BRATSBURG SMELTING AND REFINING WORKS.—Report for week ending July 25.—Since last report the stack has been finished and is doing first-class duty, inasmuch as no smoke is blowing off the top of the furnace, and no dust is lying about, the roofs being all now drawn into the catching chambers and saved. As predicted last week, M. Manhe's representative succeeded from the first in obtaining copper, and says he has no doubt whatever that we shall find the Manhe's process work quite successfully. On Wednesday, Thursday and Friday, we ran the converters during the day and kept the furnace going as slowly as possible by the night, the Frenchman confining himself solely to testing the lining of the converters, and the quality of the various ores, slags, &c., and their effects. The furnace was blown out on Friday afternoon, and it and the converters were relined on Saturday, and this morning we have started again for a more exhaustive trial, the result of which will be duly reported. We have now no doubt that our difficulties will be overcome, and that M. Manhe's man will start us fairly in the right direction.—T. F. SMITH.

CORTEZ (July 18).—Report from the mines: Work at the mines for the week ending this date has been as follows:—South cross-cut No. 1 east advanced 4 ft.; middle tunnel west, stoped 8 tons of ore; Caps Breast, stoped 7 tons of ore; upper tunnel west, stoped 5 tons of ore; north-east raise, stoped 35 tons of ore; north-west raise, stoped 137 tons of ore; run into ore-house 162 tons of ore; trammed to mill 84 tons of ore; worked at mill 170 tons of ore. Average assay for the week, 58.40 ozs. silver per ton. July 16, shipped 18 bars of bullion, lot 69, assaying silver, 19,102.91; gold, 367.51 ozs.

DAY DAWN BLOCK AND WYNDHAM.—Report for fortnight ending June 6:—No. 2 underlie shaft: This shaft has been sunk a further depth of 5 ft., making total depth from surface 1,449 ft. The 902-ft. level west: This level has been driven 16 ft. We are now away from the broken ground. The reef is 6 ft. in thickness, and is well-defined; it shows a little gold, but not much mineral. A contract will now be let to drive 100 ft. The 805-ft. level west: A winze has been commenced, and sunk 5 ft. There are 5 ft. of good quality stone here. The reef in the stopes above this level will average 4½ ft. in thickness, of good quality. The 630-ft. level: The stopes above this level are looking well. The reef will average 3½ ft. in thickness, of good quality. A winze will be shortly commenced. The 500-ft. level west: The contractors have further extended this level 17 ft.;

total distance from the shaft, 114 ft. We are now crossing the slide. The drive will be continued until the reef is met with, after which a winze will be sunk to connect with the 630-ft. level. No. 3 stopes (old workings): Stoping is being carried on on the hanging-wall reef; it is 18 ins. thick and payable.

DAY DAWN P.C.—Report for fortnight ending June 20:—The output of quartz is 1,093 trucks; sent to the Excelsior mill, 1,104 tons. No. 13, east level, has been extended a further distance of 15 ft., making a total distance of 39 ft. from the underlie; the formation is 10 ft. wide, carrying 4 ft. of stone of fair quality. The No. 12 level has been extended a further distance of 17 ft., making a total distance of 358 ft. from the underlie; this level is carrying about 4 ft. of very good stone. The leading stope over this level is carrying 4 ft. of stone of good quality. In the No. 4 stope we have 6 ft. of stone of good quality. No work has been done in the Nos. 2 and 3 stopes this fortnight. The No. 1 stope is carrying 4 ft. of stone of fair quality. In the No. 1 stope going west from the No. 2 winze we have 6 ft. of very good stone. No. 11 hanging-wall drive has been extended a farther distance of 10 ft., making a total distance of 90 ft.; this level is carrying about 3 ft. of stone of good quality. In the No. 7 stope over the footwall drive we have 4 ft. of stone of good quality, and, in the No. 6 stope, 4 ft. 6 ins. of good stone. Nothing has been done in the Nos. 4 and 5 stopes except filling up these stopes with mullock. In the No. 3 stope the stone is gradually getting smaller as we draw towards No. 3 winze. We have now 5 ft. of stone in the face of good quality. In the Nos. 1 and 2 stopes we have 4 ft. of stone of fair quality. The No. 5 winze on this level has been sunk a further depth of 20 ft., making a total depth of 28 ft.; the stone in this winze will average 2 ft. 6 ins. of fair quality. No. 10 level: The stope over this level on the footwall is carrying 6 ft. of stone of good quality. In the stope over the hanging-wall drive we have 2 ft. of fair quality stone. The 240-ft. level has been extended a further distance (with two men) of 10 ft., making a total distance of 86 ft. from the shaft. The country passed through has been a soft diorite, but carrying no stone. The number of trucks of quartz hauled from each level is as follows:—No. 13 level, 42 trucks; No. 12 level, 392 trucks; Nos. 10 and 11 level, 541 trucks; No. 2 shaft, stopes under No. 5 west level, 56 trucks; No. 2 shaft, stopes over No. 5 west level, 62 trucks; total, 1,093 trucks. No. 2 underlie shaft: The No. 5 east level has been extended an additional 20 ft., making a total distance 413 ft. from the shaft; no further change has taken place since last report. No. 5 level west. The stope going west is carrying 2 ft. of stone of medium quality, and in the stope going east we have 1 ft. of stone of poor quality. In the No. 1 stope over the back of this level there are 1 ft. 6 ins. of very good stone. In the No. 2 stope we have 1 ft. on the hanging-wall, and about 1 ft. on the footwall of fair quality, and between these two small reefs we have a horse of mullock 10 ft. thick. The No. 4 west level has been extended a further distance of 21 ft., making a total distance of 409 ft. The small reef which we had in the face of this level at the beginning of this fortnight has completely cut out. We are now driving through a soft diorite formation about 6 ft. thick. Lease 1,280: The work done in the above mine during the past fortnight has been mostly confined to the cross-cut, which has been extended 13 ft., making the total distance driven 18 ft. At a distance of about 13 ft. from the drive we intersected the footwall, but as the ground at that point showed evidence of considerable disturbance, I thought it would be advisable to continue driving a few feet further to make sure. We also bored a hole into the hanging-wall, and from the nature of the country through which it passed, I am confident we have the true hanging-wall. The drive has been extended 2 ft., making the total distance from shaft, 178 ft. There is no change in the ground. We are busy at present making preparations for pumping out the underlie, and shall lower the pump the first thing next week.—T. LESTER.

DON PEDRO (July 15).—Half-monthly report:—Maquina Mine: Operations have again been carried on in sinking Gordon's shaft and with the new drive towards same; also 30-fm. cross-cut. The last-named place has become very soft, and is a little troublesome; therefore, progress has been slow. The face of cross-cut is still in lode, and of a very good quality. By appearance there is a change taking place. The jacotinga has become more of a compact nature, and so far as we can prove it is possible to be the No. 5 shoot. This still remains to be proved as we advance east. Gordon's shaft: Since our last another set has been put in at face; the ground is very hard for excavating. The drive also towards the shaft is hard, being both in one channel of ground. We have commenced the open cut for new adit, and hope to continue this with all possible speed to cross the flookan before wet season sets in. We have started to drive a "lobby" through the Sugar-Loaf mountain to take away the heavy storm water from the new reduction works. Gold raising: This has been continued in the North Mountain and No. 4 gully with a small force. We have one exploration level driving in North Mountain on branches of jacotinga, which show fairly well for washhouse. Running work: Two sets of timber have been fixed above adit in Gordon's shaft to support old sets. Several repairs have been done to the old P. P. incline. A lift of pumps has been fixed in Gordon's shaft to enable us to continue sinking until such time as the new level is communicated with the shaft. The old adit and all other work connected with the mine has been kept on. Remittance of gold: 2,852 oits. of gold=328,850 ozs. from new exploration in North Mountain, and sampling the lode in the mine. Realised 1,261.

EAST BROKEN HILL CONSOLS.—The mining manager reports for fortnight ending June 25.—Main engine shaft sunk 15 ft.; total, 30 ft.; lode getting more defined. Surface work: Foundations ready for receiving boiler, which has been delayed in transit by rail, but is expected on the mine to-day; carpenters' shop and storeroom built. South engine sunk 11½ ft.; total, 87 ft.; water increasing very much. Engine and boiler house completed, all but windows. Trial shaft on No. 2 cross lode sunk 10½ ft.; total, 10½ ft. This is being sunk on the cross lode described in last report. Lode has narrowed, owing to the hard and contrary nature of the country; good galena is being raised in small quantities. Dam is being fenced in.

ELMORE (July 21).—The manager writes: Since writing you last week very good progress has been made. The east drift on 540 level has been advanced 30 ft.; total distance now in from cross-cut 265 ft. The west drift from same level has been extended 45 ft.; total length of drift 275 ft. 30 ft. has been added to No. 3 raise, which is now up

50 ft. from the drift; for the last few days we have been dropping 20 stamps on ore extracted from this raise and stope.

EMERALD MINES OF COLUMBIA.—The manager, writing on June 20, says:—This week we have finished another 50 metres of the level for the trench, and have to do another 45 metres before being able to terminate the trench commencing in some parts. By the end of next week I think I shall be able to send the water of the pond down that way in order to clear the ground at the foot of the height, where we have come across that new vein mentioned in my last, which, according to all appearance, is now the most promising one we have. Near the old bridge we have been working in six steps in a length of 84 metres, and have reached there a depth of 13½ metres in rock, always keeping on widening that part to follow these veins in their length. Hands at work, 160.

FLAGSTAFF (July 18).—I have been very busy again this week with the ore, so have not done much in the mine, but the little we have done in seventh level has shown up a big body of good ore. It has been more than 6 ft. wide, but is now not quite so big. I think this level is bound to furnish a great quantity of rich ore. When we first came on it the mineral ran nearly west, but now it is turning to the right towards the hanging-wall, which is a very good sign. The ore in seventh level is very heavy, and shows plenty of silver-lead. We are now shipping to Sandy 100 tons of each of the three classes of ore, and will not make much headway mining for another week or so, but will do the best I can. Level 6 is looking fine both above and below. I think our ore is going to yield a good price; since it has been carefully sorted, it looks very much cleaner and better quality; a good deal of rock and low grade iron has been separated from it. This could (not?) be done well in the darkness in the mine, and is a great improvement, and will pay well for the trouble, and long time it has taken. I hope to send you better reports soon.—A. L. SPOWE.

GARFIELD (July 18).—Report from the mines:—The following work has been done at the mine:—Western Mine—180-ft. level: The north-east drift has been extended 25 ft., making a total of 110 ft. The face of the drift is in porphyry and talc, and looks favourable. During the earlier portion of the week we had to drive through a hard bar of rock.

GYMPIE GOLDEN CROWN.—Report for fortnight ending June 18:—I have to report that on the March reef at the 240-ft. level the north drive and stopes have been carried on as usual. The stone being raised from these workings is very poor at present, and has been so for some time, as we are now getting too high above the gold-bearing country, and would, therefore, advise that work at this level be discontinued. At the 105-ft. level the north drive has been carried in 71 ft. from top of rise; a back stope has also been carried in 40 ft. by 10 ft. The south drive has been advanced 50 ft., with back stope following 40 ft. by 12 ft. The reef averages about 6 ins. in thickness, and is carrying a little gold on the break, but the gold is principally in the casing of the reef. Lease 777, 2 mile: On the Peter and Paul reef the north drive has been carried in a distance of 110 ft. from top of rise at cross-cut, and is being pushed forward to meet the south drive from eastern shaft. At the eastern shaft the south drive has been carried in 30 ft. from rise, and is also being pushed forward to meet the north drive, for the purpose of ventilation and the better working of the mine. The distance on the line of reef between the main and eastern shaft is 290 ft., which leaves the distance to be driven about 150 ft. A rise is being carried upon the reef, which is about 18 ins. in thickness, but no quartz has been broke at this shaft during the past fortnight.—T. RAMAGE.

HARRIETVILLE (June 26).—Fortnightly report:—Mons Meg Mine: Rise on new shoot north of tunnel J advanced 11 ft.; total, 131 ft.; lode 4 ft. wide; has carried a little gold during the fortnight, but is now poor. Drive north of shaft 50 ft. below tunnel J extended 12 feet; total, 37 ft.; lode 2 ft. wide, but poor. South drive at same level advanced 13 ft.; total, 50 ft.; lode 6 ft. wide, payable throughout, portions carrying fair quantities of visible gold; the lode is inclined to assume its original easterly underlie; walls much disturbed. North drive 170 ft. above tunnel J extended 1 ft.; total 146 ft.; lode 6 ft. wide, but poor. Drive north of tunnel K advanced 42 ft.; total, 360 ft.; lode 6 ft. wide, and generally poor, although a small portion has been payable. Guerdon Mine: Drive north of tunnel J on Guerdon lode advanced 27 ft.; total 127 ft.; the lode is 4 ft. wide, and carries a little gold. Drive south on same lode advanced 29 ft.; total, 122 ft.; the lode here is 4 ft. wide, and of similar appearance and quality to that in the north end. South Mons Megs Mine: Drive north of shaft in No. 1 tunnel advanced 15 ft.; total, 20 ft.; the lode is 2 ft. wide, and carries veins of quartz, which are fairly auriferous, although no free gold is visible. Tiddledee Mine: Drive south of tunnel D towards Mons Meg extended 26 ft.; total, 1,145 ft. The lode is small and poor, but there are indications of improvement. Drive west of that towards Mons Meg is in 20 ft. This is being extended on what appears to be the junction of two lodes. No gold has been met with in driving. Drive south of tunnel C on new shoot advanced 13 ft.; total, 427 ft.; the lode in the end is 2 ft. wide, and carries a little gold. A rise has been put up from the end of the foregoing drive, which has communicated to the shaft below tunnel D. At the point of communication the lode is 2 ft. wide, and payable. Preparations are now being made to stope north and south from the winze. Drive south of tunnel B towards new shoot has not been further extended on account of starting to stope on ore shoot recently passed through. A rise has been put up 9 ft. on this shoot, the lode being 6 ft. wide, and payable throughout. Jackass Mine: Drive north of tunnel C on No. 1 lode advanced 17 ft.; total, 92 ft.; the lode is 3 ft. wide and carries a little gold, but not payable. Machinery: All machinery at mines and mill is working satisfactorily.—T. G. DAVEY.

MOUNT MORGAN EXTENDED.—The directors have received the following from their local committee (per Mr. R. Ballard, M.L.C.E.) dated Rockhampton, Queensland, June 15:—Only hand-drills were used during the fortnight. We cleaned and thoroughly overhauled our large boiler, tested same up to 90 lbs. hydraulic pressure. Repaired all rock-drills. Put new balance and back stays to Immanuel pump, and altered air piping in the eastern drive, substituting 2 in. for 1 in. pipes. Up to the 9th inst. the weather was very wet, and the byewashes were all running. Western drive, No. 3 Immanuel: Up to the 8th inst. we drove 4 ft. further in the western drive, discontinuing it at a total extent of 13 ft. The rock met with was similar to the hard blue country of the eastern drive, and contained traces of gold; this drive is at the 77-ft. level. Eastern drive, 86-ft. level, No. 3 Immanuel: Up to the 8th inst. we lost two shifts through a bother

with the pumps, the pump rods having carried away. During the fortnight we only progressed 13 ft., the total distance being now 201 ft. We have been in a very hard belt of country all the fortnight, and the air-drills not being in use made matters worse. This hard belt shows bunches of universal, almost solid, mundic. The stone only showed minute traces of gold. Yesterday we got through the bar and into softer country. We got the boiler right and the steam up at four o'clock this afternoon, and started the air-drills to work again. We have 73 ft. further to go to get to J winze, and I predict, from the appearance of the face, that we shall be at our destination in five weeks—that is, July 20. Thus the promise offered by the face will, I believe, fully make up for the time lost during the past fortnight, and keep us to the time programme set forth in report No. 76, paragraph 5.

MYSORE REEFS (July 14).—Fortnightly report:—Harvey's shaft: The 520-ft. level north has been advanced 9 ft.; now 57 ft. 6 ins. from shaft; we are still in hard, sterile ground, but an expecting every blast to intersect the shoot of quartz gone down in the bottom of the 460 ft. level. The 520-ft. level south of the west cross-cut: The level has been extended 11 ft.; the lode in the present end is split up in small stringers of quartz; a sample of same gave, according to assay, 1 dwt. 7 grs. of gold per ton. We have suspended this drive for the time, and put the men to drive north. If it does not open in this direction I shall continue the cross-cut west a few feet to ascertain if any more lode is remaining. We have been taking down the ground pent-house at the 400-ft. level, and laying the skip road to the 520-ft. level during the past two weeks. This has been a hindrance to these drives, the places being full of debris. The skip is now at work, and I hope better progress will be made in the future. The 400-ft. level south: This level has been advanced 10 ft.; now 136 ft. 6 ins. from shaft; the lode is improved in size and value; there is a leader of dark-looking quartz, 15 ins. wide, worth, according to assay, 7 dwts. 19 grs. of gold to the ton. The rock each side of this quartz is fearfully hard for drilling, but this slight improvement is encouraging, and I do trust that it is the beginning of something good.—M. SCANTLEBURY.

MYSORE-WYNAAD AND MYSORE WEST.—The mining manager reports for fortnight ending July 14:—Tank Mine—North shaft: This shaft has been sunk 4 ft., making a total depth of 178 ft. 3 ins. from surface; the bottom is on a hard dry rock, containing patches and stringers of quartz, which show a trace of gold. Sinking is hindered very much at present, as the 173 drive is so close. I expect, however, to finish cutting the plat during the next fortnight, and shall then be able to make arrangements for clearing stuff, &c., so that there shall be no hindrance to the sinking. The 173-ft. level cross-cut east has been driven 29 ft., making a total distance of 43 ft. 6 ins. from the north drive; at about 34 ft. we intersected a small lode about 6 ins. wide; several stones were broken, showing gold visible in the stone, and two samples which I took and assayed gave 6 dwts. of fine gold per ton. About 8 ft. beyond this another small lode has been met with, but a sample only afforded a trace of gold. A few feet north and south have been driven on the first lode; these will be continued, and I trust to see an improvement before long. South shaft: This shaft has been sunk 3 ft. 6 ins., making a total depth from surface of 111 ft. 3 ins.; there is very little change here, but the rock is harder, and there is now a considerable stream of water coming in. Surface: All surface work is making satisfactory progress.

NEW EBERHARDT.—The mine manager reports under date July 18 as follows:—Monitor: Total number of tons of ore extracted for the past two weeks, 56 tons; assay value of same as per mine samples, \$31 per ton. The outlook for ore in the mine is not so promising as it has been for some few weeks past; the ore has become more diffused through the lime-rock, causing a falling off in the grade of our ore. The ground through which we are passing is certainly favourable, and we have some small seams of ore, but if they will continue as they are at present, or if they will open out into larger bodies, or otherwise I am not prepared to say. As I said before the ground looks favourable for ore. The ore team is still running, and will continue to do so for a few days yet, it having brought to the mill for the past two weeks 119 tons of ore, making the total weight of ore now on our mill dump, say, 400 tons. The team will have caught up with the mine dump about Monday or Tuesday next, when it will lay off until such time as we are ready to start the mill.

—The following cable has been received from the mine manager: "Monitor: Weekly output quantity, 18 tons; the average is \$35 per ton; expenses during July, \$2,000. Eberhardt: Everything going on well; expenses, \$3,000."

NEW VISO.—Monthly report: Since my last report we have driven the California adit north 10 metres in a large and very kindly lode, yielding tin stuff of excellent quality, and in sufficient quantities to pay the cost of extraction. This point is about 30 yds. under the surface and is advancing in whole ground. The alluvial deposit in Mi Amor is turning out very satisfactorily. At present it is about 40 ft. wide, 5 ft. deep, and improving in quality as we proceed. This is different from the other alluvial deposits of this district which have invariably been found in the depressions on the hill-side, but this is going straight up the face of the hill, which has a moderate rise and lying on the line of the main lode traversing our property, which strongly confirms the opinion I have before expressed, viz., that the alluvial tin has come from this lode and that we are tracing it to its source. It is, therefore, probable ere long we may find something better than we have hitherto seen here. Notwithstanding the partial suspension of our dressing operations for want of water as reported a fortnight ago, I calculate we have got out a similar parcel of tin to that sold last month, which I intend cleaning up and weighing off next week.

OSCAR (July 31).—Report from the mine:—Hodgkinson lode: The 300-ft. level north has been, during the month, driven 20 ft. The lode is still much disturbed, and the quartz much mixed with country rock. As, however, the winze—less than 20 ft. ahead—is going down in a very strong lode, containing galena, copper, and occasionally showing gold, this disturbed section cannot extend much further, but must soon be again replaced by the lode intact. In the 250 level north fair progress has been made. In eight weeks the level has been extended nearly 35 ft. The character of the end remains the same as when last reported on. Other points are without alteration. Williams' lode: The quartz in the winze sinking on this lode holds

still a width of nearly 2 ft. It is of the hard blue character, and just now is carrying an increased amount of mineral.

PAHANG CORPORATION.—The receipt of two months' mine reports, both to hand by the same mail is announced. Pollock's lode: The bottom drive has been cut through into the winze from middle, and gives a good deal of stoping ground. The lode at the end is small, but is improving in size and carrying fair tin. In the east end the lode has nearly cut out, and work has been stopped there, and the men put on to work on a vein going west, nearly parallel with the main lode and which is carrying good tin. The winze has been sunk 13 ft. during the month, the contractors wanting more money, but it is hoped that it may be renewed at the price hitherto paid. Men have been started on the east side of the water-course near Pollock's bottom, where good tin was got. It is still carrying good tin, but the vein is small, being only 6 in. The middle drive has been extended 49 ft. during the month. In the last fortnight a nice shoot of tin has come into the face and is improving in size. The stopes in the top tunnel are about the same as last month. The vein in some places being very good but narrow. Campbell's lode: All work has been stopped on this lode for a time. Nicholson's lode: There is but one drive being worked at present. Willink's lode: The drive on this has been cut through into the winze. Nice bunches of ore are showing in the face of the drive. I intend to start stoping in the winze as soon as possible. Jeram Batans: The lode has been cut in Teague's tunnel and the men are at present rising on it. The vein is about 9 in. wide and carrying very good tin, sample brought up by contractor assaying 25 per cent. I think that June will be the best month's output of tin since the mine started.—R. MCKENZIE.

PARKER (July 25).—Manager's report.—I am pleased to be able to inform you that I have this morning started the pumps, having just returned from the river; the line as a whole is far better than I expected, seeing that the majority of our joints or connections had to be made with old gaskets. I shall not, however, put the pumps to their full capacity for a few days, until I am certain of having cleared the whole line of air. Rich vein: I am pleased to be able to inform you we have, since last writing you, uncovered about 200 yds. ahead of our gulch, and in a straight line with same, a vein about 8 ins. wide, which shows up remarkably well, having some 30 specimens, and about 1½ dwts. of free gold to one rocker full, which I had washed. I shall not work on it, as we shall the more economically obtain the same for the mill when the gulch reaches that point. The report on the supply of water for the town I hope to be able to send you by next mail, the town authorities having recently held another meeting, the result of which will enable me to give you the necessary figures as to the probable income for the first year.

PESTARENA UNITED (Aug. 3).—Report for Aug.—No. 1 lode: In the 150 end north the lode continues wide, but carries no pyrites. In the 90 end south the lode is composed entirely of schist, and without a division. The lode in the 70 end north is about 1 metre wide, and is much mixed with schist; it produces 4 tons of ore per fm., worth 18 dwts. per ton; it is probably at the northern limits of the ore shoot. In the 70 south the ground south of the communication is being stoped forward; after completion the end will be continued; the lode produces 6 tons of ore per fm., worth 1 oz. per ton. Caunter lode: The 90 end east has been communicated to the levels. In the 55 end east the lode is 90 centimetres wide, carrying 30 centimetres of good quality ore, producing 4 tons per fm., worth 1 oz. 5 dwts. per ton; the number of men has been reduced on account of the foul air. In the 55 end west, the lode has become smaller, and carries only 5 centimetres of ore in the footwall; it produces 1 ton of ore per fm., worth 18 dwts. per ton. In the 46, the eastern end has been suspended and the men set to drive west. The 150 cross-cut south is in very hard schist, and is difficult for driving. We are at present working 13 stopes, which produce on an average 5 tons of ore per fm., worth 18 dwts. per ton. During the past month four men have been employed re-opening and timbering an old level in the Valle Rossa. The distance re-opened at present is about 195 metres and is near the end. A sack of ore was brought down on Saturday, but no assay has yet been made. This will be done during the coming week. All the machinery both at surface and underground continues to work satisfactorily.—W. ROBERTS, W. H. TRELEASE.

(Aug. 4).—Val Toppa Mine: The drive in the south end of stope, over Zero level, has reached the extent of the ore, and is suspended and rising again resumed. In the rise stope over Zero level the lode shows two branches, the footwall one being very irregular, but often has good patches of ore; the western one is smaller (averaging about 20 centimetres), chiefly quartz: it produces 7 tons of ore per fm., worth 8 tons of ore per fm. In the stope in the north end of the above rise the vein has become so small and poor, that it has been abandoned. In the stope over No. 2 level on western lode, all the payable quartz having been taken away, work has been discontinued. In the stope over No. 3 level in side of intermediate drive the quartz still holds good, and shows patches of galena and metallone, producing 15 tons of ore per fm., worth 10 dwts. per ton.—W. ROBERTS.

RUBY.—Report for week ending July 18.—Dunderberg: We have five tributaries at work here. In the Home Ticket we have about 1 ft. of fair looking ore in the middle of the quartz, and I hope it may increase in size. The winze in the 500 level still continues about the same. We have discontinued the main drift on the 800 level, and are now following up and down on the pipes of ore which are passed, and will endeavour to follow the ore wherever it may go, without doing more dead work. Lord Byron: We have eight tributaries at work here; the ore shows about the same. Bullwhacker: There is a slight improvement in this mine; four men still at work.

SOUTH-EAST MYSORE (July 14).—Fortnightly report of mine captain.—During the past two weeks we have been sinking a winze below the 500-ft. level north on the course of the lode and are down 14 ft. below the level. I am pleased to inform you that there is now a decided improvement in the appearance of the lode. It shows a width of 3 ft., 2 ft. 6 ins. of which is hard blue quartz. From a sample broken across it, which I washed, gave about 6 dwts. of gold to the ton. We have seen several pieces of quartz with visible gold. This I think is most encouraging, and from its appearance it is reasonable to hope that it will still further improve.

THE combination for regulating the production of nitrate of soda have arranged to limit the total exports during the present year to 18 million quintals, equal to 800,000 tons. Last year the total exports were 1,043,000 tons.

REPORT OF MEETING.

D'ERESBY AND GWYDYR MINES.

PROPOSED ISSUE OF 10,000 NEW SHARES OF 3s. EACH.

AN ordinary general meeting of the shareholders in this company was held at Gracechurch Buildings, Gracechurch Street, E.C., on Thursday.

Mr. F. Hodgkinson

presided.

Mr. GEO. J. NICHOLLS (secretary) read the notice convening the meeting.

DIFFICULTIES.

The CHAIRMAN: Gentlemen, you have had the balance-sheet before you and Capt. Nottingham's report for some few days, and we are met here now to ask you to approve and pass the accounts. We have had a struggle to keep on as we have, and very great difficulty in getting in the arrears of calls, and there are some outstanding now. I hope Capt. Nottingham will be here soon to express his opinion as to the desirability of continuing or not. If we continue, of course it means more money for the shareholders to subscribe, and they will have to decide that point to-day. The Chairman then formally moved the adoption of the report and accounts.

Mr. SIMMONDS seconded the motion.

A SHAREHOLDER asked for an explanation of the item of 597l. 16s. 2d. paid to the liquidator of the D'Eresby Mining Co., Limited.

Mr. ASHMEAD, the liquidator, said that the costs of the winding-up were 52l. only, the balance being the debts of the old company.

In reply to Mr. BRITAIN,

The CHAIRMAN said that since the accounts were made up a sum of about 70l. had been received, in respect of calls in arrear, and there were now 350l. still owing.

The motion was agreed to.

EXTRAORDINARY MEETING.

The meeting was then made special, "For the purpose of considering, and, if thought fit, passing resolutions authorising the raising of a sum of not less than 1,500l. additional capital for the purposes of the company." The notice convening the meeting stated that in the event of no resolution being come to with regard to raising such additional capital, special resolutions to the following effect would be proposed, viz.:—

(1.) "That the D'Eresby and Gwydyr Mines, Limited, be wound-up voluntarily." 2. "To appoint a liquidator."

VIEWS OF THE MINE CAPTAIN.

Capt. NOTTINGHAM then read a long report upon the position and prospects of the property, from which we excerpt the following:—In opening up the No. 10 south of shaft, we have failed to discover any ore in paying quantities in connection with the shale bunch, which was lost at the No. 9. This has been a heavy loss to the mine, but against this we have, by cross-cutting, discovered a foot-wall lode, which has made very good lead for the distance opened, and promises to be a counterpart to the shale bunch, and going up behind all our present workings between this and No. 7. The formation and character of the ground, and the lead it contains, are similar to what is seen at and above the No. 7 on the footwall side of the lode, which to me is a reasonable proof that it is one and the same, and will in all probability make lead up to that level. I have taken the bearings, and find that the No. 2 cross-cut in south end of No. 9 is the most advantageous point for opening out this ground, and have commenced cross-cutting accordingly. This is the only point I should advise you to develop in the bottom of the mine at present. The next point to note is the No. 8. A cross-cut should be driven through the lode here, in the same line of ground as above indicated. There has no cross-cut yet been put through the lode between No. 7 and No. 10. I would also call your attention to the north run of ore ground, which failed on reaching the No. 8 north of shaft. Looking at this ground, which is still of a lead-bearing character, and bearing in mind the fact that no level has yet been driven out from shaft above this, I consider it should have further trial.

WILLING TO GO ON.

The CHAIRMAN: The position, gentlemen, is this: We have produced 960l. at a cost of 3,000l., but I remember the time when D'Eresby shares were selling at 4l. 10s. and 5l. Personally, I am willing either to go on or to stop, as you choose. We have not been successful so far, but mining is always very uncertain, and sometimes when things look their blackest a mine turns out a success. If you decide to go on, the proper thing to do will be to make a rise from the No. 9 to the No. 10-ft. level. The theory is that lead goes up at the back of these levels, and if that is the case it will be a finding of the old course of ore.

Mr. WAGSTAFF, addressing Capt. Nottingham, asked: Are you of opinion that it is worth another trial?

Capt. NOTTINGHAM (emphatically): Yes.

The CHAIRMAN: You have a mine, gentlemen, that is equipped, a manager in whom you can have confidence, and a board that you do not pay any fees to; so that the thing is worked as cheaply as possible.

Mr. BRITAIN said that the directors had done more than work for nothing—they had advanced money out of their own pockets to pay labour costs.

In reply to a question,

Capt. NOTTINGHAM said he had been compelled to suspend operations on Saturday last.

On the motion of Mr. SIMMONDS, seconded by Mr. WAGSTAFF, it was resolved: "That the capital of the D'Eresby and Gwydyr Mines, Limited, be increased from 20,000l. to 21,500l. by the addition to the existing capital of 10,000 shares of 3s. each, to rank *pari passu* with the present shares, such new shares to be offered *pro rata* to the present shareholders."

A vote of thanks to the chairman terminated the proceedings.

THOMAS THOMPSON,

STOCK AND SHARE DEALER

ESTABLISHED 1862.

84, ANGEL COURT, LONDON, E.C.,
And MINING EXCHANGE, LONDON.

Bankers:—THE CITY BANK, LIMITED, and METROPOLITAN
and BIRMINGHAM BANK, LIMITED.

INVESTORS in all classes of Stocks and Shares should read
Mr. THOS. THOMPSON'S MINING AND INVESTMENT CIRCULAR,
free on Application.

Shares sold at Special Prices for forward delivery (One,
Two or Three Months) on deposit of 20 per cent.

Orders by Letter or Telegram promptly attended to.

Telegraphic Address:—"REMEMBRANCE," LONDON.

NOTE ADVANTAGES WE OFFER TO INVESTORS AND SPECULATORS.

LOCKWOOD, WHITLARK AND CO.,

5, THROGMORTON AVENUE, LONDON, E.C.

We make Mines a special study, and invite correspondence, whether
business results or not. We can always give reliable information.

We open any number of all classes of Mining Shares at close
market price of the day on 10 per cent. deposit, and carry them over
as long as clients wish at low contango rates.

We close speculative accounts at any time, and pay profits instantly,
irrespective of account day. We sell shares at current prices for forward
delivery at one, two, or three months on 15 per cent. deposit.
We are members of the Mining Exchange, and subject to the rules and
regulations of that institution.

Send for our prices before dealing elsewhere.

Options at low rates for account, one, two, or three months in
Mining, Land, and Miscellaneous Shares.

We deal in every description of Miscellaneous Shares.

We publish a South African Share List daily at 4.15 p.m., containing
useful information as to claims held, dividends paid, &c., post free.

Telegraphic Address: "PERSONIFY," LONDON.

NOTICE TO READERS.

Replies to Annual Subscribers will be sent by wire or letter, as
may be necessary.

Cricketer (N. E. S.).—They are safe to hold.

Tired Holders.—Sell at once by all means.

M. L. M. (Yarmouth).—They must have more working capital very soon.
Keep your shares, however, for the present.

Nervous.—Still hold on. You have received quite 50 per cent. of your money
back in dividends, and more is yet to follow, we think.

Investor (Bridport).—Cannot advise their purchase just now. The company has
certainly fair prospects, but the existing circumstances may prevent a rise taking
place in the shares for some time.

Sprite.—Yes. They are good to hold.

T. H. (Arundel).—We consider the company would do well under better
management than the present. The shares are at present marketless.

Putney.—The company owns a splendid property, which has been reported on
by several known experts. You cannot do better than purchase the shares for
an investment.

Joseph.—It is partly guaranteed by some of the largest shareholders. Hold
your shares, and if possible increase the number.

S. M. W. (Calais).—An improvement is likely in all those named, with the
exception of No. 3. This is a purely nominal price, and likely to keep so.

Importer.—Sell them, and think yourself fortunate that you have not lost
more.

H. R..—Have nothing to do with the concern you name. The promoters are the
only parties likely to profit.

Troubled (Malvern).—We think they are on the verge of success.

Roland.—We understand there is no immediate need of more capital. The
shares certainly appear a cheap speculation.

B. G. Willows.—For a sharp rise we should decidedly say no. They are only
good as an investment.

Money.—It would pay you much better to take them up. We advise you to
write to your broker, telling him that you wish them delivered at the coming
settlement.

E. D. H..—Realise whilst you can see a profit.

Davis.—Hold.

Fillibuster.—All the money you put into the proposed scheme we fear will be
lost.

SOUTH AFRICAN TRUST AND FINANCE COMPANY, LIMITED.

SUBSCRIBED CAPITAL, £255,000.

BOARD.

B. B. TRENCH, Esq., Chairman.

Sir CHARLES METCALFE, Bart.

L. BALFOUR BURNS, Esq.

Sir STUART S. HOGG.

Major J. W. M. COTTON.

RICHARD SMITH, Esq.

EDWARD DICEY, Esq., C.B.

HEAD OFFICE.—19, ST. SWITHIN'S LANE, LONDON, E.C.

SOUTH AFRICAN OFFICE.

NATAL CHAMBERS, JOHANNESBURG.

GENERAL MANAGERS IN SOUTH AFRICA.

W. Y. CAMPBELL, F.G.S., and E. W. EVANS.

BANKERS.

THE LONDON AND SOUTH WESTERN BANK,
LIMITED, LONDON.

THE MANCHESTER AND LIVERPOOL DISTRICT BANKING
COMPANY, LIMITED.

THE STANDARD BANK OF SOUTH AFRICA, LIMITED.

The Company undertakes the following business:—

The skilled investment in South African Mining, Land, or other
securities for European investors.

Professional and confidential reporting upon companies, mines,
mineral properties, lands, and generally advising European share-
holders and others in South African ventures.

To act as agents on behalf of principals interested in South
African investments, and for the protection of their interests, and
where desired, to register shares in such undertakings, and to issue
certificates in exchange for same, thereby enabling European holders
to co-operate for their mutual protection.

Financing or advancing moneys to corporations, companies, syndi-
cates, or persons in South Africa.

The receiving of money on deposit.

The purchase and sale of properties, and all classes of South
African securities or interests.

A Mining Circular containing special information will be posted
weekly from the South African Office to all subscribers.

A SPECIAL CABLE CODE FOR PROMPT AND ECONOMICAL COMMUNI-
CATION BETWEEN THE SOUTH AFRICAN AND LONDON OFFICES.

Further information can be obtained at the Head Office of the
Company.

The Mining World.

LONDON: SATURDAY, AUG. 8, 1891.

The "MINING WORLD" is not the property of a Mining
Speculator nor under the control of any clique.

INDIAN CRUSHINGS.

THE returns from India still continue month by month to show that
steady improvement to which we have called attention for some time
past, the result for July, as regards the four principal mines being
in every case in excess of that for June. A notable feature in the
last returns is a considerable increase in the percentage of gold
obtained from the quartz crushed, which has taken place in two out
of the four mines referred to. For instance, the Mysore Mine has
returned 90 ozs. of gold more than in June; while the quantity of ore
crushed was 36 tons less. More marked even than this is the return
from the Ooregum Mine, which, while crushing only 20 tons more
than in June, shows a gain of 232 ozs. of gold. The Balaghat
return shows an increase of 28 ozs. from a corresponding increase in
the quantity of ore treated. Ooregum does not compare quite so
favourably, the result for July being merely 1 oz. in excess of that of
June, while the quantity of ore put through the mill was 38 tons
more. However, the falling off is so slight that it is hardly worth
noticing. We are afraid that the cholera, which is now raging in
India, may affect the returns for the current month, but should this
not be the case there is no reason why these four mines should not
show as satisfactory a result for August as they have done for July.
We give below a comparative table of the crushings.

	June.		July.	
	Quartz Crushed. Tons.	Yield. Ozs.	Quartz Crushed. Tons.	Yield. Ozs.
Mysore ...	3,546	5,560	3,510	5,650
Ooregum ...	1,354	2,902	1,392	2,903
Nundydroog ...	1,050	1,812	1,070	2,044
Balaghat ...	270	472	292	500

SHEBA AFFAIRS.

THE excellent management of this property at home and abroad
gives confidence to those, who, like ourselves, desire to say a word on
its behalf. We believe the property to be most valuable, and the
directors to be entitled to the sincere thanks of the shareholders for

the services they have rendered. One of their number, Mr. Chalmers, has recently visited the mine, and his speech, which we reproduce in connection with our full report of the meeting, may be left to tell its own tale, but those who read it cannot fail to see that it is a strong tribute to the work of the staff on the spot. As to the speech of the chairman, Mr. W. Garland Soper, it perfectly bristles with points of interest, and no mere summary can do it justice. Shareholders should not fail to read its full text, for it describes the position in detail, and shows that the well-laid plans of the directors are maturing in a manner gratifying to all concerned. The returns from the 60-stamp mill have steadily increased, from 618 ozs. in Mar. to 2,665 ozs. in July, and of course the quantities of ore dealt with are augmenting proportionately. In spite of the difficulties which must always be expected in mining, the position of Sheba is becoming more consolidated and assured every month, and although the aerial ropeway has not yet given perfect satisfaction active steps are being taken to remedy initial defects. When in order, the problem of cheap carriage, the all-essential one in this case, will have been solved, and the ropeway will be able to carry 4,000 tons per month. The summary of the financial position given towards the end of Mr. Soper's speech will show the satisfactory position in which the company finds itself at the present time, whilst his forecast may be accepted as substantially correct. Although we have repeatedly expressed the fullest confidence in the Sheba Mine, we must own that we were scarcely prepared to find the position already so secure as the speech of the chairman proved it to be.

THE FALL IN TRUST SHARES.

WHEN the trust mania began to show signs of reaching dangerous proportions we warned our readers in very emphatic language to give the companies a wide berth. Experience had shown conclusively that although some of the trust companies which were formed years ago had invested safely and profitably, and had, in consequence, paid on an average fair rates of dividend, yet that the results had in no wise justified the expectation that new companies would be able not only to earn something like 7 per cent. for the shareholders, over and above the expenses of management, but would also be able to pay extravagant dividends to the holders of founders' share. It is true that, for a time, some of the so-called trust companies did a highly lucrative business, not as investors so much as promoters, underwriters, and financial props, and that in consequence such preposterous dividends were obtained by the wire-pulling founders that they were enabled to realise their holdings at fabulous prices. But the times have changed very seriously, largely, no doubt, owing to the operations of these very companies. Promoting and underwriting is for the nonce played out, and the trusts have been in very many cases left high and dry with a lot of "securities" which are unmarketable or utterly worthless. The shares of several of these concerns have dropped from 50 to 70 per cent. from the highest quotations, and we should not be surprised to see the fall continued, for loans and debentures have been largely raised, and in the event of a winding-up these would have to be paid off first. In some cases we are afraid, there would be very little left for the shareholders. We regret, of course, that these companies have done so much harm directly, and especially indirectly; but it is difficult to feel very much sympathy for people who rushed headlong into these undertakings simply because they had among their founders a lot of titled bigwigs who ought to have known better than to lend their names to such ventures.

THE FALL IN DE BEERS SHARES.

IN these days of keen competition it is by no means easy to obtain a monopoly in the supply of any commodity; but the experience of the De Beers Co. is proving more clearly every day that even when a monopoly is obtained, it is exceedingly difficult to get very much benefit from it, at all events benefit of a lasting character. A couple of years ago the De Beers Co. forced into amalgamation with itself practically the whole of its rivals in the Kimberley diamond fields, and it thus obtained almost complete control of the great four diamond-producing properties, De Beers, Kimberley, Bultfontein, and Dutoitspan. Our readers are aware that, following on the completion of the fusion arrangements, the price of Cape diamonds was steadily advanced, and that in consequence the De Beers Co. netted very large profits. But the rise of prices had the inevitable result of lessening the demand, and the general commercial and financial depression which has since come about, especially in the River Plate countries, which had been large purchasers of diamonds as well as of every other luxury conceivable, had still further reduced consumption. For a good while past the De Beers Co. has practically suspended production in the Bultfontein and Dutoitspan properties, and for some time now it has only been partially working Kimberley and De Beers. In spite of this restriction of output, however, stocks have continued to accumulate, although a considerable reduction in prices has been made with a view to tempt purchasers. This is, of course, a serious matter for such a heavily capitalised company as the De Beers, and the difficulties of the management have not been lessened by the discovery of the Wesselton Mine.

It is true that the De Beers Co. have the option of purchasing that property; but if it exercises its option, it could scarcely work it without further reducing the development of its other properties; and if it agrees to stand aside, its place would at once be filled by other people. There is a third alternative, namely, to buy the Wesselton Mine and keep it closed; but in view of the appointment of a special committee of the Cape Parliament to inquire into the distress existing on the diamond fields—to which our Kimberley correspondent referred in the letter which appeared in our last issue—we are strongly disinclined to believe that Mr. Rhodes and his colleagues would suggest such a policy. If they do, it is by no means improbable that serious troubles would follow, for the distress caused by the closing of the Dutoitspan and Bultfontein Mines, has aroused an exceedingly strong popular feeling against the De Beers Co. It is the knowledge that this feeling exists, coupled with the unsettled state of the diamond market, which has resulted in the recent heavy fall in De Beers shares. Last year they stood at over 23, and this year they have been as high as 17½; within the past few days the quotation has been under 12. Investors do not forget that before a penny of dividend is earned upon the 3,950,000l. of ordinary capital, interest upon 4,903,400l. of debentures and other obligations has to be provided, this interest representing an annual payment of no less a sum than 269,687l. If the prices and the demand of a couple of years ago still existed, and were likely to continue, De Beers shares would be a good purchase; but under the changed condition of things we still think them too dear, and too unsafe for prudent investors.

RICHMOND—RETROSPECTIVE AND PROSPECTIVE.

THE memory of a good mine, like that of a good man, is ever worth preserving. "Twenty years after" Mr. George Hopkins, like a modern Dumas, tells the story of the past triumphs of the Richmond Mine, the profits it has earned, the dividends it has paid and the good generally it has done to all connected with it, except the unfortunate few, like Mr. Hart, who bought not wisely but too well. The tale may not have possessed that deep interest and personal significance for many of those who have recently become shareholders that it did for shareholders, of whom Mr. Hurst may be considered typical, but we may tell them that there was a time when the shares, which probably they have recently acquired round about a pound, could not have been had at less than 18l., and when the mine was so valuable that not only was there a good deal of law going on about it in America, but there were squabbles here in which unavailing but expensive attempts were made to upset the management, which can hardly have passed from the memory of most of the shareholders, and certainly has not done so from that of the Richmond patriarch, Mr. Hurst. Before Richmond became the success it was, it passed through a furnace of trial almost as hot as is its own when the quantity of ore on hand justifies the lighting up. Purified as by fire, Richmond, by sundry painful stages, finally stepped on to the path that led to success. How this came about was omitted from the later version of "Twenty years after," as told by Mr. Hopkins, but we may supply the deficiency. When the company was in its most critical state, there one day walked into the office Mr. Edward Probert, who began to talk over with the directors the general position, and to indicate the means by which he thought the mine might be saved. His suggestions we may be sure were not in the direction of cutting down the fees of the directors, reducing the wages of the staff, and circumscribing the emoluments of the charwoman, but they went direct to the mine itself, when suddenly there came from one of the board the suggestion that Mr. Probert himself should go out and see what he could do on the spot. Upon this request Mr. Probert acted, and in a very short time the whole aspect of affairs became changed, and for several years onward Richmond began that career of prosperity which culminated in the extraction (for the most part) and purchase of bullion to the extent of 5,748,898l. sterling, of which the nett revenue has been about 20 per cent., whilst the other 80 per cent. has gone in expenses, improvements, and materials. To give the reader some idea of what this production means, it is really 83,183 tons of lead, 460 tons of silver, and over 15 tons of gold. The dividends have amounted to 871,968l., or a payment back to the shareholders of their original capital more than three times over. The average dividends during the last 20 years have been 16 per cent. per annum, and the extent to which the district of Eureka has benefited all this time is shown by the payments made to the extent of 4,400l. per week. As Mr. Hopkins said, these brilliant results are largely due to the ability, energy and forethought of the managing director, Mr. Probert, and he truly added, "the mine record is one hard to beat."

Such has been the Richmond of the past. But what of the Richmond of the future? The patriarchal, Mr. Hurst, who participated in the earlier dividends, takes a somewhat gloomy view of the future. He admits that the past production has been extraordinary, but adds, "We cannot expect to see it repeated in the future." Why not? Is there any law in nature by which the history of a successful mine may not be repeated? We may tell Mr. Hurst there is not. Again and again in cases that might be cited, the second period of a mine's prosperity has been its best. The Hon. Randolph Stewart, one of the

directors, knows this, for he has observed invariably that there is a turn in the fortunes of Richmond at the very hour when those fortunes seem to be darkest, and why should not one of these turns be as good as what has gone before? There appears to be an improvement in them now. Without laying more emphasis upon the latest reports from Eureka than they should bear the outlook for the moment is distinctly encouraging. Mr. Probert always writes carefully and within the mark. The appearances in the rise from the 300 to the 200 level may disappoint expectations, but it is quite possible that they may lead to something of value. At one time in the Richmond Mine, as Mr. Hopkins reminded the meeting, an ore body was discovered from which there was an enormous extraction of metal, but this had been only missed three years before by about 4 ft. He would be a bold man who would say definitely that the Richmond Mine is played out. Even if it were, the company has the Williamsburg Mine, which at the first start paid its purchase price from the dump heap, and the indications there also are, at present, far from unfavourable. In the meantime, the shareholders have received a small dividend, which even on the present price of shares is equal to 6 per cent., and vigorous exploratory operations are going on in various directions, from which, according to the latest advices, there is every reason to suppose that future discoveries will be made.

COPPER STATISTICS.

ALTHOUGH the corrected copper statistics for July, which were issued on Thursday, are not so satisfactory as those to which we have had to refer for some months past, they are decidedly less unsatisfactory than those which were published at the close of last week. The revised edition shows that the total supplies in England and France during the month amounted to 9,075 tons, a falling off of nearly 2,000 tons, as compared with the figures for June; while the deliveries were 8,618 tons only, or nearly 3,300 tons below those of the preceding month. The nett result is an addition of 457 tons to the visible stocks, which are set down at 57,782 tons, in contrast with 57,325 tons. The diminution in the supplies arises mainly from the smaller receipts from Spain and Portugal and "other countries," North America having sent us the unusually large amount of 3,938 tons, an amount in excess of any month's exports for at last three years past. But those who are interested in the copper trade are not likely to be dissatisfied with the smallness of the total supplies; they are more concerned with the falling off in the demand. To some extent this latter circumstance is traceable to the general depression; but it is partially due to an impression among consumers that if they buy only from hand to mouth for a time, they will bring the price of the metal down still further. They may do so temporarily; but with the extension of electric lighting and with the demand which is likely to follow the announcement that the *phylloxera* has appeared in the champagne vineyards, there is no room to doubt that the consumption of copper will tend to increase considerably in the near future.

AFFAIRS IN SOUTH AFRICA.

[From our Own Correspondent.]

Kimberley, July 13, 1891.

ATTEMPT TO BLOW UP THE DE BEERS CO.'S OFFICES.

YOUR readers will have gathered from several of my recent letters that there has been a deal of unrest on the diamond fields during the past six months. As a rule this community has ever been the most law-abiding and peaceful of any community in South Africa, and although the outrage I am about to describe has created feelings of intense indignation amongst the majority of the inhabitants, it is useless to disguise the fact that there is an element of maliciousness amongst us, which has resulted in a diabolical attack on the premises of the De Beers Co. These premises are situated at the corner of Stockdale and Market Streets, and are substantially built of brick. On Thursday night a loud explosion alarmed the inhabitants, being heard over a greater part of the town, and on proceeding to the spot it was found that an attempt had been made to blow up the structure by placing a charge of dynamite on the doorstep in Old Main Street, the result being that a part of the corner of the building was considerably shaken, all the windows on the ground floor in that street smashed, part of the iron verandah blown away, and the large general clerk's room a perfect wreck. The night watchman on duty inside was thrown down by the explosion, but speedily recovered, and opened the hall door to admit the police, resident directors and officials, who at once made an investigation, and found the strong room intact, and that the only damage done was that which I have described. It certainly seems strange that the perpetrators should have chosen the early hour of half-past ten for the deed, a time when the principal hotels and bars were still open, and when a number of people were about, the offices being situated in the very centre of the town. The local directors have offered a reward of 500*l.* for the bringing to justice of the offenders, but up to the present not the slightest clue has been obtained.

MINERAL RESOURCES.

I have had frequent occasions for some time past to call the attention of your readers to the vast undeveloped mineral resources of this part of South Africa, and in order to substantiate all that I have said I will quote the following from an article in one of the

local papers:—"Some time ago we alluded to this undeveloped and but little prospected portion of the African Continent, and pointed out that a grand field was open for energetic prospectors with moderate capital. It is a great wonder to our mind that diamond drills of small size have not been brought into use in assisting in the prospecting of supposed mineral farms; the rapidity with which they bore, and the ore brought up, would prove conclusively the formation of the strata below the surface. The fact of the Wesselton Mine being discovered and proved payable so close to the well known mines of Dutoitspan and Bultfontein, after many years of futile search and impotent fossicking, should be an incentive to others to proceed persistently and energetically in the work of discovery. Without doubt, between the Vaal and Orange Rivers there is an immense belt of diamondiferous ground; the continuity may be broken here and there—what formations are not? Jagersfontein and Koffyfontein are instances that the whole wealth of the diamond deposits is not located in the Kimberley districts. With reference to other minerals, we have recently heard of coal prospects within a reasonable distance of Kimberley, iron in an almost pure state, and in abundant quantities, and copper and galena indications in many parts of Griqualand West and the Free State. There are plenty of opportunities of opening up good, payable industries in connection with the baser metals and commercial products, but we appear to want men of capital who would enter into these business enterprises." The fact is, that is just where we are wanting. We have untold wealth lying at our feet in all directions, but we have neither men of capital nor men of enterprise to bring them to light.

THE WESSELTON MINE.

In my last I gave you an account of the litigation going on in the Supreme Court regarding the Wesselton Mine, and now I have to add that within the last two or three days another matter has cropped up which has set people a-wondering. Mr. Ward, who has for some time past allowed certain individuals to prospect on certain terms, has given them notice to quit, and from to-day Major Wollaston is to be supplied with three large steam gears, and to employ a number of hands to prospect and define the actual limits of the mine. As this will undoubtedly give employment to a number of white men at present standing idle, it is looked upon as a step in the right direction, but from another point of view the community do not look upon it in a favourable light at all. As Major Wollaston is, and has for some time been an officer in the service of the De Beers Co., it is considered now as an absolute certainty that as soon as the present litigation is ended, no matter who is the winning party, the De Beers Co. will step in and claim the whole of this valuable mine.

LEAD.

THE regret we have often experienced at the gradual decay of metallic mining in this country is not relieved by a consideration of the figures we shall now proceed to lay before our readers with respect to the production of lead in the United Kingdom. At one time this production was extremely large, particularly in Wales, but now the record is discouraging to a degree. The production of this metal generally has been declining year after year. To go no farther back than 1889, it was then 48,465 tons of the value of 429,647*l.*, whereas last year it fell to 45,651 tons of the value of 406,164*l.* The production in England in 1890 was 25,159 tons of the value of 197,247*l.* In Wales it was 10,455*l.* of the value of 100,112*l.*, and in Scotland 3,889 tons of the value of 31,112*l.* The Isle of Man produced 6,141 tons of the value of 77,632*l.*, and we may remark that the total value of the mineral products of the Isle of Man is 101,159*l.* Ireland brings up the very decided rear with the production of only 7 tons of the value of 41*l.* The largest production has been in the county of Durham, 9,781 tons of the value at the mines of 81,442*l.*, whilst Flintshire comes next with 5,222 tons of the value of 48,419*l.* Derbyshire follows with 4,026 tons of the value of 30,195*l.* The value of the lead obtainable in 1890 according to the mean monthly prices of common pig lead in the London market for the year was 449,826*l.*, and of the silver obtainable therefrom, 58,040*l.* Cardiganshire used to be a famous lead producer, but now the production has fallen to 1,666 tons of which the largest output was made (395 tons) from Lisburne. Nearly all the production of Denbighshire is from Minera—1,392 tons out of 1,416 tons. Of the Durham production, the Teesdale mines yield 2,940 tons, and the Weardale mines, 4,770 tons. The greater part of the production of Flintshire came from the Halkyn Mines, 3,588 tons out of 5,222 tons. There are only two mines working in Montgomeryshire, of which the most important is Van with a production of 450 tons and Blaen Twymyn 167 tons. In Shropshire, Roman Gravels has fallen to the low level of 874 tons, but its neighbour, Snailbeach, produced 100 tons. Most of the lead ore of the Isle of Man was produced by the Foxdale Mines—4,160 tons, against Laxey's 1,430 tons. The major part of the output in Scotland has been from Leadhills—2,026 tons, but the Queenbury Mine produced 1,863 tons. The average price for common pig lead during 1890 was 13*l.* 7*s.* 10*d.*, an increase of 7*s.* per ton on the prices of the previous year. The exports of pig lead were 34,701 tons, as compared with 28,422 tons in the previous year. Cornwall does not now appear in the lead-producing statistics. All these figures seem to indicate the decline of what was once a fairly

important home industry, and one cannot look upon them without feelings of regret.

THE MONEY MARKET.

CITY, FRIDAY EVENING.

WITH a calmer feeling regarding credit, the absence of any pressure in the demand for gold, and the superabundance of capital offering for practically nothing for short dates, the discount market has weakened, and the rate is now not better than $1\frac{1}{2}$ per cent. for full three months' bills, and $1\frac{1}{4}$ per cent. for those of two months' date. The week, which has included the Bank Holiday and Consol settlement, has been featureless, apart from the success attending the issue of the new Manchester Corporation Three per Cent. Loan for 1,500,000*l.*, which was tendered for to the extent of 2,700,000*l.*, and was allotted at an average price of a fraction over 96, or 2 per cent. above the minimum, and the scrip is now quoted $2\frac{1}{2}$ $\frac{1}{2}$ pm. The loan was considered cheap, and its success is re-assuring, showing no lack of confidence when a sound security is offered. The Bank return, with an influx of over 400,000*l.* in gold from abroad, shows a decrease of 64,000*l.* in the stock of bullion which, with an increased note circulation of 540,000*l.*, has resulted in a reduction of 605,000*l.* in the reserve to 16,807,000*l.* against 11,427,000*l.* last year. The liabilities, however, under deposits have decreased 1,600,000*l.*, so that the proportion of reserve has been rather more than maintained at 43 per cent. Both the Government and private securities have decreased, 500,000*l.* and 436,000*l.* respectively.

Virtually the Stock and Share Markets are better than they appeared last week, and while any recovery is in part due to an improved feeling on the Continental bourses, the upward movement has been fostered by the holiday character of all markets combined with a cessation of liquidations, and last, but not least, a successful issue of the Manchester Corporation Loan. Moreover, an European Commission has been spoken of to elucidate the Argentine chaos, and a scheme propounded for renovating the Uruguayan debt, but we are bound to add that no confirmation has followed these statements, and in the place thereof we have such facts as an extended moratorium in Monte Video and a proposal from Buenos Ayres to increase their paper money by \$50,000,000 in order to found a new national bank. We have all along, however, understood that the whole trouble was precipitated by a too free use of the printing press. A feature of some importance is the weakness of Union Pacific shares, which have fallen about \$5, because of fears that Jay Gould, who is credited with holding a preponderating portion of the Funding Debt, may beg to get the latter paid off, assess the unfortunate stockholders \$10, or, as an alternative, throw the road into bankruptcy, *i.e.*, the hands of a receiver. United States Railways throughout have been inanimate and dull, or exactly as Wall Street makes them. Mexican (Vera Cruz) securities were tolerably steady on purchases to cover, and Argentine Railways have accompanied the National Bonds and Cédulas in advancing. Uruguayan Loans fell 4 per cent. and 5 per cent. one day, and nearly recovered the next. Internationals are generally stronger, and Suez Canal rose 2 or 3 per cent. Consols and Indian Stocks are stronger, likewise most English Railways, although the unseasonable weather, and not very good traffics, are only partly counterbalanced by the Great Western and North-Western dividends. However, there is a fair volume of speculation and investment business actuating this department. Banks are flatter, as the monthly balance-sheets only show, as a rule, from 10 to 15 per cent. of gold held against their public liabilities, and Miscellaneous, including Trusts, Iron and Tramway, or Omnibus properties, have also reacted.

Discount to-day has been unaltered at $1\frac{1}{2}$ per cent. for three months' bills, but advances from day to day, and for short periods, were more offering than wanted at nominally $\frac{1}{2}$ per cent. In the bullion market gold continues in request for Germany, and there is some inquiry for India and the River Plate. Sovereigns to the number of 20,000 were taken from the Bank to-day for Germany, but 55,000*l.* were received from Oporto. Silver was unaltered, bars being 45*sd.*, and Rupee Paper proved steadier.

The markets opened firm this morning, but soon fell away in the absence of business, and finally closed at about their lowest point touched. Consols, after reaching 96*½*, reacted to 96 or yesterday's level. Foreign Government Bonds have presented an irregular appearance, with exceptional flatness in Spanish and Argentine Securities, the former left off $\frac{3}{4}$ lower, and the Sterling Bonds of the latter as much as 2 per cent. Egyptian also closed heavy, but German, Greek and Russian recovered. Home Railways also presented an undecided appearance, the Scotch and passenger lines reacting, while the heavy lines were much stronger, Great Western rising $1\frac{1}{4}$ to 162*½*. American Railroad Securities, after showing a considerable advance, drooped, and finally closed with an average gain of $\frac{1}{2}$. Canada Pacific shares were exceptionally $1\frac{1}{4}$ higher, at 83*½*xd, and Norfolk Preferred 1, at 48*½*. Grand Trunk Stocks also advanced, but Mexican were more erratic. South American Railway Stocks fell 2, to 5 per cent., and Miscellaneous Securities participated in the general depression, but to a slighter extent than in the more important departments.

Annexed are the final quotations to-day:—Consols Account, 95*½*, 96*½*; Egyptian Preference, 91*½*, 91*½*; Egyptian Unified 96*½*, 96*½*; French Four-and-a-Half per Cents, 104*½*, 105*½*; Hungarian, 88*½*, 89*½*; Italian, 89*½*, 89*½*; Mexican, 83*½*, 83*½*; Peru Five per Cents, 7*½*, 8*½* per cent.; Peru Preference, 19*½*, 20*½* per cent.; Russian 1889, 96*½*, 97*½*; Portuguese, 38*½*, 39*½*; Spanish, 70*½*, 70*½*; Turkish 1871, 95, 95*½*; Turkish Defence, 92*½*, 93*½*; Caledonian, 115, 115*½*; Great Eastern, 89*½*, 89*½*; Great Western, 162*½*, 162*½*; Brighton "A," 146*½*, 147*½*; North Western, 174*½*, 174*½*; Metropolitan, 81*½*, 82*½*xd; Metropolitan District, 28*½*, 29*½*; Midland, 155*½*, 155*½*; North British, 40*½*, 41; North Eastern, 158*½*, 158*½*; South Eastern "A," 81*½*, 81*½*; Mexican Railway Ordinary, 38*½*, 39*½*; Nitrate Railway, 12, 12*½*; Grand Trunk, 9*½*, 9*½*; Grand Trunk First Preference, 64*½*, 64*½*; Grand Trunk Second, 43*½*, 43*½*; Grand Trunk Third, 23*½*, 23*½*; Canadian Pacific, 83*½*, 83*½*xd; Denver, 14*½*, 14*½*; Erie, 18*½*, 18*½*; Milwaukee 64*½*, 65*½*; Lake Shore, 111*½*, 111*½*; Louisville,

71*½*, 71*½*; Atlantic First, 30, 30*½*; Ontario, 15*½*, 15*½*; Ohio, 17*½*, 18*½*; Norfolk and Western, 48*½*, 48*½*; Reading, 13*½*, 13*½*; Reading Bonds, 77, 78; Union Pacific, 38*½*, 38*½*; Wabash Preference, 22*½*, 23; Ottoman Bank, 12, 12*½*; Anglo-Telegraph, 43*½*, 44xd; National Telephone, 4*½*, 4*½*; Hudson's Bay, 14*½*, 14*½*xd; Suez Canal, 111*½*, 111*½*; Guinness, 328, 331; Allsopp's Ordinary, 20, 22; Bryant and May, 13*½*, 14xd; Eastmans, 6*½*; Elmore's Copper, &c., 3*½*, 3*½*.

CORRESPONDENCE.

We do not hold ourselves responsible for the Opinions or Statements of our Correspondents.]

To the Editor of the MINING WORLD AND ENGINEERING RECORD.

PALMAREJO.

SIR,—I have been referring to the original prospectus of Palmarejo, and what has struck me most forcibly is that none of the extraordinary expenditure to which the company has of late been put was so much as hinted at in that precious document. Had the public at the outset been told that in addition to the 400,000*l.* capital there would have been needed an independent company to build a railway, a mortgage of the whole affair to secure a mill and a water-course, with other expenses "too numerous to mention," I venture to think that the capital of Palmarejo would never have been subscribed. I do not attach blame to the present board more than to the board that preceded it. I think there should be blame apportioned all round, for the simple reason that the original directors did not foresee the true state of the case, and that the later ones have been misled, and misleading in every estimate of cost they have formed. I give every director the company has ever had credit for honesty of purpose and singleness of aim, but I give to not one of them the least credit for prescience, forethought, business ability or discernment. I think, from first to last we have had our affairs managed by well-meaning incompetents, and that what the company most needs now is to get really capable men to take the helm. Where they are to be found I do not know. The present chairman treats the whole matter in a jaunty way and with a vein of humour that is extremely disagreeable to shareholders whose money is being dealt with and who, as you said last week, see continually fresh barriers put between them and dividends on their holdings.—I am, &c.

DISGUSTED ALL ROUND.

SIR,—I thank your correspondent last week for the information that Capt. Drake, now at the head of Palmarejo affairs on the spot, is the same Capt. Drake, who unceremoniously left the service of the Eberhardt Co. some three years ago. I may add now the further information, that this Capt. Drake had the charge of Eberhardt affairs for very many years—I think for 15 or 16—and I, as an old shareholder, vainly search my bank book to see any dividends that were produced from the mine under his management. I think Eberhardt has far better prospects now than it had when Capt. Drake was manager. An enormous sum was spent in driving the tunnel through Treasure Hill, and though, of course, I do not wish to imply that he did not do his best, I do assert that, so far as the shareholders were concerned, the result of that expenditure was *nil*. Subsequently there was a shuffle of the cards, brought about by the same set of people (to some extent) who are now interesting themselves a little too strongly in Palmarejo affairs, and the Monitor Mine was bought, with what results the records of the Eberhardt Co. only too plainly show. I will merely say that Capt. Drake's report upon which that property was largely bought, has been a regretful bargain for the shareholders, so regretful that they have turned again, wisely I think, to their first love, and are devoting the main part of their attention to the Eberhardt Mine, which they ought never to have left.

I am not a shareholder in Palmarejo, and therefore have, perhaps, no right to offer an opinion, but speaking as an outsider who is simply watching the game, I venture to say that I think no important change will be made for the better until the management at home and abroad is improved. When I hear that is done I shall be in the market for some shares, but until then I shall "sit on the style."—I am, &c.,

HISTORICUS.

SIR,—I note with pleasure (*vide* last circular) that Mr. Pigou is sick of his job as chairman, and so there is a chance that he may retire and make way for someone else, who may perhaps do better (they could hardly do worse). The present board came in with a great flourish of trumpets, and were to do wonders. It seems to me that they have accomplished considerably less than nothing.

Why do not the board call a meeting of all the shareholders to discuss matters? Surely, there has been enough mystery and secrecy about the affair. I do not agree with your correspondent, "Disappointed but not Hopeless," who thinks *one* new director upon the board would satisfy the requirements of the case. I think a clean sweep of the lot *might* be the salvation of the company. The amiable nonentities who have swayed our destinies for the last three years have been tried and found wanting to a lamentable extent. They have failed as miners, as business men, and as financiers, but most of all have they failed in *candour*, and the pursuance of a straightforward policy towards the shareholders whom I consider they grossly misrepresent. There are one or two names I would like to suggest for seats upon the board, which must inevitably be re-constituted—1. Mr. Sueton D. Grant; 2. Mr. Thomas A. Bennett; 3. Mr. J. Stewart Wallace; 4. Mr. Stewart Pixley; 5. Mr. T. J. Bewick; 6. Mr. John Darlington.

I believe that the appointment of any or all of the foregoing would receive the approval and merit the confidence of the great mass of the shareholders. Mr. Pigou says his board is merely an administrative one. The bulk of the shareholders, I think, would like to see both an administrative and executive directorate.

Nothing short of an extraordinary general meeting will satisfy the shareholders; and when this meeting is called, as called it must be, I suggest that the notice convening the meeting be sufficiently comprehensive to admit of an adequate discussion of the company's

affairs. We want no artful legal quibbles raised at the last moment, and be told that this, that, and the other is out of order. Let us have the affairs of the company properly ventilated once for all.—I am, &c.,

LUX.

A GOOD WORD FOR VICTORY MINE.

SIR,—One of your correspondents states that Victory is a corpse which cannot be resuscitated.

Mysore were deemed a corpse at the time 100 shares were purchasable for a 10% note. Gustons were so considered when 200 shares were obtainable for a 5% note. Nundydroogs and Ooregunis were thus entitled not so long ago. Goldfields of Mysore were believed to be dead as recently as last autumn; and Australian Broken Hills appeared to be practically defunct at about the same period. I have good reason to know something about these mines, but there are probably others, which do not for the moment occur to me, that have had similar experiences. There is certainly a large variety of apparent corpses in the mining market at the present time. Some may very likely be doomed to decompose, but some will revive. Which fate may be in store for Victory I do not presume to know, but still less do I know on what evidence your same correspondent bases his belief that there is no gold in its lodes. Until the mine has had a fair trial, and its lodes have been developed, no one can know what its prospects are.

All Venezuelan mines are at present in a comatose state, but they are by no means dead, *vide* the returns from Callao Bis, the re-constructions of Potosi, Venezuelan Austin, and the symptoms of revival in Yuruari, now under the management of Messrs. Taylor. The same firm might be able to resuscitate Victory, provided, of course, that the sparks of life in it are not extinguished by its own shareholders sitting on it.

The Board of Trade cannot resuscitate either Victory or any other so called corpse. As well expect a highly respectable old dame to revive a prostrate bull. If shareholders allow an unfortunate personal animosity, which appears to prevail among some members of the company, to play havoc with their interests, it will not be the fault of the mine, but of the shareholders themselves, if it expires. Messrs. Taylor would certainly not undertake the management of any mine under an incompetent board. The very fact of Messrs. Taylor accepting the management (if they would do so) would be an assurance that the board would also have to be a competent one. We cannot have competent directors and managers without remunerating them fairly for their labours. A merchant (and I am one of 20 years' standing) might as well expect his clerks to work for nothing for him during periods of depression and loss in trade.

Your correspondent "A. B." has made a practical suggestion, which no one can deny would give a fair chance to the mine and to the general body of shareholders. As one of them, I hope it will receive consideration in quarters which can give effect to it.

A significant fact about Victory is that the combatants themselves appear to be genuine believers in the intrinsic value of the mine, and their present action is evidently not induced by want of faith in the existence of gold in its lodes.

I shall not venture to trespass again on your valuable space in reference to any of these matters, and thanking you for your courtesy in having allowed my remarks to receive a hearing,—I am, &c.,

"A CONTENTED SHAREHOLDER IN 16 MINES."

Aug. 4, 1891.

INDUSTRIAL ESTABLISHMENTS AND FREE TRADE.

SIR,—“Darkest before dawn,” may be said of the prospects of many fiscal reforms which have advanced the welfare of nations and mankind.

Humanity is yet so selfish as often to be blind to its true interests, and to learn wisdom only by dearly-bought experiences. The Americans are paying very dearly for theirs in the advanced prices under the M'Kinley tariff régime.

The United States, Germany, France, Greece, Portugal, Spain, Italy, Austria, and the Argentine have not been able to improve their financial positions through an increase of customs tariffs. They do not appear to be increasing in wealth through the restrictions and fines they impose upon its production and the exchange of one form of wealth which they can spare for other forms of wealth which they require, but are beginning to wonder why they have not got richer by taxing themselves.

English manufacturers and merchants will have nothing to fear from the newly-imposed M'Kinley and other tariffs, if they are freed from threatened burdens at home. If they can now be enabled to manufacture goods only a little cheaper they will be in a position to reduce their prices, so as to sell as many and more goods in highly protected countries than before. *This cannot be done by lower wages or longer hours of labour, for neither tend to excellence or cheapness of products.* They don't want bounties or subsidies like the Germans and the French, and would not get them if they did. There is, however, *one source from which most practical and just aid to the industries of Great Britain might come, and that is by the removal of taxation from machinery and factories.* The cost of producing goods would be so considerably lessened if this were done that the foreign or export trade of the country would be immediately increased. Home consumers would get the benefit in the lower prices of home manufactured goods, while owners of property would be benefited by the increased demand, tradesmen by increased sales of goods, and the labouring classes by having more work.

The present proud position of England as the greatest of all commercial, banking, and maritime nations has arisen through the removal of the restraints of taxation upon her manufacturers one by one till but few remain. If now the *remaining burden upon her industries be removed*, England will take a grander leap forward than ever before, and astonish the world with her prosperity.

While other nations are binding their hands and feet with protective tariffs, which increase cost of production, and shut them out from competing with us in other countries, now is the time for England to free her industries and commerce from all such burdens, and thus to completely and quickly win the race for a commercial supremacy from which other countries will not be able to dislodge her when they awake and realise their lost opportunities.

The grey dawn of the American awakening has already appeared in the West with the triumph of those who call themselves tariff

reformers. The free trade wave is rising higher every day, and promises to sweep the customs houses away in a few years.

England will then have to compete with a nation of the most energetic manufacturers in the world, whose industries are much lighter taxed than those of Great Britain, and who, in very many cases, are entirely free from taxation on machinery and plant.

It is a common custom of municipalities and villages in America to offer great inducements to English manufacturers to settle among them on account of the increased business and prosperity which they bring to the trade of the places where they are located. It is very common for them to promise exemption from taxation on their factories and plant, or buildings. Similar policy is adopted in Austria and other countries, and in some cases land is given free of rent.

If England wishes to give an enormous impetus to her manufactures and commerce, and to create a greater demand for labour and better condition of workmen than ever before, *let her require local authorities to exempt from rates or taxes all machinery and buildings used by manufacturers.*

Any localities offering such inducements to manufacturers would soon become the busiest and most prosperous in the kingdom. The cost of production would be decreased by the amount of the tax taken off industry. English manufactured goods would then be cheaper to her people at home, and could be sold so cheaply abroad as to defy the competition of foreign protected manufacturers.

No member of Parliament can do a better thing for the prosperity of the country generally than to support the Bill exempting machinery from taxation, and to insist that the Government no longer permits an interested minority to obstruct its progress Session after Session to the great prejudice of all interested in the prosperity of the country.—I am, &c.,

S. M. BURROUGHS
(Burroughs, Wellcome and Co.).

Snow Hill Buildings,
Aug. 4, 1891.

THE GLENROCK CO., LIMITED.

SPECIAL REPORT ON THE PREMIER MINE.

THE directors communicate the accompanying paragraphs from a report received last mail from Mr. L. O. Beal, jun., C.E., M.E., who has been appointed consulting engineer to the Premier Consolidated Gold Co., Limited. Mr. Beal has forwarded a detailed report, accompanied by plans showing the development of mine workings by the Premier Consolidated Gold Co., Limited, and same can be inspected at the company's office. The directors are glad to note Mr. Beal appears to be so well satisfied with the work done, and the hopeful manner in which he speaks of the future for the mine.

MR. BEAL'S REPORT.

I have recently inspected the Premier Mine, and made the necessary surveys of all works done to date of inspection, also fixed the position of new reef outcrops discovered. I find all the contracts are being carried out with all possible speed; the men are working as I specified night and day, so as to open up the mine as quickly as possible, and bring in returns for the capital being invested. The contract prices for this work are very reasonable—in fact, on the low side, by the present average prices in the district. In connection with the driving of the new adit level, I proposed when reporting upon the property, this has been driven 190 ft. in, and the No. 4 reef has just been cut. When this new main adit is put in, the good stone left under foot will pay very well indeed, and I am glad advising you not to commence stoping it out till this very necessary work was completed, as otherwise, the many handlings from the old adit would have eaten up most of the profits. The old adit has been done up and re-timbered, making it a lasting and substantial job, and has been extended a distance of 561 ft. A new shoot of stone was struck after a rise was put up, as I looked for one about there, the same shoot being struck further on as the level was extended. Although this shoot was not large the quality of the stone was very good—about 1 oz., or the average of the Premier Mine; it was not wide, but will, I think, be found much stronger or wider under foot, there being a distance of about 175 ft. below this adit to the proposed new one. The main shaft has been re-timbered and trimmed up, and improved and sunk almost deep enough to commence driving the new low level adit from. It will be necessary to drive in from the bottom of this shaft a distance of about 200 ft., to pick up the old rich shoot of stone that formed the mainstay of the mine in its early career. When the low level adit is put in the good stone left under foot will be able to be risen upon and stoped out in a cheap and profitable manner, as very little handling will be necessary. In conclusion I have to state that everything is being pushed ahead by the battery and mine managers, and the various prices paid to the various contractors are extremely reasonable, as you will find by comparing them with prices of work let in the district, and are under what I expected. I have made my recommendations herein upon the works, and look for good returns as soon as the mine has been opened up upon a cheap and systematic scale. Mr. Farrell cables under date Aug. 4, from Dunedin by code, which we interpret as follows: “The new find in upper level is improving in value. Shall be able to crush Sept. 22.”

CALLINGTON UNITED MINES.

INTERSECTION OF THE SOUTH TIN LODE.

WRITING on Aug. 5 Capt. H. Bennett, the manager, says:—We have intersected the south tin lode in the 125-fm. level cross-cut south of Johnson's lode. The lode is from 5 to 6 ft. wide, composed of tin capel and peach, and as far as opened upon it is worth 10% per fm. We are now driving east, in order to get under the extensive ancient workings that were worked as deep as the ancient miners could get down for the water. This lode will form a junction with Johnson's lode about 30 fms. below the 125-fm. level, the present bottom of the mine. In driving the 125 cross-cut south of Johnson's lode, for the last 9 fms. of driving, we intersected numerous branches of rich copper, tin and arsenic, varying in size from 1 to 6 ins. wide, and all these branches will fall into the lode before the junction of the two lodes is reached. We are making preparations to immediately sink the engine shaft with a view of reaching the junction of the lode.

REPORTS OF MEETINGS.

BUENOS AYRES AND PACIFIC RAILWAY CO., LIMITED.

A YEAR OF ANXIETY TO THE BOARD, AND A CALL TO THE SHAREHOLDERS TO PAY THE COMPANY'S DEBTS AND PLACE THE PROPERTY ON A SOUND BASIS—VIEWS OF MR. LEE AS A MEMBER OF THE NEW BOARD—ALL AGREE AS TO THE PRESENT AND PROSPECTIVE VALUE OF THE ENTERPRISE.

THE ordinary general meeting was held at Winchester House, on Thursday, the 6th inst., "for the purpose of receiving the directors' report, and the statement of accounts, made up to Dec. 31, 1890, electing directors, appointing auditors and fixing their remuneration, and of transacting the ordinary business of the company."

Sir Gabriel Goldney, Bart.

(chairman of the company), presided.

Mr. F. O. SMITHERS (secretary) read the notice of meeting, and the report of the directors was taken as read.

ORIGIN OF THE COMPANY.

The CHAIRMAN: Gentlemen, in rising to move the adoption of the report, I shall take the opportunity to refer to the different paragraphs with which it deals. You will see by the report itself exactly the position of affairs both of the Argentine Government and the claims of the debenture-holders, and perhaps it may be as well that I should refer in some concise way to the formation of the company and to its actual position at the present time. The company was formed in 1882 for the purpose of taking over a concession for a railway from Mercedes to Villa Mercedes, and Messrs. Clark and Co. undertook the construction and equipment of the line, which was to occupy, by the contract, $4\frac{1}{2}$ years, and as the line was built it was to be handed over to us in sections, with the entire line given over to the company in the year 1886. It had been worked to a certain extent, as the sections had been opened, and in 1886 it was considered very desirable by parties, who advised us out there—the local board and others—that, if possible, we should obtain the extension of the line, from our station then in Mercedes, to Buenos Ayres, and further negotiation was made with the Messrs. Clark, as the result of which they transferred the concession to us which they had obtained from the Government for making the line to Buenos Ayres. That line was constructed by them, and was handed over to the company in 1888, from which period the line in both sections has been worked by this company as one complete system. In 1889 we had in the Argentine Republic one of those exceptionally

DISASTROUS AND VIOLENT FLOODS

that not only stopped the traffic of the line for a period of 10 months, but caused a great expenditure for repairing it, raising it, and meeting the difficulties during that period. In consequence of that the Government made certain arrangements that we might, instead of handing over to them the profits after deducting the expenses, retain them for the purpose of meeting the exigencies thus caused, but this really did not by a considerable sum meet what was required. Having started with a very small working capital (which I complained of at the very initiation of the company), it necessitated our obtaining temporary advances, for the purpose of carrying on the works as well as meeting the requirements of the Government, and in consequence of their warnings, that unless the line was carried on to the satisfaction of traders and customers, the Government would probably have to intervene. That is how it has come about that there is this debt mentioned in the report, which has been incurred for the purpose of providing stores, sidings, and completing the repairs of the line. Now, the principal matter we want to impress upon the shareholders is

HOW THAT DEBT OF SOME 150,000L. IS TO BE MET,

and some additional working capital (which has been put at about 50,000L.) provided for the purpose of carrying on the line. All the reports we get from our general manager, and those that are set out in this report before you, show a considerable and steady increase of traffic, and that it merely wants a full fair development of the line itself, I believe, to make it within a very reasonable distance of time self-supporting, and prove to the shareholders, and those who have invested their money in it, that it is a grand undertaking, which will rank amongst the foremost lines in the Argentine Republic. The railways in the Argentine are limited in comparison with other great States that have risen from small beginnings to a great reputation like those of North America at the present time. The position, as we have said in the report, of our financial arrangements in the Argentine Republic has caused considerable anxiety to your directors. As you all know, under Lord Rothschild's committee's recommendation, the Argentine Government have, instead of paying, as they have hitherto done, the interest under their guarantee in gold, sent over a certain number of bonds bearing interest at 6 per cent., which they hoped would have commanded par in the European markets at the time of issue. That is not the case at the present time, and the debenture-holders have put forward a claim to be paid as mortgagees of the company before the shareholders receive their portion of what this guarantee might come to—the guarantees being distinctly and definitely pledged by the security they hold. Well, after two meetings of the

DEBENTURE-HOLDERS, COMMITTEES WERE APPOINTED FROM BOTH CLASSES,

and those committees met for a considerable space of time with a view of seeing how far it was possible for them on the one side to assert their claims, and on the other to give fair consideration to all parties interested in this undertaking, and they have sent

us a copy of a resolution, which is printed in the report, of what their views as representing the debenture-holders are. I may say here that the committee of the debenture-holders do not in their resolution intend to pledge the bondholders to the course proposed, but to state what their recommendation would be to them if the shareholders would (say within a month of the meeting) carry out their suggestions by advancing, or finding the necessary funds, to meet the floating debt and carry on the lines. In that sense their resolution must be taken, and in that sense only. I put that before you in that sense very distinctly. The resolution that they have sent to the directors we (the directors) simply put before you. We have also put before you the increased traffic receipts, which average in 1891, 20 per cent. more than they did in 1890, and three times as much as they were in 1889, though in 1889 we had the floods. Those increasing receipts in the present state of the country, with the almost suspension of the commercial affairs, which the newspapers reveal, prove to you the grand soundness of the line and the expectations we may fairly form when the country gets back to its normal state, and therefore I think it is a very

FAIR PROPOSITION FOR THE COMMITTEE TO PUT FORWARD.

We do not pledge you to anything definite in this meeting, but after it is over it will probably be our duty to communicate further with you. The proposition they make releases a large proportion of the funded bonds (about 70,000L. per annum) for a period of three years, and we think the proposition well worthy of consideration. At all events, it is a question that has to be grappled with and dealt with, and I think you may safely leave the interests of the shareholders in the hands of the directors in any recommendation they make to you. With reference to that, I may state that since our last meeting, as you will see by the report, a very

CONSIDERABLE CHANGE HAS OCCURRED IN THE BOARD.

Mr. Moses and Mr. Rodger, two of the directors, have retired, and in their places Mr. Clarke, whom everyone interested in the Argentine Republic knows by reputation as well as by name, and Mr. Ross Pinsent, have been elected in their stead, and it having been felt that it still might be necessary to have some further change in the board with the view of meeting the crisis in the company's affairs, Mr. Stride and Mr. Mosley very readily placed their resignation in the hands of their colleagues, in order that the board might be strengthened with a view of meeting financial difficulties; and in the places of those gentlemen we have elected Mr. Gaskell and Mr. J. C. F. Lee, both of whom are well acquainted and interested in Argentine matters, and Mr. Lee especially in the affairs of this company. (Hear, hear.) I think I must say, in common fairness to the two latter gentlemen who retired, and, indeed, to all, that their resignations were offered entirely to further the interests of the company. The resignations of Mr. Stride and Mr. Mosley came when the consultations were going on with a committee of bondholders, and I give them my individual thanks for doing so readily what they considered best for the interests of the company at the sacrifice of any personal feeling and claims they might otherwise have urged. For a long time this affair has demanded a very considerable amount of the leisure, and more than the leisure of the directors, but they have done all they could to meet the necessities of the line by aiding in the financial and other arrangements. I think that if the shareholders are prepared to respond in the way indicated by the report, that is by making advances in the direction of the wishes of the debenture-holders, there is an ample interest bearing fund to meet all obligations and requirements, and I think it will be fairly and readily conceded that by adopting that course they are taking the best one for preserving their interests intact in this great undertaking. I now simply move the adoption of the report, and shall be ready to answer any questions that gentlemen present may wish to put. (Cheers.)

Mr. EDWARD NORMAN (director): I second the motion.

DISCUSSION.

Mr. HODGKINSON: I do not see in these accounts the expenses of the management in London. I do not wish to criticise the accounts in any way, but it appears to me that these expenses ought to be put down in the accounts. The directors receive 3,000L. a year for their services, according to the articles. I do not know whether they receive it all, but that sum represents a large amount of interest that might be payable on the preference stock. It is 4 per cent. on the interest which is not paid or earned. I do not wish to criticise the management in any way, especially as the board has been changed, and as we look forward in consequence to a more hopeful future; but I think the accounts should show in some form the expenses in London and abroad.

QUESTIONS AS TO THE DEBT.

Mr. BLUNDELL: I had hoped that somebody better qualified would have risen to put a few questions, which I think may with propriety be asked on the present occasion. My first question is with reference to paragraph 4, dealing with the funded debt. It is proposed to be met by "the issue at par of second mortgage debenture stock, or in any other form to which the proprietors may agree to subscribe." I take it that in the present depressed state of our securities it will be impossible to issue that second mortgage debenture stock at anything like par. Already 100,000L. is issued. I do not know what the price in the market may be, or whether there are any dealings in the stock, but I do not think that we can hope to obtain money except under a very heavy discount from that stock at present. I should like to ask whether we shall be able to issue that stock at all at a discount, and whether we have power to do it. That being out of the question, I should like to know what other form the directors would propose in the event of that not being available. I take it, in the second place, that the preference stock will go without any dividend for some considerable time, and I was very much struck on looking at the share lists to observe that the preference and debenture stocks stand at almost identically the same price. It appears to me that seeing the debenture stock is going to get a dividend and the preference stock not, it is curious that the market price should be so nearly the same. Of course, the board being an almost entirely new one, some time must elapse before they can master the position of the company. I take it we must wait as patiently as we can until we see what the events of the coming year will produce. It is very gratifying to find that the traffic of the line is improving, and that we may hope, at no long distance, to be paying our expenses, and perhaps doing something more.

The Rev. A. MATTHEY: The last gentleman has partly anticipated my observations, but I should like to ask a question about the preference stock. I am a holder of both classes, but, unfortunately, my interest in the preference stock is much larger than in the other, and, in fact, you can hardly call it a preference stock at all. I should be glad to have some assurance that we shall not be altogether left out in the cold, and that, although we may have to wait, our stock is not waste paper. Perhaps the chairman will give some information about it.

CAN A BETTER SUGGESTION BE MADE?

Mr. MARCUS VAN RAALTE: I am perfectly sure that the debenture committee, appointed provisionally to give their report, have done their utmost to arrive at an equitable settlement. You all know the difficulty that exists at the present moment to raise any money. There are very few shareholders to whom it might not be difficult to find money just now, and it would therefore be rather hard upon them if they were unduly pressed to do so for the want of other means being found for the time being to satisfy the debenture-holders. Now, I am sure, Mr. Chairman, that if the shareholders will leave to the board the task of seeing whether for the time being some satisfactory arrangement cannot be made they will be satisfied with the result, because I feel certain some such method can be found. You see we have to deal not only with the debenture-holders, but with the Argentine Government, and I think that if the directors would, after this meeting, take the matter into consideration of how to get out of the difficulties for the time being, they would earn the gratitude of both debenture and shareholders. I see an easy means of doing it without hurting the debenture-holders, and at the same time of improving the value of the shareholders' property to a considerable extent. The position at the present moment in the City of London is this, that anybody who asks for money for the Argentine Republic, or even to discount a bill, or to give a loan on security, has the greatest difficulty in doing his business. Therefore, under the circumstances, I think the debenture-holders will be very glad if you call another meeting, or issue a circular offering them such a security as will be ample in the future. We must not forget that we have to deal with

A LINE OF RAILWAY 430 MILES LONG,

that has a great future before it, as shown by its weekly traffic receipts of between \$50,000 and \$60,000, in spite of the present hard times. It is not always we shall have the gold premium at 300, but if we arrive at the position we were in two years ago, we shall be able to earn not only the interest on the debentures, but a great deal of the interest on the other stock as well. Everyone to whom I speak believes implicitly that the Argentine Republic has a great future before it. Now, if we can combine the interests of all classes and get the debenture-holders satisfied by arranging this matter without calling upon the shareholders for money, a great service will be done. I am very grateful to the debenture-holders' committee for the way they have acted, but I should be very glad indeed if, at some future time, the directors will take that committee again into conference with them and see if a proposition cannot be made which will be more satisfactory to all parties. Shareholders need not fear about the position of the line in the future. It is a good property. They are passing through a panic in the Argentine, which I hope before long will pass away, and that then we shall be able to congratulate ourselves on tangible proofs of the excellence of this property. (Cheers.)

Mr. ROBSON: Is the line now paying its way? Are the receipts sufficient to pay all the expenses in connection with the management?

VIEWS OF A NEW DIRECTOR.

Mr. J. C. F. LEE: The chairman has been good enough to ask me to reply to the various questions, and also to say a few words as one representing all the interests in this great undertaking. It rarely occurs that a shareholder and a debenture-holder finds himself in the same boat, but that is my position, and if it were possible to conceive an arbitrator in a very difficult and complicated case you could scarcely conceive one more prepared by interest, if that is to guide an arbitrator, than I myself am, for I hold in all the securities of this company—the 7 per cent. and Mercedes debentures and shares, and in addition many of my friends are large shareholders. I will just for one moment proceed to answer the questions, and then to turn to the larger subject which Mr. Van Raalte has mooted. The first question is a very common and a very ungrateful one, but often raised at these meetings—the subject of directors' fees. I want to know how you can expect a body of competent men such as you see around this table to-day, two railway experts in Argentine affairs, of great capacity and industry and of good-will, to devote themselves to this institution for nothing. It is unreasonable to expect it. (Cheers.) It is very well known in the City of London that I myself am not what is called a "guinea pig," for I have the misfortune of directing one or two affairs in connection with which I do not draw a fee. (Hear, hear.) Still, in the administration of an important railway like this—if you only knew the work and responsibility, you would not expect either to be incurred gratuitously. To pay an ordinary manager 3,000*l.* a year would be in no sense an excessive sum for dealing with a property so far away. I was surprised when I came to look into the affairs of this company, which I did at the courteous and cordial invitation of the directors, to find that

THEY HAD NOT TAKEN A SHILLING FOR 12 MONTHS.

I hope that will satisfy Mr. Hodgkinson's mind and answer his question. I am not going to say that we are not going to take any fees. I do not know how you can expect gentlemen to come and conduct your affairs and try to put them on the basis that has been suggested to-day and do it all for nothing, because, if you do, it might be as well for you to look about amongst the larger body of the shareholders and see if you can find in the number those who will do it upon such terms. They would soon find they had enough upon their hands. (Cheers.)

Mr. HODGKINSON: May I save time by interrupting. I did not for a moment express any criticism of the amount received or grudge it to the directors, but merely wished that it should be put down in the accounts—nothing more.

Mr. LEE (resuming): These accounts were audited before I joined the board. They were audited months back, and their presentation to a meeting was only delayed because of these negotiations with the

debenture-committee. I may say that before the debenture-committee were formed, it was proposed to hold this meeting and issue these reports, but the negotiations referred to have impeded their earlier presentation. I hope all the shareholders have understood that there was nothing withheld, and in fact, the date of the audit will certify the fact. Mr. Blundell has raised a point in connection with the preference shares, and if he will allow me I will include his observations in my general answer to Mr. Van Raalte's larger views with reference to the property as a whole. My reply will also include Mr. Matthey's question as to the preference shares. I take it that the shareholders do not want the debenture-holders to pay the company's debts. These are debts that have accumulated, as the chairman tells you, over a series of years, and owing to physical misfortunes. They had to be dealt with or your guarantee might have gone by the board. Now, do not forget that you have had that guarantee. It has been paid. You have had seven fat years in which the 7 per cent has been regularly paid, and it is not in the nature of any institution which is so growing and so progressive in its demands on capital as a railway to expect always to be getting 7 per cent. Your misfortune is that these debts have had to be met, or must be met, at a bad time for Argentine affairs, but surely

WE OUGHT TO SHOW SOMETHING OF THE COURAGE OF ENGLISHMEN

under difficulties, and try to grapple with this question. (Cheers.) It is of no use putting it off. The debt must be paid somehow. If you will not pay it yourselves, and if you ask somebody else to do it, you must expect that his terms will be hard at this season, and though Mr. Van Raalte has appealed for mercy, rather at the hands of the debenture-holders, I am on the debenture committee, and I am in no way disloyal to my colleagues on the committee in saying that I believe if the shareholders, as a body, will show their willingness and determination to adopt some line of policy, which will close this floating debt and put the company in a position to deal with the Argentine Government, and satisfy all its requirements finally, you will be met, as every honest debtor is by his creditor, with forbearance and with compromise. But if you are going to sit still and leave the board, unaided by shareholders, to grapple with this debt, then we must do so; but you cannot grumble if the persons who come to your assistance does so only upon hard terms. I may illustrate what that means. During one of the meetings of the debenture committee a proposal was put forward, I imagine by a financier. What do you suppose his terms were for paying your debt? He was prepared to take 400,000*l.* 5 per cent. bonds at 40*l.*, which would give you 160,000*l.* and simply double your debt at once. Would it not be better for you all to do it for yourselves? I have a list of shareholders here. There are from 800 to 900, and this floating debt would be roughly paid by a subscription of 200*l.* from each. What is that in the affairs of a great railway.

AN EXAMPLE TO BE FOLLOWED.

I remember some years ago talking to that great railway administrator, Sir James Allport, and asking him how it was he always got the capital he wanted. He said—"The fact is this, the same shareholders year after year have sat in the meetings in the same place, and they have grown grey with me in their connection with the railway, and stuck to the institution, and whenever we have wanted money they have found it." That is how the great Midland Railway has been built up, and you will have to do the same thing. What the terms are which will have to be made with the debenture-holders and creditors are as nothing compared with the fact that you must make some effort yourselves to pay your debt. Now, gentlemen, I should like that this report should be unanimously adopted by you, because, although it does not commit you to subscribing to-day, or to-morrow, or the next day, it does lay down distinctly the clear principle that you must do something. I cannot promise anything further from the debenture committee. They consider they have made a great sacrifice already in offering the terms proposed, of which Mr. Van Raalte does not seem to approve, but that is a question that might come up again for consideration, when we know what the shareholders are going to do. The chairman omitted to say something which I must do, and it is this—the debenture committee have made it an absolute condition that

SOMETHING MUST BE DONE WITHIN A MONTH.

I was going to suggest, as a compromise between the parties, that you should accept this report, and that the board should arrange to call you together again in a month, during which time you will have had time to digest the situation. I do not suppose, if I were to begin to advocate Argentine credit or Argentine future to-day, I should be looked upon as other than a false prophet, but do not forget that nature is at work in that vast territory, and that extravagant and improvident as the authorities may have been, the money they have had has not been spent for the purposes of war, or all wasted, but that a large amount of it has gone in public works, which must in time tell, and in this particular is telling, as you see by your increased traffic receipts. (Cheers.) Look how they have tried to meet you. Lord Rothschild's committee proposed the issue of this funding loan, and predicted it would stand at 100, and so it ought to.

ADVICE TO SHAREHOLDERS.

But why does it not? Because people have lost faith; but there are those who have faith, and who are picking up these bonds quietly in small amounts, and I say to you, do not let them have them, but keep them yourselves and stick to the company, and we shall get it out of all its troubles. Now will you agree with us to pass this report and these accounts, on the understanding that we shall, if found desirable, call you together again to ask this question? (Loud cheers.)

The CHAIRMAN: In answer to Mr. Robson I would say that the difficulty is in getting remittances over here with the present high premium. The accounts show the exact state of the working.

Mr. HODGKINSON: Is this the unanimous recommendation of both committees?

Mr. LEE: It is.

Genl. HOPKINSON: As a member of one of the committees I fully confirm that statement.

The report was unanimously adopted.

The CHAIRMAN: After what Mr. Lee has said I am sure you are

satisfied the directors will throw their whole energies into the endeavour to make this property as valuable for the company as possible. I now move "That the retiring directors, Mr. Robert Ryrie and Mr. T. C. Clarke, be, and are hereby, re-elected directors." Mr. Clarke goes out by rotation, as one of the directors would have done whose place he fills.

Mr. NORMAN seconded the motion, which was carried unanimously.

Mr. DUNLOP proposed the election of the auditors, Messrs. Turquand, Youngs, Weise, Bishop and Clarke, at a remuneration of 50 guineas. I would say (he remarked) that I listened to the observations of the chairman, and particularly to those of Mr. Lee, with very great pleasure. I do not wish now to discuss financial matters, but I do desire to emphasise all the observations made as to the value of the property. We have a property which is identified with the prosperity and progress of the Argentine—possessing vast resources—and though it is now under a cloud, we shall soon see the sun of Argentine prosperity shining again, when we hope to be able to reap the fruits of our faith. I counsel faith in our company, and in the future of the Argentine Republic. (Cheers.)

Mr. BLUNDELL seconded the motion, which was carried.

SERVICES OF THE BOARD.

Mr. VAN RAALTE proposed a cordial vote of thanks to the chairman and directors, and in doing so, said: I am sure they have had a very arduous time for the last 18 months, and it has not been a bed of roses upon which they have reclined. I think we are going to see a better future, and I am grateful to them not only for the way they have acted for the company, but I repeat, I am grateful to the debenture-holders' committee. I am sure that what they have recommended is for the best, but I repeat my belief that some *modus vivendi* can be found by which all parties will be satisfied, and by which also we shall see a great future for our company, and an improved price for our shares.

The Rev. A. MATTHEY seconded the motion, which was carried by acclamation.

The CHAIRMAN, in returning thanks, said: The affairs of this company, during the last two years especially, have demanded an enormous amount of our time and attention, and I hope the future will show that our efforts have not been unavailing. It is very difficult for people here to grapple with that greatest of all difficulties that has been harassing us—I refer not merely to the burden of debt, but to the high rate of gold premium that still rules in the Argentine. That re-adjusted more than anything else would solve the difficulty, because you will understand that a dollar coming over here, which a year ago would fetch 2s. 9d., is now hardly worth 1s. 2d. or 1s. 3d. You can see

THE SCOURGING LOSS THAT EVERY REMITTANCE CAUSES

to the company. That is one of our great difficulties, and why we want to make the most economical arrangements possible. At the same time stores and coal must be sent to feed the line, but the high price of gold acts as a double disadvantage to us, for not only do the remittances which come to us realise so much less, but wages have to be increased, because purchases made by the men are all governed by the price of gold. There are certain elements that we cannot deal with or control, but the general management of the line, and the interests of the shareholders (although I may appear to be a little egotistical in saying so), may safely be left in the hands of the board to do the best they can for you. (Cheers.)

The meeting then separated.

SOUTH WHEAL FRANCES.

PROFIT £306—MUCH IMPROVED POSITION.

A SIXTEEN WEEKS' meeting of South Frances adventurers was held on the mine on Thursday.

Mr. Cornelius Bawden

(the purser) presided.

The accounts showed:—Labour costs, 4,514*l.* 3s. 2d.; merchants' bills, 2,106*l.* 19s. 10d.; stannary assessment to end of June, 6*l.* 3s. 1d.; Illogan rates (half-year), 33*l.* 15s. 4d.; bankers' charges (half-year), 89*l.* 19s. 4d.; dues, St. A. St. Aubyn moiety of 1-60th, 125*l.*; Employers' Liability Insurance Co. (half-year), 51*l.* 13s. 6d.; total debits, 6,827*l.* 14s. 3d. On the other side—tin sold, 114 tons 1 cwt. 3 qrs. 22 lbs., at an average of 50*l.* 11s. per ton, realised 7,129*l.* 4s. 6d.; extra carriage of tin, 14*l.* 16s. 6d.; old iron sold, 39*l.* 11s. 3d.; disbursements, 50*l.* 3s. 7d.; total assets, 7,233*l.* 15s. 10d. This left a profit on the 16 weeks of 306*l.* 1s. 7d. At the last meeting the balance against the mine was 2,271*l.* 15s. 6d., and now there was a balance in favour of the mine of 177*l.* 0s. 1d.

Capt. HOOPER, in supplementing his report, said it was very gratifying to him to meet them under more favourable circumstances than that day. They had made a profit of over 300*l.* during the past 16 weeks, and he would be very pleased if they could make four times the profit, so that they could put something in the adventurers' pockets. He would use his utmost endeavour to return the tin from South Frances legitimately, and so as to save the shareholders' hands going into their pockets and if possible put something in. (Applause.)

Mr. J. MAYNE proposed the adoption of the accounts and report.

Mr. HENWOOD seconded, and congratulated the agents on the state of affairs they had brought about the present quarter.

The motion was adopted.

A discussion again took place in regard to

THE BANKERS' CHARGES,

and it was decided, on the proposition of Mr. HENWOOD, seconded by Mr. HUSOX, that the purser be instructed to endeavour, if possible, to get better terms for the banking account of South Frances.

Mr. TRESTRAIL proposed, and Mr. WOOLCOCK seconded, and it was agreed to offer the engine to Wheal Bassett adventurers first, then to the lords, and failing the engine being purchased by either of these that it be sold in the best market within a month.

The meeting was afterwards made special, and 10 shares belonging to two gentlemen on which there were unpaid calls owing by each gentleman to the amount of 15*l.* were ordered to be forfeited if the calls were not paid within a fortnight.

A vote of thanks to the chairman concluded the meeting.

THE SHEBA GOLD MINING CO., LIMITED.

MR. SOPER'S EXHAUSTIVE STATEMENT OF THE PRESENT POSITION OF THE MINE, AND FORECAST FROM THE FINANCIAL SIDE—MR. CHAMBERS SPEAKS HIGHLY OF THE MINE AND ITS MANAGEMENT FROM A PERSONAL EXAMINATION.

THE seventh ordinary general meeting was held at Winchester House, on Wednesday.

Wm. Garland Soper, Esq., J.P.

(chairman of the company), presided.

The SECRETARY (Mr. J. E. Booth) read the notice convening the meeting.

EXHAUSTIVE RÉSUMÉ OF THE POSITION.

The CHAIRMAN said: Gentlemen, when last I addressed you on Jan. 26 we were all looking with confident expectations to the commencement of active operations. We started crushing on Mar. 4, 1891. It is now my duty to examine the present position; and, with the assistance of Mr. Chambers, who has just returned from a visit to the mine, and for whose presence here to-day this meeting has been deferred, to lay before you the opinion of the board as to the future of your property. Now, whatever else might have been anticipated, the severe storms at just about the time of the starting of the mill could neither have been foreseen nor foregarded. But, it may be asked, how could the weather have affected the matter? The storms were so unprecedented in their severity that continuous and extraordinary attention had to be given to the water-race; and, while extra labour was thus being concentrated, the general manager could not make a trial running of the mill or prepare the plates by preliminary crushing. The mill had to be started in earnest without any previous trial; and then and since it has done its work to our satisfaction—I may say, to our admiration. (Cheers.) It is capable of crushing 2 tons per stamp per day of 24 hours; and what is more, when the supply of quartz has been continuous, it has done it. By reason of the enforced inability to prepare the plates, the absorption of gold at the first crushing was great. Now at our last meeting, these were my words: "It would be easily possible for your directors to make a sensational crushing, and abnormally drive up the value of the shares; but we do not intend to adopt any such firework policy." By the cheers which followed that statement, shareholders endorsed the decision of the board. Yet, when, allowing for the absorption by the plates, the return was just 1½ ozs., disappointment was expressed.

A POINT TO REMEMBER.

Is it not a fact that when a larger mill is erected upon a mining property it is usually for the purpose of increasing the returns by crushing a larger quantity of lower grade ore? Shareholders cannot reasonably expect as high a return per ton when crushing with a large mill as when crushing with a small mill. When the Sheba Co. had only a 20-stamp mill and a most costly transport, selected ore would alone pay to crush; but with our 60-stamp mill we are crushing the ore as it is received. To pick rich ore as the mine now is laid out is to be deprecated.

RETURNS.

Our returns from our 60-stamp mill were:—For Mar., 1,000 tons, 618 ozs.; for Apr., 1,057 tons, 1,061 ozs.; for May, 2,640 tons, 2,822 ozs.; for June, 2,025 tons, 2,625 ozs.; and for July, 2,300 tons, 2,665 ozs. In addition to these returns there are 130 tons of concentrates which are estimated to yield 8 ozs. to the ton, and which have not yet been treated. (Cheers.) But, perhaps, if we could not have anticipated the mode and extent to which our start was prejudiced by the occurrence of storms, we could have more accurately anticipated the difficulties which might have been likely to have arisen at the outset in the transmission of the quartz some 2½ miles by

THE AERIAL TRAM.

In writing to the board, Mr. Chambers says: "I was prepared to see something never before attempted in this line, but the reality far exceeds my imagination." I have had some photographs brought to this meeting that shareholders may form some idea of the nature of the mountains to be traversed. The decision to employ this means of transport, however, was not adopted without serious consideration; and at present, grave as have been the breaks-down, nothing in the system has arisen to invalidate the prudence of this decision. Mr. Pohlig has entered into a contract whereby he guaranteed to construct a ropeway capable of carrying 15 tons per hour, with 116 buckets, and 25 tons per hour with 54 additional buckets on the line. Mr. Pohlig has an engineer and representative at Eureka; and this engineer, Mr. Kriekhaus, drew out the specification which, from his own actual survey of the country, he considered would be sufficient to carry out the contract. If I were asked to instance some of the defects we have been experiencing, I would thus summarise them—the want of additional iron standards—the rope frequently slipping—the cars jerking off the ropes—the supply of larger carrying rollers—and the great strain caused by the hauling rope while crossing the ridges of the hills. To use the words of the general manager, the tramway "is not constructed substantially enough in many places. After that is done, I believe we shall be able to run ore over it at one-third the cost of the steam tram."

TRAM IMPROVEMENTS.

To remedy these defects there left these shores, on June 27, supplementary material supplied by Mr. Pohlig at his own cost; and Mr. Pohlig, writing under date June 8, says that we may be "assured that the ropeway in question will work up to the standard he has guaranteed, and that he will leave no stone unturned until this aim has been fully attained." What Mr. Chambers thinks about the aerial tram, he will tell you; and in answer to my question on Mar. 26 to Mr. Hill, as to whether we could rely on the ropeway for permanent

transport, this is what our general manager writes under date Apr. 27: "My opinion regarding the system is the same as it always was, viz., that it is just what we want, and is the cheapest mode of transport for us." Mr. Hill further says on May 12: "All it wants is another thousand or two pounds spent on it to make a permanent ropeway of it, such as Pohlig guaranteed." Test the question practically as a matter of transit. If between May 2 and May 28 this tram as now erected can in 26 days transport 2,640 tons, why, when the line is strengthened by the erection of additional standards and further material, may we not reasonably conclude that this ropeway will

EASILY CARRY 4,000 TONS PER MONTH?

In point of fact, we are not without reasonable assurance that we are and shall be accumulating sufficient stock at the battery to keep the mill continuously running, even should there arise the necessity for any temporary stoppage of the aerial ropeway. Take also the item of cost. In Mar. we find it to be 2s. 4d. per ton, in Apr. 1s. 9d. per ton, in May 1s. 9d. per ton. June is not to hand. This compares most favourably with the cost of transport by a ground tram. I must confess to some amount of disappointment that the ropeway should not have started and worked as satisfactorily as the mill; but when I regard the nature of the work, and when I consider that, at the commencement of any engineering enterprise of importance, difficulties usually occur at the outset, then I feel that by the exercise of a little patience, and by the supply of the new material, what was originally projected will, no doubt, be accomplished. Meanwhile, we have held the contractor responsible for all the expenses which have been or may be incurred, and for the losses which we have already sustained and may still sustain.

TAILINGS.

You will also like to know about the tailings. Our agreement of Oct. 13, 1890, is for all tailings "exclusive of those which have been already treated" on a basis of 20,000l. for 9,000 tons. Now two points have arisen. In the first place there is a dispute as to the quantity. The purchaser affirms there is only 4,500 tons. Mr. Chambers says there is at least 6,000 tons. The question then, which immediately arises, is why was 9,000 tons stated? This estimate was based on a return of between 8,000 and 10,000 tons; and you will remember that in our balance-sheet of Sept. 30, 1889, the stock was taken on the certificate of the general manager at 8,000 tons. I cannot do better than quote the explanation of the general manager on the discrepancy. This is what he says:—"It is no easy matter to estimate on an immense pile of tailings like these, for there are hillocks all over them. I estimate that the past year's rains have washed away a great many. A large quantity has also been blown away, for upon a windy day it is almost impossible to see within a hundred yards or so of the mill. I still further account for the deficiency by thinking that in all probability the weight used in the old mill was more than we accounted for; for we could not very well weigh every ton used, but estimated by measuring in a box." The error, if any, has been an unintentional mistake. In the second place, the purchaser says that in our quantity there is included some 600 tons which he calls "slimes," and which he affirms is not included in his purchase. Our answer is that our contract was for the mill tailings lying at the company's mill at Fig Tree Creek, "exclusive of those which had been already treated." This is the existent position of the matter of the tailings; and I much regret there should exist any difference on the subject. Now, as to the payments, we have to report to you that, up to June 17, 1891, we had received in cash from the purchaser 3,000l. on Oct. 14, 1890, and 4,000l. on Feb. 17, 1891, in all 7,000l. On June 17 last there was due 6,500l.; but the purchaser objected to make payment except on the basis of a 4,500 tons quantity. We agreed to make adjustment for the purpose of that payment on a basis of 6,000 tons, leaving the final issue to be settled when all shall have been treated. The payments on a basis of 6,000 tons were therefore temporarily readjusted as follow:—2,000l. in cash; 2,666l. 13s. 4d. Feb. 17; 4,333l. 6s. 8d. June 17; 4,333l. 6s. 8d. Oct. 17.

PAYMENTS FOR TAILINGS.

We have up to date received in cash 9,000l., leaving the payment of 4,333l. 6s. 8d. in Oct. still due, and the balance of account still to be adjusted. While on this subject I must remind you of what I have said. Speaking on Sept. 24, 1890, my words were:—"Many of you may ask—having proved their value, why sell? Why not realise them for the Sheba Co.? The unpleasant answer is at hand: The want of money to erect more machinery. If we had sufficient capital the directors might have urged the erection of a plant for the purpose of working the tailings, the more particularly because such an operation is as safe as any known industrial enterprise can possibly be." On Jan. 26, 1891, I again alluded to the tailings thus:—"The question we had to resolve when financial difficulties were pressing was—how shall we raise the money? By paying a long price? Or by selling our tailings even at a low figure? We agreed to the latter course—may I not add with your concurrence? The negotiation was only concluded in this hall at our summer meeting; and if I must state my belief, this is my opinion, that the sale of the tailings induced the 30,000l. subscription of debentures, and the success of the subscription of the 30,000l. gave the impetus to secure the further 20,000l. debentures, making the 50,000l. debentures required." Having regard to the great expenses necessary and incidental to the starting and development of such a property as the Sheba, if the purchaser has gained by his contract, the company has also benefited by the sale.

HOW TELEGRAMS ARE MADE KNOWN.

Dissatisfaction has been expressed in some quarters with respect to the communication of the information received from the mine. This is a subject which has given me some anxiety. Speaking generally, I open all cablegrams. If the nature of the cablegram requires publication, it is posted immediately at the offices of the company, and on the same evening it is sent simultaneously to the Stock Exchange and to the various newspapers. Can any better mode be suggested? If so, it will receive our adoption. But this I know does not cover the whole subject matter. Some affirm that the information is known to the Stock Exchange before it is known even to the directors. Only one of two hypotheses can account for this phenomenon. Either there is treachery at the Sheba Mine, or the alleged information is the guess work of operators in Sheba shares. In more than one instance the information circulated in advance has been inaccurate. In no instance has information been sent to any

other than to the board. In every instance our general manager has taken the utmost possible precaution that the first result should be sent to the directors. (Hear, hear.) If, and notwithstanding, treachery exists at the mine, its discovery will involve the instant dismissal of the culprit, be he whomsoever he may. From the letters of the general manager on the subject, I may add that he is of opinion that his staff and men are loyal, and that the information cabled is guess work, and only guess work. Soon after we started crushing a rumour was circulated here that our ropeway had broken down, and, therefore, in order to keep shareholders advised as to the facts, we instructed the manager to send us weekly a cable, stating the number of tons crushed. But as no such necessity now exists, we have told the manager to discontinue these weekly returns and save this cable expense. As an illustration of the difficulties incidental to the publication of information, we may instance the cablegram of June 16, 1891, viz.:—

"Level No. 6 cross-cut has cut the lode 23 ft.; assays satisfactory." Well, the cable of June 16 was in the papers of June 17; but the market promptly put down the shares 1s. on this intelligence, intelligence which the directors thought most encouraging, proving as we think it does prove, that the rich shoot goes down. Dissatisfaction with the cablegram was openly expressed; because the market said that if the assays had been satisfactory they would have been stated. Now, the cablegram was published just as received. If the directors had supplied the assays from their general knowledge of the matter, they would have been blameworthy. Had they indicated their opinion by a postscript to the cable, they would have been open to all manner of imputations. We are now, however, in a position authoritatively to say that these assays were—Sample 5, June 16, 4 ozs. 8 dwts. 20 grs.; sample 6, June 17, 4 ozs. 4 dwts. 22 grs.; sample 7, June 18, 4 ozs. 14 dwts. 1 gr.; sample 8, June 19, 4 ozs. 4 dwts. 22 grs. Since these dates we learn that this rich lode has been defined to be 48 ft. running north and south, 50 ft. east and west, and 75 ft. in depth. (Cheers.)

FOUR ESSENTIAL POINTS.

I think I have touched the chief subjects as to which difference of opinion may exist. I now pass to the following points:—The mine, the crushing, the cost of working, and the nett results. But before I advert to these subjects, I must give expression to the unanimous appreciation which the board entertains of the untiring skill which Mr. Hill, our general manager, has shown. A check or a difficulty has to him been the signal for renewed exertion. Fever has attacked him, and not him alone, but nearly every member of the staff. They are fighting our battles and bearing our burdens; and we as directors and shareholders wish them to know that they have our sincere sympathy and cordial recognition. As to the mine, it will doubtless be more satisfactory to hear the report from Mr. Chambers. As to the crushing, the general manager estimated the return at 4,000 tons per month. But this was on two hypotheses: (1) that the mill would be running full time; (2) that the manager expected 1,000/1,200 mesh screen would be fine enough. At present the mill has not been running full time owing to the stoppages on the aerial ropeway. Taking May, however, as an example, the output would have attained on full time 3,000 tons; and when the tram is strengthened we shall no doubt attain quite 4,000 tons per month. But the sized mesh will affect the outcome. The finer the mesh, the smaller the quartz must be crushed, and the smaller the quartz is crushed, the less must be the total quantity put through the mill. After thoroughly testing the ore, the manager found he had to use not a 1,000/1,200 mesh, but a 1,600 mesh screen; and he now thinks it advisable to try a 2,000 mesh in order to attain better gold results at per ton of quartz crushed. As to the cost, we are now in a position, from actual working, to give you figures rather than estimates. By "cost" we mean the outlay for mining, milling, transport, and all office and other expenses in South Africa. At per ton in Mar. it runs out at 2l. 4s. 2d.; in Apr. at 2l. 0s. 9d.; in May at 1l. 4s. 5d.; and the average, therefore, on these three months is 1l. 16s. 5d. But we must point out to you that during Mar. and Apr. the expenses were exceptionally heavy, and Mr. Chambers considers 1l. 4s. 5d. will prove a fair monthly average. This is satisfactory. But what still tries our finances is

EXPENDITURE ON CAPITAL ACCOUNT.

During the storm the simple watching of the water-race by way of strengthening those points which might show stress of weather involved very heavy expenses for labour and material. During the construction of the ropeway the expenditure already incurred and paid for is not less than 10,000l. over the estimate, and perhaps more. It may be explained that, by the contract, Mr. Pohlig was to find material and skill while we were to supply labour; and the labour has been not only very great in itself, but much increased by the incidence of repairs and the necessary strengthening of the plant. Of course, all these sums have reference exclusively to capital account, and have in no way affected revenue. As to results, may I say, as chairman, that I keenly appreciate the patience of the Sheba shareholders; and I am as sincerely solicitous as any one of them to commence and continue the payment of dividends. I am sure, however, they will recognise with what serious difficulties the board have had to contend, and that in anticipating dividends they will remember that practically crushing commenced in Apr. I am excepting Mar., because in that month, owing, as I have already said, to the nature of the start and the absorption on the plates, the yield barely met current expenditure. In order that at the annual meeting at the end of this year the shareholders may see the value of their property as a dividend-paying concern, the board issued instructions to the general manager so to arrange his returns that a balance-sheet may be prepared to Mar. 31 last, thus far covering the expenditure on capital account, and a second balance-sheet to Sept. 30 next, by which date, on a basis of six months' actual working, our current revenue and expenditure may serve as an index of the future.

A FINANCIAL FORECAST.

It has been intimated to me that some financial statement will be expected; and although it is not easy to sketch a descriptive reference during the course of a current financial year, I will make the attempt rather than minister to any disappointment. (Hear, hear.) Our profit and loss account for the year ending Sept. 30, 1890, recorded a balance to loss of 2,789l.; and you will remember that this result was shown by taking the stock of tailings on hand at 20,000l. Now, I have already referred in my remarks to the alleged

deficiency in the tailings. Opinion is still divided as to the outcome; and both the general manager and Mr. Chambers think the heap will be found to contain more than the purchasers expect; yet, taking Mr. Chambers' estimate of 6,000 tons as a basis for my present purpose, there will be a deficiency on this item of, say, 6,667.; the expenditure during the months from Sept., 1890, to Mar., 1891, shows a balance to debit to the extent of, say, 4,650.; the proportion of debenture interest up to Mar. 31, is, say, 4,100.; discount and charges on debentures issued since Sept. 30, 1890, 3,350.; bringing up the deficiency to 18,767.; add to this amount the recorded loss of 2,789., and the total estimated deficiency becomes 21,556. This sum will be chargeable against the second six months of our current financial year. Turning now to the working months of Apl. to Sept., both inclusive, what shall we have to provide for capital account? What for maintenance? What for debenture interest? And what for current expenses? Now I have been most anxious to repress further expenditure on capital account; but, as Mr. Chambers will tell you, sinking must be commenced, so that on the one hand we may develop the payable ore below No. 5 level (the ore to which I have alluded as assaying 4 ozs. at No. 6 level), and so that on the other hand we may pump out the water which we are sure to meet as we get deeper down. Now this expenditure need only be incurred gradually. I do not think I can put it at less than 500. per month; and it must be begun at once. I am sure you will recognise the great difficulty of forecasting figures in a mining enterprise, and how precarious all such estimates necessarily must be; but subject to this remark my outlook from the end of Mar., 1891, to Sept. 30, 1891, is somewhat like this:—Revenue estimated Apl.—Sept., six months, 57,000.; current expenses six months at 3,000. per month, 18,000.; probable expenditure on development account two months (Aug., Sept.) each, 500., 1,000.; debenture interest six months 90,000. at 10 per cent., 4,500.—23,500.; nett revenue for six months ending Sept. 30, 1891, 33,500.; total, 57,000. Now these figures set out as nearly as I can foreshadow the result of six months actual working, viz., a surplus of 33,500. (Loud cheers.)

POSITION SUMMARISED.

Let me summarise the position. On the credit side we estimate a surplus of 33,500., to which, as we think, there is to be added the 4,333. due as we contend from the purchaser of the tailings, making thus an amount of, say, 37,833. On the debit side there is the estimated deficiency mentioned above of 21,556. The amount on balance thus becomes a credit of 16,277. (Cheers.) But how will our cash account stand? Inclusive of the cash balance now at our bankers, which will be supplemented by the yield from gold during the months of June, July, Aug., and Sept., there will be a cash asset of, say, in round figures, 46,500. Our liabilities we estimate thus:—Supplies for the mine, say 2,500.; current expenses at the mine, say 10,500.; electrical plant for sinking, say 3,500.; making thus a total of say 16,500. These figures show on cash balance an estimated credit of 30,000. Now, you will observe that at the same date, viz., Sept. 30, 1891, the general account shows an estimated credit balance of 16,277., and the cash account an estimated credit balance of 30,000. I cannot pretend to say how our auditors will adjust the question of capital and revenue account. I shall remind them of the fact that 9,000. earned from tailings will have, as it seems to me, to be repaid to revenue account. In supplying these details I shall probably have laid myself open to remark; but I shall contentedly bear criticism provided you feel that in response to your wishes I have expressed an honest opinion to the best of my ability for your guidance as shareholders. (Loud applause.) I will now ask Mr. Chambers to give you his report.

VIEWS OF A VISITING DIRECTOR.

Mr. ARTHUR CHAMBERS (director): Gentlemen, I am afraid that after the very exhaustive statement given you by Mr. Soper, the few words I have to say will prove somewhat a repetition and uninteresting. He has, so to speak, taken the wind out of my sails, and left me the difficult task of making bricks without straw. What I shall endeavour to do is this—give you an exact description of the property and works as I found them, and my own ideas and impressions as to present and future prospects. I left England on May 1. I spent some 10 days in a thorough examination of the whole of the Sheba Mine and works. During this time I went through every level and every winze in the mine that it was possible to get through, testing and examining wherever and whenever I thought necessary. After inspecting the mine I went several times carefully over the line of wire ropeway, and also the dam and water-race; spent portions of several days at the battery, watching the operations and system of working in the new mill, including the whole process of the clean up, the retorting and casting of the gold into bars such as they arrive on this side. I also several times visited the old battery at Fever creek, where the McArthur Forest Co. are treating the tailings. I will now briefly describe what I saw. First, a word or two as to the nature of the country. Very few here in this room, and only those who have been on the Sheba hill, can understand the enormous difficulties that we have to contend with in carrying on our works. Many persons, and even newspapers, think and imply that the Randt district and De Kaap district are almost one, or at least in close proximity to each other. This is a great mistake; they are fully 300 miles apart. As to mining, there is no comparison between mining at the Randt and mining at the De Kaap district. I do not intend any disparagement to the Randt mines, but merely to show how different is the situation. Suppose, for instance, our general manager starts from his house to visit the No. 5 level, he has to descend some 700 ft. by zig-zag paths cut in the face of the hill, returning the same way, and, even if he spent only a short time in the mine, it would occupy fully half a day. Or, if he decides to go to the battery, distant in a straight line hardly 3 miles, he has to ride and walk a distance of probably 12 miles each way, all at foot pace, and occupying him fully a whole day. Following the order of Mr. Soper's speech, I will take the wire ropeway.

THE WIRE ROPEWAY.

Here again I must repeat my own words. I was prepared to see something never before attempted in this line, but the reality far exceeds my imagination. The wire ropeway has been called one of the wonders of South Africa. I speak subject to correction, but so far as my memory serves me, I believe that no ropeway, with such gradients and such enormous spans, has ever been erected before. Starting

from the loading station, this commences with a steep ascent of about 700 ft., up the almost perpendicular face of the Sheba Hill; passing over this we come to a deep valley, where the ropeway has a span of 1,500 ft. Standing, as I have done, in the bottom of the valley some 800 ft. below, and looking up, the wire ropes appear as cobwebs, and the buckets as spiders travelling across the sky. After this span we come to No. 2 anchorage, and then on to another tremendous span and ascent on the opposite side; but this span is broken by what I call the Sheba Eiffel tower or standard 100 ft. high. This appears to be well and substantially erected, and fully equal to all requirements. After this we come to No. 3 anchorage, the highest point on the line; here there is a look-out station, and two men are constantly on duty. From this point the line commences to descend, passing over several smaller hills down to the battery some 1,700 ft. below the highest point. A telephone connects the battery, mine, look-out station, and office, and, in addition to this, one of the line inspectors has a telephone on his back and can at any time connect with the line, at any point, and speak to either end. There are on the line 109 buckets, carrying 5 cwt. each, at intervals of 90 yds. between them. Each bucket occupies one hour in travelling from loading station to battery. The number of hands required to work it are four white men and 20 natives. The cost per ton for every ton of quartz carried is 1s. 9d. The anchorages I have mentioned are points on the top of the hills, where the carrying ropes are carried over pulleys and connected with enormous iron buckets some 12 ft. deep, and 3 ft. in diameter, filled with rocks and masses of iron, thus tightening the ropes automatically, in response to any expansion or contraction.

DEFINITE ANSWER TO A CRUCIAL QUESTION.

And now I fancy I hear some doubting individual say "All this is 'all very fine and large,' but will it work successfully? To this I answer at once, and without any hesitation, "Yes," without a shadow of a doubt. Of its ultimate success I am well assured when the alterations which actual experience has shown to be necessary have been carried out by the contractors. From all I have seen, and taking into consideration the nature of the country, I believe this is the best system of transport at all suitable, and if we had to go over the whole matter again to decide as to how we are to work the mine, I should at once advise the wire ropeway. I have been inundated with suggestions as to what to do, and with questions as to why we do not do this, that, and the other. To all I make one reply: "At present we have nothing to do with it; it is in the hands of the contractors." I now pass on to another, but not less important subject—the mine. I believe many here present have heard me express my opinion of the mine previously. My visit has strengthened and confirmed that opinion in every way, and I regard the recent discoveries and developments below No. 5 level, to which our chairman has alluded, as the most important discoveries of any that have ever been made in connection with the property. Both Mr. Hill and Capt. Cook, the mine manager, are unanimous in their opinion that this rich and extensive body of ore goes down probably to an unlimited depth. Entering the mine through the No. 5, or main level, is like going into a railway tunnel; the double line of rails are well laid, and the points and sidings work automatically and without any hitch or trouble. So well has Mr. Hill arranged his system of winzes and passes that all the ore falls from the top to the bottom, without handling, through the different shoots into the trucks on No. 5 level, and thence out by a short line to the loading station. Two natives easily handle and run out a truck holding 25 cwt. as fast or faster than required for the ropeway.

MINE STEADILY IMPROVES.

Commencing from No. 1 level to No. 5 level, the whole of the mine, good as it was before, for some months past has very much improved, and these reports are continued up to the latest advices. In No. 1 level at the back of the quarry a further discovery of rich ore has taken place; this apparently is continued down to the No. 2 level. In consequence of this discovery it has been decided to run a drive in from above the quarry level and then sink a winze to come down on the back of it, and thus stope it out. No. 3 level is still holding its own as one of the best levels in the mine. From No. 4 down to No. 5 not very much work is being done, and ore from this portion of the mine will be extracted later on, as needed. The true system of mining is in all cases to get well ahead with developments, and this system Mr. Hill has well carried out. Though we have a long and continuous lot of work ahead of us, I do not consider we can call a halt. We must go on, and in this opinion Mr. Hill agrees with me. I have been urging on my co-directors, and urging most strongly, that we must immediately and at once send out the necessary plant and appliances for continuing our sinking below No. 5 level in No. 15 winze. We are already down a distance of 175 ft., and this is as low as we can deal with the water and hoisting by hand-power. Mr. Hill wishes to continue this winze, and, simultaneously with it, sink the low level shaft to a depth of 600 ft.; at this point the two would nearly meet. A hoisting plant can be fixed at a point midway between the two so as to hoist from both at the same time. This plant (also the drills and pump) to be driven by electric power supplied from the battery. The expenditure on these works would be spread over probably two or three years, and would not much increase our present outlay. On the other hand, it will increase our monthly returns as we have below No. 5 level a large body of exceptionally rich ore. I do not think I can say any more about the mine, except to conclude in the words of Capt. Cook at our opening dinner: "That the Sheba Mine is a mine not only for us and our children, but for our grandchildren also." Next I take the battery. Here a very few words will suffice. It is without doubt and admitted by every one to be the finest battery in South Africa.

THE MILL.

I mean it is the finest and best as regards labour-saving appliances, its system of work, and the amount of work that can be done with few hands. The easy and smooth manner in which the whole of the machinery runs without any hitch or break. I visited several other mills, many of them most elaborately got up, but in no single instance did I see anything working so continuously, smoothly, and at the same time so complete and simple, as the Sheba battery. The best music I ever heard was on the morning when I rode over the line of ropeway to the battery, and at a distance of nearly ½ mile heard the steady, loud, and continuous roar of the 60 stamps pounding away at the hard quartz. My first

words were "may they never stop." Inside the mill the noise is deafening, and yet with all this tremendous pounding of the 60 stamps, each weighing 960 lbs., going at the rate of 90 strokes per minute, the vibration of the building is very, very slight, and you feel at once that the whole thing is on a good, sound, solid foundation. Our chairman has explained the particulars of the crushing, and I do not think it necessary for me to say more. During my stay various rumours were afloat as to theft of amalgam.

NO ROBBERY OF AMALGAM.

I went thoroughly into the matter with Mr. Hill, and believe, under the system he has introduced, that it is next to impossible for any theft from the Sheba Mine to take place, but quite independent of this, I believe, we have a staff of good honest men, anxious to do their duty, and anxious for the success of the company. In this, I consider, is our greatest protection. Water-race and dam: With the water-race I am not so well satisfied as with the other works. In one or two places the line as originally carried is too near the river, and hence during the floods the damage occurred with which you have been made acquainted. This is all remedied now, and later on Mr. Hill intends making a trifling alteration in the route, which he hopes will prevent any recurrence of such trouble. The dam is a fine piece of work, and the fact of its having withstood the late unprecedented floods is proof of its stability. My sincere thanks are due to Mr. Hill for his assistance during my visit. He aided me in every possible way, and spared neither himself nor anyone else in enabling me to obtain all and every information. I am also sure that the hearty thanks of this meeting and of the shareholders generally are due to him for his indefatigable energy and perseverance. The work that he has done has rarely, if ever, been equalled by any manager. (Cheers.)

DISCUSSION COURTED.

The CHAIRMAN: Gentlemen, if there are any shareholders who wish to put questions I shall be only too happy to answer them. But in order to promote dispatch of business, as this is not a meeting held under our articles of association, perhaps those of you who wish to ask questions will put them as questions only, and get answers, and then if any one desires to address the meeting generally he can be heard at greater leisure.

SERVICES OF DIRECTORS AND MANAGER NOT FORGOTTEN.

No questions having been put, Mr. MUIRHEAD (after a pause): Mr. Chairman and gentlemen, as no other shareholder has risen, I think I should like to offer a few remarks on the present state of the company. I wish to add the testimony of an independent shareholder to the very great care and, I am sorry to say, anxiety which Mr. Soper has been obliged to devote to the affairs of this company. I do not want to lay too great stress upon this, but it is only due to him to say that every day he has been most anxious to do the best he could to promote the interests of this company. (Cheers.) I think we ought to pass a vote of thanks to him, and also to the other directors and Mr. Hill, the superintendent, because I am sure they have each and all shared the anxiety of the chairman. (Loud cheers.) It seems to me that there are several things we do well to keep in mind at this time. Mr. Soper has referred to the patience of the Sheba shareholders, and, personally, I think it almost phenomenal. I have held my shares, for example, for 5 years, and have been, with my brother shareholders, beset by all sorts of vicissitudes. In fact, we have had what you might call very bad luck. Nothing has seemed to go right, but I can only express my own opinion, and I think others will agree with me, that we are getting near the end of the long lane. Now, what have we in the Sheba Mine? We have

PRACTICALLY AN UNLIMITED AMOUNT OF QUARTZ

Mr. Hill has estimated at 4,000,000 tons. That is enough to keep us going for 100 years, but what we have in prospect is much more important, and that is the development in No. 6 level, which is unprecedented in any other mine of which I have knowledge. I would draw the attention of the chairman to a fact which he never forgets—that we have been without dividends very long, and that, therefore, there is a stern necessity to develop this work at the earliest possible moment. I know I shall be told I am not a mining man, and do not know the difficulties of mining, but at the same time I will ask the directors to address themselves to that problem. I think there are mining men on the board who do know something of mining, and I believe we are not going to stick at any difficulty which will not allow us to get quartz out of that part of the property so as to make it dividend-paying. The real crux of the whole question has lain in the tramway. The absence of that has been the cause of all the trouble, and I am very glad to hear from the chairman and Mr. Chambers that the difficulty now felt is not one that is insuperable. If that be so at this present moment, and if this difficulty has been overcome—with our present plant we are earning 15 per cent. It is true we have not the money at the bank, as it has been absorbed on capital account, but I hope that at the end of this next month or two we shall be in receipt of some of those dividends which Mr. Chambers has described as "frequent and abundant." We have the stuff there, and that is a great fact. (Cheers.) Do not let us stand outside the door of the banquetting hall, but let us enter in, so that we may partake of the feast. I do not want to be told that the quartz is there for my children and my grandchildren—I may never be in the position of having such luxuries. (Laughter.) I want to press this point rather strongly on the board—whether, having a genuine mine, we cannot reap the benefit of it. Our shares are kicking about at all sorts of prices, but we must not pay too much attention to market quotations, although sometimes they are an index of value. All around us we find disaster. The Sheba was the first mine to draw the public attention to this industry in South Africa as presenting any prospects of success, and I hope that the Sheba will now rise Phoenix-like from the ashes of an unlucky past, and show everybody that the confidence originally reposed in it, and that we repose in it to-day, has not been misplaced. (Cheers.)

The CHAIRMAN: I can only thank you for your good wishes and for your attendance, and the meeting is at an end.

The Sheba Gold Mining Co., Limited, has received the following cablegram announcing that the July yield has been received:—"2,300 tons, 2,665 ozs."

HILL'S WATERFALL ESTATE AND GOLD MINING COMPANY.

COMPANY TO BE WOUND UP VOLUNTARILY—LIQUIDATOR APPOINTED.

AN extraordinary general meeting of this company was held at Winchester House, on Friday, July 31, for the purpose of considering, and if thought fit, passing the following resolution:—

"That the company be wound up voluntarily, under the provisions of the Companies Acts, 1862 and 1867."

Mr. N. J. West

presided.

Mr. J. JAMESON TRURAN (secretary) read the notice convening the meeting.

THE POSITION CLEARLY STATED.

The CHAIRMAN: Gentlemen, we have met here to-day to consider and decide upon the future of this company. When your directors were asked and consented to take seats upon this board, they did so fully believing in the statements that were made to them by Mr. Hill, the vendor, and also in the reports that were issued with the prospectus to the public, and they determined, one and all, by giving their time and attention to the affairs of this company, if possible, to bring it to a successful issue. For that purpose machinery was ordered, such as was considered necessary for the immediate development of the property, and the services of an experienced manager, Capt. Pascoe, were secured, whose duty it would be to conduct the mining operations on the estate. Previous to his leaving for Africa the directors gave him full particulars as to how to act there, and they also instructed him to report to them upon the whole estate as soon after his arrival as possible, but more particularly with regard to the water, the wood, and the auriferous lodes. We are sorry to state that Capt. Pascoe's report was not of a satisfactory nature. It may be within your recollection, gentlemen, that the reports, as said to have been given by the experts employed by the vendor, and that were issued with the prospectus, applied more particularly to that part of the estate called the Irene claim, and it was in this claim that your manager, after having prospected elsewhere, determined to prosecute mining operations. The extent of those operations you have been fully informed of, as they were explained by a diagram and plans at the last meeting in Oct. From time to time during those operations the reports sent home by Capt. Pascoe were certainly not of a cheering nature, but the directors hoped that on further development the ground would improve, and eventually payable ore would be met with. In this, however, as you know, they were

VERY MUCH DISAPPOINTED.

As Capt. Pascoe was sinking the shaft and driving upon the claims, it was impossible to form any decisive opinion with regard to their actual value, and it was not until his operations had assumed considerable magnitude that the directors felt fully convinced that, as far as these claims were concerned, they were not of the value we had supposed them to be. There was, however, one doubtful feature about it. Capt. Pascoe's operations were prosecuted in the banket formation peculiar to the Transvaal, and we thought that perhaps he might have been misled as to the value of this particular banket; and in order to test this we asked a Mr. Button, who is an expert and an old miner with the banket formation, to go and report upon it, and his report was certainly not a favourable one. We were further of opinion, however, that the shareholders here in London would not be inclined to take the opinion of Mr. Button solely, and in order to make our position firm we procured the services of an expert, whose opinion would not only be taken as conclusive in the Transvaal, but also here in England—namely, Mr. W. H. Furlonge. He is a gentleman who is not only well-known in Africa with regard to the quartz and also the banket, but he is known all over the gold-bearing world as a man of great experience and repute.

MR. FURLONGE'S REPORT.

After having received his report, which was very clear and comprehensive—and, I regret to say, at the same time most condemnatory—we had it printed and circulated amongst the whole of the shareholders. You are, of course, fully aware what that report contained. Having received, therefore, that report from Mr. Furlonge, which was backed up by that of Mr. Button and confirmed by our mine manager, we thought that the time had arrived when the directors should recommend you to spend no more money upon the property. The very points that were stated in the prospectus to be gold-bearing, after having been given a very fair trial indeed, turned out to be almost utterly worthless. As soon as possible after our meeting in Oct., when this resolution was come to, we cabled to our manager, which was followed by a letter, instructing him to suspend all operations, to sell everything on the property that was movable or valuable, to leave the property in the hands of a caretaker, and return to England at once. Upon his arrival in this country we had several interviews with him, and he strongly reiterated his opinion that this estate was really not worth working.

POSITION WITH THE VENDOR.

We would have called you together sooner after the interview with Capt. Pascoe, had it not been for the action pending between the company and Mr. Hill, the vendor, and we were led to believe that that action would have been decided before now. We were informed by our solicitor that the action which was placed twenty-fourth on the list, and was to have been heard before Mr. Justice Kekewich, has now been postponed until after the long vacation. As soon as we knew that, we issued a circular calling you together to-day. I do not know that I can say very much more in regard to what we have done—that has been fully explained in the report circulated amongst you—but I will say this, that I think it reflects great credit upon the manager, whom we sent out, that all the reports we have received have verified in every possible respect that which he has done in your interests. If there was no gold there, he could not put it there; but he worked the property in a minerlike way, and to have received the credit of such men as Mr. Furlonge and Mr. Button is a great feather in his cap.

DIRECTORS HAVE DONE THEIR UTMOST.

Gentlemen, we now have to propose to you that this company be wound up. We claim that we have done as much as any board of directors could do, trying to develop the property in the very best manner possible, and we feel that we should not be doing our duty if we did not recommend you to wind it up. If you decide upon that course to-day, your directors do not personally care whether the winding-up is done voluntarily or compulsorily. We care not to what extent the limbs of the law may come down upon us. We say from our hearts that we have done everything that possibly could be done in your interest. We had but one motive in working this property, and we are not afraid of an investigation of the books, or of any document connected with the company. Mr. Cooper, whom I think you have all seen, has rather taken the wind out of our sails by applying to the Court for a winding-up order. We shall have to-day three resolutions to place before you. One is for the winding-up of the company voluntarily, and the second is for the appointment of a liquidator. As regards the liquidator, the directors have no choice in the matter at all; the only thing is that they wish to have a man of undoubted integrity and ability. Our object in wishing you to have a voluntary liquidation is that we believe it to be the cheapest and quickest method. We shall therefore propose to you that the company be wound up voluntarily, and that it be placed under the supervision of the Court. Mr. Cooper has suggested the name of Mr. Peat, of 3, Lothbury (Roderick Mackay and Co.), as liquidator, and the directors had not the least objection to Mr. Peat. The chairman concluded by moving, "That the company be wound up voluntarily under the provisions of the Companies Acts, 1862 and 1867.

Mr. LINTILHAC (director) seconded the motion.

CRITICISM.

Mr. MONRO warmly criticised the management, and suggested that the chairman might, through his firm, be able to assist the company in realising some portion of the 7,000*l.* expended on machinery. He contended that a sum of 11,000*l.* had been paid to the vendor before it was due; whereas, had they waited until the due date they would have been in possession of reports to the effect that the property was worthless, and could then have refused to pay the balance of the purchase-money. He thought the shareholders were "doomed to pay up the remaining 3*s.* 6*d.* per share, and strongly urged the appointment of an independent liquidator.

A SHAREHOLDER asked if it was intended to take proceedings against Mr. Hill, the vendor, whose transaction with the company he referred to in very strong terms.

The CHAIRMAN: There is an action pending against Mr. Hill.

The SHAREHOLDER: That is a civil action, is it not?

The CHAIRMAN: Yes.

IMPORTANT STATEMENT.

Mr. COOPER: I am the shareholder in the company who has presented a petition for the winding-up of the company. I this morning saw Mr. West at the company's office, and he met me in the most frank manner. I showed him the proxies which I hold, and recognising me as the representative of an important body of shareholders, he offered certain concessions which I thought it my duty to accept. The resolutions that are to be submitted to you to-day practically amount to a compromise. We secure the winding-up of the company under the supervision of the Court, and the appointment of a thoroughly independent liquidator. I have named the liquidator, and he is absolutely unconnected with any person even remotely connected with the company. He comes amongst us without any bias whatever, or leaning to either party. Mr. West has agreed to certain stipulations in order to secure Mr. Peat a perfectly free hand, and under these circumstances I think I ought to recommend these terms—that is to say, a liquidation under the supervision of the Court, with a perfectly independent liquidator.

A SHAREHOLDER: What were the conditions agreed to by Mr. West to which you refer?

The CHAIRMAN: There is an error in Mr. Cooper's remarks. I did not send for Mr. Cooper, or agree to any stipulation whatever. As a matter of fact, I was asked if I would see Mr. Cooper, and, of course, I saw him as I would have seen any other shareholder of the company, or anybody else nominated by the shareholders.

Mr. COOPER mentioned that he held proxies from the holders of upwards of 10,000 shares.

THE MACHINERY.

The CHAIRMAN, in answer to Mr. Monro, said: The question of the machinery has been raised before, but I had nothing more to do with ordering it than any other member of the board. The machinery was supplied by Messrs. Harvey and Co., whose reputation as makers of mining machinery is well known all over the world, and ours is as good machinery as it would be possible to get. With regard to the payment to the vendor on account of the purchase-money, I think Mr. Abrahams, our solicitor, will be able to tell you that everything we have done has been done orderly and legally.

Mr. DIXON said he would support the resolution provided Mr. Peat were appointed liquidator. If there was anything wrong it would then have to be set right; and if, on the contrary, there was nothing wrong, many unpleasant imputations that had been thrown at the directors would be removed.

THE VENDOR AND LEGAL PROCEEDINGS.

Mr. ABRAHAMS (solicitor): With regard to the action against Mr. Hill—as soon as the directors received Capt. Pascoe's report, in June, which threw great doubts upon the value of this property, they determined at once on my advice not to pay another single shilling to Mr. Hill. He thereupon commenced an action against the company. Mr. Hill had a mortgage upon the property and served notice of motion for the appointment of a receiver of the property to enforce his mortgage. We had a counter-claim against him for the amount he had received on account of the purchase-money, but the directors ascertained that he was impecunious. Our action against him stands adjourned now, and we are advised by counsel that we should strengthen our case by having the deposition of Mr. Furlonge, who examined the mine. Mr. Hill still protests that the mine is what he stated it to be, but my belief is that he stated an untruth. He must have known that the reports he got were untrue. I must say that I have never come across a body of directors more desirous of doing

their duty to their shareholders than the gentlemen who sit at this board, for whom I have acted as solicitor.

ASSETS.

The object of the liquidator, I am sure, will be to bring this liquidation to a close as speedily and as economically as possible. Mr. Furlonge says that this property has a valuable deposit of manganese ore, and I am sure the directors will assist the liquidator in bringing it to a market. I cannot see any possibility of the shareholders being called upon to pay 3*s.* 6*d.* per share. The assets are good assets. We have had them valued at upwards of 8,000*l.*, irrespective of the property itself.

In reply to a further question as to the payment of the 11,000*l.* to the vendor,

Mr. ABRAHAMS said the money was due the moment the property was conveyed to the company. The directors might have withheld the payment, but they paid it in good faith.

The resolution was carried with two dissentients.

The CHAIRMAN then moved the appointment of Mr. Peat as liquidator.

Mr. COOPER seconded, and the motion was agreed to.

The CHAIRMAN next proposed "that the voluntary winding-up be placed under the supervision of the Court."

Mr. LINTILHAC seconded, and the motion was carried.

The proceedings then closed.

LONDON AND SOUTH-WESTERN BANK.

A PROSPEROUS HALF-YEAR.

THE half-yearly meeting was held on Thursday, at the Cannon Street Hotel.

Sir George R. Prescott

(chairman of the bank) presided.

The CHAIRMAN, in moving the adoption of the report and accounts, said the last six months had not been free from anxiety, and rumours of financial trouble had been both loud and persistent; but, so far as that bank was concerned, they had been making

GOOD, SOLID, AND SUBSTANTIAL PROGRESS.

The items in their balance-sheet showed continued and increasing prosperity. The current and deposit accounts amounted to 5,100,044*l.*, being an increase on the year of 321,357*l.* This item, above all others, showed the public appreciation of and confidence in that bank. The present paid-up capital was 525,000*l.*, and when the next three instalments on the new shares had been paid they would have a paid-up capital of 600,000*l.* The reserve fund, which last year was 95,000*l.*, with the premiums added from the new shares, now amounted to 170,000*l.*, all invested in Consols, which stood in their books at 92*l.* 10*s.* per cent. That was alike satisfactory to the public and to the shareholders.

LIQUID ASSETS.

When, six years ago, he had the honour to take the chair, they had upwards of 50 per cent. of liquid assets; now they had in cash in hand and at the Bank of England 840,480*l.*, and in money at call and short notice 311,550*l.*, making a total of 1,152,030*l.* Their investments in Consols and securities of, or guaranteed by, the British Government amounted to 1,105,425*l.*, added to which they had, in City of London Bonds, 38,800*l.*; in British and Colonial Government stocks, 195,250*l.*; and in British railway stocks and other securities, 99,856*l.*; making the total of their investments 1,439,331*l.*, which, added to the cash before mentioned, brought up their readily-available assets to 2,591,361*l.* Having regard to the fact that their current and deposit accounts were 5,189,000*l.*, and the liquid assets 2,591,000*l.*, the meeting would see at once that they had in hand 50 per cent. of their total liabilities to customers. That was a position of great strength and security. Their cash reserve amounted to 16.2 per cent.

PROFITS.

The gross profit of the half-year was 101,027*l.*, and the net profit 29,996*l.* The directors proposed to pay a dividend at the rate of 8 per cent. per annum, which took 20,000*l.*; to write off premises account, 2,000*l.*; to add 500*l.* to the Clerks' Guarantee and Provident Fund, and to carry forward 7,406*l.*

The motion having been seconded by Lieut.-Col. GEORGE A. ELLIOT, was adopted, and the dividend recommended was then declared.

BOTALLACK.

CALL OF 5*s.* A SHARE.

A SIXTEEN-WEEK MEETING of adventurers in Botallack was held on the mine on Wednesday.

Mr. A. H. James

(the purser) presided.

The accounts showed:—Labour costs, 4,245*l.* 5*s.* 9*d.*: coals (1,099 tons), 703*l.* 4*s.* 2*d.*; carriage, 302*l.* 15*s.* 6*d.*; stamps rents, 50*l.*; bank charges, 90*l.* 15*s.* 6*d.*; stannary assessment, 4*l.* 16*s.* 8*d.*; merchants' bills, 632*l.* 8*s.* 7*d.*; timber, 150*l.*; rates, 6*l.* 16*s.* 6*d.*; total, 6,186*l.* 2*s.* 8*d.* The credits were:—Tin sold (107 tons 9½ cwt.), 5,725*l.* 0*s.* 6*d.*; arsenic, 141*l.* 6*s.* 5*d.* The loss on the quarter's working was 319*l.* 15*s.* 9*d.*, and the present balance against the adventurers of 987*l.* 16*s.* 10*d.*

Mr. H. OLDS: What amount of calls are unpaid?

The PURSER: 205*l.*, or thereabout.

The accounts were passed on the motion of Mr. R. THOMAS, seconded by Mr. HENRY OLDS.

The PURSER said he recommended that a call of 5*s.* a share be made, and, if the call were paid and they got a little copper, he thought he might guarantee to wipe off the balance. (Hear, hear.) The call would produce 550*l.*

The call was made on the proposition of Mr. GEORGE COULSON, seconded by Mr. JOHN HOLMAN.

The PURSER said: In the last three years we have spent 65,000*l.* in working the mine, 13,000*l.* of which had been for opening and ventilating the mine. The extraordinary expenses had been 4,000*l.*, and the loss made in the three years was only 4,500*l.*

It was proposed by Mr. THOMAS that a special meeting be called at Penzance on Aug. 26 to consider the advisability of sinking a central shaft.

Mr. A. CHENHALLS seconded, and this was carried unanimously. This concluded the business proceedings.

THE COLAR GOLDFIELD.

From *The Madras Mail*, July 10.

It speaks well for the estimation in which the Colar Goldfield is held by experts and non-experts in England that the Stock Exchange valuations of the shares of the principal Colar companies have participated to a very small extent in the shrinkage that has been the lot of practically all classes of securities since the collapse of Barings shook the commercial world to its centre, and occasioned profound distrust and general alarm. The shares of the Transvaal gold mining companies have been woefully depreciated, in some cases as much as 50 per cent., notwithstanding the steady increase of the total yield of gold. In the first five months of this year the yield was 265,000 ozs.; in the same period of 1890 it was 186,000 ozs.; in 1889 it was 139,000 ozs., and in 1888 it was 72,000 ozs.; so the yield has almost quadrupled in four years. This decline of the Randt shares has been attributed to the reaction from excessive speculation and unwarranted inflation, and also to the realisation of the ominous fact that the auriferous deposits do not grow richer with depth, but much the reverse. On the other hand, the quotation of the shares of the Mysore, Ooregum, and Nundydroog companies experienced but a trifling decline during the worst period of the late depression, chiefly because the wise in mining matters recognised the significance of the fact that the lodes in each mine continued to increase in value with depth. Take the Mysore Mine, for example, and it appears, according to the latest figures available, that at 260 ft. north of Rowse's shaft, or in the 780-ft. level, the lode is a fine one of 3½ ft. in width, and assaying 2 ozs. 9 dwts.; and in a stope in the back of 700 ft. north in the same shaft the lode is 3 ft. wide, and assays 5 ozs. 3 dwts.; while in a winze sinking below the 700 ft. north the lode is 3½ ft. wide, and assays 6 ozs. 10 dwts. It is not surprising, therefore, to learn that the mill samples of quartz from this shaft give 3 ozs. 10 dwts. of gold to the ton, and that the total yield of gold in the first six months of the present year showed an improvement of 3,032 ozs. on the yield in the corresponding period of last year:—

	1891.	1890.
January ...	3,350 tons. 5,360 ozs.	3,271 tons. 5,002 ozs.
February ...	3,031 " 5,450 "	3,000 " 5,884 "
March ...	3,108 " 5,477 "	3,200 " 5,868 "
April ...	3,239 " 5,505 "	3,661 " 4,570 "
May ...	3,554 " 5,728 "	3,385 " 4,262 "
June ...	3,516 " 5,558 "	3,491 " 4,460 "
Total ...	19,828 " 33,078 "	20,008 " 30,046 "

The sterling value of the yield, reckoned at 3*l.* 17*s.* per oz. of gold, was thus 127,350*l.* between Jan. and June, 1891, and 115,677*l.* in 1890. The cost of winning the gold at this mine in the whole of 1890 was 1*l.* 2*s.* 6*d.* per oz. In the present year the scale of the operations has increased, and the quality of the ore has improved, so the working expenditure must have averaged less than last year. But if the average of 1890 be taken, then the working expenditure in the first half of this year, calculated on the above-mentioned basis of 1*l.* 2*s.* 6*d.* per oz., may be set down at 37,213*l.*, leaving a profit available for dividend and extensions of 90,138*l.* for the six months, or at the rate of 180,276*l.* for the year, being over 80 per cent. on the capital of 225,000*l.* (recently increased by the 25,000 shares given to the Goldfields Company for a slip of land west of the original block of the Mysore Co.) The directors do not return all the available profits to shareholders, but reserve a potential portion to meet the cost of new machinery and fresh exploration. The stamping power is soon to be increased by 30 heads, which will bring the stamping capacity up to nearly 5,000 tons of quartz a month; and additional tailings machinery is being erected to allow of from 1,250 to 1,500 ozs. of gold being obtained monthly from the tailings. The increase of the output of gold to 7,000 ozs. a month may, therefore, be reasonably expected at an early date.

It remains to be proved whether the Mysore will always, as a mine, be *facile princeps* in the Colar Goldfield, for the Ooregum is striding ahead, and, as a whole, is a richer property, as far as it has yet been proved, than its great rival. We have alluded to certain points in the Mysore Mine which are remarkably rich and encouraging, but it must in fairness be added that the majority of the other points give comparatively poor results at the present moment. On the other hand, the majority of the points in the Ooregum are rich, almost phenomenally rich. The 360-ft. level in Wallroth's shaft has been advanced 23 ft. south and 22½ ft. north, and the lode is 2 ft. wide, assaying 4 ozs. 18 dwts. at the former, and is 2 ft. wide, assaying 7 ozs. 4 dwts., at the latter point. The sinking of the shaft below 360 ft. is now being resumed with the comforting assurance that there is overhead a large reserve of rich ore readily available for stoping. Low's shaft has been sunk 363 ft., and the 350-ft. level has been advanced 139 ft. south, towards Wallroth's shaft, and the lode at the extremity is 1 ft. wide, and is valued at 8 ozs. 2 dwts. Probyn's shaft has been sunk to 546 ft., and at the bottom of it the lode is 5 ft. wide, and assays rather more than 1 oz. per ton. The 450-ft. level has been driven 50 ft. north of the shaft, or close up to the Nundydroog boundary, and the lode there is 4 ft. wide, and assays 4 ozs. 7 dwts. per ton. The same level has been driven 195 ft. south, towards Low's shaft, and the lode at this point is 3 ft. wide, and is valued at 2 ozs. 3 dwts. per ton. In a rise in the back of this level the lode is 1 ft. wide, and assays 4 ozs. per ton; and in one winze the lode is 3 ft. wide, and assays 2 ozs. 4 dwts., while in another winze in the same level the lode is 3 ft. wide, and assays 2 ozs. 5 dwts. The epidemic of cholera in the Ooregum camp during Apl. and the early part of May greatly interfered with the work throughout the mine, and caused the return of gold in the former month to decline one-third, as compared with March, but the results for the six months just ended compare very favourably with those in the corresponding period of 1890. They are as follows:—

	1891.	1890.
January ...	1,353 tons. 2,890 ozs.	825 tons. 1,784 ozs.
February ...	1,197 " 2,913 "	957 " 2,032 "

	1891.	1890.
March ...	1,302 " 3,004 "	1,005 " 2,075 "
April ...	950 " 2,055 "	966 " 2,049 "
May ...	1,367 " 2,890 "	1,001 " 2,107 "
June ...	1,354 " 2,902 "	1,010 " 2,127 "
Total ...	7,523 " 16,654 "	5,767 " 12,174 "

The milling power of the mine is now being increased from 30 heads to 50 heads of stamps, and the tailings machinery is in course of erection. The company has accumulated about 25,000 tons of tailings, and it is believed that a profit of 7,000*l.* per annum will be obtained from this source. The quartz at this mine has proved exceptionally rich, and the value of tailings depends to a great extent on that of the stone when quarried, so that rich stone gives rich tailings and *vice versa*. The cost in 1890 of winning gold at Ooregum averaged 2*l.* 2*s.* 8*d.* per oz. This year the cost must have decreased with the increase of the scale of operations, but assuming 2*l.* 2*s.* 8*d.* as the cost, and it follows that the Ooregum gold gives a profit of 1*l.* 15*s.* per oz., which, calculated on the above-mentioned 16,654 ozs. obtained from Jan. to June this year, means a nett profit of 29,144*l.* for the six months, or at the rate of 58,288*l.* for a year on a capital of 255,000*l.* (including the new issue of shares). The credit balance on Dec. 31 last was 51,570*l.* Out of this sum 20,000*l.* was appropriated to paying off debentures, 2,500*l.* to paying debentures bonus, and 1,250*l.* to paying interest on debentures, thus leaving 27,820*l.* available for dividend. There are no more debentures to pay off, and the dividend this year should be a handsome one.

Until very lately the belief was entertained on the field and elsewhere that the lode dipped from the Nundydroog south into the Ooregum; but it is now proved that the lode dips north from the Ooregum into the Nundydroog. This is of vital consequence to Nundydroog, and is of comparatively small importance to Ooregum, which has many strings to its bow. The Probyn's shaft, or the northernmost shaft in Ooregum, has given extraordinary results so far, and is far from being worked out. After paying tribute to the Ooregum proprietors the lode dips into the Nundydroog block, and promises to enrich its proprietors exceedingly. A few months ago it was predicted at Colar by the experts that unless some new discovery were soon made the Nundydroog Mine would be played out at an early date. The richness of the lode adjacent to Ooregum had increased with depth, but the length diminished ominously with depth, and it was argued that it was only a question of months when the triangle, with the apex downwards, formed between Webb's shaft in Nundydroog and the Ooregum boundary, would be exhausted of its wealth. But the cross-course was penetrated; the lode that had been shifted was recovered north of it; work was resumed with energy; and the deeper the shafts have been sunk, and the further north the levels have been driven, the better have been the results. At a depth from the surface of 520 ft. the lode has been followed in a level of a total length of 170 ft., which measures 1½ ft. at the northern, and 4½ ft. at the southern extremity (or as it approaches Ooregum) and assays 2½ ozs. and 4 ozs. per ton respectively. The figures for four stopes are 3 ft. wide, assaying 1 oz. 5 dwts.; 2½ ft. wide, assaying 2 ozs. 2 dwts.; 2 ft. wide, assaying 2 ozs. 11 dwts., and 1 ft. wide, assaying all but 2 ozs. As a "proof of the pudding," it is stated that the rough mill samples are valued at 3 ozs. 11 dwts., and the smalls at 2 ozs. 4 dwts.—two little facts that tell their own tale of good dividends to come. The following are the results for the first six months of last year and of present year:—

	1891.	1890.
January ...	830 tons. 1,471 ozs.	670 tons. 1,139 ozs.
February ...	810 " 1,449 "	700 " 1,321 "
March ...	800 " 1,520 "	650 " 1,017 "
April ...	855 " 1,633 "	650 " 986 "
May ...	1,000 " 1,634 "	700 " 1,035 "
June ...	1,050 " 1,812 "	750 " 1,488 "
Total ...	5,345 " 9,519 "	4,120 " 7,036 "

The yield in the first half of this year consequently exceeded that in the first half of last year by 2,433 ozs., and the reserves now are believed to be much larger than they were a year ago. "Minelooking better than ever." So telegraphed the superintendent to his board at the end of Apl.; and it is looking even better now than it did at that recent date. The capital of the company is now 200,000*l.*; the tailings machinery will come into use this month, and add from 150 ozs. to 250 ozs. of gold to the monthly yield; and the stamping power, which is now restricted to 20 heads, will be doubled before the end of the year.

The progress of the Champion Reef Mine is peculiarly interesting, for the property lies between the Mysore and the Ooregum blocks, and it is unquestionably traversed by the reef that has proved so advantageous to those properties. Sufficient depth has not yet been attained to cut the reef below the old workings, but so far as anything can be certain in mining it is sure that the reef will be cut rich at depth. The company has ample funds available, and the operations are being directed with great vigour and skill by the superintendent. The Coromandel block belonging to this company, lying to the north of Nundydroog, was until recently an asset of very dubious value; but its importance has been increased considerably by developments at depth. The prospects of Balaghat are also improving. In one place the quartz averages 2 ft. in width, and is worth 1 oz. 10 dwts. per ton; at another point there is an 8-in. lode, assaying 7 ozs. 7 dwts.; at another point there is a 10-in. lode, assaying 3 ozs. 3 dwts.; and at another point there is an 8-in. lode assaying 3 ozs. 12 dwts. The new 10 heads of stamps have been in use several weeks; the old 10 heads are being renovated. Haines's shaft is approaching completion, and the north engine shaft will soon be put into the state of thorough repair that it badly needs. The company has not yet succeeded in coming to terms with the Goldfields Co. for the purchase of a slip of land to the west of its block. The chief shaft is now 600 ft. deep, and is within 100 ft. on the lie of the lode, of the land of the Goldfields property. The Goldfields Co. has been prompted by the heavy prices that it has obtained from the Mysore, Ooregum and Nundydroog companies to demand a higher price from the Balaghat than that company can conveniently afford to pay in the present state of its finances. The Goldfields Co. might afford to be generous; but it would probably say in reply to such a remark that "business is business and sentiment is sentiment." Which nobody can deny.

SUPPLEMENT.

The Mining World AND ENGINEERING RECORD.

ESTABLISHED 1871.]

SATURDAY, AUGUST 8, 1891.

[ESTABLISHED 1871.]

REPORTS OF MEETINGS.

RICHMOND CONSOLIDATED MINING CO., LIMITED.

"TWENTY YEARS AFTER"—BRILLIANT PAST RESULTS, AND A GOOD FUTURE OUTLOOK—IMPROVEMENTS IN TWO OF THE MINES.

THE ordinary general meeting was held at the City Terminus Hotel on Thursday, "to receive the report of the directors and the statement of accounts for the year ending Feb. 28, 1891, to declare a dividend, and to transact the general business of the company."

Mr. George Hopkins, C.E. (chairman of the company), presided.

Mr. HUBERT AKERS (secretary) read the notice of meeting, and the report of the directors was taken as read.

A 20 YEARS' RETROSPECT.

The CHAIRMAN: Gentlemen, many of you, probably, will have noticed that it is just 20 years (not to-day, but last Monday) since the Richmond Co. was incorporated, and, before I deal particularly with the accounts which we have before us to-day, I do not think you will imagine a few minutes wasted if I give you some particulars of what the Richmond Co. has done during the 20 years it has been in existence. During that time we have taken out of the Richmond Mine 465,297 tons of ore, and have purchased from other companies 89,578 tons, making a total of 554,873 tons. This ore has yielded 83,183 tons of lead, 362,950 ozs., or

OVER 15 TONS OF GOLD,

and 11,022,465 ozs., or 460 tons of silver. The total value of this bullion has been 5,748,898 $\frac{1}{2}$ sterling, and the net revenue to the company has been 1,156,885 $\frac{1}{2}$, which is, as nearly as possible, 20 per cent. of the total value, the other 80 per cent. having gone in labour and materials. Out of this revenue we have used for purposes of capital 125,260 $\frac{1}{2}$, and we have expended in law costs nearly 100,000 $\frac{1}{2}$, the actual figure being 97,967 $\frac{1}{2}$. Now, I think that that confirms what is rather a common saying—that in America a mine is worth nothing unless you have plenty of law. In addition we sustained a loss by fire in 1878 of 18,156 $\frac{1}{2}$, leaving a surplus of 915,502 $\frac{1}{2}$, of which there has been distributed in dividends 871,968 $\frac{1}{2}$, or 16 $\frac{1}{2}$ 5s. per share, which is just

THREE AND A QUARTER TIMES THE NOMINAL AMOUNT OF THE CAPITAL.

(Loud cheers). The shareholders (taking them generally as a body) have received during the whole period of 20 years an average dividend of 16 per cent. per annum. (Cheers.) Now, the benefit to the district will be realised when I tell you that out of the total sum no less than 4,592,000 $\frac{1}{2}$ has been expended in Nevada and San Francisco in wages and materials, which is on the average for every year 230,000 $\frac{1}{2}$, or 4,400 $\frac{1}{2}$ a week during the whole 20 years. A great deal of that result is due to the ability, energy, and forethought of

OUR MANAGING DIRECTOR, MR. PROBERT.

Of course, he could not have obtained those results if the mine had not been equal to them, but I have been long enough on this board to remember letters coming from the other side advising the vendors to sell out their shares as quickly as possible, because the Richmond mine was worked out. By Mr. Probert's energy and perseverance, aided by his managers out there, we have obtained a very different result, and I think the figures I have given you to-day show a record of mining which it will be very hard to beat. (Loud cheers.) It is in these days, when we have so many properties brought here, which, however well they look at first, turn out very disappointing and disastrous to the shareholders—I say, it is somewhat refreshing to refer to such figures as I have alluded to now. (Cheers.) We will now deal with the report, and, of course, the principal feature in it is that of

THE TIMBER SUITS,

commenced by the United States Government, and which were not withdrawn until nearly the end of last year, and which, as a matter of fact, necessarily paralysed during the greater part of the year all our operations, both of mining and smelting. The cost of those suits to the company has been 2,116 $\frac{1}{2}$ cash paid, in addition to the loss we have sustained from the interference with our business. During the short time that we have been able and at liberty, so to speak, to work, explorations have been carried on in the Richmond Mine, and we have raised from it 1,346 tons of ore, but that quantity was not sufficient of itself to

warrant the starting of the furnaces, and, as a consequence, the company has done no smelting during the year, the furnaces being shut down all the time. In addition to the work done on the Richmond Mine, we have executed a good deal of exploratory work on

THE WILLIAMSBURG MINE,

and as matters are looking very hopeful there, and some of you have probably forgotten, or have never known, what this Williamsburg property consists of, I will just state that it comprises three claims, each 1,200 ft. long and 200 ft. wide, about 2 miles from the Richmond Mine, and about the same distance from the smelting works. We purchased it in 1883 for 3,000 $\frac{1}{2}$, and expended on the shaft in 1884, 930 $\frac{1}{2}$, but a severe storm in that year destroyed the works and filled up the shaft, and since then until within the last 12 months no work has been carried on except by tributaries. We have, now, however, sunk a new shaft, which at the date of our last meeting was down some 200 ft. Since then it has been sunk a further 200 ft., and is now down 400 ft., and a considerable length of levels has been driven from it in two directions. In our report we gave you the latest information that we then had about the Williamsburg Mine, where you will notice (page 3) Mr. Probert says that he considers the discovery, small though it is, of special interest, showing that the ground at the depth of 400 ft. and on the true dip of the vein is not barren. Since the publication of that paragraph we have received further information from Mr. Probert, which I think it is advisable I should read to you. Speaking of the Williamsburg, he says—

"Mr. Morrison reports that, although from various causes but little progress has been made in sinking in the bottom level (southerly drift), in cutting out the ore from the extension of the old chamber above indications have been met with which point to the probability of that pipe of ore dipping northerly instead of southerly, as was supposed. If this should prove to be the fact, then the ore in the southerly drift must be an independent streak, having its apex elsewhere, and showing that the Williamsburg ground is likely to contain mineral in places remote from the old chambers, and possibly extending eastwards through the whole length of the claim, where many iron croppings and discolourations have been found in a line leading towards the old east end workings, which yielded good ore formerly. When you get the map, you have sent out, properly filled in you will understand this ground better, and will see there is sufficient warrant for continuing the explorations in hand. About 100 tons of Williamsburg ore is now in transit to Salt Lake, and there will be more to send forward, but the grade is rather low."

That letter was dated July 22, and we asked Mr. Probert to let us know in time for the meeting the latest news with respect to these works, and his answer is this—

"South drift temporarily suspended; following traces of another chimney pitching northerly from the old chamber. 100 tons of ore shipped to Salt Lake netted \$2,500."

I do not know whether he meant this cable to correct to some extent his letter, but \$2,500 for 100 tons of ore is not very low grade—in fact, it is much better than we were expecting, and I think it a very satisfactory price. Now, as I mentioned before, we have a large area of ground, and if we have this additional pipe which he speaks of, and also the old one from which we and our predecessors abstracted a considerable quantity of good ore, I think there is a very favourable prospect for us in the Williamsburg property. Since the withdrawal of the timber suits, I mentioned that we had been exploring in the Richmond Mine proper, and have spent on that work 2,300 $\frac{1}{2}$. We have spent a good deal of money from first to last in exploring the lower levels, but up to the present time have never come across anything of consequence. I wish we had. It is the belief of everybody that in the lower levels there must be good ore, but, as you know, the ore bodies in the Richmond Mine are very irregular. They are not like an ordinary mine where the ore is enclosed between walls; it occurs in chambers, in detached masses, and is very difficult to find. Those of you who have been in the company for some years will remember that when we found that large ore body in 1878 from which we took out an enormous amount it had only been missed three years before that by about 4 ft. The workings had gone past this enormous body, and had missed it, and it was only found three years after. Now we have a little

MORE ENCOURAGING NEWS EVEN ABOUT THE OLD RICHMOND

ground, and when we have a little good news we never know what it may lead to. In this same letter from which I read an extract just now Mr. Probert says:—

"I have also a little better news from Eureka to communicate. In a rise from the 300-ft. level to the 200 in the Richmond a little good ore has been encountered, and as this is in new ground, it may lead to something of value."

You know how very carefully Mr. Probert writes. (Hear, hear.) He does not raise hopes unnecessarily. He waits until he sees results, and all he says is here:—

"It may lead to something of value. It is impossible, however, to say much about it until more work has been done, and the connection made between the levels."

However, gentlemen, although we know nothing much at present, it is satisfactory to think that we have found something which looks hopeful in that ground. So far for the mining, and I have explained that we have done no smelting, and as regards the accounts I do not think I need weary you with the details, particularly as they are very explicit in regard to every department. The principal items are set forth in the report where it states that we have at present standing to the credit of revenue 3,751l. 16s. 10d., out of which I shall presently have to ask you to

DECLARE THE DIVIDEND

recommended in this report, and we have, in addition to that, a reserve fund of 42,483l. We paid a dividend of 2s. 6d. per share, free of income-tax, on the 1st of this year, and the present dividend, although a small one, will, I have no doubt, be acceptable to the shareholders. (Cheers.) If I can give any more information I shall be pleased to do so, and, in the meantime, I will formally move the reception and adoption of the report and accounts. (Cheers.)

The Hon. RANDOLPH STEWART (director): I second the motion,

VIEWS OF SHAREHOLDERS.

Mr. HURST: The statement that the chairman has made is very explicit, and everyone will understand it, and certainly the accounts presented to us are very full indeed. The chairman has told us a great deal of what has been done in the past, but there are a good many shareholders who did not enjoy its benefits, and who, therefore, must look to the present and to the future. The chairman has told us something with regard to the future that looks hopeful, and I trust it will be realised. There was an extraordinary production in the past which we cannot expect to see repeated in the future, and at present the mining outlook seems gloomy. I find one thing in the accounts which does not look well, and that is that the profit and loss account, which is 916l., and the expenses in London are 1,671l. As a man of business in former days, whenever I found my profits smaller I tried to curtail my expenses as much as possible, and, therefore, should recommend the directors to see if they cannot in some way or other contrive that the expenses in London may be reduced. If the business is to go on, it is important the shareholders should receive some profit, though even those we are receiving are better than that of many mines that could be named. But those have been mines that have been pushed forward not honestly or in a straight-forward way. Our capital in the first instance was enormous, but still the results have fully justified it, and now we must look to the future, and it is only by good management and great economy that we can expect dividends.

I GIVE THE DIRECTORS CREDIT

for the attention they have given to the concern. I give Mr. Probert credit also for being capable in the management of affairs in Eureka, and trust that things will turn out more prosperously than they have done recently. We know "the darkest day—live till tomorrow will have passed away," and this new prospect held out by Mr. Probert, I trust, will be realised even beyond what he has intimated. (Hear, hear.)

Mr. LEEKE: With regard to dividends, my own idea would be to spend what you now propose to divide on more vigorous exploration, for the life of the mine consists in that.

Mr. WEIR: It is gratifying to be free from the law suits which have given our board so much trouble for a long time past, but I should like to know whether the costs of fuel will be greater than before this litigation commenced. I quite agree with the first speaker that an effort should be made to reduce the expenses in London. How is your reserve fund invested, and as to temporary loans—are they realisable?

REPLIES.

The CHAIRMAN: They are all well secured. As to the profit and loss, you will see by the first item on page 2, that out of the ore raised in the last 12 months and sold for 6,830l., we paid the general expenses of management at Eureka of 1,595l., leaving a profit of 784l. As regards our investments, we received on them 1,750l., which was more than sufficient to pay the London expenses. As regards the suggestion of not paying a dividend but spending more money on energetic exploration, I do not know whether Mr. Leeke is aware of the large amount of money we have spent in this direction in the Richmond year after year below the 800, which is the lowest level from which we have taken any ore of consequence. We have explored in all directions, and really the question has been on my mind for some years whether we ought not to give up explorations in the lower levels, but I have been unwilling to do it so long as there has been any hope whatever. We have not restricted the amount of development expenditure. It has been small lately, because we could not with these suits going on explore the mine at all—it was not worth while. I do not think it is necessary to keep the money in hand, and so would advise the shareholders to take the dividend, although it is a small one. We have a balance in hand on revenue brought forward from previous years. At the last account we had a balance of 9,584l., out of which we paid a dividend of 2s. 6d., which absorbed 6,750l. The remainder, with what we have earned during the year, enables you honestly and well to divide 1s., and still carry forward 1,050l. With reference to the smallness of the amount, Capt. Stewart has long wished to pay an extra shilling so as to bring the sum to a round figure, for he has never liked the odd one. (Laughter.) Of course, to those who have purchased shares at anything like their present price (and I hope many have done so) even that small dividend represents something like 6 per cent. on their money, and for those who have been shareholders from the beginning, I do not think they need grumble at the smallness of the amount now, because I have shown you they have had

THEIR CAPITAL BACK MORE THAN THREE TIMES OVER.

As regards the London expenses, we have reduced them very considerably, to the extent of nearly 1,000l., by sharing our offices and our work with other companies, so that our office expenses, salaries and clerks, stand now at less than 400l. for the year. (Hear, hear.) The only item you could reduce would be the directors' fees. I do not know whether Mr. Hurst levelled his bow at them or not. (Laughter.)

Mr. HURST: I simply threw out the matter for the directors' consideration.

WHAT MIGHT HAVE BEEN.

The CHAIRMAN: I will only say that at the time we were earning cent. per cent. the shareholders did not propose, and the directors did not ask for, any increase of their fees. We have been on half-pay now for a good many years, and I find that for the whole 20 years during which the company has been in existence the directors' fees have amounted to 23,500l.—a little over 1,000l. a year for the whole period, which is very small on the returns of the mine. I am quite sure, gentlemen, that if we had asked you at the start to pay us according to results, you would have willingly said, "We will give you 5 per cent. on the profit," in which case instead of paying us 23,000l., we should have received something like 55,000l. (Hear, hear.) However, I do not make a point of it, and will see what can be done. I hope, from what we have heard lately, that we have better times in store for us, and then if we can give something more to the shareholders, I am sure you will not be strict about the fees of the board. (Cheers.) As to the timber, it is nothing but scrubwood, which is used for burning into charcoal, and the timber proper which we use in the mine is imported from other States, and, therefore, it makes no difference to that item. The timber is the brushwood and scrub that grows wild on the mountain side, and is not timber at all. It has hitherto been cut down by American citizens, converted into charcoal by them, and then brought to our mine and other mines, and sold in that form. As a matter of fact, I do not suppose it will make any difference in our expenses.

A SHAREHOLDER: What is the probability of your re-commencing smelting?

OTHER PROPERTIES.

The CHAIRMAN: I do not think it will be wise to start up until we have accumulated a certain quantity of ore. The furnaces are very large. Each one is a 60-ton furnace, and requires a large quantity of ore to keep it going. Mr. Probert has great hopes of finding another property. We have told him that if he could secure one something like the Williamsburg that would answer our purpose, and we thought it would be the best way in which to invest some of our reserve fund. I suppose if he has examined one he has examined probably 20 or 30, until he is almost disheartened about it. What he says is this—either the properties are worth nothing, or if they are worth anything then the owners put on such a price as to make the purchase prohibitory. I hope that this Williamsburg Mine will do something for us, because we have plenty of ground there. We bought it cheap, and it looks really as if we should now get something out of it. (Hear, hear.)

The report was unanimously adopted.

THE DIVIDEND.

The CHAIRMAN: I propose, "That a dividend of 1s. per share, free of income tax, be and is hereby declared, payable on Aug. 10 inst. to the shareholders on the register on July 27." I think we may be able to send out the dividend warrants on Saturday.

Mr. BOWER (director) seconded the motion, which was carried.

JUSTICE TO MR. PROBERT.

The CHAIRMAN: Mr. Probert and the Hon. Randolph Stewart retire, and offer themselves for re-election. I need say nothing about Mr. Probert, for you know him well, but I will say this—that we have been extremely fortunate in being able to retain his services in the management of our property out there. It is all well enough when things are going right, and the mine is producing largely, as ours was at one time, but it is a different thing when you find your mine almost worked out, and you are troubled to know in which direction to look for fresh bodies of ore. He has always been a most devoted servant—I do not like to call him that—a most devoted friend to this company, and at all times, whether in prosperity or adversity, we have had the most able and generous assistance from him. As to Mr. Stewart, he is an energetic and painstaking director and brings a good deal of ability to bear on the affairs of this company. I propose the re-election of Mr. Probert.

Mr. LEEKE: I second the motion.

Carried unanimously.

The CHAIRMAN: I propose the re-election of the Hon. Randolph Stewart.

Mr. JONES seconded the motion, which was carried unanimously.

The Hon. RANDOLPH STEWART, in returning thanks, said: I can only reiterate what the chairman has said with reference to the mine, and trust we have a future still before us. I have always observed this during the 13 years I have been connected with the property, that whenever its fortunes appear at the lowest ebb they have invariably improved, and I take even this as a good omen for the future. (Cheers.)

Mr. HART proposed the re-election of the auditors, Messrs. George Broom and James Fraser, chartered accountants.

A SHAREHOLDER seconded the motion, which was carried unanimously.

THANKS TO MR. PROBERT.

The CHAIRMAN: Before we separate I will move a vote of thanks to Mr. Probert, who, I am sure, will take it kindly from you. I know the law proceedings during the last two years have been a constant source of worry to him, and I also know that he has spared no pains at all times to endeavour to find new properties for us. He has been in all directions, and in one case, during most inclement weather, where there was a property to be purchased, he went in the winter time, at great personal discomfort, and satisfied himself that it was not worth having. That property has since been bought by an English company, very much to their regret. But Mr. Probert saved us from that. He is not very well. He is suffering from rheumatism, because he is a man who does not spare himself, and, I am afraid, unwisely exposes himself at times, and I am quite sure at this moment a cordial vote of thanks from you will be a consolation and an encouragement to him.

Mr. HART seconded the motion, which was carried by acclamation.

Mr. HART also proposed a vote of thanks to the chairman and directors, and said: I believe, whatever the position of the company,

WE HAVE AN HONEST BOARD OF DIRECTORS,

who have the interest of the shareholders at heart. (Cheers.) We have, I feel sure, also in Mr. Probert a very efficient and faithful

helper. I take it that Mr. Hurst is one of the original shareholders, for he looks as if he had been in the mine a good many years. (Laughter.) He looks also as if he had had the large dividends that have been spoken of, but such has not been my fate. If I were to tell what my shares cost me you would admit that the story is a sad one, and particularly so to me. At the same time I recognise that the directors have done all they can.

Mr. HURST, in seconding the motion, said: I happen to be one of the early shareholders. I have no cause to complain of my investment. I believe the chairman and directors have worked well, and I am very much obliged to Mr. Hopkins for the very clear manner in which he has laid the affairs of the company before us.

The CHAIRMAN, in replying, said: The face of Mr. Hurst is a very familiar one, and I thought he was with us from the commencement, and am now pleased to hear it. I am afraid there are not many like him in this room. You will hardly credit it, but apart from the transactions of which the company gets no knowledge, we have actually registered, in our office, transfers for 522,332 shares, that is to say, our capital has changed hands 10 times over in this period. Therefore, I am afraid we have not many of the original shareholders left, but still there are some, though not at this meeting. We are very much obliged to you for your vote of thanks and for your attendance here to-day.

DE KAAP GOLD MINES, LIMITED.

THE MINE CAN BE SAVED FOR £2,000—SUBSCRIPTIONS FORTHCOMING—DISCOURAGING REPORT.

A SPECIAL MEETING of this company was held at Winchester House, on Wednesday.

Mr. W. F. Turner

presided.

A DOLEFUL POSITION.

The CHAIRMAN: I have to preface my remarks by saying that immediately after posting the notice of this meeting it was discovered it was insufficient, and that instead of seven days we should really have given 10 days' notice. For that reason no resolutions can be passed to-day. The circular of July 18 told you the position of affairs, and also that immediately after the Mar. 23 meeting an action was commenced against five of the former directors to recover about 4,000£. At the Apl. 15 meeting I said we had reason to expect proposals from some of the directors to settle that action out of court, and I stated also that we intended to wait for those proposals and use the money, if we received it, in developing the mine, and not then to attempt an issue of preference shares. From time to time we were assured that we might expect an offer from certain of those directors, at any rate, but I am sorry to say it has not come, although we know some of them are still prepared to

SETTLE THE MATTER OUT OF COURT.

They recognise their liabilities, and are willing to discharge them, but there is a difficulty in regard to others. The net effect is this, that whether the company goes on or does not, that action must be prosecuted to the bitter end, and, as we are advised and believe, there is no doubt whatever as to what the ultimate issue will be. We

SUSPENDED WORK AT THE MINE ON APL. 30.

You may remember we instructed the manager to do so at once, but he interpreted his instructions in a very liberal manner, and, at some considerable expense to himself, continued to work throughout Apl., which partly accounts for the liabilities amounting to 600£. He did it for the best, being anxious to complete certain work, but writes to say he is discouraged by the result. We have remitted him all the money we could, and have at this moment about 20£ left, whilst he, poor man, is actually out of pocket for various sums he has paid whilst his own salary is accumulating. We had made an arrangement with him by which if he received his salary to July 31, he was quite prepared to terminate his contract and return to England, as he wished to do. There can be no advantage in keeping a manager who does not wish to remain, and who has lost confidence in his property. We have not been able to remit any portion of this 600£, and he has given us notice that if he did not receive it by July 31 he should avail himself of whatever remedies the law of the country gave him—in fact, take steps to realise any assets we might have on that side, including the mine, and pay himself. We authorised him to sell 10 stamps, and pay all the claims and licenses. The latter have been paid for last month, but there are no funds to pay them for this. I have no doubt he will do his best to carry out our instructions and find buyers for these 10 stamps, but failing that, unless we can raise money at once the machinery will be sacrificed, and probably the mine also. As to the preference shares, a paragraph in our circular refers to two actions commenced against the company for rescission of contract to take shares and to rectify the register. We defended the actions, and it seemed doubtful whether they could succeed. It would have been wrong for us to issue preference shares when the amounts subscribed upon them would have been subject to the claims of those shareholders if they succeeded. As to the debenture subscriptions—we have received subscriptions for 300£ in all, and out of 1,050 shareholders less than 12 have responded.

UNLESS THE DEBENTURES ARE SUBSCRIBED THE COMPANY CANNOT BE SAVED.

The assets will certainly be taken by the creditors, and the property will pass out of our hands, and we will lose the machinery, which has cost us about 3,000£. We have negotiations on hand for the sale of a portion of it, and have offered to sell 10 stamps for 1,100£, and the managing director of the company proposing to buy, has gone out to see them, but there has not been time for his reply. In fact, the company can be said to have no assets on the other side, unless money can at once be raised to protect them. Re-construction has been suggested, but having approached several large shareholders, I am sorry to say I have been met with a direct negative. People seem to be of opinion that we do not know enough to make it worth while to re-construct, and I feel there is force in that argument. A comparatively small amount has been spent on the mine compared with what should have been spent. Money was expended in all sorts of ways other than on the mine, and at the present moment we cannot be said to know anything definite

of its merits. The manager advised us some months ago to sink deeper, and the consulting engineer on this side counselled us the same way, but we have not the means to do it, and even if we had, neither the manager nor the consulting engineer is very confident as to the result. The

LAST ADVICES ARE DISCOURAGING,

and the shareholders we have consulted are not disposed to go into re-construction on any terms. The only hope, therefore, is to get the debentures subscribed, and the board are prepared to aid in the matter. The question is—will the shareholders subscribe 2,000£? At the present moment we cannot see our way to more than 500£, which is absolutely useless.

Mr. J. BARKER said the position would be secured if all the shareholders subscribed 4d. a share.

The CHAIRMAN said this was impracticable, for all would not do it. Otherwise the suggestion was excellent.

Mr. DIXON said he understood at the last meeting influential people were going to do a great deal for the company, but a subscription of 300£ he did not regard as a fulfilment of their pledge. He thought that in three months the new board might at least have obtained an independent report on the property. As

THE MEETING TO-DAY WAS ILLEGAL

it was useless to go on. Personally, he thought nothing could be fairer than re-construction, because then the burden would be shared by many and be light, instead of being borne by the few, in which case it would be heavy.

The CHAIRMAN said that Mr. Dixon was quite right in saying that no resolutions should be passed to-day.

Mr. HOSKING agreed with Mr. Dixon in thinking that a good deal was promised to be done for the property by those who had been instrumental in "kicking out the old board."

A SHAREHOLDER: You were not kicked out—you had a vote of thanks for your services.

Mr. HOSKING: We were kicked out for the purpose of putting a new board in, and placing the company on a proper basis.

Mr. GREY: To re-construct with only a liability of 6d. per share would be absurd, and a voluntary subscription is impracticable.

Mr. MOSCROP urged the directors should send out a circular telling each shareholder what was the definite proportion he should subscribe towards the money now wanted. There should be a 10 per cent. subscription all round.

A SHAREHOLDER: The vendor holds 70,000 shares, and how would you deal with him?

The CHAIRMAN: The vendor has got rid of all his shares—except 500. He never received 70,000 shares, but many were allotted to his nominees at the time, and he has transferred others, so that they are now held by hundreds of people.

Mr. GREY: Without knowing more about the property (and what we do know is most discouraging), I, as a small shareholder, will not subscribe.

Mr. HOSKING: How much will it cost per month to keep the property going for a year?

IN FAVOUR OF RE-CONSTRUCTION.

Mr. KEARTON: I think we have only examined a very small portion of this property. There are 150,000 shares in the company, and De Kaap district shows signs generally of resuscitation, which makes me think that our property has some value. I have heard that Big Buffalo reef spoken well of by Mr. Henderson, of the Oceana Co. I think it would be better to endeavour to get a re-construction on the basis of a liability of 2s. 6d. per share. It seems to be folly to abandon the mine at the present time, and it might be made a condition that we should not go on working until we got an independent report.

RE-CONSTRUCTION IMPOSSIBLE AT PRESENT.

The CHAIRMAN: There are two difficulties in the way of re-construction—first, that we must have about 1,000£ at once, or otherwise the property will be gone, and next, re-construction takes time, which we cannot spare. Many of the vendors' shares also are held round about Barberton, and no help would be forthcoming from that quarter—in fact, they would give notice to be paid off under the Act. That is my opinion, and it would be wrong to withhold it from you. I do not think you would get 1,000£ outside this room. If 2,000£ of debentures were subscribed we could save the property, and the security for the money in my judgment and that of the board is ample.

HELP.

Mr. RAIT: This is evidently an acute case of fever, and if you wish to save the patient you must do it to-day. I am willing to subscribe 100£ of the debentures—a friend will subscribe 100£ more, and my partner (Mr. Kearton) will subscribe 50£ on the understanding that no allotment be made unless subscriptions for the amount of 2,000£ be forthcoming.

The chairman and directors promised 150£ between them, and there were further subscriptions before the meeting closed.

SOUTH CONDURROW MINE.

MINE LOOKING WELL, BUT NO DIVIDEND—TIN TICKETING.

A MEETING of the adventurers in this mine was held at Windsor Chambers, Great St. Helens, London, E.C., on Wednesday, 5th inst.

Mr. H. J. Marshall

presided.

The notice convening the meeting having been read, the minutes of the previous meeting were read and confirmed.

Mr. CHARLES CLARK read the statement of accounts for the four months ending July 11, which showed the total costs during that period to have amounted to 6,023£. 7s. 9d. The tin sales were 103 tons 4 cwt., realising 5,768£. 0s. 9d., which, together with discounts on merchants' bills and income tax recovered, left a loss on the four months' working of 132£. 5s. 2d. The ledger balance in favour of the mine was 1,804£. 15s.

Capt. RICH then read the agents' report as follows:—

AGENTS' REPORT.

Aug. 3.—We have partially cut plat at the 138-fm. level at Marshall's shaft, and have driven east 7 fms., and intersected the cross-course. The men are now driving north on the cross-course to intersect the lodes standing in that direction. The ground is easy for working, and looks congenial for tin. In the 123-fm. level north of shaft we met with a lode nearly vertical, several fathoms from the main tin lode, which yielded rich tinstone west of the cross-course. We expect that the perpendicular lode, and the main tin lode (which has a rapid underlie south) will be very near each other at the 138-fm. level, if not in actual conjunction. We hope to find the lodes profitably productive when intersected at this level. We are sinking a winze below the 123 east of Marshall's. The lode in the bottom is worth 15% per fm., and the stope in the back is worth 12% per fm. Two stopes in the bottom of the 60 east of King's shaft, on the north section of the lode, are worth 10% per fm. each. The stope in the back of the 60 east is worth 10% per fm. We have been compelled to suspend the stopes in the back of the 50 east for the time owing to a fall of ground in the back of this level, which completely filled it for several fathoms in length, but we hope to clear it and resume operations in about a week. The 40 end east of engine shaft is without tin to value. We have put out a cross-cut at this level, and intersected the north part of the lode, but as far as yet proved it is unproductive; we are, however, sinking a winze on it at the level above, and some few fathoms further west where it is worth 5% per fm. There are three stopes in the back of the 40 east of engine shaft, worth 8%, 10%, and 12% per fm. In addition to the stopes and other explorations mentioned, we have about 100 men working on tribute throughout the mine.—W. RICH, W. THOMAS.

Capt. RICH, continuing, said: We are developing in the western part of the mine, and spending money there, and I hope the day is not far off when we shall resume dividends again. We have done a lot of work and paid for it out of the proceeds of the mines. We have lost 130%, I admit, but I think with a little perseverance we shall open up a new mine entirely to the west. We are doing a little in the old mine, but there is no profit from it. We must look to the western part of the mine in future. There is no doubt we shall have to go deeper for tin in the western part of the mine than in the eastern, and that is the reason we have not got it so quickly as we did in the eastern. I do not think, however, but there is a very good chance of our being successful, and if we get anything good there, as I believe we shall, there will be no difficulty about sinking. We are making

A NEW MINE

out of the old one, and I hope at the next meeting we shall be very near the lodes in the 130, if we have not actually got them.

Mr. STRAUSS: How much further have you to sink to where you expect to meet the lode?

Capt. RICH: Perhaps we shall have to sink 100 ft. The best lode we have at present in the mine is in the western part, only we want more of it. We have put up a lot of machinery, and spent considerable money in the western part, which we have done without having to make any calls to meet it.

The CHAIRMAN: I now beg to propose that the agents' report and accounts now read be received and passed.

Mr. CHARLES CLARK seconded the motion, which was carried unanimously.

NO DANGER OF A CALL.

The CHAIRMAN: Gentlemen, I am sorry we have to meet you again without having the pleasure of asking you to declare a dividend, but after the full explanation you have had from Capt. Rich of our position, there is not much left for me to say. He has dwelt upon the fact, which is patent to all of you—that we have opened out this new mine with the proceeds of the old one. No call has been made upon you, and so far there seems no danger of a call in the immediate future. The new ground has not been quite all that one could have wished, but there is a very encouraging feature which Capt. Rich, I thought, was going to pass over altogether, but he mentioned it casually, and that is that the richest part of the mine in the winze sinking below our lowest level is on the flat lode. That is

WORTH 15% A FM.

When Capt. Rich quotes a lode worth 15% a fm., you can see tin in it, and it is a very encouraging feature. He tells us he hopes to cut the lode, or, at any rate, be very near it by the time of the next meeting, so we must possess our souls in patience, and hope that when we do meet that lode there will be something that will repay us for the expense we have been put to in reaching it. (Hear, hear.)

THE TIN TICKETING QUESTION.

There is an excitement amongst the buyers of tin at the present moment with regard to ticketing. We have been strenuous supporters of ticketing, as you are aware, ever since it was established. We considered the former method of disposing of our tin anything but satisfactory, and we welcomed the change to public sale as of very great advantage to the miner. It has not been of equal advantage to the smelter, I am afraid, otherwise we should not have this effort on the part of the smelters (which I am afraid it is) to stop the sale by ticketing. I think it rests with all who have the interests of mining at heart to do their utmost to support the independent buyers in this their time of trial, and I hope that other mines will see it in the same light that we see it, and will adopt the course of

SELLING ALL THEIR TIN BY TICKET.

Some managers of mines tell us that it is a good thing to sell some one way and some another. That is a statement one can hardly understand, for if one way is better, it is better, but it is very difficult for both of them to be better. I can only hope, gentlemen, that when next we meet, if we have not got a dividend to declare, at any rate this ground we are stopping will be producing good payable stuff. We can rest assured that Capt. Rich and those working with him will leave no stone unturned and no ounce of available tin in the mine if they can help it. (Cheers.)

Mr. STRAUSS: I see in the accounts that the bills receivable amount to about 2,300%, while you owe 800% to your bankers. Would it not be worth your while to discount some of those bills, and discharge the liability to the bankers?

The CHAIRMAN: We have studied that, and we find there is nothing to be gained by discounting. We do discount whenever there is anything to be gained by it.

THE LORDS' DUES.

Mr. STRAUSS: You are still paying the same lords' dues, although not making any profit. What is our lease?

The CHAIRMAN: One-twenty-fourth.

Mr. STRAUSS: Would you make the suggestion to him that as we are not making any profits now he should forego the dues?

The CHAIRMAN: Mr. Pendarves has always been a very good landlord, and we have not thought the time has arrived to approach him on the subject. If he likes to propose a remission of dues we shall receive it very gratefully, but, personally, I do not think we have any claim on him.

Mr. STRAUSS: The lords have been very generous of late in that respect, and I thought, perhaps, it would be worth while approaching him. Of course, I know we are not entitled to it.

The CHAIRMAN: Some of the lords you refer to were receiving much heavier dues. We are only paying a 24th, and we consider the lease a very fair one. We are opening out his ground. He is very well satisfied with us, I fancy, and we have every reason to be satisfied with the way he has treated us, and if any remission is made it should be as a gift.

Capt. RICH said there was one point the chairman had evidently overlooked. When he (the chairman) took up the mine there were 10 years of the old lease to run, with 1-18th dues. Mr. Pendarves gave up that, and gave 1-24th dues instead, and in addition to that he gave them this new ground without charging a single farthing. Under these circumstances he was sure the chairman would be very reluctant to approach him on the subject. The mine had paid good dividends in the past, and he hoped and believed would do so again. This was only the second meeting at which they had not received dividends, and, therefore, they could hardly expect a remission of the dues.

Mr. HORSLEY then proposed the re-election of the committee of management.

Mr. HARROWAY seconded the motion, which was carried unanimously.

The CHAIRMAN returned thanks on behalf of himself and his colleagues, and said he hoped they would meet in future in as happy circumstances as in the past.

THANKS TO THE CHAIRMAN.

Mr. STRAUSS: Before we part I have much pleasure in proposing a vote of thanks to the chairman. I am frequently here, and I always admire Mr. Marshall for his outspoken words. He never has any reticence in telling us what he thinks, and I am very pleased that he speaks his mind out so freely as he does. To-day he spoke about ticketing in a manner which I applaud, and I hope what he said here will be read in Cornwall and be taken to heart. (Hear, hear.)

Mr. HORSLEY seconded the motion, which was carried.

The CHAIRMAN returned thanks, and the proceedings closed.

THE MONTANA CO., LIMITED.

MONTHLY RETURN.

The secretary of the Montana Co., Limited, begs to state that the following information has been received by cablegram from the manager at the mine:—"Total weight of ore crushed during July, 7,918 tons; yield from the mills, \$55,100; working expenses for the month, \$42,600. Prospects are more encouraging for this month's run." N.B.—The estimated number of ounces contained in returns by assay being, gold, 2,109 ozs.; silver, 8,914 ozs.

ROBEY & CO.'S IMPROVED STONE BREAKER AND ORE CRUSHER.

ROBNEY & CO.'S STONE BREAKER AND ORE CRUSHER, for crushing Ores, Quartz, Road Metal, Railway Ballast, Cement, Phosphates, Coke, Coal, &c.

The above illustrates the most simple form of Stone Breaker made, and has no equal for easy transport over bad roads or mountainous countries. Steel has been largely employed, and in the place of the usual heavy Cast-iron Frame, a neat and much stronger Frame of rolled steel is used, with a saving of some tons in weight. The great depth of the side gives it increased stiffness, and the materials of which the machine is constructed ensure great rigidity and thorough adaptability for heavy work.

The parts are few and simple, and thoroughly accessible for oiling, adjusting, and cleaning, and the liability to breakage is reduced to a minimum.

The jaws are easily renewed, and are made of our own special mixture and treatment, rendering the face well suited for quartz. These jaws can be adjusted while the machine is running so as to reduce the material to any desired size, and are adapted for either cubing or crushing.

**VAN RYN GOLD MINING
COMPANY, LIMITED.**
(IN LIQUIDATION).

The South African Trust and Finance Company, Limited, have been instructed by Mr. E. C. Jamieson, Johannesburg, agent for the Official Liquidators of the Van Ryn Company, to request that all Share Certificates be sent in to be cancelled and the proportionate amount of new fully paid up shares allotted, to which the owners of old shares will be entitled.

The share register will be kept open a sufficient time to allow of shares, forwarded by the South African Trust and Finance Company to Johannesburg not later than the 31st August, being duly registered in the transferees' names, and allotments of new shares made in accordance with such register.

Shares should, therefore, be lodged without delay with the South African Trust and Finance Company, Limited, 19, St. Swithin's Lane, London, E.C.
London, July 29, 1891.

THE MINING EXCHANGE.

Lists of Members of the Mining Exchange (who are under the control of the Committee, and subject to the Rules and Regulations) may be obtained on application to

W. T. HARGREAVES,
Secretary to the Committee.

The Mining Exchange,
9, Old Broad Street, E.C.

MITCHELL & CO.,

MINING AND MISCELLANEOUS SHARE
DEALERS,
10, THROGMORTON AVENUE,

PATENT.**—The undersigned have had
placed in their hands for disposal a valuable
Patent for the grinding of ores.—Full particulars will be sent on application to McLean Bros. and Rigg, Limited, 9 and 11, Fenchurch Avenue, E.C.

CAMBORNE SCHOOL OF MINES.

SESSION, 1891-2.

CHAIRMAN OF COMMITTEE.

JOSIAH THOMAS, Esq.

PRINCIPAL.

Mr. J. J. BERINGER, A.R.S.M., F.I.C., F.C.S.

SECRETARY.

Mr. H. T. ROBINSON.

THE above School has been formed for giving instruction in subjects specially applicable to mining students, and in a district where the practice of mining may be observed at the same time.

The subjects taught include Mining, Ore-dressing, Vanning, Assaying, Chemistry, Geology, Mineralogy, Steam, Metallurgy, Plan Drawing, Engineering, &c.

The managers of the principal mines in the neighbourhood will afford facilities to students of the School for studying practical mining.

Prospectuses, and any further information, may be obtained of the PRINCIPAL or SECRETARY.

The Session commences on Monday,
21st September.

THE BRITISH AND FOREIGN MONTHLY MINING NEWS.

CORRECT INFORMATION is the basis of successful dealing in **Mining Shares.**

THE AGENCY CAN COMMAND AND SUPPLY THIS TO INVESTORS.

GENERAL FOREIGN MINES.

Many of these deserve special attention. Profits may be secured by acting upon sound advice in Buying certain Shares, whilst losses may be avoided by timely sales.

RE-CONSTRUCTIONS.

BEFORE making further Investments Write for Advice.

A similar remark applies to joining new Mining or other enterprises.

INDIAN MINES.

The information possessed by the Agency is invaluable for those wishing to Buy or Sell Shares in this Market.

KAFFIR MINES.

Special efforts have been made to secure the best and most reliable information as to the management, resources, and prospects of South African Mines in which the profits and losses have been alike phenomenal.

GREAT CARE IS NEEDED BEFORE INVESTING.

Those doing business through the Agency are kept informed as to any exceptional news in connection with the Companies in whose Shares they are interested. Purchases can be made for forward delivery, and sales effected for cash.

TELEGRAPHIC ADDRESS—

QUINLAND—LONDON.

MINING MARKET.

CITY, FRIDAY EVENING.

THE DEAD SEASON — BUSINESS AND BROKERS CONSPICUOUS BY THEIR ABSENCE—A FEW EXCEPTIONS—DEALINGS IN DIAMOND, INDIAN AND GENERAL FOREIGN SHARES.

It is an old saying, but a true one, that blessed are those who expect little for they shall not be disappointed. We expected little of the Mining Market this week at the time when last we wrote, for long experience has taught us that the middle of August is about the deadest time of the dead season. It is the time when the ordinary resident of London rushes to the seaside, and when by one of those extraordinary arrangements of nature which one admires, but cannot understand, people in the country rush to London. When they get here and see the beautiful parks in their choicest verdure, and the places of open public resort presenting their most fascinating appearance, they are astonished that Londoners choose such a time for leaving the metropolis, and begin to predict a period when its denizens will return to a more reasonable frame of mind. Of course there are always five millions of people in London, but the exodus we deplore is of the remaining thousands to whose energy, action, and capital the markets owe so great a proportion of their life.

Now, if our country cousins in their peregrinations had visited the Mining Exchange they would have seen its space deserted, and the portals of the "big house over the way" shadowed but by few of those who are wont to surround it. If, indeed, they had asked the pertinent question, "Where is the Mining Market?" echo, but for the presence of the remnants of a lost tribe, might have answered "Where?" To say that brokers just now are meeting their expenses would be to utter that which would slap truth in the face, and earn the chief prize for audacity. The idea of brokers evidently has been for the last week or two that they may as well play for nothing as work for nothing, and so they are off to their favourite haunts with an uneasy feeling, however, that something may turn up, and, consequently, their clerks have had strict instructions not to spare the "wire" should occasion arise to use it.

Now, there was some occasion during the week to use it. For example, when Mr. Brice finished his speech at the Mexican Explorations meeting, in which he told those present, most of whom were Palmarejoites, that the capital of which the company stands in need had been provided, and that the works of the company were practically completed, only those

of the railway being unfinished, Palmarejo shares began to jump. It is quite true they had been jumping recently, but the motion was downward; now it is quite upward. "Palms," as they are familiarly called on the market, were inquired for and eagerly bought. Sellers had not been informed of what had taken place at the meeting, and buyers did not see why they should tell them. They had been 6s. or 7s. before this meeting, but on Monday, Tuesday, and Wednesday they gradually advanced to 11s., and we heard of one transaction taking place at even a slightly higher price. The market does not close to-night so firm (10s.), but the rise on the week is 2s. The directors of this company, for their deplorable want of frankness at the recent meeting, have been severely blamed and bitterly reproached, but let the credit not be denied them of having financed the company, for the full 50,000l. has not only been subscribed but the allotment was made yesterday.

Australian Broken Hills have also been the sport of the hour, and the shares, which at one time fell as low as 18s., have "firmed up," but show a loss of 4s. on the week. It is believed the future will reveal that on the active resumption of business these shares will rise to much better quotations. Another feature has been the substantial rise that has taken place in De Beers, which have lately been as low as 10½, which closed last week about 11½ and this week at 12½. The appearance of buyers has put a stop for the time to the downward movement. New Jagersfonteins are also firmer. Another feature of the market has been the decline in Goldfields of South Africa, which this afternoon was positively sudden, the fall on the week representing ½. A further event has been the decline in Exploring shares. The other incidents of the market call for no special comment. Generally speaking, the Australian section has improved, but the copper one has declined.

In the Indian department there has been an all-round rise in the principal shares, though not to any considerable extent—the solitary exception being Goldfields of Mysore, which are quoted lower, to the extent of the value of the allotment.

A shareholder writes as follows :—"In the matter of Balaghat-Mysore and Goldfields Mysore, what do you think of a suggestion that the latter company should purchase the former mine instead of Balaghat buying land from Goldfields? Then Goldfields would have a mine which would possibly give returns at an early date, and Balaghat would not have to raise fresh capital for extra land purchase."

By a note in our leader columns the reader will see that the reconstruction of Mysore Reefs and of Etheridge has been carried out in each case with considerable success. When it is remembered that at the present time it is impossible to obtain capital for even the best enterprises, it will be seen that there must be a considerable degree of confidence felt in the value of these concerns and in their management to induce so hearty a subscription at so inopportune a time.

The Venezuelan Austin Company's directors desire to obtain the undertaking of the preference shareholders to accept an equal amount in fully paid ordinary shares of 1l. each in the Venezuelan Mines, Limited, in full discharge of all their rights and interests in the Venezuelan Austin Gold Mining Co., Limited, under the scheme which is set forth in the resolutions passed at the extraordinary general meeting on the 31st ult. This undertaking will certainly be given by all preference shareholders who understand their true interests.

In the general Foreign market there has been an improvement in Richmond, country shareholders having read favourably the speech of Mr. Hopkins at the recent meeting. There has also been active business in Tolima "B," Balkis and Tesoro shares at better prices. On the other hand it has been noteworthy on the market to-day that Callao Bis fell on the issue of a report which was read unfavourably. Frontinos are also down. Respecting this mine we publish an important letter from the late manager, Mr. Gifford, on certain of the speeches made at the last meeting. Golden Feathers and Golden Gates are drooping somewhat on the long delay in realising the colonel's telegraphic predictions.

Flagstaff has also declined, possibly because Professor Vincent has again been seen in Old Broad Street. May we suggest to this worthy gentleman that, having just returned from the mine, and as

shareholders are anxious, he should issue something like a manifesto as to its present position. The latest record of his doings on the spot was that he had gone to Salt Lake City to buy 2,000 bags in which to convey the ore on the dump to the market. Now, the shareholders in this connection want plain answers to a few plain questions. Is the ore there to fill those bags? If so, what has it realised at the market? If the ore is not there, why not? after the Professor's speech at the recent meeting, and his asseverations to his private friends. Shareholders also want to know what is the condition of the mine. Is it improving, or has it once more disappointed the hopes of those who have prophesied in its name? These are questions which we call upon the Professor to answer in the interests of the shareholders, on behalf of his colleagues, and for the sake of his own professional reputation. "More light," cried the Greek philosopher, when he was dying, and that is precisely what the shareholders want in respect to Flagstaff.

An American subscriber writes:—"It is much to be regretted that you are unable to publish the number of shares sold; here, in the States, every member of the Stock or Mining Exchange is obliged to hand in at once a detailed statement of every sale or purchase which he makes while on the floor during business hours, and the general opinion here is that this rule is a wise and correct one."

The last report from the Mosman Mine should be read by every shareholder. It shows that the reef has widened in the north Australian Mine, and that the quality of the quartz is better; 221 tons have been crushed for 698 ozs., yielding, on the average, 3 ozs. 2 dwts. per ton. This report is dated June 27, but there was a cable on July 20 to say that 734 tons had been crushed from the North Australian and Wyndham mines for a yield of 1,036 ozs. of gold, or, approximately, 3,575%.

We have several times of late written favourably of Tesoro Golds, which have risen from 1s. 3d. to 2s. 1½d. to 2s. 4½d., the present quotation. Those who followed what we have said have so far done well, but there is ground for anticipation that they will do better yet, and even that those who buy at current quotations will reap a good profit. Everything at least seems to point to this happy state of affairs.

The course of the other markets calls for no special comment, but in regard to Home mines, they are once again in the doleful dumps, Carn Brea leading off with a fall of 4l. on the rumour of the Highburrow lode being disordered in the shaft. Other Home shares, without an exception, have fallen in sympathy. Our article on "Cornish Mines, and Outside Capital" has not been received with favour in "the county," and, frankly speaking, we did not expect it would.

The position of the metal markets may be considered fairly good for the time of the year. The stocks of iron for July were practically the same as in the previous month, the actual figures being an increase of 1,377 tons. A good deal of uncertainty prevails as to the immediate future of iron. In copper the consumption has been very nearly equal to the production. The stocks on the 31st July were 57,782 tons as against 57,325 on the 30th June. Higher prices in this metal are confidently expected. The demand for tin continues good, especially from America, and considering the small stock held in London (12,850 tons) a rise in price is not improbable.

The outlook for next week is not of a brilliant kind, and cannot be when those who give life to the market are on holiday intent.

KAFFIRS.

There has not been a great amount of business doing in this class, although in one or two instances where crushings were more favourable the shares have been enquired for. Ferreras and Jumpers are much better on the week after various ups and downs. Shebas are quoted better. Salisbury (New) close lower, the return being regarded as unfavourable. Pigg's Peak Preference are down, and a few others to a small extent.

Business:—A rise is shown in Sheba of 6d.; City and Suburban, ½; Crown Reef, ½; Durban Roodepoort, 1½; Ferreira, ½; Johannesburg Waterworks, 1½; Jubilee, ½; Jumpers, 1½; Langlaagte, 1½; Modderfontein, 6d.; and Simmer and Jack, ½.

The falls are in Pigg's Peak Preference of 1½; May Consolidated, 6d.; Salisbury, New, 6d.; and Witwatersrandt (Knight's), 6d.

AFRICAN LANDS.

The chief feature in this market has been a fall in Explorings, which were pressed for sale. Goldfields of South Africa, until this afternoon, showed a rise on the week, but at the close they experienced a sharp fall on adverse rumours. British South Africa Chartered also close weak. On the other hand, Oceanas and London and South African Explorations have been bought, and close better.

Business.—A rise has taken place in Bechuanaland of 1½; London and South African, ½; and Oceana, ¼; whilst a fall is noted in British South Africa Chartered, 1½; Exploring, 20s., Exploration, 1½; Goldfields of South Africa, 1½; Moodies, 10s. paid; 1½; and Sutherland Reef, 1s.

DIAMONDS.

The attraction in this market has been De Beers, which after frequent changes in price varying from 10½ to 12½ close at a sub-

stantial rise. The buying has been due principally to the movements of the Hatton Garden clique, although it is said in various quarters to be due to a rise in the price of diamonds. New Jagersfonteins, of course, have gone up in sympathy. Griqualand West close lower.

Business.—A rise has taken place in De Beers of 20s.; Gordon, 6d.; New Jagersfontein, $\frac{1}{8}$; whilst the only fall is in Griqualand West of $\frac{1}{8}$.

AUSTRALIANS.

Australian Broken Hills have been freely offered, and at one time during the week were 18s. They have, however, rallied to a certain extent, but show a fall on the week. Mosmans, Bonnie Dundee and Gympie Great Eastern have improved. Business has also been transacted in Cumberland and New Queen, both of which close firm at last quotations.

Business.—A rise is shown in Gympie Great Eastern of 9d.; Mosman, 6d.; New Queen, 3d.; and Scottish Australian, $\frac{1}{8}$; whilst a fall is noted in Australian Broken Hill, of $\frac{1}{8}$; Kangarilla, 6d.; and Wentworth Proprietary, $\frac{1}{8}$.

INDIANS.

A fair amount of business has been transacted in this market, and prices, on the whole, are better. A demand sprang up during the week for Nine Reefs, and although only a small rise is shown on last quoted prices, they close firm. Mysore show an improvement, after being dealt in to a considerable extent. Goldfields of Mysore are now quoted ex the allotment of Nundydroog and Ooregum shares. Balaghat, Nundydroog, and Ooregum Ordinary and Preference are all better, whilst Mysore West and Mysore Wynaad remain the same as last week.

Business.—A rise is shown in Balaghat of 3d.; Mysore Gold, $\frac{1}{4}$; Nine Reefs, 6d.; Nundydroog, $\frac{1}{8}$; and Ooregum Ordinary and Preference, $\frac{1}{8}$ each; whilst a fall is noted in Goldfields of Mysore of $\frac{1}{8}$ (about the value of the allotments), and Mysore Reefs, 6d.

COPPER SHARES.

Rio Tintos have, as usual, occupied the largest amount of attention in this market. Selling orders from Paris in the earlier part of the week caused the shares to fall, but they rallied slightly on the improvement in the price of the metal.

Dealings have taken place in Capes, Copiapo and Tharsis, which close from $\frac{1}{8}$ to $\frac{1}{4}$ lower than previously quoted. Namaqua remain steady. The tone to-day is rather better.

Business.—There is no rise to note, but a fall has taken place in Capes of $\frac{1}{8}$; Copiapo, $\frac{1}{4}$; Rio Tinto, $\frac{1}{4}$; and Tharsis, $\frac{1}{8}$. Others remain unchanged.

GENERAL FOREIGN SHARES.

Considerable attention has been given to Palmarejo shares, which have been dealt in up to 11s. After the official statement that the additional capital had been subscribed became generally known, a slight re-action took place. Although they do not close at best, a substantial rise is recorded. New Russell found buyers on the telegram published, which is considered favourable. Amador, Balkis, Lisbon Berlyn, and La Plata have improved, whilst Golden Feather and Golden Gates after various changes close lower. West Indians were dealt in, and Elmore below 1s. Callao Bis fell to-day to 5s., but recovered somewhat at the close. In American Belle, Dicken's Custer and Flagstaff several bargains have been booked, but without much alteration in prices. Gravel Gold and Yankee Girl remain steady, as also Richmonds.

Business.—A rise is shown in Amador of 1s., Balkis, 6d.; Bratsberg, 3d.; Monte del Oro, 3d.; Palmarejo, 2s.; Richmond, $\frac{1}{8}$; Tesoro, 3d.; and Tolima "B," $\frac{1}{2}$. A fall has taken place in American Belle of 1s.; Callao Bis, 9d.; Emma, 3d.; Flagstaff, 3d.; Frontino, 1s.; Golden Feather, 1s.; Golden Gate, $\frac{1}{8}$; New California, 6d.; Pahang Corporation, $\frac{1}{8}$; St. John del Rey, 3d.; and Tolima "A," $\frac{1}{4}$.

The following list shows the principal changes which have taken place:—

	Last Week.		This Week.

LATEST FROM THE MINES.

COLONIAL MINES.

BRITISH BROKEN HILL PROPRIETARY.—The yield for the week ending Thursday, the 6th inst., was 526 tons of ore treated, including 151 tons of iron ore, yielding 95 tons of lead, containing 4,734 ozs. silver. During the week ending Thursday, the 13th inst., there were 524 tons of ore treated, including 166 tons of iron ore, yielding 94 tons of lead, containing 5,240 ozs. of silver.

BROKEN HILL PROPRIETARY.—During the week ending Thursday, the 13th inst., there were 4,201 tons of ore treated, yielding 630 tons of lead containing 180,613 ozs. of silver.

DAY DAWN.—The directors have sold, through Messrs. Johnson Matthey and Co., the gold, ex Tara, which realised 2,988 $\frac{1}{2}$ 2s. 7d.

MOUNT ZEEHAN.—Telegrams announce that the new pumping and winding plant at the Argent section has started work, a vein fully 4 ft. wide has been cut, and first and second-class ore is now being raised from it.

NEW QUEEN.—A cablegram, dated Charters Towers, Aug. 8, gives result of crushing for past fortnight:—"380 tons, yielding 460 ozs. gold."

WENTWORTH GOLDFIELDS PROPRIETARY.—Cablegram from the mines:—"During the week the total sinking has been 100 ft., and driving 20 ft., with no important change. Developments are proceeding satisfactory, and we have started cross-cutting towards the footwall of the Chapel Hill quartz reef."

FOREIGN MINES.

CASTILLON (Aug. 10).—Under above date Capt. Edwards reports:—"On 18th inst. we despatched to Bordeaux 253 tons blende, which completes cargo. We shall sample 50 tons silver-lead on Wednesday. We have four men engaged effecting a communication between these points, which we expect to accomplish and have ready for stopping early in Sept. Our works generally are progressing satisfactory, and the different machinery is in good working order."

DE LAMAR.—Cable from the mine:—"During the month of July 1,500 tons were crushed, producing \$44,795 bullion. Estimated value of shipping ore, \$13,000; miscellaneous receipts, \$1,430; total revenue, \$59,225; total expense on revenue account, \$28,000. Extensive explorations have been made during the month, whereby the expense on revenue account has been materially increased."

DICKENS CUSTER.—The following cable has been received from the managing director at the mines:—"Shipped bullion amounting to 3,610 $\frac{1}{2}$ for the month of July. Expenses, cash, 1,750 $\frac{1}{2}$; milling and mining supplies, 980 $\frac{1}{2}$."

ELKHORN.—Information from the mine:—During July the mill ran 28 days, crushed 918 tons, and produced bullion value \$36,285. Smelting ore sold 285 tons, \$17,273; total produce, \$53,558. Total expenses, \$22,790. Bullion produced for week ending Aug. 8, \$8,410.

GOLDEN FEATHER.—Cable from Col. Frank McLaughlin, the company's general manager at Oroville:—"Sub-flume completed; foot-dam this week. Shall commence pumping during the week, and will be making returns about the end of the month."

GOLDEN GATE ALLUVIAL.—Cable from Col. Frank McLaughlin, the company's general manager at Oroville:—"Accident to main pump. Damage not serious. Will re-start pumping Wednesday (12th). Hope to be mining Aug. 19. Débris largely washed out by last winter's floods."

MAMMOTH.—The manager reports that the bullion sent to bank in July amounted to \$17,800. Development work is progressing rapidly, and connection between hoisting shaft and ore body at 400 ft. will shortly be completed.

NEW PIERREFITTE.—The company has sold 150 tons silver-lead ore to Messrs. Sheldon, Bush and Co., at 11½ 15s. per ton f.o.b. Bordeaux.

NEW RUSSELL GOLD.—The directors have received the following cablegram:—"Estimate amount of ore in sight 3,000 tons. Will commence milling, calcining Monday. Profit may be expected to be not less than 1,500%. Six weeks working day and night.—BAILEY."

OURO PRETO.—The company has sold, through Messrs. Johnson, Matthey and Co., Limited, the gold obtained in the month of May which realised 4,227½ 8s. 3d. A telegram, dated Aug. 11, gives last month's return of gold as follows:—"3,260 tons yielded 8,452 oits. (975 ozs.)"

RIO TINTO.—The company notify that at the twenty-third half-yearly drawing of their 5 per cent. bonds, 1880, to be held on the 28th inst., bonds amounting to 26,220£. will be drawn to be paid off at par on Oct. 1.

THE QUEBRADA RAILWAY, LAND AND COPPER.—The company notify that the transfer books of the company's 400,000£. six per cent. debenture stock will be closed from the 15th to the 31st inst. inclusive, for the preparation of interest warrants due Sept. 1. Coupons due same date on the 50,000£. prior mortgage (bearer) bonds will be paid at the Commercial Bank of Scotland, 62, Lombard Street.

SAN LUIS.—Cablegram from the company's manager at San Luis, Nicaragua:—"Bullion shipped, July 28, 1,150£. Mill stopped for repairs on July 24; will start work again on Aug. 1."

ZARUMA.—A telegram from the manager at the mines, re July produce, states:—"Mill working 17 days crushed 355 tons of quartz, producing 265 ozs. of bullion. Concentrates not yet treated, value 120£. Total value with concentrates estimated at 812£."

HOME MINES.

MINING CO. OF IRELAND (From our Dublin correspondent).—In connection with the voluntary winding-up of the above company, the liquidators announce that a second dividend of 10s. per share on the capital will be paid, the warrants issuing forthwith.

AFRICA.

LATEST FROM THE GOLD AND DIAMOND MINES.

CRÆSUS.—The crushing for July was 251 ozs.

SALISBURY.—The crushing for last month was 1,030 ozs.

SIMMER AND JACK.—Cable: "Profit for last month, 4,500£."

EDWIN BRAY.—Advices from Barberton state that the July crushing amounts to 878 tons, yielding 240 ozs. free gold.

WEMMER.—Advice by cable states that the general meeting of shareholders is to be held in Johannesburg on Oct. 8.

VOGELSTRUIS.—Cablegram, dated Johannesburg, Aug. 10, states:—"Total amount crushed, 1,100 tons assorted ore, the gross yield being 254 ozs."

PALMAREJO.—The amount of 50,000£. required by the Palmarejo Mining Co. has been fully subscribed, and allotment was made yesterday.

GRASKOP MILL.—A cablegram announces the result of the July crushing as follows:—"Crushed 953 tons; yield 205 ozs.; estimated cost, 600£."

WITWATERSRANDT (KNIGHT'S).—Advice by cable states that the result of the work done during July is a yield of 720 ozs. gold from the 3,500 tons crushed.

MACATE.—Cable received Aug. 7 from manager at mine:—"The quartz from No. 3 north has given by small crushing and washing 1 oz. per ton. La Escocia looking well."

MOODIE'S GOLD AND EXPLORATION.—Cable from the secretary in Pietermaritzburg:—"340 claims rented or leased; 1,450 tons crushed by claimholders yielded 720 ozs. of gold."

NORTH EASTERN BULTFOUNTAIN.—Telegraphic advice announces for last week: 9,800 loads, chiefly re-washings, produced diamonds 780 carats. Increase of blue ground on floors, 3,000 loads.

CENTRAL MONTROSE ESTATE.—Advices have been received from the mine that the result of the crushing for the month of July with a 10-stamp battery was 424 tons of quartz, yielding 264 ozs. of gold.

ST. AUGUSTINE.—Cablegram Aug. 8, from Mr. D. T. Hartley, the manager: "Struck upon better-looking blue than have had up to the present time in north-west drift, 20 ft. from shaft; 600-ft. level drift is advanced a distance of 29 ft. If no change for the worse, very soon stoep."

CROWN REEF.—The crushing for last month, during 29 days, was 5,148 tons, which yielded 3,514 ozs. of gold. The revenue for the month was 12,562£. 11s., and the working expenditure was 6,395£., leaving a balance of profit for the month of 6,167£. 11s. The expenditure on capital account was 4,755£., making a total expenditure of 11,150£.

RED REEF.—At a meeting of the Red Reef Gold Mining Co., Limited, held on Monday, at 30, Finsbury Circus, E.C., a resolution for the voluntary winding-up of the company, which was passed at an extraordinary general meeting held on the 24th ult., was unanimously confirmed. Mr. Frederick Painter, of the firm of Tribe, Clarke, Painter and Co., was appointed liquidator, and it was notified that at the close of the liquidation proceedings a scheme of reconstruction would be submitted to the shareholders.

MAY CONSOLIDATED (July 10).—The following are the results for the month:—Sunk and driven May block, 84 ft.; sunk and driven Annie block, 411 ft.; total, 495 ft. Timbered, 80 ft.; stoped, 4,992 tons; stopes filled in, 785 tons; mullock raised, 711 tons; quartz raised, 5,388 tons; quartz sent to mills, 5,457 tons; tons milled, 5,204 tons; ore at grass, 6,678 tons; smelted gold, 2,020 ozs. 8 dwts.; value of gold, 7,323£. 18s.; average per ton, 7 dwts. 18.36 grs.; average crushed per stamp, 2.70 tons; time running, 70 heads, 27 days 16 hrs. 37 min.; time running, 50 heads, 28 days 16 hrs. 6 min.; time running, 20 heads, 25 days 5 hrs. 53 min.

TRANSVAAL GOLD EXPLORATION AND LAND.—General manager's advices dated July 13:—Bullion: A shipment of eight bars melted gold, weighing 1,020 ozs. 10 dwts. (part of June produce), had been forwarded through the Standard Bank. Mining:—Ophir Hill, Theta vein: Ore extracted, 20 tons; assay value 4 ozs. 8 dwts. per ton. Brown's Hill, Nu vein: Ore extracted at No. 1,209, 30 tons; assay value 4 ozs. 16 dwts. per ton, and at Nos. 1,211 and 1,220, 25 tons; assay value 2 ozs. 7 dwts. per ton. There was nothing new to report at either of these places. Prospecting: At Edin Hill the ore deposit was being further proved. Operations were also being actively carried on at Ophir Hill, Brown's Hill and Glinister's. Mill: The battery and pans ran full time throughout the week. A few loads of ore were hauled to battery dump.

HORO CONCESSION.—Report from superintendent dated July 9.—I beg to send you below the report of the work done here during the month of June last:—No. 1 tunnel: The drive along the reef towards the east from No. 1 tunnel has been advanced as far as the small prospecting shaft to the east of No. 1 shaft. We are now rising from the tunnel to connect with the prospecting shaft. We are also continuing the sinking of the prospecting shaft to make a pass from the surface for material to fill up the stopes on the reef. A drive is being put in along the reef at a depth of 35 ft. from the surface, starting from No. 1 shaft, and going for about 35 ft. to the east and 30 ft. to the west, and rails laid to facilitate taking ore to No. 1 shaft. Cross-cuts to the north and south have been put in to the west of No. 1 shaft from this drive to prospect the ground. Pannings from the drive and cross-cuts show from 1 dwt. to 13 dwts. of gold per ton, the average would be about 3 dwts. Pipe line: The work has been concentrated on the pipe-line. The balance of the pipes arrived here on June 29, and the pipes were all in place by July 4. We worked the mill a little on the 6th inst., and the machinery so far seems to work satisfactorily. We have had a little difficulty with the pipes, but I hope to overcome this to-day, and if so, we should be able to crush continuously.

CERRO DE PASCO, LIMITED.

THE MANAGER SENDS THE MOST ENCOURAGING REPORT YET RECEIVED.

Aug. 13.—I am instructed by the board to hand you the following full report on the work done at the mines since this company commenced operations. You will notice Mr. Howes states that of the 12 reefs cut by the eastern cross-cut, 11 are gold-bearing. No. 11 is 2 ft. wide, and assays over 11 dwts. gold per ton. No. 12 (the last met with) is a wide lode, which Mr. Howes estimates will produce quite 8 dwts. free gold per ton. In a letter, under date July 13, giving the latest information from the mine, Mr. Howes states:—"On the 10th inst. I sent you the following message: 'Have struck large body of ore in the cross-cut. Have commenced driving; 8 dwts. per ton. Very good indications.' The body of ore referred to in my cable is made up of—quartz, 10 ft. thick; mica schist, 3 ft. thick; quartz, 2 ft. thick; rotten quartz, 3 ft. thick; hard black quartz, 4 ft. thick; in all, 22 ft. thick; which will, I believe, average quite 8 dwts. per ton. We have commenced driving south on the reef, and hope it may prove even better than we anticipate." The importance of the discoveries of these reefs (worth, say, 2½ 1s. 3d. and 1½ 10s. per ton respectively) will be appreciated, when it is recollected that Mr. McGavin's estimate of working expenses was:—"Cost of milling, including wear and tear and uphold of stamps and machinery, 6s. per ton; cost of raising quartz, tramage, management, and sundries (this is a larger estimate than need be), 14s. per ton; total, 1½ 10s. per ton." This, of course, after completion of battery and tramway. I am also instructed to state that the board have arranged with the mortgagees for an extension for a period of four months of the time fixed for payment of the mortgages. Sir Henry Isaacs, the late chairman of the company, having retired from the direction, Mr. John Silva, of 3, Great Winchester Street, London, has been elected to a seat at the board.—G. W. RITCHIE, secretary.

REPORT.

July 4.—Herewith I have the honour to lay before you a synopsis of the work done under my management upon your property since I took charge of same in Dec. of last year. In accordance with your instructions, I first made a most careful

examination of all the pre-existing works, with a view to ascertaining beyond doubt the capabilities of the mine, as then opened, to provide payable quartz in sufficient quantity to keep a 60-stamp mill in full operation for any length of time. After an exhaustive series of tests of the ore on the various dumps on the north, south and middle reefs at the west end, as well as of samples taken personally from the different levels, I came to the conclusion that the quartz extracted would not pay to mill, and duly advise you of my opinion by cable on Feb. 20 last. My reasons for this opinion are—(1) That the quartz will not produce more than 3 dwts. per ton: (2) That it is distributed in nine different dumps, widely apart, and consequently could only be conveyed to the mill at a very great cost. I am aware that this estimate of the gold bearing value of the quartz does not coincide with the results of the test crushing effected under the personal supervision of Mr. McGavin, as given in his report, but cannot offer any opinion as to the discrepancy.

NORTH, SOUTH, AND MIDDLE REEFS.

The value of these two reefs, as proved by the old workings, is not such as to warrant any further outlay upon them, and they have been abandoned. Middle reef is a well-defined reef, averaging 4 ft. 6 ins. in width, and as the samples taken from the 500-ft. level gave rather better results than those from the two reefs mentioned above, I resolved upon continuing this work, to see whether the quartz might improve in quality. Operations were, consequently, resumed in this level in Jan. last, and at one time the ore gave considerable signs of improvement, but it did not last, and after driving 55 ft. I determined to abandon the work, and attack the reef by cross-cutting at a point further west.

BULLION REEF.

Special attention was directed to the prospecting works mentioned by Mr. McGavin in his report, and although the bullion reef itself had not been struck in any of these works, still the samples taken from the three prospecting shafts sunk by Mr. Davis were sufficiently favourable; and the general indication of the neighbouring formation such as to warrant a thorough examination of this section of ground. The favourable opinion then formed has been fully borne out by the results of the exploration works now in progress. A main shaft, 10 ft. by 6 ft., was commenced in Jan. on Block F, as shown in the subjoined plan, and sunk to a depth of 95 ft. At 90 ft. we put in a platform, and drove north 14 ft. From this point we commenced to cross-cut east at right angles with the formation, connecting same with an air shaft 100 ft. distant on Apl. 27. On June 30 this cross-cut was in 262 ft., and the ground becoming much more favourable for payable reefs.

REEFS CUT.

From the plan and section attached you will see that in this cross-cut we have met with, up to date, no less than 12 reefs, 11 of which are gold-bearing, but narrow. Reef No. 11 is fully 2 ft. wide, and assays over 11 dwts. of gold per ton. Reef No. 12 (the last one met with) is a well-defined reef, 10 ft. wide, lying between sandstone and mica schist, and dipping west at an angle of about 70 degs. From a large number of pannings taken from all parts of the reef I estimate it to produce quite 8 dwts. of free gold per ton of ore. We shall at once commence driving on this reef, which will give us several hundred feet of back both in a north and south direction. This cross-cut can be continued over 700 ft. before crossing our eastern boundary (O to K), and will meet both the south and middle reefs, and probably the north reef, all of which may prove payable at the points of intersection. Cross-cut on Block 12: This work, which was commenced in April, should meet with all the reefs found in the main cross-cut from Block F, the reefs opened up at the west end being a continuation of those coming in from the bullion ground. The formation is distinctly traceable along the whole section of ground, as shown in the sketch plan of the surface, and there is no sign of any intrusive granite or of any serious fault between the two workings. Two narrow reefs have been already cut, showing gold in the pan, but not payable. The various workings made on East End reef by our predecessors disclose a well-defined reef about 3½ ft. wide, and showing good gold in the pan, but at the lowest level the reef had been cut off by a surface slide and work had been suspended at that point. Operations were resumed at this level at the beginning of June by driving a distance of 47 ft. through the faulted ground. We are now again in the original formation, and after driving a few feet further shall cross-cut for the lost reef.

GENERAL PROSPECTING.

Owing to the surface of the country being covered by grass, in some cases over 6 ft. in height, a thorough examination of the whole extent of the property has been impracticable, but we are gradually getting the grass burned off, and expect within the next two months to be able to get a fair idea of the general run of the country. There are without doubt many reefs, the location of which we are yet ignorant of, and the value of which can only be determined by carefully thought-out work. Total extent of ground driven and sunk during the six months, 704 ft.

THE MILL.

As the present condition of the mill has been so fully gone into and explained in my several letters to the secretary, it is needless again to refer to this here. I would, however, strongly recommend and urge upon you the necessity that the terracing of the rock overhanging the battery, and the re-construction of the retaining wall, be proceeded with at as early a date as possible, so that the permanent security of the whole battery may be secured.

TRAMWAY, DAM, AND WATER-RACE.

Estimates for the construction of the former, and the repair of the latter, have been already laid before you. Trusting that the exploration works so far prosecuted will meet with your approval, and that the results, so far obtained, are only the precursors of even more satisfactory finds in the future.—EDMUND HOWES, manager.

A further telegram has been received from the manager, dated Barberton, Aug. 14, in which he states the ore is improving in quality as developed.

THE LONDON IMPROVED FIREWOOD Co.—Letters of allotment and regret were posted on the 13th inst.

BRITISH MINING INTELLIGENCE.

DEVON GREAT CONSOLS (Aug. 13).—Wheal Maria, Capel Tor lode, eastern shaft: The lode in the stope in the back of the 36-fm. level east is worth 4 tons of copper ore and mundic per fm. The lode in the back of the 36-fm. level west is yielding 5 tons of copper and mundic ores per fm. Wheal Anna Maria: The lode in the stope in the bottom of the 110-fm. level east of the engine shaft is worth 10 tons of mundic and 2 tons of copper ore per fm. The lode in the stope in the bottom of the 130-fm. level west of the Field shaft on the south lode is worth 10 tons of mundic per fm. Wheal Josiah: In the stope in the back of the 144-fm. level east of Hitchen's shaft on the main lode the lode is producing 7 tons of mundic per fm. The lode in the stope in the bottom of the 130-fm. level east of Hitchen's shaft on the south lode is worth 3 tons of copper ore and 1 ton of mundic per fm. The lode in the stope in the bottom of the 103-fm. level east of Agnes' shaft is yielding 2 tons of copper ore and 4 tons of mundic per fm. Wheal Emma, Thomas engine shaft: The lode in the stope in the bottom of the 100-fm. level east is yielding 15 tons of mundic per fm. In the stope in the bottom of the 103-fm. level east the lode is also yielding 15 tons of mundic per fm. The lode in the stope in the back of the 100-fm. level east is producing 18 tons per fm. of mundic. Inclined shaft: In the stope in the back of the 150-fm. level east the lode is worth 2 tons of copper ore and 2 tons of mundic per fm. The lode in the stope in the back of the 112-fm. level east is worth 3 tons of copper ore and 5 tons of mundic per fm. In the stope in the back of the 100-fm. level west the lode will yield 7 tons of mundic per fm. New shaft, New south lode: In the stope in the bottom of the 190-fm. level west the lode is producing 6 tons of mundic per fm. The lode in the stope in the back of the 130-fm. level east is worth 4 tons of copper ore per fm. The lode in the stope in the back of the 100-fm. level east is worth 5 tons of mundic per fm. Watson's engine shaft: In the 172-fm. level west the lode is about 2 ft. wide, producing a little copper and mundic ores. In the 160-fm. level east the lode is large, 5 ft. wide, and is worth 4 tons of copper ore per fm. In the 160-fm. level east the lode is 3½ ft. wide, and is producing a little copper and mundic ores. The lode in the stope in the back of the 160-fm. level east of the engine shaft is yielding 4 tons of copper ore per fm. In the stope in the back of the 148-fm. level west the lode is producing 4 tons of copper ore per fm.—W. CLEMO.

EAST BLUE HILLS (Aug. 12).—To rise in back of the 40-fm. level west of engine shaft by four men, at 4½ per fm. This will communicate with the 30-fm. level on the north section for ventilation. The shaftmen to sink a winze in bottom of the 30-fm. level by six men, at 4½ 10s. per fm., to communicate with rise in back of the 40-fm. level. The 30 end to drive west on the south section by six men, at 4½ 10s. per fm.; lode about 1 ft. wide, turning out some good stones of tin. The 10 end west and the 35 east are being driven by tributaries for another month's take. Some of the tributaries are doing very well. We have sampled in the last four weeks 3½ tons of tin. Several new tributaries started last week.—J. WHITE.

LEADHILLS (Aug. 10).—Brown's vein: The 145-fm. level north of Jeffrey's shaft is in a vein above 4 ft. wide, composed of improving quartz and spar, with bits of ore sometimes. The stope above the 145 north of Jeffrey's shaft is worth 10 cwt. of ore per fm. The stope above the 145 south of Wilson's shaft is worth 50 cwt. of ore per fm. The stope above the 145 north of Wilson's shaft is worth 35 cwt. of ore per fm. The three stopes above the 130 north of Wilson's shaft are worth 20, 30 and 20 cwt. of ore per fm. respectively. The stope above the 130 south of Wilson's shaft is worth 25 cwt. of ore per fm. The 115-fm. level north of Jeffrey's shaft shows a vein above 4 ft. wide, charged with promising spar and ore, worth 30 cwt. per fm. The stope above the 115 north of Jeffrey's shaft is worth 20 cwt. of ore per fm. The 100-fm. level north of Jeffrey's shaft is in a vein above 4 ft. wide, well mixed with kindly quartz and ore, worth 5 cwt. per fm. The stope above the 100 south of Wilson's shaft is worth 20 cwt. of ore per fm. The 85-fm. level north of Jeffrey's shaft keeps in a promising vein above 4 ft. wide, but yet without ore; we have cut a heavy feeder of water here, which has rather overmastered the pumps in the bottom of the mine for the time being. The 70-fm. level south of Wilson's shaft is in a vein 4½ ft. wide, of much harder constituents, which, however, we do not dislike, but it is still without ore. The two stopes above the 35 south of Flat Rod shaft are worth 45 and 25 cwt. of ore per fm. respectively. Sarrowcole vein: Gripp's adit north of George's Roust vein is in a vein 3½ ft. wide, made up of kindly spar mostly, but worth only 5 cwt. of ore per fm.—T. NEWBIGGING.

PRINCE OF WALES (Aug. 12).—Since our last report the men in the 180-fm. level have been driving both east and west by the side of the lode, in which there are indications of improvement. In the 166 west we are taking down the lode, which has varied from 4 to 2 ft. in width, composed of peach, tinny capel, and spar, and worth 15½ per fm. In the most advanced point it is again opening out wider. There is no perceptible change in the cross-cut south in neither the character of the ground nor quantity of water.—S. ROBERTS, J. PROWSE.

ROMAN GRAVELS (Aug. 13).—The 155 is driven north 14 fms. 3 ft., the lode in present forebreast being about 4 ft. wide, producing ½ ton to the fm., and improving. The 155 south-east is driven 14 fms. 5 ft., the forebreast being still in the cavity and very wet, but without material change since last week. The 140 south-east is worth 1½ tons of lead ore, and ½ ton of blende to the fm., and the rise behind this forebreast shows a lode worth 3 tons of lead ore and saving stuff for blende to the fm. The two stopes in the 140 north are together worth 2½ tons per fm., and the new winze is in a vein worth about 2 tons per fm. The 140 south is driven 10 fms. 4 ft. beyond the winze, and shows a wide promising vein, yielding good stones of lead ore and blende. The 125 south is still worth about 1 ton per fm. The three stopes in back of the 110 south average 1½ tons per fm., and seem to be improving in like manner as those above the 80 did, as they go south. It is not unlikely that as good a bunch will be found here as that discovered above the 80, and if this be so, we may expect the same order of things up against the shale in front of all the south forebreasts below the said 80-fm. level. The remaining stopes are without change during the week. The 50 tons of lead ore sold to-day realised 420l.—A. WATERS.

SOUTH DARREN (Aug. 13).—On Saturday last the following bargains were let for one month: To sink the shaft under the 142 by nine men at 19½ 10s. per fm., worth 15 cwt. of silver-lead ore per fm.;

depth now under the 142 level, 62 ft. To sink a winze in the 130 end west by four men at 9½. 10s. per fm., worth 17 cwt. of silver-lead ore per fm. The winze is being sunk close to the end (which is worth 12 cwt. of silver-lead ore per fm.), and will open the ground for stoping from the 142, and give ventilation for stoping above the 130. Two men are now engaged laying tramroad over an old stope in the bottom of the 142, to enable a stope to be commenced in this level, which will meet the winze from the 130. The 130 end will be suspended till the winze is down, when we hope to resume it, as all the indications point to a profitable lode in this direction. Four men are engaged picking and tramping from the old stope in 142 west.—J. MITCHELL.

VAN (Aug. 13).—In the cross-cut south at the 150-fm. level (towards the south lode) we have cut into a good looking string or branch, producing fine stones of lead ore; this no doubt is one of the several similar branches met with in the cross-cut at the 135-fm. level above, before the main part of the south lode was found; we have 25 fms. yet to drive at the 150 to intersect this, which we hope will prove productive. The two stopes over the 150 on the old lode continue to yield 15 cwt. of lead ore per fm. The stope over the 135-fm. level on the south lode will produce 25 cwt. of lead ore per fm. In the end of the 120-fm. level east of Seaham's shaft we have just commenced to cross-cut north to prove the lode to the footwall; there are strong spots of lead and blende ores in the forebreast of the cross-cut. At the cross-cut south in this level (now driven 5 fms.) there are good stones of blende and lead in the present forebreast. From Seaham's winze we have started to drive the 150-fm. level eastwards on a part of the lode near the south wall, and here the lode is turning out fine stones of blende—we anticipate an improvement as the level goes forward. The stopes at work in the old parts of the mine are producing 15 cwt. of lead ore per fm.—J. PAULL.

WEARDALE.—Report for week ending Aug. 8.—Ore raised for week, 48 tons; ore dressed for week, 64 tons; ore and slag smelted for week, 81 tons; producing 38 tons of pig lead.

WHEAL CREBOR (Aug. 11).—The lode in the 156 east continues to yield 5 tons of arsenical mundic per fm. We have set a contract to six men to drive the end 10 fms., at 6½. per fm.; this price includes putting the stuff to shaft and laying tram road. The lode in the 132 end driving west on the south part of the lode is worth 3 tons of mundic per fm. There is no change to report in our stopes. The tributaries have finished dressing their ore and have again resumed the working of their pitches. The copper ore we have for sale on the 20th inst. assays 74 per cent. In about eight or ten days we shall be ready to sample one parcel of mundic and one parcel of copper mundic, of about the usual quantity.—P. D. HOLMAN.

WHEAL METAL AND FLOW (Aug. 12).—The lode in the 27 end is producing a little tin, but not enough to value; the ground has become a little harder. We have commenced to excavate for the new reservoir.—S. P. CURTIS.

WHEAL UNY (Aug. 12).—Setting report, Aug. 8: To drive south in cross-cut at the 244-fm. level by six men and boring machine until wall of lode is reached, when we shall drive west with same machine, at 9½. per fm. for the whole. We have cut through the lode over 15 ft. wide, and worth for tin 20½. per cubic fm. To drive east of cross-cut at the 244 by six men and boring machine, at 9½. per fm.; lode worth for tin 20½. per cubic fm. A rise in back of 244 on the north branch by six men, at 8½. per fm.; worth 10½. per fm. The 230 end to drive west by six men, at 7½. 10s. per fm.; worth for tin, 6½. The 230 east to drive by four men, at 5½. 10s. per fm. Here the ground is better for driving, which is a good indication for early improvement; now worth 6½. per fm. The 203 end east to drive by four men, at 6½. 10s. per fm. This point is improving, and now worth 11½. per fm. The 203 end to drive west by six men, at 9½. per fm.; worth for tin 18½. per fm. A new stope behind this end (203 west) by 6 men, at 5s. per ton; worth for tin 15½. per fm. No. 2 stope in back of 203 west by 10 men, at 6s. per ton; worth for tin 15½. per fm.—J. WHITE, D. H. WILLIAMS.

FOREIGN MINING INTELLIGENCE.

ANGLO-MEXICAN (July 3).—Superintendent writes:—During the past month the sinking of the main incline shaft was resumed; the progress made may be, I think, considered satisfactory. We have been stoping ore extensively from above the 908-ft. level. We find that as we raise up there is a decided improvement in the grade. We are following the body of ore east and west of Nabor winze. The other stopes we are working are small, and while they will furnish a large amount of ore for some long time to come, we are not in a position to work them extensively. We are at present very short of Mexican miners, most of our men having gone off to their homes to plant their crops. It is necessary, therefore, to leave many of the places where there is some little ore left until we have a larger force at our disposal. The opening of the rainy season with several heavy storms has entirely relieved all scarcity of water both at mill and mine.

ARGENTELLA (Aug. 1).—Monthly report.—No. 2 Marine—Driving the footwall east: Driven during the past month, 10.50 metres, on a very promising lode; the footwall being well defined. In the early part of the month we broke some nice stones of killas, and carbonate of lime, containing small cubes of silver-lead. The forebreast at present is in good ground containing more quartz than I have seen since we commenced driving this level. There is every prospect of cutting ore as we get nearer the foot of Monté Martino. Quartz reef—Cross-cutting south for Argentella quartz lode: Advanced for the month 4.30 metres. Our progress has been much slower. We cut into a stiff band of killas and quartz which showed a little mineral. The forebreast has just got into more favourable ground, which will help us considerably in reaching the lode. Ogliastrone Valley—Driving east of south: Driven 4.80 metres through hard ground. The end is still in the band of serpentine. No. 3 Rowe's workings: Driving east on new lode, 6.80 metres. This lode continues very promising, producing silver-lead and blende. If it keeps on improving we shall have saving-stuff at no distant date. This end must be pushed on for about 20 metres further, and the No. 4 brought up underneath. I have every confidence in finding a good paying mine. Every metre in depth proves that the further we are from the crust the better our chances are. The ore we have found is rich, but the quantity will improve, I hope, in the No. 4 and No. 3 forebreast.—J. B. ROBERTS.

BALAGHAT-MYSORE (July 21).—Report of work for past fortnight:—The 600 north: Having finished the plat, we resumed the

drivage at this point on 10th inst., and have driven 27 ft. 6 ins., making the total distance from shaft 119 ft. 6 ins.; the quartz is now about 1 ft. wide; worth 3 ozs. 6 dwts. 7 grs. per ton. The 500 winze north has been sunk 4 ft. 6 ins.; total depth, 88 ft. This winze will in a few days be deep enough; the quartz is 9 ins. wide; worth 1 oz. 17 dwts. 20 grs. per ton. The 500 winze south: Sunk 6 ft. 3 ins.; depth, 19 ft. 3 ins.; carrying quartz 6 ins. wide; worth 8 ozs. 4 dwts. 11 grs. The 500 back stopes—No. 1: Quartz averages 1 ft. wide; worth 2 ozs. 2 dwts. 23 grs. per ton. The 500 back stopes—No. 2: Carry quartz about 10 ins. wide; worth 1 oz. 9 dwts. 21 grs. per ton. The 410 winze north has been sunk 5 ft. 3 ins.; depth, 30 ft.; the quartz here is 10 ins. wide, and worth from 6 to 8 ozs. per ton. The 410 back stopes: Carry quartz 1 ft. wide; worth 1 oz. 8 dwts. 14 grs. per ton. The 330 back stopes: The quartz is 10 ins. wide; worth 1 oz. 13 dwts. 10 grs. per ton. The 270 south has been driven 20 ft. 9 ins.; total distance from north engine shaft, 673 ft. In a short time we shall be out far enough to cross-cut to the lode indicated by the southern old workings. The 205 winze: Sunk 5 ft.; total depth, 26 ft., with a little quartz in the bottom, but of no milling value. The 205 back stopes: Quartz 1 ft. wide; worth 3 ozs. 14 dwts. 7 grs. per ton. Haues' shaft: The timbering of this shaft is now going on below the 330, and I hope at an early date we shall be able to be putting in timber below the 410. The skiproad is being put in the Downright, i.e., from surface to the 270.—A. S. B. OAKLEY.

BRATSBERG.—Report for week ending Aug. 1.—Hoffnung Mine: At No. 2 adit level the outlook is very encouraging, the lode producing 1 ton per fm., and is altogether of a very promising character. No. 1 rise in the back continues rich, yielding 1 ton per fm.; and No. 2 rise for the present, however, is worth only ½ ton per fm. No. 3 adit level has been looking well, but just now is rather disturbed, temporarily, we think, producing ½ ton per fm. The rise here is improving; present value, ¾ ton per fm. No. 4 level will be resumed to-day. The trial workings in Murchison's section are opening up a very satisfactory lode, yielding about 1 ton per fm. of high-grade ore. The number of miners employed at this mine during July was 46. Johannes Mine: The western end of the level on Howard lode has now improved; worth ½ ton per fm.; and the eastern end of the same level is worth fully ¾ ton per fm.; in fact, it now shows a better appearance than it has ever done in this direction. The rise in the back is worth fully 1 ton per fm. for the width carried, and I have again to express satisfaction as to the value of this lode where laid open in the back, the stopes never having looked better than to-day. Fifteen miners employed here during July. Surface work and remarks: The dressing machinery has gone on very regularly and well for the past week. The Edward Arthur is loaded with the quantity chartered for, but as she can take 40 tons more, and the captain offers to wait the necessary time for same to get forward, she will not sail for some days yet. Although the number of miners appears to be less than last month, it is not really so, but actually three or four more, the apparent discrepancy being due to our having lent several men to the smelting company; the production, however, still continues very low, being 120 tons 20 per cent. ore.—J. D. HOLMAN.

BRATSBERG SMELTING AND REFINING WORKS.—Report for week ending Aug. 1.—Smelting and converting were continued without cessation every day last week with every success, and we may now, I think, congratulate ourselves on having come to the end of our troubles. We have had no trouble whatever with either the water-jacket or the convertors, and no hindrance or stoppage of any kind occurred. As per last report, the water-jacket was kept going slowly by night, and converting was only carried on by day owing to our not having a man sufficiently trained as yet to undertake the night shift. We find also that the fine buddle ore can, since the heightening of the stack, be used in the furnace without first having to be made into balls, and this will be a great economy not only in labour but in time. The foreman Mr. Manhes sent us this time has proved himself to be thoroughly competent, and will train up a man here to take his place as quickly as possible, so that we shall soon, we hope, be quite independent of outside help, and able to carry out the operation of converting entirely by ourselves. The result of each day's converting is as follows:—Monday, 18 anodes running seven hours; Tuesday, 33 anodes running 12 hours; Wednesday, 32 anodes running 12 hours; Thursday, 31 anodes running 12 hours; Friday, 35 anodes running 12 hours; Saturday, 36 anodes running 12 hours; total, 185 perfect anodes, which, at average 60 kilo each, equals a production of about 11 tons copper for the week. Only complete workable anodes are included in the above 11 tons, but, as a matter of fact, considerably more copper was produced, but, owing to defects in casting, were not available for the electro department. The lining of the convertors has stood well, the one used on Saturday having stood nine operations, and the subsequent washing out. The results of last week's operations will doubtless be most cheering not only to you but to all interested in the welfare of the company.—T. F. SMITH.

CALLAO BIS (July 18).—Advices from the mines: Independiente: Shaft has been sunk since the 4th inst. 7 ft.; total distance from surface, 173 ft. The ground continues very hard for sinking. No. 3 level west has been driven 15 ft.; distance from cross-cut, 110 ft.; lode showing quartz, 3 ft. wide, of fair value. No. 2 west level has been driven a further distance of 43 ft.; making total distance from shaft, 313 ft.; lode, 2 ft. wide, of quartz and cascajo, but not of any value. No. 2, north-east level: Nothing has been done here since last reported. No. 1 winze in the bottom of No. 2 north-east level has been sunk 3 ft.; distance from level, 33 ft. Little has been done in this winze owing to so much water. We have to suspend this until we drive a cross-cut from the No. 3 east level to drain the water, a distance, say, of 45 ft. No. 2 winze on north-south lode has been sunk 31 ft.; distance from level, 79 ft. We intend to put the men from here to drive a short cross-cut to hole to the east stope on east-west lode. When this is holed we can take the dirt away with less cost from this point. Stopes looking well. The west stope: Lode 7 ft. wide, of good value. East stope: Lode 3 ft. wide, of good value.

CHAMPION REEF (July 21).—Fortnightly report:—Mysore section: At Carmichael's shaft the 225-ft. level has been advanced north 8 ft. 6 ins.; total, 9 ft. 9 ins.; and the south end has been driven 17 ft.; total length, 87 ft. 3 ins. We are still following a small branch of quartz, which continues very regular, and carrying good walls. Ribblesdale's shaft: Driving cross-cut east at 240 level, 15 ft.; total length, 44 ft. During the last few feet of drivage we

have passed through several branches of quartz, about 4 ins. wide, which has more the appearance of the lode than anything we have yet intersected at this point; the cross-cut will be continued a few feet further. A drift has been commenced south at the 240 level, and driven $4\frac{1}{2}$ ft., the result of one week's work only. Garland's shaft: Sinking 3 ft.; total depth, 248 ft. 6 ins. The coolies have not been able to work to the best advantage, as there are several delays, caused by the working of the rock-drills near the shaft; this, however, will soon be remedied when the shaft is low enough to cover over the tip-plate. Driving at the 240-ft. level, the north drift has been extended 11 ft.; total from shaft, 47 ft. 8 ins. The south drifts have been driven 13 ft. 6 ins.; distance from shaft, 34 ft. 6 ins. The lode in the north end is at present rather disordered, and the quartz has fallen off a little in value to $4\frac{1}{2}$ dwts. per ton. In the south end the lode continues very regular and carries about 1 ft. of quartz, which gives an assay value of 5 dwts. per ton. Dalyell's shaft: Sinking 2 ft.; total depth, 247 ft. We have a difficulty in getting good coolies for sinking as the rock is very hard and difficult. Driving north at the 240-ft. level, 16 ft. 6 ins.; total length, 68 ft. 4 ins.; the lode here is small, but carries very regular walls. Driving south, 13 ft.; total distance, 57 ft. 3 ins.; the lode still maintains a width of 2 ft., but the quartz has pinched a little since last reported. Coromandel section: Driving north at the 380-ft. level 5 ft.; total length, 21 ft. The north drift at the 320-ft. level has been advanced 6 ft. Since having passed through the dyke at this level, the lode has not been as good as before; in the present end we are undoubtedly on the footwall of lode, which is composed of small branches of quartz mixed with country rock. A cross-cut has been commenced west near the end, which will soon prove if any portion of the lode is heaved in that direction. Winze below the 320 level has been sunk 6 ft. 6 ins.; total depth, 20 ft. 3 ins. The shoot of quartz dipping rapidly to the north, and the portion of the lode now in the winze, is about $1\frac{1}{2}$ ft. wide, assaying 8 dwts. per ton. The winze will be turned in order to follow, if possible, the dip of the ore shoot of ore. The 290 end south, driving 3 ft.; total length, 177 ft. The lode is pinched to about 6 ins. in width. The cross-cut west at this level has been driven 4 ft.; the rock is very hard, and slightly mineralised. Surface and general work: At the Mysore section we have done a little costeaning on the old works on the Champion lode. Between Ribblesdale's and Carmichael's shafts we have up to the present proved the old works to a depth of 20 ft., and we are now sinking a winze on same, which will be carried down on the workings to prove the dip of the shoot as worked by the ancients. This work will beyond doubt give us considerable information as to the best method of conducting our operations at the 240-ft. level. Carmichael's shaft: Other exploratory works will be carried on north of Carmichael's shaft, near the north boundary of the company's property, and also south of Ribblesdale's shaft. The erection of winding engine and boiler at Dalyell's shaft is complete, with the exception of a few connections of steam pipes, and the building of stack, flues and engine and boiler house are progressing favourably. Machinery working well throughout the mine, and the health of the camp continues good.—R. C. JONES.

COLAR CENTRAL (July 21).—New shaft: 200 north has been driven 8 ft. 3 ins., making full distance from the cross-cut 25 ft. 9 ins.; the quartz is now much larger than it was, averaging 15 ins.; the value is, however, just now low, the quartz being worth $2\frac{1}{2}$ dwts. per ton. The 200 south has been driven 3 ft. 6 ins.; total distance, 10 ft.; quartz very pinchy and small, but worth $\frac{1}{2}$ oz. to the ton. The 200 winze: We have commenced to sink a winze in the bottom of this level, and have sunk 3 ft. 3 ins.; there is not much quartz at present, but we expect it to open out more as we sink.—A. S. B. OAKLEY.

—Office note.—A recent telegram announces that the lode in the 200 north is 12 ins. wide, worth $2\frac{1}{2}$ dwts. of gold per ton; and in the 200 south it is 18 ins. wide, worth 15 dwts. of gold per ton.

CORTEZ (July 25).—Report from the superintendent.—Work at the mines for the week ending this date has been as follows:—South cross-cut from No. 1 east advanced 3 ft. No. 2 tunnel west, stoped 6 tons of ore; No. 3 tunnel west, stoped 5 tons of ore; north-east raise, stoped 31 tons of ore; north-west raise, stoped 77 tons of ore; ore run into ore house, 138 tons; trammed to mill, 180 tons of ore; worked at mill, 160 tons of ore. Average assay for the week, 56.75 ozs. silver per ton.

CUMBERLAND (June 15th).—Progress report to date:—No. 7 level north: This level was at a standstill until the 8th of this month, when, for the purpose of holding our ground and prospecting at the same time, a contract was let to continue going northward at 30s. per ft. There is a goodly stream of water coming in at the far end, and the ground is generally of a favourable appearance; but I have very small hopes now of finding anything really payable in this portion of the mine. No. 2 winze north: This was connected with No. 7 level on the 6th inst. I regret to say nothing of importance was met with. The mine is now perfectly ventilated. No. 7 level south: Up to date 50 ft. have been driven. The ore mentioned in my last report continued for about 15 ft., when it widened out to 2 ft. 6 ins. underfoot, showing more mineral as it increased in width. It went strong for about 30 ft., when the ore broke up into numerous leaders which carry a little mineral. From present appearances too much importance cannot be put on the fact that underfoot is where we must now concentrate all our energies, and I should not be at all surprised if large bodies of ore were met with coming in again from the south. If this should be so there is undoubtedly a great future before the Cumberland Mine. Battery: This will be started next week. There is between 300 and 400 tons of public stone to be crushed; while this is going through the spare grinding machinery will run on tailings.—A. GALLAGHER.

EMMA (July 13).—We were unfortunate with the concentrating mill last week, the engine becoming disabled and also the rock-breaker, so that we were obliged to close down several days until we could go to Salt Lake to get the necessary fittings for repairs, &c. I am glad to say we are again running. In consequence of my being obliged to go to Salt Lake, I omitted writing you last week. Again the July holidays intervening interrupted our work both in the mill and mine. In the south-east part of the mine on the Emma tunnel level in the hanging-wall drift we worked 8 men stoping ore and timbering, besides three carmen running waste-rock and low-grade ore; for the two weeks we mined about 125 tons low-grade ore which has been run to the mill. In the footwall drift we worked four men sinking on the vein; sunk 10 ft.; total depth, 45 ft.; the vein is still about $2\frac{1}{2}$ ft. wide,

ledge matter of the same character as per my report of June 29. On the Illinois tunnel level we worked five men drifting and raising besides stoping; mined about 20 tons iron ore. The cross-cut towards hanging-wall from level No. 3 south-east advanced 6 ft.; total, 173 ft.; the rock is very hard, air close, so that progress here is slow. The ore mentioned in my last report has been sampled, assayed, and marketed with the following results:—Lot 5. Concentrates, 15 tons 1,808 lbs. net ore at \$75.60, \$1,202.34; average assay, 44 5-10ths per cent. lead, 61 6-10ths ozs. silver per ton. Lot 6. Crude, 8 tons 1,093 lbs. net ore at \$24.70, \$211.16; average assay, 19 4-10ths per cent. lead, 18 75-100ths ozs. silver per ton.—H. C. WALLACE.

ESMERALDA (July 28).—The superintendent writes:—Esmeralda ledge: The quartz has been very hard during the past week, and we have only been able to make 5 ft. progress. The face is now looking much better, however, and more like ore; in fact, there has been a marked improvement all along. I am satisfied that the men are working their best.

FLAGSTAFF (July 25).—I again have the pleasure of sending you my report. During the past week very little has been done in the way of getting out ore, as we are now engaged in putting up a rise from 6th to 7th levels for gaining better air; the 6th level wants this badly, and in 7th level we can hardly go on for the want of better ventilation. The work on this rise will take about 10 days or may be two weeks, but when it is done I can make a good showing for my week's work. I am pleased to say the level 7 is looking magnificent; the ore now shows a great deal of silver-lead, and is much wider than the level is. We have gone 8 ft. into it, and it gets bigger, so far, all the time. Mr. Gundersen has seen it, and he says he has not seen such a prospect for good ore, and a larger quantity of it, anywhere below level No. 2. I told you in my last that I was blasting out a place for a track so as to take the cars around by one side, as this ore in the eastern part turns downwards, and we will have to work down on it like sinking a deep well. I have big hopes of this place, and in a few days I shall be wheeling out ore from it. The most of this past week we have been shipping ore, and I shall begin shipping again in a few days, as the Professor has ordered that 400 tons more first-class shall be down to Sandy ready for sale by the middle of Sept., when he will be back here from England to sell it. Everybody thinks that the ore of the two kinds just sold has brought a good price, but I think we have better ore piled in 7th level than any of the lots sold this week. I shall get the machinery running as soon as possible, in order to free the 7th level of ore and waste. The ore in 6th is looking good, and above the level is improving in size and is very good first-class.—A. L. SWOPE.

GARFIELD (July 25).—The following work has been done at the mine.—Western Mine—180-ft. level: The north-east drift has lengthened 29 ft., making in all 139 ft. The ground we have had during the week has continued favourable for ore at present, that in the face of the drift is looking very favourable.

GYMPIE GREAT EASTERN (June 25).—Fortnightly report.—During the past fortnight there is nothing to report except baling water since Monday, the 15th inst. The water rose in the shaft within 140 ft. of the surface, and filled all the underground workings; it is now lowered to about 274 ft. The shaft is keeping in good order; there was only one batten that got loose so far. There will have to be a good portion of the shaft battened when the flood water is out. This, however, will not delay any of the work in the mine. For 22 days ending June 13 there were 530 tons of quartz raised and crushed for a return of 523 ozs. 18 dwts. 6 grs. of smelted gold. Out of this stone there was 490 tons from the Orient reef and 40 tons from the Great Eastern reef. This 40 tons would not average more than $\frac{1}{2}$ oz. per ton. There is only 10 head of stampers crushing for No. 2 Great Eastern. The winding engine and battery is in good working order. There are 12 men employed—six on the mine and six at the battery.—J. JAMES.

INDIAN CONSOLIDATED (July 18).—Phoenix section.—No. 1 level still remains the same chloritic schist with small bands of quartz; there is now a strong stream of water coming from foot of the face; the lode maintains its width. A small rise up has not shown any change in the lode and character of the ground, and will be discontinued next week if there is no alteration; level extended 7 ft. Tramway level: This face, too, shows no change, and is still about 5 ft. in width. The ground is a bit harder, and the contractor has only driven 7 ft. Stopes A and B have only changed, in so far that they are getting smaller. Of the other stopes there is nothing to report. We have a full force working at every available point, and expect to make a big crushing. Mill working steadily, and all surface works in order.—C. A. PATERSON.

—Office note.—A telegram has been received stating that during the month of July 940 tons of quartz were crushed, with a yield of 131 ozs. of gold.

—(July 21).—Colar section.—No. 1 shaft has been sunk for the past fortnight 4 ft. 6 ins., making a total depth from surface, 229 ft. 6 ins.; the progress here has been slow, owing to the shaft being very wide on account of our having commenced to go on the underlie, which has made it difficult for fixing the bar. No. 2 shaft: This shaft was sunk 25 ft. 3 ins., making a total depth on the underlie of 65 ft. 3 ins.; the lode is 1 ft. 6 ins. wide, but at present of no value. 240 main shaft: West cross-cut has been driven 21 ft. 9 ins.; total distance, 433 ft. 6 ins. The last few feet of drive have been in the trap dyke. Main shaft: East cross-cut has been driven 15 ft. 9 ins., and as there is no appearance of any more lode standing here, we have suspended this and put the drill at No. 5 shaft. No. 5 shaft: We have been underground here, and have carefully examined this part of the mine, and in our opinion the main lode has not been worked on here, but is further to the east. We have commenced to drive a cross-cut out in that direction with the rock-drill taken from main shaft east cross-cut, to ascertain whether the lode is there or not.—M. STEPHENS.

LEEDS COPPER (July 30).—Kent's shaft: The 20-fm. level driving west of shaft is being pushed on by full party; the bed vein for the past 2 ft. is not as good as when fully reported on last; it is mixed with poor schist, but expect as we advance it will again improve, producing $\frac{3}{4}$ ton 15 per cent. ore per fm. No. 1 stope in the bottom of this level is poor and suspended. No. 2 stope in the bottom of this level is producing good ore; bed vein 4 ft. wide; worth 3 tons 15 per cent. ore per fm. No. 1 stope in the back of the 15-fm. level west is in bed vein 3 ft. wide, producing $1\frac{1}{2}$ tons 15 per cent. ore per fm. No. 2 stope in the back of the 15-fm. level west is in bed

vein 3 ft. 6 ins. wide, and producing $1\frac{1}{2}$ tons 15 per cent. ore per fm. The 15-fm. level driving west of shaft continues in bed vein from 3 to 4 ft. wide, of good character, producing $1\frac{1}{2}$ tons 15 per cent. ore per fm. No. 1 stope in the back of the 15-fm. level is in bed vein 4 ft. wide, and producing 2 tons 15 per cent. copper per fm. No. 2 stope in this level is without change; bed vein 3 ft. 6 ins. wide, and producing $1\frac{1}{2}$ tons 15 per cent. ore per fm. No. 3 stope in this level is in bed vein 5 ft. wide, producing 2 tons 15 per cent. ore per fm. McGee's shaft: The level driving west of shaft is showing good bed-vein ore, and producing $1\frac{1}{2}$ tons 15 per cent. ore per fm. Kent's dump is without change, the men being taken from here for other work in Kent's shaft. Surface: Everything is near completion, and we start our new plant in a few days.—T. R. DAVEY.

MONTE DEL ORO.—Fortnightly report.—Taylor's engine shaft: The total length of the 316-ft. level north of this shaft is 54 ft., showing the good advance in the past fortnight of 27 $\frac{1}{2}$ ft. Two samples have been taken and assayed, the first from a lode 8 ins. or 10 ins. wide, of flookan, slate, and stringers of quartz, yielding no gold, and the second from a lode of quartz and slate about 2 ft. wide, which gave a result of 1 dwt. 23 grs. of gold per ton. In the 316-ft. level south of the shaft 21 ft. were driven in the fortnight, making its total length 48 ft.; the lode in this level continues very small, but it carries a good hanging-wall, and in the present end it is letting out a fair stream of water. One sample was obtained, the result of the assay being no gold. At a point about 200 ft. north of this engine shaft the sinking of winze No. 12 below the 244-ft. level has been commenced with the object of communicating with the 316-ft. level north by the time it reaches that point. Already 7 ft. have been sunk, and a sample, taken soon after starting from a lode of quartz 2 ft. to 2 $\frac{1}{2}$ ft. wide, assayed 3 dwts. 6 grs. of gold per ton. Shaft No. 6: Notwithstanding the foul air to be contended with fair progress was made in extending the 244-ft. level north, 17 $\frac{1}{2}$ ft. being driven, making its total length 565 ft.; the lode, composed principally of quartz, averages about 1 ft. in width, and both the samples taken yielded a trace of gold on assay. The total rise from the back of this level towards winze No. 11 is 47 ft., of which 10 $\frac{1}{2}$ ft. have been done since the last report. On reaching this point it became necessary to suspend operations for want of air; the lode of quartz maintains a width of 3 ft., and the last sample from it assayed a trace of gold. With the sinking of winze No. 11 below the 186-ft. level north very good speed is being made, since 21 $\frac{1}{2}$ ft. have been sunk since operations were resumed, and the depth attained is now 52 ft.; the lode is 3 ft. wide and is nearly all quartz, the sample obtained from it yielding 6 dwts. 12 grs. of gold per ton. A rise from the back of the 186-ft. level north has been started at a point 14 ft. south of No. 11 winze, and 22 ft. have been done. The quartz has now almost entirely cut out, but a sample taken from about 15 ins. yielded 2 ozs. 1 dwt. 18 grs. of gold per ton. Low's engine shaft: Since the last report, this shaft, the total depth of which is 121 ft., has been squared down, and the timbering completed to the bottom.—Capt. J. ROBERTS.

MOSMAN.—Mine manager's report for fortnight ending June 27.—North Australian Mine: During the past fortnight this mine has turned out a few more tons stone than usual owing to the reef having widened out a little in some places. The stone raised has been of better quality too, as will be seen from the yield given below. During fortnight 66 tons of stone have been raised, and 221 tons carted to the mill, leaving 15 tons in the paddock. These 221 tons have been crushed for the very satisfactory return of 689 ozs. 4 dwts. smelted gold, being an average of about 3 ozs. 2 dwts. 9 grs. Portion of crushing reported by cable, July 20, viz.: "North Australian and Wyndham: Have crushed 731 tons for a yield of 1,036 ozs. gold; approximate value, 3,575*l*." Eastward Hol Mine: There are only four men working on day work, all of whom are on the surface; therefore, there is nothing in the way of development to report. The tributers and contractors who are driving the 900-ft. level make up more than the number of hands required to hold the ground under existing partial exemption. Wyndham Mine: The underlie shaft has been further sunk 17 ft. during the fortnight; total depth from the surface, 836 ft. The reef has not yet been met with again, as the shaft is being sunk at a steeper grade to strike the 1,000-ft. level, and therefore, having left the hanging-wall previously sunk on, we are really cross-cutting to the bottom formation. I think, however, there is a reef under us, as leaders of quartz are met with occasionally from below. The 550-ft. level south has been only extended 6 ft.; total distance from shaft 123 ft.; the reef is small, and not very good. The 550-ft. level north has been extended during fortnight 5 ft. only; total length, 230 ft.; there is 1 ft. of stone, of about 1 oz. quality. The reef in the stopes north of the shaft is looking fairly well, averaging from 10 ins. to 12 ins. in thickness. The quantity of stone raised since last report is 100 tons; total in the paddock and taken to mill is 340 tons. Crushing: About 130 tons have been carted to the mill, and partly reduced; the yield, I fear, will not exceed 1 oz. per ton. Machinery: The winding plant, viz., 25 h.-p. Robey engine and boiler and double winding drums, is being erected on the Wyndham shaft. This plant will do all our work for the next three or four years thoroughly and well, and will, therefore, be a very cheap one.

MYSORE (July 21).—Mining operations for the fortnight ending July 18.—The progress in general in the different bargains throughout the mine has been very satisfactory. The 890 west of Rowse's shaft has been driven 22 ft. 2 ins.; total distance, 32 ft.; we have met with small veins of quartz and carbonate of lime, but nothing of any value: the ground is mineralised with pyrites but hard for progress. The 780 north of shaft has been driven 31 ft.; total distance, 393 ft.; the lode is 1 ft. 6 ins. wide, and assaying 2 ozs. 13 dwts. 7 grs. The 620 south of the incline shaft on the west lode has been driven 22 ft.; total distance, 70 ft.; the lode is 1 ft. wide, and assaying 2 dwts. 15 grs. The 550 south of incline shaft (on the west lode) has been driven 20 ft.; total distance, 115 ft.; the lode is 1 ft. 2 ins. wide, and assaying 1 dwt. 15 grs. Glen's shaft: The 250 north of this shaft has been driven 21 ft.; total distance, 313 ft. 10 ins.; the lode is 1 ft. wide, and yielding quartz of low quality; during the past week we broke some good samples of quartz from this end, but the lode at present is again declined in value. The 250 east of this shaft has been driven 17 ft. 8 ins.; total distance, 110 ft. 6 ins.; the ground has been occasionally mixed with spots and patches of quartz, but we have not seen anything yet like a branch or lode. Tennant's shaft: The 360 north of shaft has been driven 26 ft. 6 ins.; total distance, 555 ft. 5 ins.; the lode is 10 ins. wide, and assaying 5 dwts. 5 grs. The 360 south of shaft has been driven 18 ft. 6 ins.; total distance, 61 ft. 6 ins.; the lode is 9 ins. wide, yielding stones of quartz, but nothing to value.

The 290 north of shaft has been driven 35 ft.; total distance, 884 ft.; the lode is 1 ft. wide, yielding quartz of low quality. I have put these men to cross-cut east as I think there is a great probability that the main part of the lode is standing a few feet further in that direction. The 290 south of shaft has been driven 23 ft. 6 ins.; total distance, 490 ft.; the lode is 1 ft. wide, and estimated to be worth 1 oz. Schaw's shaft: The 450 north of this shaft has been driven 22 ft.; total distance, 465 ft.; the lode is 1 ft. wide, and assaying 12 grs. The 450 south of the shaft has been driven 4 ft.; total distance, 101 ft.; the lode is 1 ft. wide, and assaying 15 grs. The 320 north of shaft has been driven 4 ft.; total distance, 177 ft. 9 ins.; the lode is small and unproductive. The 320 south of shaft has been driven 4 ft. 6 ins.; total distance, 234 ft.; the lode is 1 ft. wide, well defined, and assaying 9 dwts. 2 grs. Rising: The rise in back of the 450 north of Schaw's shaft has been put up 3 ft. 6 ins.; total distance, 26 ft.; the lode is 2 ft. wide, of a mixed character of quartz and schist, and underlaying very fast. Stopes: The lode in stope in back of the 700 north of Rowse's shaft is 2 ft. wide, and assaying 17 dwts. 19 grs. The lode in No. 2 stope in back of this level is 3 ft. wide, and assaying 2 ozs. 13 dwts. 23 grs. The lode in stope in back of the 700 south of Rowse's shaft is 3 ft. wide, and estimated to be worth 15 dwts. The lode in stope in back of the 700 south of incline shaft is 2 ft. wide, and assaying 2 ozs. 3 dwts. 14 grs. The lode in No. 2 stope in back of this level is 2 ft. 6 ins. wide, and assaying 19 dwts. 16 grs. The lode in stope in bottom of the 700 south of the incline shaft is 2 ft. wide, and assaying 2 dwts. 14 grs. The lode in stope in back of the 620 south of incline shaft (on the wide lode) is 1 ft. 6 ins. wide, and estimated to be worth 1 oz. The lode in stope in back of the 620 north of Rowse's shaft is 1 ft. 6 ins. wide and estimated to be worth 10 dwts. The lode in No. 2 stope in back of this level is 2 ft. wide, and assaying 6 dwts. 12 grs. The lode in No. 3 stope in back of this level is 1 ft. 6 ins. wide, and assaying 4 ozs. 8 dwts. 19 grs. The lode in stope in back of the 550 north of Rowse's shaft is 3 ft. wide, and assaying 16 dwts. 23 grs. The lode in stope in bottom of the 550 south of Rowse's shaft is 2 ft. 6 ins. wide, and assaying 2 ozs. 3 dwts. 2 grs. The lode in stope in bottom of the 466 north of Taylor's is 4 ft. 6 ins. wide, and assaying 3 dwts. 15 grs. The lode in stope in the bottom of the 400 north of Taylor's shaft is 1 ft. 4 ins. wide, and assaying 6 dwts. 2 grs. The lode in stope in back of the 400 south of Taylor's is 3 ft. wide, and assaying 3 dwts. 6 grs. The lode in stope in back of the 400 north of Rowse's is 2 ft. wide, and assaying 2 dwts. 14 grs. The lode in stope in back of the 400 south of Plummer's is 4 ft. 6 ins. wide, and assaying 7 dwts. 16 grs. The lode in stope in back of the 360 south of Plummer's is 2 ft. wide, and assaying 5 dwts. 6 grs. The lode in stope in back of the 295 north of Plummer's is 1 ft. 6 ins. wide, and estimated to be worth 10 dwts. The lode in stope in back of the 296 north of Rowse's is 4 ft. wide, and assaying 2 dwts. 15 grs. The lode in stope in back of the 236 north of Rowse's is 2 ft. 6 ins. wide, and assaying 4 dwts. 13 grs. The lode in stope in back of the 290 north of Tennant's is 2 ft. wide, and assaying 2 ozs. 3 dwts. 2 grs. The lode in No. 2 stope in back of this level is 4 ft. wide, and assaying 1 oz. 10 dwts. The lode in stope in back of the 180 north of Tennant's is 3 ft. wide, and assaying 1 oz. 1 dwt. 15 grs. The lode in No. 2 stope in back of this level is 3 ft. wide, and assaying 1 oz. 15 dwts. 22 grs. Sinking: There has been a little water in, which has prevented us from measuring Tennant's shaft this week; the lode is 9 ins. wide, carrying well defined walls, but yielding nothing to value. Gilbert's shaft has been sunk 12 ft.; total distance from surface 139 ft.; we are making very good progress here considering it is all coolie labour. The winze in bottom of the 180 north of Tennant's shaft has been sunk 16 ft.; total distance, 36 ft.; the lode is 3 ft. wide, and assaying 1 dwt. 12 grs. Both our crushing mills are in full work, but we are suffering from want of water in the tailings department. On account of the drought throughout all the year we have brought home the waste water this week from the Champion Reef Mine, which has helped us out a good bit, so that we could start all our tailings machinery again this morning. Mill samples: New mill quartz, Rowse's, 1 oz. 18 dwts. 13 grs.; new mill quartz, Tennant's, 1 oz. 0 dwts. 6 grs.; old mill quartz, Rowse's, Taylor's and Plummer's, 1 oz. 7 dwts. 6 grs.; old mill quartz, Tennant's, 1 oz. 0 dwts. 6 grs.—J. GILBERT.

NAMAQUA.—Abstract of superintendent's report for June, 1891:—Tweefontein Mine—Shaft below the 73-fm. level: There is no change in the appearance of the ground. Shaft below the 73-fm. level east: At this point the rock is composed of quartz mixed with iron and spotted with copper ore. Shaft below the 73-fm. level west: The nature of the ground continues similar to that in the eastern driving. Shaft below the 58-fm. level east: The value of the ore ground varies considerably; there are indications of early improvement. Shaft below the 43-fm. level west: This level has now been communicated with the stope above it, and the two will be worked as one. Stopes—The 33 west, bottom of level: Worth 8 tons of ore per fm. The 33 west, bottom of No. 2: This is a new stope, which it is hoped will supply a quantity of stuff for the dressing machinery. It is worth 5 tons of ore per fm. The 43 east: The ore continues to open towards the north, and it is hoped that a large quantity from that point will be obtained. It is worth 10 tons of ore per fm. Wheal Julia Mine: The ground has again become more of the character usually found surrounding ore bodies, and there is a little ore mixed with it. As progress is being made towards the mineralised outcrop, it is hoped that speedy improvement will take place. New east centre: The trial at this centre has been abandoned for a time, as stated in the last report. Output for May: 361 tons of 30 per cent.

NEW DEVALA MOYAR.—Report for week ending July 16:—Drive west in the 186-ft. level, 5 ft. driven; total, 20 ft. Lode matter at present of no value. Started to drive east in 186 ft.; apparently lode dipping east from 116 ft. No. 4 winze in bottom of 116 ft. sunk 3 ft.; total, 6 ft. Lode matter at present no value. Shaft suspended on account of rains. Mill running as usual.

NEW EBERHARDT (July 24).—The mine manager reports:—Drift south from upraise 2 advanced 9 ft.; total length, 29 ft. Material met with in this drift has been quartz and spar; the ground during the past week has been a little more broken. Drift north from No. 2 upraise advanced for the two weeks 7 ft.; total length, 11 ft. Material met with in this drift nearly all spar, with occasional bunches of low-grade quartz. Cross-cut west on tunnel level advanced 15 ft.; total length, 23 ft. Material met with, pure lime. Cross-cut west advanced for the week, 7 ft.; total length to date, 16 ft. There has been no change met with since last report; the

ground continues of the same dark colour, with seams of quartz running through it. Treasure Hill: I have to-day commenced working in the old mine on Treasure Hill. As yet I have only two men at work there. These men will be running south on a brake that comes down from the Lady's Chamber. The drifts we are about to run now are about 120 ft. below the bottom of the Lady's Chamber. The brake at this depth is filled with ledge matter, but contains no ore at present.

NUNDYDROOG (July 21).—Report of work done for the fortnight ending July 16:—The 520 north: Distance driven, 24 ft., by two Italians with a rock-drill; present length, 180 ft. The quartz looks very good, though the assay value is not quite so high, 16 dwts. 6 grs.; the lode is 2 ft. wide. The 520 south, No. 1 winze: Distance sunk, 18 ft., by one Englishman with a rock-drill; total depth of winze, 44 ft.; the lode is a very fine one, 6½ ft. wide, and assaying 1 oz. 9 dwts. 6 grs. The 520 south, No. 2 winze: Sunk 17 ft., by one Englishman with a rock-drill. The lode here is also a very fine one, 5 ft. in width, and worth nearly 2 ozs. per ton. The 480 south driven 13 ft., and stoped 3 fms., by one Englishman with a rock-drill. This level has been holed to the 480 north from Webb's; so we have now done away with the lift in Webb's shaft; the average size of the lode is 3½ ft., and its assay value 3 ozs. 2 dwts. 6 grs. per ton. The 480 north: Driven 10 ft., making a total length of 72 ft., when we holed to the 480 south. The men employed, two Italians with a rock-drill, were then put in the 300 north to drive for a bob-plat; they have driven 6 ft.; we are putting in a new balance bob at this level. The 450 north, No. 1 stope south: Ground stoped 10 fms., by one Englishman with a rock-drill; the lode looks very well, being 6 ft. wide, and assaying 1 oz. 7 dwts. 6 grs. per ton. The stopes working by hand labour are as follows:—The 450 north, No. 1 stope in back north: Lode, 4 ft.; assay, 1 oz. 2 dwts. 18 grs. per ton. The 450 north, No. 2 stope north: Lode, 2 ft.; assay, 1 oz. 16 dwts. 18 grs. per ton. The 450 north, No. 2 stope south: Lode, 4 ft.; assay, 1 oz. 5 dwts. per ton. The 450 north, intermediate level: Lode, 4 ft.; assay, 13 dwts. per ton. The 370 north, stope in bottom: Lode, 2 ft.; assay, 1 oz. 10 dwts. 12 grs. per ton. The 370 north, stope in back: Lode, 2½ ft. wide; assay, 1 oz. 18 dwts. per ton. The 370 south, stope in back: Lode, 4 ft.; assay, 2 ozs. 4 dwts. 12 grs. The 300 north, stope in back: Lode, 1½ ft.; assay, 2 ozs. 17 dwts. 18 grs. per ton. Taylor's shaft: Sunk 10 ft., making a total depth of 603 ft., and driven north at the 600, 6 ft. by three Italians with a rock-drill. We shall push this level on, and resume the sinking of Taylor's as soon as possible. Kennedy's shaft: Sunk 5 ft., making a total depth of 150 ft., by three Italians with a rock-drill. The water appears to be increasing, and the shaft is very wet; we shall soon hole to the cross-cut from north shaft. Mill: The mill is doing good duty, and the daily yield of amalgam keeps up well. New tailings machinery: The tailings machinery started on the 13th inst., and I am glad to tell you it is running very satisfactorily. Health: One Italian in hospital, all the rest at work. Mill samples: Rough quartz, through stonebreaker, 2 ozs. 16 dwts. 12 grs.; smalls, 2 ozs. 9 dwts. 18 grs.—F. W. GREY.

OOREGUM.—Mine report for the fortnight ending July 20.—Wallroth's shaft has been sunk 12 ft. 3 ins.; total, 396 ft. 6 ins. from surface; lode, 4 ft. wide; assay value, 5 ozs. 8 dwts. 21 grs. per ton. The skip road is now completed down to the 360-ft. level. The 360-ft. level north: This level has been driven 1 ft.; total, 31 ft. 9 ins.; lode, 2 ft. wide; assay value, 2 ozs. 3 dwts. 13 grs. per ton. The 360-ft. level south has been driven 11 ft.; total, 77 ft. 6 ins.; lode, 2 ft. 6 ins. wide; assay value, 3 ozs. 5 dwts. 8 grs. per ton. The 280-ft. level south has been driven 30 ft. 4 ins.; total, 705 ft. 5 ins.; width of lode, 4 ft.; assay value, 1 oz. 7 dwts. 5 grs. per ton. No. 1 winze: The 280-ft. level south has been sunk 4 ft. 3 ins.; total, 56 ft. 3 ins.; lode, 1 ft. 6 ins.; assay value, 2 ozs. 6 dwts. 19 grs. per ton. No. 2 winze: The 280-ft. level north has been sunk 5 ft. 4 ins.; total, 50 ft. 6 ins.; lode, 6 ins. wide; assay value, 15 dwts. 6 grs. per ton. No. 3 winze: The 280-ft. level north has been sunk 4 ft. 8 ins.; total, 62 ft. 8 ins. Driving north from No. 2 cross-cut east from 280-ft. level north advanced 2 ft.; total, 63 ft. 6 ins.; lode, 6 ins. wide; assay value, 6 dwts. 12 grs. per ton. Driving south from above cross-cut, total, 14 ft. 3 ins.; suspended. Driving 215-ft. level north advanced 1 ft. 6 ins.; total, 82 ft. 9 ins.; lode, 10 ins. wide; assay value, 1 oz. 14 dwts. 20 grs. per ton. Low's shaft: The sinking of this shaft has been suspended, the shaftmen being employed in cutting a cistern plat at the 350-ft. level. On completion of this work the sinking of the shaft will be resumed. The 350-ft. level south has been driven 2 ft. 6 ins.; total, 185 ft. 8 ins.; lode, 6 ins. wide, assaying 5 dwts. 10 grs. per ton. Winze 350-ft. level south has been sunk 3 ft. 2 ins.; total, 10 ft. 6 ins.; lode, 2 ft.; assay value, 1 oz. 12 dwts. 16 grs. per ton. The 350-ft. level north has been driven 1 ft. 6 ins.; total, 82 ft. 6 ins. Winze 350-ft. level north has been sunk 3 ft.; total, 14 ft. 6 ins.; lode, 2 ft. 6 ins. wide; assay value, 2 ozs. 14 dwts. 10 grs. per ton. Winze 270-ft. level north has been sunk 2 ft. 1 in.; total, 45 ft. 7 ins.; lode, 10 ins. wide; assay value, 2 ozs. 3 dwts. 13 grs. per ton. Winze 270-ft. level south has been sunk 3 ft. 2 ins.; total depth, 50 ft. 4 ins.; lode, 10 ins. wide, worth, by assay, 2 ozs. 8 grs. per ton. The 200 level south from cross-cut east has been advanced 2 ft. 10 ins.; total, 31 ft. 2 ins.; lode, 6 ins. wide; value, 3 dwts. 6 grs. per ton. Probyn's shaft: The 550-ft. level south has been driven 22 ft.; total, 22 ft.; lode, 5 ft. wide; assay value, 3 ozs. 7 dwts. 12 grs. per ton. The 550-ft. level north has been driven 14 ft.; total, 14 ft.; lode, 5 ft. wide, assaying 1 oz. 1 dwt. 19 grs. per ton. Rise in back 450-ft. level north has been risen 1 ft. 2 ins.; total, 21 ft. 2 ins.; suspended. No. 1 winze, 450-ft. level south, sunk 11 ft.; total, 39 ft. 6 ins.; lode, 6 ft. wide; value, 3 ozs. 6 dwts. 10 grs. per ton. No. 2 winze, 450-ft. level south, sunk 1 ft. 6 ins.; total depth, 15 ft.; lode, 3 ft. 6 ins. wide; value, 4 ozs. 1 dwt. 15 grs. per ton. The 450-ft. level south advanced 25 ft. 5 ins.; total, 301 ft. 4 ins.; lode 3 ft. wide; worth 1 oz. 1 dwt. 19 grs. per ton. No. 2 winze, 366-ft. level south, sunk 10 ft. 3 ins.; total depth, 40 ft. 9 ins.; lode 2 ft. 6 ins., assaying 1 oz. 8 dwts. 7 grs. per ton. No. 3 winze, 366-ft. level south, sunk 3 ft. 6 ins.; total, 5 ft. 6 ins.; lode, 3 ft. 6 ins. wide, assaying 12 dwts. per ton. 300 level south advanced 4 ft. 2 ins.; total, 296 ft. 4 ins.; lode, 9 ins. wide; value, 6 dwts. 12 grs. per ton. Remarks: The coming water in main shaft necessitated the use of two 8-in. lifts; one of them is a very old lift, and not trustworthy for any strain. The pitman is engaged replacing them with a 13-in. lift, which we now have on the mine. The lode in the bottom of the mine continues to hold strong and rich, which is most satisfactory. Health of the camp is somewhat better. Tailings machinery is being advanced

with all dispatch, and the men engaged are working overtime. All other machinery on the mine continues to work satisfactorily.

RUBY.—Report for week ending July 25.—Dunderberg: We have five tributaries at work here. There is a breast of ore (quartz) of about 10 ft. in the Home Ticket, but as, under the present furnace rates, it is useless to work it, I will discontinue it for the present. On the 800-ft. level we are still following the pipes of ore as mentioned in my last. Lord Byron: We have eight tributaries at work here. In this mine we have about 15 ins. of ore lying under heavy, cavey ground, so that progress is slow. We have about 15 tons extracted. Bullwhacker: We have four men at work, who are extracting considerable ore.

SOUTH-EAST MYSORE (July 21).—Agent's report.—I wrote you on the 14th inst., and have since telegraphed to you, viz.:—"Winze: The vein improves as it goes down; pieces of rock containing visible gold." The lode is not rich, but is the best I have seen in the mine, and is certainly improving. During the past week some time had been lost in fixing tackle and lowering donkey pump, and the sinking has been only about 4 ft. The lode, however, maintains its size and value. I have tried several samples, which have varied from 2 or 3 dwts. up to 1 oz. of gold to the ton. The most promising feature is that the quartz contains visible gold. I broke down several pieces yesterday, and am getting a case made to dispatch them for your inspection.

YURUARI.—The secretary advises receipt of letter from the new manager at the mines, dated July 23, who, having just arrived, gives a hurried report, chiefly relating to surface machinery, &c., based upon such information as he could obtain from the officials at the mines. He states that Mr. Pryor gave him every facility for inspection, and explained every matter relating to the mines before leaving. The principal feature in the report is the fact that they hoped next day to complete the connection between the Cenicerio and Water shafts (levels Nos. 9 and 6 respectively) upon which largely depends the future success of the company. He reports that the sole attention of the staff had been devoted to vigorously sinking the Water shaft and driving the levels east and west therefrom, especially to complete the connection between the two shafts so as to dispose of the water, which has temporarily compelled the suspension of the sinking of the Water shaft. He reports that no stopping operations had been carried on, and that he was at present unable to judge as to whether any of the rock met with in sinking and driving levels (of which he estimated there would be about 10,000 tons on surface), would be remunerative to run through the mill. This and other material points with regard to the mine he promised to report fully upon at the earliest possible date, probably by next mail.

—Report from Mr. Pryor for fortnight ending the middle of July:—Water shaft: The depth of this shaft is now 503 ft. from surface, and sinking will be resumed as soon as No. 6 level is holed through to Cenicerio. No. 6 drift is now 105 ft. from shaft; the lode is poor, but it carries a good hanging-wall. We have driven 16½ ft. during the fortnight. No. 6 level is 123 ft. from shaft, having driven 18½ ft. for the same period. The lode in this drift looks better, but up to the present we have not considered the quartz worth crushing. No. 5 drift is 256 ft. from shaft, it having been driven 22 ft. for the fortnight. Indications here are not as good as we expected long ere this; the lode, however, has a good hanging-wall; a short distance behind the end of the lode took horse, resulting in our driving on the footwall. We are expecting this and another branch to unite further on, or otherwise will require further exploration. Cenicerio: No. 9 drift is now 451 ft., showing 8 ft. driven for fortnight. The ventilation is getting worse as we proceed, and we have great difficulty to obtain men to work this level. The lode here resembles No. 6 east. Water shaft: Contrary to expectation, we have not yet come into the good ground found just above, or, in fact, any ground as to induce us to start the mill. I do not consider the prospects at other points better than those now in operation, therefore consider the sinking of the water shaft, and the connecting of levels 9 and 6 the best policy. The machinery at Cenicerio and Water shafts are in good order, and the pumping engine at Cenicerio having been thoroughly overhauled is in splendid condition, so are the hoisting engines and boilers. The feed pumps are working well, having recently been put in thorough working order. The boiler at Water shaft is in good condition, as also are feed pumps, which are giving every satisfaction without causing any delays. The hoisting engine at Water shaft is working well, but requires a set of piston rings.

WE regret that an error crept into the article on Indian crushings in our last issue. The Ooregum crushing was stated to have shown a gain of 232 ozs. It will have been apparent from the table accompanying the article that we were referring to the Nundydroog Co.

HOLLOWAY'S PILLS.—When inclement weather checks to a considerable extent the action of the skin, an alternative is required to compensate the body by means of other channels. Holloway's Pills can be confidently recommended as the easiest, surest, and safest means of attaining this desirable end without weakening the most delicate or incommencing the most feeble. When from frequently recurring chills or the inhalation of impure air the blood becomes foul and the secretions vitiated, these Pills present a ready and efficient means of cleansing the former and correcting the latter. By this salutary proceeding disease is arrested at its outset, its pains and inconveniences averted, and the nervous structures saved from the depressing effects entailed upon them by an illness.

NOTICE TO READERS.

**Replies to Annual Subscribers will be sent by wire or letter, as
may be necessary.**

G. D.—No. 1 we think good as a speculative purchase, and as a call was made,
about six weeks ago, another cannot be at hand for a considerable period. No. 2
look good to buy for a rise.

Cestrian.—Are not a good investment.

Purchaser.—Nothing has yet been heard about the decision. It is certainly a
good property.

J. R. Smyth.—The company has the power to call up more capital. Write to
the secretary on the matter.

Esplanade.—Should be sold.

Undone.—The company is in liquidation, and the shares are unsaleable.

D. S.—There is a very free market for them. Your informant has evidently
mixed the names.

M. S. Whitehead (Bury).—Of any upward movement in these shares we advise
you to take advantage. They are purely speculative.

Britisher.—The price is so low that we cannot advise a sale just now, especially
while the markets are so dull.

Fish.—Safe to hold.

Waiting.—At this low price it is not worth your while selling, particularly when
by waiting you may get a better.

B. R. H.—Probably will go lower, so do not touch them.

H. W.—The cables are certainly very rosy, but nothing tangible results. Take
a profit when you see it.

W. Welton (Cambridge).—You can only dispose of your holding now at a loss.
By waiting, we think this loss will be avoided.

Naval.—A very restricted market. Cannot advise purchase.

Absentee.—Sell them at once.

P. P.—Could not recommend them, as their prospects are very gloomy.

SOUTH AFRICAN TRUST AND FINANCE COMPANY, LIMITED.**SUBSCRIBED CAPITAL, £255,000.****BOARD.****B. B. TRENCH, Esq., Chairman.****Sir CHARLES METCALFE, Bart.****Major J. W. M. COTTON.****L. EVANS.****BANKERS.****THE LONDON AND SOUTH WESTERN BANK,
LIMITED, LONDON.****THE MANCHESTER AND LIVERPOOL DISTRICT BANKING
COMPANY, LIMITED.****THE STANDARD BANK OF SOUTH AFRICA, LIMITED.**

The Company undertakes the following business:—

The skilled investment in South African Mining, Land, or other
securities for European investors.

Professional and confidential reporting upon companies, mines,
mineral properties, lands, and generally advising European share-
holders and others in South African ventures.

To act as agents on behalf of principals interested in South
African investments, and for the protection of their interests, and
where desired, to register shares in such undertakings, and to issue
certificates in exchange for same, thereby enabling European holders
to co-operate for their mutual protection.

Financing or advancing moneys to corporations, companies, syndi-
cates, or persons in South Africa.

The receiving of money on deposit.

The purchase and sale of properties, and all classes of South
African securities or interests.

A Mining Circular containing special information will be posted
weekly from the South African Office to all subscribers.

A SPECIAL CABLE CODE FOR PROMPT AND ECONOMICAL COMMUNI-
CATION BETWEEN THE SOUTH AFRICAN AND LONDON OFFICES.

Further information can be obtained at the Head Office of the
Company.

The Mining World.**LONDON: SATURDAY, AUG. 15, 1891.**

*The "MINING WORLD" is not the property of a Mining
Speculator nor under the control of any clique.*

RANDT CRUSHINGS.

NOT very long ago we heard the confident opinion expressed that
before the present year of grace should have run its course, the
monthly aggregate of the Randt gold output would have reached a
total of between 70,000 and 100,000 ozs. Well, the year is getting on
and the total does not get much "farrarder." It is not, of course,
impossible that the predictions may be verified; but the progress
exhibited thus far does not encourage any very sanguine hope on
that score. The July aggregate, indeed, instead of showing the
expansion that was expected, fell below that of the preceding month
by nearly 1,000 ozs. In the following table the crushings for the past
seven months are contrasted with those for the corresponding periods
of last year and the year before:—

	1891.	1890.	1889.
Jan. ...	53,205	35,030	24,986
Feb. ...	50,073	36,886	25,800
Mar. ...	52,949	37,680	23,703
Apl. ...	56,362	38,799	27,131
May ...	54,672	38,884	38,298
June ...	55,863	37,412	31,272
July ...	54,920	39,452	32,407
Totals ...	378,004	264,143	208,599

The total is, of course, a very good one for an industry that is still
young; but it is unsatisfactory to observe the shrinkage which has
taken place since Apl.; for with the extension of the work of develop-
ment, and the addition to the stamping capacity, an improvement
might have been reasonably anticipated. And the general result is
all the more discouraging, as some of the mines, such as Geldenhuis,
Durban-Roodepoort and May Consolidated, have shown increased
yields. In the following table we compare the returns of some of the
leading companies for the last four months:—

	April.	May.	June.	July.
	ozs.	ozs.	ozs.	ozs.
City and Suburban ...	690	811	952	1,325
Durban-Roodepoort ...	1,868	2,025	2,125	2,390
Ferreira ...	4,038	4,011	4,001	3,173

	April. ozs.	May. ozs.	June. ozs.	July. ozs.
Geldenhuis	—	—	1,888	2,289
Geldenhuis Main Reef...	365	400	485	450
Jubilee	831	708	521	540
Jumpers	2,685	2,396	1,659	1,208
May Consolidated ...	2,250	2,100	2,000	2,200
May Deep Level...	433	713	654	594
Salisbury	1,100	1,300	1,150	1,030
Stanhope	867	966	934	830
Wemmer	900	1,160	1,252	1,146

The worst features of this table are the marked decreases in the Jubilee and Jumpers yields, those two mines, Jubilee in particular, having been regarded as amongst the most promising properties in the district. They are still as promising as ever, their friends assure us, and that may be true. Shareholders, however, pay more attention to performances, and it is in that respect that they are so disappointed. For very many months the Jubilee Co. paid 5 per cent. dividends; but it has now joined the unprofitable majority, and Salisbury, whose nominal capital has been raised and lowered so frequently, seems to be settling down into its old form. From all that we can hear, many of the mines would pay fairly well with honest and competent management; but shareholders generally have been so disgracefully treated, that they have become utterly apathetic, with the result that dozens of the companies are dominated by a few wire-pullers. The need for a protection committee of the kind proposed by us months ago, is more than ever apparent; but the brokers here, who were mainly instrumental in enabling the local gamblers to transfer their holdings at enormous profit, make no move, and individual shareholders appear to have come to the conclusion that it is better to bear the ills they have than to fly to those they know not of. So matters drift from bad to worse, and many a really valuable property is left to the mercy of a few adventurers. Surely the time has arrived when those who once ruled supreme in the "Kaffir Circus" should bestir themselves in the interests of those who were their clients a couple of years ago. When Van Ryn shareholders were in trouble they consulted, greatly to their own advantage, the board of the South African Trust and Finance Co., of 19, St. Swithin's Lane. Why cannot other concerns, the shareholders in which feel they are not being well treated by their local management, follow the example? The suggestion seems worthy of consideration, for, after all, if shareholders will not raise a finger to protect themselves, they can hardly expect to avoid the fate of the sheep in the hands of the shearer.

CORNISH TIN SHARES.

THE improvement in the prices of some of the leading Cornish tin shares which we had to record a week ago has proved to have been a merely spasmodic movement, for during the past week the advance has been lost in nearly every case, and has been replaced by an even lower quotation than that ruling a fortnight ago. For a considerable time now Cornish shares have been well-nigh neglected in the London market; but one would have thought that in the Duchy, where the cost-book system is known and appreciated, there would have been enterprise enough to have prevented the decline shown by the current prices, when compared with the highest prices quoted this year, as given in the following table:—

	Highest Price.	Current Price.	Decline.
Carn Brea	61½	41½	19½
Cook's Kitchen	17½	9	8½
Dolcoath	74½	58	16½
East Pool	23	18½	4½
South Condurow	6½	4½	2½
South Frances	11	8	3
Tincroft	35½	23½	12
West Basset	2½	½	1½
West Kitty	9½	9	½
Wheal Agar	13½	8½	4½
Wheal Grenville	12½	11½	½

During the year tin has ruled at a fairly good price, and though in the early months of the year the costs were generally heavy, owing to the continuous rains, the expenditure upon fuel has not been sufficient to reduce materially the profits obtained. We can only conclude, therefore, that the Cornish people are not, after all, so enamoured of cost-book mining and the conditions which surround it as some of its apologists would have us suppose.

MEXICAN EXPLORATIONS AND PALMAREJO. AN IMPORTANT MEETING.

THE meeting of the Mexican Exploration, Limited, though a long one, was certainly not deficient in interest. That interest was partly derived from a consideration of the company's own affairs, and partly from a consideration of those of Palmarejo, with which to a certain extent it is financially concerned. Palmarejo directors have been terribly criticised of late, not to say fiercely assailed, but the dual announcement made by Mr. Brice that its mill, conduit and other works are completed, and that the 50,000*l.* required for the general purposes of the undertaking has been raised, was received with cheers which must have been some recompense to Palmarejo board for

the hostility that has been displayed towards them, and to which they unfortunately laid themselves open by not being sufficiently frank with their shareholders at the recent meeting. They should in this connection learn a lesson from the address of Mr. Seward Brice, Q.C., the esteemed chairman of Mexican Explorations, whose speech was not only a model of frankness, but was delivered in a manner that carried the meeting with him from its commencement to its close. Let us look at the facts surrounding Mexican Explorations, Limited, as elucidated by Monday's meeting. When Mr. Brice and his colleagues began to carry on the business of Mexican Explorations, Limited, the capital available was 67,000*l.*, and at the present time the assets of the company are represented on a careful computation, to which the pruning knife had previously been applied with unsparing hand by, at least, 80,000*l.* Now, everyone acquainted with the A B C of commercial affairs knows that the times are out of joint for profitable business, and reasonable shareholders will be disposed to congratulate the board, under the circumstances, on the account they are able to give of their stewardship. With a candour unwonted at similar meetings Mr. Brice explained what the assets, represented by 80,000*l.*, were. First of all, there is the wood business, which even critics of the Reid type admit to be most valuable, and respecting which Mr. Plummer, the specially-appointed inspecting agent of the board, has telegraphed in most encouraging terms. The chairman estimates, under this head, 12,000*l.* in excess of the expenditure incurred, allowing nothing for goodwill and incidentals, which would certainly figure in the report of any ordinary valuer. Then there is the company's interest in Palmarejo. The latter made an issue of 100,000*l.* debentures which the former guaranteed as to payment of principal and interest receiving as consideration, 12,500*l.* of these debentures as a gift, and 3 per cent. interest per annum on the amount outstanding (3,000*l.*), and the company has also an interest in the deferred shares to the value of 6,000*l.* It should be borne in mind that the debentures form a first charge on Palmarejo property, upon which from first to last a sum not short of half a million sterling has been spent. There is also cash in the bank about 10,000*l.*, with other amounts shortly to come in, and, moreover, the company has an interest in the Western Development Syndicate, with which it is owner of a group of mines of which we had previously heard by repute.

Now, with these facts available, as Mr. Brice pointed out, to any *bona fide* shareholder who chose to make an appointment with the secretary, and with not a single charge of mismanagement worthy of one moment's serious consideration, the board had sprung upon them a requisition asking them to call a special meeting and to appoint a "committee," one of the proposed members being their late representative in England in the timber business, and another not even being a shareholder. Every man who has cut his business teeth will agree with Mr. Brice in one of his remarks—that if a committee be appointed by any company it should be really representative of the whole body of proprietors; and also with another, that it is impossible satisfactorily to conduct the business of any company if circulars are to be sent out broadcast, if requisitions are to be served upon the directors, and if "committees" are to be appointed at random. Not only will the business of a company in such circumstances be made impossible, but men of self respect like these directors would secede from it, if such ideas to any considerable extent pervaded the minds of shareholders. Our experience of committees does not differ from that of one of the shareholders who said that they are usually the preliminary step to the ruin of the company appointing them, and shareholders, as they value their cash, should have no fellowship with them. The mover of the resolution was shrewd enough to see the temper of the shareholders present, and accepted with good grace the offer of the board to make the direction somewhat more representative than he thinks it has been of the section for whom he appeared. With this compromise, and the interchange of compliments which followed, we sincerely trust the incident (as they say in political circles) has closed, and that the company will be allowed to pursue, what we cannot but call its prosperous career, in peace. We are satisfied, from the information imparted at Monday's meeting, that the nucleus of an extremely valuable business has been established, and that the present directors will manage it with credit to themselves, and with profit to the shareholders.

A CHAIRMAN WHO WILL NOT PROPHECY.

MR. PAINE is one of the few chairmen of mining companies who can resist the temptation to prophecy. Some chairmen quote Mark Twain's famous axiom, but do not act up to it: Mr. Paine acts up to it without quoting it. When Mr. Paine is asked to prophesy he shakes his head and looks at Mr. Peter Watson, who, he naively remarks, "has had more experience at that than I have." Mr. Paine admits that in the character of a prophetic chairman he is a lamentable failure. Those who come to hear him discourse of the past, present, and future of Drakewalls will find his music pitched in the minor key. There may be trumpets in the band, but the flourish will not come from the instrument through which Mr. Paine blows. Shareholders in mines, when they listen to Mr. Paine, not merely hear an account of what the captains are doing with their money, but they sit at his feet as a sort of mining Gamaliel,

ready to receive that instruction which makes them wise unto financial salvation. When Drakewalls received plenary absolution for the sins of its past, and when it started on its fresh career, enveloped in the penitential sheet of re-construction, there were those who predicted big things for it, and who shouted from the house-tops that it would be the premier mine of Cornwall; but good Mr. Paine, while bestowing upon Drakewalls his parental benediction, hit the shareholders under the fifth rib when he told them they were in a venture, and that they should not put money into it which they could not afford to lose. He thought that the shareholders had forgotten this advice, so he reminded them of it at Tuesday's meeting, and probably they took it more to heart, having had to pay sundry calls in the interval. Shaking his finger at them, he said, "In Cornwall you are called adventurers, and that is your proper name." It is Mr. Paine's name, too, for he is an adventurer along with them, and this thought probably gave his hearers some consolation as they listened, with chastened spirits, to the admonitions of one who, by his actions, had proved himself not above the temptations that come to mortal men in the subtle form of re-constructions. It is obvious from all this that if the promoters of bogus companies want a prophesying chairman they will not go to Mr. Paine. If they want a picture painted with rosy tints, it is not the brush of Mr. Paine they will employ. Mr. Paine belongs to the sombre school, and his palette only has colours of the darker hue. There is another temptation which mortal Mr. Paine cannot resist, and that is to tell the shareholders some home truths at the commencement of an enterprise which he will not let them forget in the course of its progression. At the same time, even Mr. Paine could not altogether use unrelieved colours in dealing with the Drakewalls picture, as it presents itself at the present time. He could not deny that Cornish people are buying the shares, which is a very good sign, and would have been made much of by any chairman other than Mr. Paine. He could not do otherwise than tell them, what is a positive fact, that whenever he is in the doleful dumps himself about Drakewalls, he has only to go to Cornwall and his spirits are brought about as near par as he ever permits them to rise, because he fears the subsequent reaction—for if there is one thing that Mr. Paine holds in deeper detestation than another, it is to be "led on by rosy speeches only to be disgusted in the end." On arriving in Cornwall in low spirits, Mr. Paine finds a state of things which is buoyant beyond description. He finds everybody so certain of the future success of Drakewalls, and in such high spirits, that, like a sort of mining physician, he administers a sedative. When they say to him, "Drakewalls is bound to be a good property, and is going to pay dividends again," Mr. Paine represses his rising feelings, and says, "What puzzles me is to know whether we shall have to call up the other 6d." The "other 6d." hangs heavily on the soul of Mr. Paine, for it is to the Drakewalls Co. what the last shilling was to the ruined squire. But Mr. Paine's sedative did not seem to work the last time he spoke to a Cornishman (fresh from the meeting of a cost-book company where they make calls quarterly)—whether for lack of time or potency we do not know. The shareholder to whom he spoke seemed to treat it as "a mere matter of detail." But Mr. Paine knows that there are poor shareholders within the four corners of the Drakewalls list to whom a call of 6d. will come not merely in the nature of a sedative, but in that of a financial crusher, and, therefore, good man that he is, he feels the longer it can be avoided the better, for what with non-dividend paying mines on the one hand, and call-making mines on the other, the shareholder has found himself between the upper and the nether millstone. Looking carefully at the prospects of the company as laid bare at Tuesday's meeting, we are bound, in spite of the admonitions of Mr. Paine to repress our enthusiasm, to own that they are decidedly hopeful, and though that gentleman is wisely careful in the matter of prediction, he evidently feels a greater degree of confidence himself in the future of Drakewalls than he ventures to express.

MR. SAMUEL JENNINGS ON HIS VISIT TO THE UNITED STATES.

FOR the last four months Mr. Samuel Jennings, who is well known in connection with several important mining enterprises, has been paying a business visit to the United States. He has recently returned, and one of our representatives sought (not without considerable success as will be seen) to gather from him, for the benefit of readers of the MINING WORLD, the impressions he formed of mining generally, as well as of certain special properties in which he and others are largely concerned.

I left London (said Mr. Jennings in reply to our representative's opening question) the first week in April and went to New York, and thence to Denver. There I visited the great smelting works, which seem to be doing a roaring trade and paying well. They are dealing with the ores that come from the mines of the Rocky Mountains, and the principal works are the following:—The Argo Smelting Works and those of the Omaha and Grant. Denver itself is a marvellous city, which dates back only a dozen years or so. It has grown far too fast for the authorities to attend to such "secondary" matters as the paving of the streets and the sanitation of the neighbourhood. In fact the streets are practically impassable when there is rain, but the

authorities are now waking up and matters are improving. What strikes one about Denver is the very large number of beautiful residences which are being erected in the immediate suburbs of the city. They are mostly of stone, and are evidently occupied by people of considerable means. On enquiry as to how those means were derived, the answer almost invariably is—from fortunes acquired in the Colorado mines; and the height of bliss, as viewed through the Rocky Mountain mine-owner's spectacles, is to build a fine villa near Denver, and have a European tour. The wealth has come for the most part from mines productive in silver, lead, gold and copper, and the most successful workers have been practical men who have taken up claims, and worked them under their own supervision. It is their practice to work at them for a certain time, and then, having discovered anything sufficiently good, they bond them to capitalists who put up the machinery, and when they are in full swing they are often transferred to English companies.

Does it follow that these are all swindles?

Oh! dear, no; far from it. Many of them are very good mines, and you have examples in New Guston, Yankee Girl, and several other concerns. They are good properties, but English companies must be careful not to give too much for them. They must also be careful as to their subsequent methods of management, which are not always thought highly of by Americans, either on the score of efficiency or economy.

A direct question—Do the Americans like to see Englishmen succeed in mining? Is there joy at success, or regret at failure?

That depends on the quarter from which you seek your information. There are Americans who chuckle over seeing the Britisher floored with "wild cat" schemes, whilst there are others who are really glad to find British capital developing the mineral wealth of the States, and this feeling is particularly strong in Colorado, where they are exceedingly eager to have their mines developed with English capital, but as to the value of their mines, I think they often have somewhat extravagant notions. They are particularly glad to negotiate with English capitalists who really mean business—that is, to do honest work. They do not desire merely a market flutter, or to have dealings with people who will clear out at the earliest possible opportunity, but rather with those who look at mining as an industry. On the other hand, in California, except in one or two districts, they seem to have fallen into a condition of lassitude and want of enterprise. The truth is, that the Californians were so exceedingly successful in the early days of gold mining there, and they won their wealth so easily, that they became careless, spending their profits as they made them, and then when mining difficulties presented themselves they have not had the capital or the energy to overcome them, and hence many good mines have been abandoned. In fact, there is not that eagerness in mining pursuits in California which I expected to see. Grass Valley, however, is an exception. It is a busy centre, full of activity, and some of the gold mines there are down 2,000 ft. or more, and paying as well as ever. I visited mines in El Dorado County near San Francisco, and notably those of the American River Syndicate, Limited. Its property is situated in the midst of one of the richest gold districts of the world, out of which, within a radius of 10 miles from Dalmatia Mine (the principal one now being worked by the syndicate), \$150,000,000 have been taken. The Dalmatia is on the Great Mother lode which passes through El Dorado County, and the reason so many mines have been abandoned is, as has been before explained, the improvidence of their owners, and the greatly increased cost of fuel. At this Dalmatia Mine has been solved by electricity, the difficulty arising from the lack of cheap driving power. The syndicate has water rights, with power of distributing the resulting potentiality by electrical force, in whatever direction it pleases over the whole district, in regard to which it holds the absolute water monopoly. The syndicate is thus put in a commanding position with regard to all the other mines in its radius. They hold, in fact, the sole right to the water, and can increase the power generated to over 20 times their present requirements: in other words to work 20 such mines as the Dalmatia, whenever it is thought desirable to do so. It is difficult to realise that the power which keeps in motion the 10 gravitation stamps and the three Huntington mills, through which more than 100 tons of rock pass daily, is being transmitted through slender wires and converted by a machine, which does not occupy so much space as an ordinary dining-room table. Yet by this means the cost of mining and milling have been reduced to under 50c. per ton. I have written to the directors of the American River Syndicate, Limited, a special report, pointing out the immense possibilities before this concern. Reverting to the subject of English management, Americans express an opinion that too much latitude is allowed to managers to carry out their theoretical fads, instead of limiting their expenditure to the directions indicated by practical experience. The English manager is too often looked upon as a mere theorist, and not as a man who throws off his coat and shows his men how the work ought to be done. Of course, you will understand these are casual remarks I have heard. I do not profess to be a mining expert, and I have not resided sufficiently long in the States to gather whether this is the general opinion.

What were the objects of your visit?

First, I went out in a confidential capacity to make arrangements with the owners of the Silver Ledge Mine in view of alterations which had taken place in the original plan of operation. In this I

was successful. The Silver Ledge property is by far the biggest in point of area of any in the whole district. It is a property that must have adequate capital for development purposes, and, given that, it has every prospect of success. So far as explorations have hitherto gone, nothing can be better than the prospects Silver Ledge holds out. Rich silver and lead ores are found from time to time in sinking the shaft and driving the levels, and the quantity of concentrating ore available not only in the mine, but all up the creek, would be sufficient to keep a good sized mill continually at work. As yet no mill has been provided, so that the quartz is lying there awaiting the time when it shall be. A great responsibility, therefore, rests upon the management in London to see that this is done, in order to secure immediate returns. Meanwhile we have secured the claims all round so as to form one solid block, and we cannot be "jumped" in any way. Another object was to visit the Dalmatia Mine belonging to the American River Syndicate, which I have already described. I also went to the city of Mexico to obtain certain information of a private kind as to silver and gold properties near there.

Were you satisfied with the result of your visit?

So far as Silver Ledge is concerned I am quite satisfied, for I am acquainted with facts now I could not have learned except from personal inquiry on the spot. I am also satisfied with my Californian visit, because I have had the pleasure of seeing in full work the electrical machinery, which I had been instrumental with others in inaugurating on the other side, and as to which the American Press and mining men generally have given the "Britisher" considerable credit. No one can visit the Red Mountain district without being deeply impressed with its vitality and its great potentiality of richness.

Is not that largely to be traced to the success of New Guston, which is a conspicuous instance of good English management?

I would scarcely go so far as to say it is all but entirely due to the success of Guston, because energetic American enterprise has certainly had a part in it, and some of their finest mines have never been heard of here. Guston, Yankee Girl, and American Belle out there are thought to be amongst the finest mines in Colorado. When I saw them, there was evidence both of great prosperity and intelligent management. In New York I was shown a pile of shipping notes, being the fortnightly returns from Yankee Girl and Guston, and they were a sight to see, for they were the tangible and unmistakable evidence of the great wealth and productiveness of this mine. At the mine I was shown ore which had a value of more than \$20,000 to the ton. It came from one of these mines, and was practically solid silver. On the Congress Mine, which is within $\frac{1}{2}$ mile of Silver Ledge, they had opened out one of the largest masses of rich ore that has yet been seen in the district. This seems to indicate that the deposit is increasing in bulk if not in value also, as it goes towards Silver Ledge.

PLAIN HINTS TO MINING INVESTORS.

No one with any pretence to a knowledge of the facts will contend that the present state of the markets does anything like justice to the position of the mines. The point of depression to which prices have fallen scarcely represents the break-up value of most of the concerns. We have shown almost week by week that mining shares are suffering from the sins committed in other branches of high finance. A general survey of the mining companies will prove them to be not merely in a good, but, we dare venture to say, in a *very* good position. Those in India are, all circumstances considered, the best of the series. The news from the mines is uniformly good, and the crushings are rising steadily, which is far better than if they went up like a rocket and came down like the stick of that rocket. The mines in the initial process of development are giving a good account of themselves, and their prospects are certainly not to be measured by the value the market puts upon them. The outlook in connection with South African ventures is better than it was, and the shady companies are gradually being eliminated by that fatal malady—impecuniosity. Those that remain are the best, and amongst them we should be disposed to place Sheba, Pigg's Peak, Graskop, and Balkis. Shareholders investing in this section should give the preference to mines under English management that is known rather than to the locally directed companies as to which one never knows what may happen. In the general foreign section, American mines, even those in the Utah district, that have been so uniformly disappointing—which always seems to be about to do great things and never really do them—even these are, to say the least, looking fairly well. If they have any value at all, it is infinitely above what is attached to them by the market. In Brazil, Don Pedro bids fair to see a return of its most prosperous days, and the position of St. John del Rey has too often been described to need repetition. In Venezuela another chance is to be given to the Venezuelan Austin group of mines, and shareholders, both ordinary and preference, will act in their own interests if they support the directors in the re-construction scheme. Yuruari has now passed into the hands of Messrs. John Taylor and Sons, who, we believe, are responsible as far as the mining details are concerned. It is a question whether Mr. Pryor, having both this mine and Potosi to manage, has not more on his hands than he can

well discharge. In a short time we shall know more about Yuruari than we do at present. We have so recently dealt with the improved prospects of Potosi, that we must content ourselves with this simple reference to them on the present occasion. Callao Bis shares have fallen on what is read to be an unfavourable report, but the future of the mine seems to be full of promise. Not so hopefully can we speak of El Callao, which, after a period of almost unexampled prosperity, is gradually dwindling away to the fine edge of nothing. In Australia the mines are looking extremely well—better, in fact, than they have done since the time when the colonists floated them on this market at prices absurdly high. Investors may be recommended to buy those shares in companies under English management at low prices in preference to those which are being pressed upon them of concerns managed on the other side. Of the directors of those concerns we know little, and of their mines possibly we know less. At home, we regret to say, the mining position is not hopeful, and few British mines can be recommended with any degree of confidence. The moral of the whole story seems to be that the investor who can buy now and wait the turn of the tide, which must come sooner or later, will be acting more wisely than he who waits for a time when shares can possibly only be bought at prices considerably in excess of those now quoted. Mining seems to work in cycles—a short period of great prosperity, followed by a longer period of depression. The present is, however, the longest of the latter periods we have known, and its continuation is due to causes which have been set forth repeatedly in these columns. We cannot but think, however, that a judicious selection of mining shares at the present time will yield a rich return in the future, the proximity or the remoteness of which we dare not venture to forecast. This, at least, we can say with certainty, that, at existing quotations, a comparatively small amount of money will buy many hundreds of shares in really promising mines.

THE AFFAIRS OF PIGG'S PEAK.

THE phenomenal discovery at Pigg's Peak has enabled the company to sell, in the first year of its re-constructed existence, 16,331 $\frac{1}{2}$ worth of gold, which, after appropriating to capital expenditure the proportion advised by the manager to be due to it, resulted in a gross profit of 8,333 $\frac{1}{2}$. It is, however, as Mr. Taylor pointed out, not to phenomenal discoveries such as that made in the Devil's reef (which, of course, may occur again) that the company in the long run must look for its profits, but rather to those large persistent masses of gold-bearing rock, yielding from 6 to 8 dwts., less than half of which will be sufficient to meet the working costs. At the England reef there are about 5,000 tons of 6 to 10-dwt. ore in sight, and the extent of this deposit has not been proved. At the Pirate reef also there is 8 to 10-dwt. ore, and both the England and Pirate reefs have been sufficiently proved to justify the management in the commencement of crushing operations. It will be observed that the Messrs. Taylor are more and more turning their attention to the transmission of water-power by electricity, for driving mills and for other purposes. They have placed this system beyond mere experiment by their very successful working of the Dalmatia Mine in California. The Americans admit that this time "the Britisher has gone ahead." Mr. Chambers, one of the directors, has visited the property and brought back with him encouraging impressions which he communicated to Thursday's meeting. Altogether out of the mouths of three competent witnesses—Mr. John Taylor, Mr. Ernest Smith (the chairman) and Mr. Arthur Chambers—the shareholders may accept the assurance that the barometer points fair for Pigg's Peak.

SUCCESSFUL RE-CONSTRUCTIONS.

OUR readers will be interested to learn that the re-construction of Mysore Reefs Gold Mining Co., Limited, has been very successfully carried through. Already upwards of 100,000 out of a total of 135,000 shares have been applied for, and applications are still coming in. The re-construction of Etheridge Gold Mining Co., Limited, has also been very successful. A large proportion of the shareholders have taken up their shares, so that something like 300,000 shares have been applied for, whilst applications are still being received daily. It is a matter of great satisfaction to find that in the present depressed state of the Mining Market the re-construction of these two concerns should be marked by so complete a success. It speaks volumes for the confidence felt in the management. The shareholders know full well that their money will be wisely spent, and that in supporting these re-constructions in the ready way they have done they have acted in their own truest interests.

FIFESHIRE MAIN COLLIERY, LIMITED.

THE meeting of this company passed off in a most satisfactory manner. The shareholders were surprised to learn that so much had been done in the short period that has elapsed since the company started. The works are proceeding under the direction of Mr. Calderwood with great energy, and the coal is proving to be of extremely good quality. The sinking of a second shaft will shortly be commenced, and the manager is of opinion that a highly remunerative property has been acquired by the company. The coal trade at

the present time is in a prosperous state, and seems likely to remain so for a considerable period, so that we shall be disappointed if the shares are not soon quoted amongst those upon which substantial dividends are paid.

THE NEW GUSTON CO., LIMITED.

OUTPUT FOR JULY.

ORE shipped, 1,160 tons; value (estimated), 20,660*l.*; mine expenses (estimated), 3,120*l.*; railway freight (estimated), 723*l.*—3,843*l.*; estimated profit for the month, 16,817*l.*

Mr. Harvey, the mine superintendent, under date July 17, reports on the mines, viz.:—No. 3 level—South drift: The south drift has been extended 12 ft. There is a streak of ore in the forebreast 1 ft. thick, worth 30 ozs. silver per ton. No. 5 level—North drift—No. 1 stope: Length of stope, 30 ft.; height over back of level, 14 ft. The north end of stope: Ore somewhat broken in appearance. South end of stope: Ore 2 ft. thick, worth from 75 to 800 ozs. silver per ton. No. 6 level—No. 6 ore body stope: Length of stope, 50 ft.; height over back of No. 6 level, 61 ft. 6 ins.; width of ore, 11 ft.; value of ore, from 90 to 1,500 ozs. silver per ton; gold, $\frac{1}{4}$ to 1 oz. per ton; copper, from 3 per cent. to 6 per cent. South drift—New stope: Height of stope over back of level, 31 ft.; length, 32 ft.; width of ore, 19 ft. for 28 ft. in length; value of ore, from 40 to 150 ozs. silver per ton; gold, $\frac{1}{4}$ to $\frac{3}{4}$ oz. per ton; copper, 7 per cent. North drift: We have commenced stopping immediately over the back of level from the north and south ends of raise, which is communicated to winze sunk from No. 5 level. South stope: Length of stope, 11 ft.; height, 6 ft.; thickness of ore, 5 ft.; value of ore from 50 to 120 ozs. silver per ton. North stope: Height of stope, 6 ft.; length, 7 ft. 6 ins.; width of ore, 5 ft.; value of ore from 60 to 700 ozs. silver per ton. No. 7 level—No. 7 ore body stope: Length of stope over back of level, 35 ft. 6 ins.; height of stope over back of level, 7 ft.; width of ore, 14 ft. 6 ins.; value of ore from 40 to 2,000 ozs. silver per ton. The south end of the stope has greatly improved in value during the past fortnight. South drift: Distance driven south from No. 7 ore body, 12 ft. 6 ins.; width of ore, 3 ft.; value from 45 to 100 ozs. silver per ton. Shaft: The main shaft has been sunk 15 ft.; total depth below base of No. 7 station, 43 ft.—B. McNEILL, Secretary.

P.S.—Cable just received from Mr. Harvey states:—"Shaft is now 70 ft. below No. 7 station. Mine looking well."

YANKEE GIRL SILVER MINES, LIMITED.

OUTPUT FOR JULY.

THE mine superintendent cables to the following effect:—"Ore shipped, 1,210 tons; value (estimated), 15,495*l.*; mine expenses (estimated), 4,415*l.*; railway freight (estimated), 750*l.*—5,165*l.*; estimated profit for the month, 10,330*l.*"

Mr. Harvey, the mine superintendent, under date July 17, reports on the mines, viz.:—Yankee Girl Mine.—No. 2 level—Stope: Length of stope, 22 ft.; height over back of drift, 17 ft.; width of ore, 1 ft.; value of ore from 20 ozs. to 180 ozs. silver per ton. No. 4 level—Orphan Boy: Length of stope, 66 ft.; height over back of level, 89 ft.; ore broken in appearance from 2 ft. to 4 ft. thick; value, from 30 ozs. to 160 ozs. silver per ton. No. 6 level—North-east drift: Drifting has been continued on the slip 43 ft.; total length from raise, 60 ft.; nothing of importance has yet been met with. Stope: Length of stope, 67 ft.; height, 56 ft.; width of ore, 12 ft.; value, from 40 ozs. to 1,900 ozs. silver per ton. Six-and-half level—Winze stope: Length of stope, 25 ft.; width of ore, 10 ft.; value of ore from 30 ozs. to 1,400 ozs. silver per ton. No. 8 level—South-west ore body: Stopping has been commenced on the ore body referred to in my last; length of stope, 30 ft.; height over back of drift, 5 ft.; width of ore, 8 ft.; value, from 20 ozs. to 40 ozs. silver per ton; lead from 10 per cent. to 20 per cent. West ore body: Height of stope, 30 ft.; length, 30 ft.; width of ore, 3 ft.; value, 45 ozs. silver per ton; copper 10 per cent. to 18 per cent. Robinson Mine.—No. 2 level—South drift: Drift extended, 15 ft.; there is concentrating ore 10 ft. wide in forebreast. South drift—No. 1 stope: Height, 98 ft.; length, 87 ft.; ore averages 4 ft. thick; value from 30 to 1,200 ozs. silver per ton. South drift—No. 2 stope: Height, 81 ft.; length, 42 ft.; thickness of ore from 1 ft. to 3 ft.; value, from 35 to 1,000 ozs. silver per ton. South drift—No. 3 stope: Length, 125 ft.; height, 34 ft.; thickness of ore, from 1 ft. to 2 ft.; value, from 10 to 100 ozs. silver per ton. No. 3 level—South drift: The drift has been extended 15 ft. through concentrating ore 1 ft. thick. South drift—No. 2 stope: Length, 32 ft.; height, 56 ft.; average width of ore, 1 ft.; value, from 10 to 35 ozs. silver per ton. South drift—No. 3 stope: Height of stope, 36 ft.; length, 75 ft.; width of ore, 2 ft.; value, from 10 to 60 ozs. silver per ton. No. 4 level—South drift: The work referred to in my last for improvement of ventilation has not yet been completed. South drift—No. 1 stope: Height, 50 ft.; length, 156 ft.; thickness of ore throughout the stope from 2 ft. to 3 ft.; value, from 25 to 250 ozs. silver per ton. No. 5 level—South-east cross drift: This drift has been extended 40 ft.; total length, 123 ft. Scattered ore has been passed through, worth from 5 ozs. to 20 ozs. silver per ton.—B. McNEILL, Secretary.

AMERICAN BELLE MINES, LIMITED.

GOOD PROGRESS REPORT.

CAPT. HARVEY reports as follows:—National Belle Mine.—No. 2 level—North ore body—Winze: Having met with quartz we drifted west 28 ft., principally through soft iron pyrites. At this point the winze was again sunk 12 ft. in the same character ore; operations have been suspended here. No. 3 level—North ore body: The drift bearing approximately 30 degs. west of south has been extended 41 ft., principally through soft talc: drifting has been suspended. 30 ft. back from the forebreast a drift has been run north-west, principally through ore for 27 ft. The character of ore is soft iron pyrites, with occasional hard boulders of iron pyrites embedded. 117 ft. from shaft station, the side drift bearing north 73 degs. west has been extended 33 ft., principally through hard pyrites ore with occasional patches of heavy cube galena. 14 ft. back from the fore-

breast a drift has been run off south-west 27 ft. through ore principally composed of galena. Silver Bell Mine.—No. 1 drift or adit level—South drift—No. 1 stope: Height of stope, 8 ft.; width of ore north end of stope, 4 ft. for 8 ft. in length; south portion of stope, thickness of ore, 3 ft. for 15 ft. in length; value of ore, from 20 to 45 ozs. silver per ton. No. 6 level—South-east drift: Distance driven (since July 11), 23 ft.; there is no change to report; we have been obliged to suspend operations here on account of our inability to remove the waste. No. 7 level—No. 1 stope: Length of stope, 74 ft.; height, 54 ft.; width of ore north-west portion of stope, 7 ft. for 17 ft. in length; south-east portion of stope, thickness of ore, 6 ft. for 20 ft. in length; value of ore, from 20 to 50 ozs. silver per ton. No. 8 level—South drift: No work has been done since my last, the men being employed opening out for a stope some short distance behind the breast of drift. South drift—No. 1 stope: Height of stope, 31 ft.; length, 24 ft.; width of ore, 6 ft., for 12 ft. in length; value of ore from 30 to 60 ozs. silver per ton. South drift—No. 2 stope: The men from the south drift have been employed here. Height of stope, 15 ft.; length, 25 ft. Ore (rather broken in appearance), 12 ft. in width for length of stope. Shaft: Shaft sunk since July 11, 17 ft.; total depth below point for No. 9 station, 96 ft. In compliance with your suggestion by cable, we have continued sinking, in order to make the lift between No. 9 level and No. 10 level 100 ft. There is 19 ft. more to sink in order to give us a sump of 15 ft. below No. 10 station. As soon as this work is completed, we shall at once commence to put in cage road, and effect the necessary improvements to the shaft. Until this improvement work is done, we work under a great disadvantage, the single bucket being engaged the greater portion of the time in sinking shaft. N.B.—It is expected that the Silver Bell shaft will be fitted with the new cage, and the levels with the new trams and cars, ready for handling ore from the stopes, by the end of the month. Ore house track and ore house: Good progress is being made with the grading for ore house track. We have commenced grading for the new ore house.—B. McNEILL, Secretary.

COMMERCIAL NOTES.

METALS.

THE Metal Market has been quiet during the current week.

Bank rate remains 2½ per cent. Bar silver declined to 45½*d.*, improving yesterday to 45½*d.* and to-day's price is 45½*d.*

COPPER has been weak and lower. G.M.B. warrants, with a considerable turnover, declined from 53*l.* to 52*l.* cash, improving again to 52*l.* 5s. cash and 52*l.* 15s. three months. To-day prices are better 52*l.* 10s. cash, and 53*l.* three months paid. We quote English tough 56*l.* to 57*l.*; best selected, 57*l.* to 58*l.*; strong sheets, 65*l.* to 66*l.*; India sheets, 60*l.* to 61*l.*; yellow metal, 5½*d.* to 5½*d.*; ore, &c., 9s. 9*d.* to 10s. 9*d.*

TIN has been quiet. Straits sold from 91*l.* 7s. 6*d.* to 91*l.* cash, and 91*l.* 12s. 6*d.* to 91*l.* 5s. three months, closing firmer to-day at 91*l.* 2s. 6*d.* cash and 91*l.* 10s. three months. Straits shipments for the fortnight have been about 1,200 tons. Australian is very scarce, and a premium of 35s. to 40s. paid for spot parcels. English ingots, 94*l.* to 94*l.* 10s. The Dutch market is quiet. Banca and billiton quoted f54½.

TIN PLATES are easier, but irregular. We quote 13s. to 14s. for ordinary coke Liverpool.

SPELTER steady at 23*l.* 12s. 6*d.* to 23*l.* 15s. for ordinary brands ex ship here.

LEAD flat. We quote soft Spanish, 12*l.* 5s.; soft English, 12*l.* 7s. 6*d.* to 12*l.* 10s.; L. B., 13*l.*; sheets for export, 13*l.* 5s.; home trade, 13*l.* 10s.

QUICKSILVER. Rothschild on Monday reduced his price to 7*l.* 10s.; seconds offers at 7*l.* 9s.

ANTIMONY lower. Hallett quotes 43*l.* for export to America; ordinary brands and delivery, 41*l.* to 42*l.*

DIVIDENDS DECLARED AND ANNOUNCED FOR WEEK ENDING AUG. 15.

Aerated Beverage and Buffet	4 per cent.
Alhambra Theatre	8 per cent.
Brentford Royal Brewery	7 per cent.
Bute Docks	3½ per cent.
Clarke, Nicholls and Coombs	5 per cent.
Cork Gas Consumers	8 per cent.
Dublin, Wicklow, and Wexford Railway	1½ per cent.
Emerald and Phoenix Brewery	5s. per share
Forth Bridge Railway	4 per cent.
Furness Railway	2½ per cent.
General Steam Navigation	3s. per share.
Gillman and Spencer	6 per cent.
Guildhall Investment	6 per cent.
Kent Waterworks	10½ per cent.
London, Paris and American Bank	3 per cent.
Maryport and Carlisle Railway	7 per cent.
Merchants' Trust	4 per cent.
Millwall Docks	2½ per cent.
Mortgage Bank of Mexico	2½ per cent.
Metropolitan Railway Carriage	31s. per share.
Real Estate Corporation of South Africa	8 per cent.
South Metropolitan Gas	13 per cent.
Smith, Garrett and Co.	10 per cent.
Southampton Trams	3s. per share.
Sheffield Trams	4 per cent.
Springfield Brewery, Ordinary	10 per cent.
Springfield Brewery, Preference	8 per cent.
South Staffordshire Waterworks	5½ per cent.
Wigan Coal and Iron	8½ per cent.

REPORTS OF MEETINGS.

THE PIGG'S PEAK ESTATE AND GOLD MINING CO., LIMITED.

PROPERTY AND ITS PROSPECTS FULLY DESCRIBED BY THE CHAIRMAN, BY MR. CHAMBERS, AND MR. JOHN TAYLOR—SHAREHOLDERS ASK NUMEROUS QUESTIONS AND EXPRESS SATISFACTION.

THE annual ordinary general meeting of this company was held at the Cannon Street Hotel, on Thursday, "To receive and consider the accounts and the directors' report; to appoint auditors; and for general business."

Mr. N. Herbert Smith (chairman of the company) presided.

Mr. WILLIAM SMITH (secretary) read the notice of meeting.

PROSPECTS OF THE ESTATE.

The CHAIRMAN said: Gentlemen, your directors, in view of this meeting, have placed in your hands printed reports and accounts, which were designed to inform you as fully as possible as to the position of the Pigg's Peak Estate and Gold Mining Co., Limited, at the present time, its past history, and, as far as they are known to the board, its prospects for the future. This being so, it is obvious that I cannot have any considerable amount of new matter to introduce into the few remarks which it is usual to make upon an occasion of this kind. However, I do not view this as a subject for regret, inasmuch as your directors come here not only to report to, but also to discuss with, you matters of mutual interest, and of necessity this end can more satisfactorily be accomplished by your not having to wait till the meeting to learn the full facts upon which alone a correct judgment can be formed. In dealing with a property of so large an area as that which this company possesses, a board necessarily is opposed by difficulties which have not to be faced in connection with the development of a single mine, but at the same time the possibilities of success are correspondingly large, and if some of the reefs which have been and are being brought to light by our prospectors prove disappointing, it must be borne in mind that, on the other hand, several are looking distinctly well, and hold out to us the promise of yielding gold in paying quantities for a considerable time to come, when we are in a position to start systematic crushing operations. You have before you a large map of the company's estate, and it has been so coloured as to show the development which existed when we took the property over, and also that which has since been effected. By referring to this map I hope to be able to place more clearly before you the facts disclosed by the printed reports.

THE MILL AND ITS SURROUNDINGS.

In the first place, then, you will observe that the old company erected a large mill of 40 stamps at this point (where undoubtedly there is magnificent water-power) and connected it with the Peak reef by means of a tramway, the course of which you can easily trace. This system involved the carriage of ore about 7 miles, and was objectionable, not only because of the expense involved, but also because of its want of elasticity when applied to so large a property. It is true that at the time to which I refer the four reefs, coloured black, only had been discovered, but very little prospecting had been done, and it was obvious that discoveries might at any time be made which would render it necessary to remove or supplement the original plant. Apart from the excellence of the water power, the mill site was inconveniently placed. The battery was badly erected, and the tram line was so laid that it rapidly became most difficult, even if not impossible, to use it. You will recollect that the first ore taken from the Devil's reef had to be taken to the original battery site, a distance of 12 miles. Trial crushing was afterwards carried on at the Havelock battery, the position of which is marked here. However, the stamps and other battery material, as well as tramway plant, I need scarcely say, are of great value to us, and being on the property, are immediately available for carrying out works which would absorb much time and money if we had to bring them from a distance.

PLAN OF CAMPAIGN.

Again, looking at the map, you will see, marked in red, the reefs and deposits which have been discovered since this company commenced its operations. The reports which you hold have already informed you as to the plan of operations which your directors have adopted, but I may take this opportunity of reminding you that 10 stamps are now being erected upon the site which is marked here, and close to the deposit known as the Devil's reef. A tunnel is being driven through the hill at a depth of 200 ft., and when completed will be 600 ft. in length. This tunnel will not only give easy access to the mill, but will also yield useful information as to what the hill itself contains. Of course, theory cannot be absolutely relied upon always to work out in mining matters, but it would seem to be obvious that the rich find of gold which was made on the side of the hill was derived from, or formed part of, a large body somewhere in the neighbourhood. If this be so, it is true that we may never find it, but, at any rate, if we are unfortunate in this respect it shall not be because we are too slothful to search thoroughly. Mr. Chambers has dealt as fully as possible with the present position of the Devil's reef in his report, and having returned recently from the property, can more satisfactorily assure you of the favourable view which he has formed of it than one can who has never been there. I should say that the 10 stamps which are being erected at the Devil's reef will be worked by an engine which the company has already acquired. The next mill site which I would point out to you is that at Peak reef, and here we propose to place at least 20 of the remaining stamps. This mill will be fed by two tram lines running from the Peak reef and England's reef respectively (to be formed, of course, out of the material we have on the spot), and it is proposed to transmit power

by electricity from the site of the original mill, where, as you already know, we have ample water-power. The board is now taking active steps in connection with

OBTAINING THIS ELECTRICAL PLANT.

The last mill site to which I would direct your attention is that at the Pirate reef, where we propose to erect one or two Huntington mills, to be driven by a turbine. You will note that there is sufficient water-power, and that the short water-race required is nearly completed. We have failed to purchase the mills on the other side, and it thus becomes necessary to ship them from here. Tenders are now before the board. The past, gentlemen, whilst providing its disappointments, has, upon the whole, not been unsatisfactory, in so far as the result of tackling this big property has been, in the first place, to establish the fact that there are large bodies of ore on hand, which we are confidently advised will pay well to work, and at the same time it has demonstrated to us that there are places upon the property in which wonderfully rich ore has been found. It is true that to the present time we have not succeeded in finding a wonderfully rich deposit which has proved of large volume, but I will repeat that there are large possibilities, and not such remote possibilities either, which attach to such a property. Recollect that a small proportion of the property, after all, has yet been prospected, and the late head prospector, who is now in this country, informs me that the part of the concession which has not yet been touched has general indications, which, in his opinion, offer quite as favourable an outlook as that which has already been examined. As regards our low-grade bodies of ore, I would remind you that their character and position are such as to enable us to work them wonderfully cheaply. This is the first occasion upon which I have had the pleasure of appearing before you, gentlemen, as my appointment dated from Feb. in last year, when Mr. Stratten Boulnois resigned. I would express the hope (which is entirely in harmony with my belief) that upon some future day we may discuss a report and examine accounts, which will proclaim the company an assured success. I formally move that the report and accounts now presented be and are hereby adopted and confirmed. After this resolution has been seconded by Mr. Arthur Chambers, I will call upon Mr. John Taylor to address you, and then I propose to answer any questions or give any explanations which may be asked, before putting the resolution to the meeting. (Cheers.)

VIEWS OF A VISITING DIRECTOR.

Mr. ARTHUR CHAMBERS: I hardly think it necessary to make any remarks. My report is before you, and you have just heard the chairman's statement; therefore, anything I might say would be only a repetition, except on one or two points. I do not think that either I or the chairman have sufficiently emphasised the fact that all our crushings so far have been trial crushings in every sense of the word—merely to find the situation and quality of the reefs. It was quite impossible for us to continue our crushings had we wished. Owing to the situation and bad construction of battery and tram line—to have continued crushing at Havelock battery, even had the rich quality of ore continued, would have been most unwise and almost impossible. Owing to heavy rains and other matters, fully two-thirds of gold was going away in the tailings. One other point is this, and I have been several times asked the question: Do I expect any further rich discoveries at Devil's reef? I may say at once that I certainly do. Perhaps nothing like the past, of 35 and 40 ozs. per ton, but that was unprecedented, and something quite different from any past experience on my part. I base my opinion on two facts: the first, that the samples I took for panning were not by any means selected, yet they varied in a most remarkable degree; this is accounted for by the remarkable and unique character of the deposit. For instance, picking of two pieces of ore, apparently of equal quality, on examination, one piece would prove to be sandstone, carrying large quantities of gold; the other would prove to be almost pure iron. The other fact is this: I here hold in my hand one of the few nuggets of pure gold found in South Africa. This was taken up and sent down with the last stuff crushed at Havelock battery. In the face of this I think we may reasonably conclude there is more gold where this came from. I may state I am well satisfied with the property. It is true it is not yet in the category of proved mines, such as the Sheba, which is a property standing alone, but the possibilities are very great, and with systematic and judicious working I have no fear as to its ultimate success. (Cheers.)

MR. TAYLOR TAKES A HOPEFUL VIEW OF THE POSITION.

Mr. JOHN TAYLOR: Gentlemen, I do not think any of us, with the information that is placed before us by Mr. Chambers in his report and in the few words he has spoken now, can look upon the position as otherwise than eminently satisfactory. It is satisfactory in this way, that it is re-assuring as to the sound value our property possesses, outside altogether the extraordinarily rich deposit of ore that we had at one time at the Devil's reef. The deposit discovered at the Devil's reef, from which such a large quantity of gold was taken in such an extraordinarily short time, was most remarkable, and probably the word applied to it in the report of the directors (unique) is so applied with perfect truth and accuracy. I have had some experience of gold mines in different parts of the world, and it does not come within my knowledge that there is another similar deposit that is so far known of. Where such a discovery as this has been made, there can be no possible reason why others of equal value should not be met with as time goes on. (Cheers.) Indeed, it appears to me it can hardly be looked upon as within the bounds of possibility that we should have met with such a wonderful deposit as this, and that no other should exist. We had the gold and know the quantity of stuff from which it came, and I repeat—it seems hardly within the bounds of possibility that so soon after the commencement of this company's operations this deposit should have been met with, and that others should not also exist in that country, not to say in this property. Now, though the discovery of further deposits of this kind would materially, at the time they are being worked, aid the returns of gold, yet, after all, it is not to such phenomenal discoveries as these we ought to look, nor can we, as men

of business, rely upon them for the steady and profitable working of the undertaking we have in hand.

WHAT WILL MAKE THE MINE PROFITABLE.

It is rather to the large persistent masses of gold-bearing rock that have been described to you as having already been opened out, to which we must turn our serious attention, and if we get those of a richer character to supplement them, then so much the better. These deposits have been very fully described in the report of Mr. Murray, sent to you in April or May last, and up to date by Mr. Chambers, and it is not, therefore, necessary, or at all desirable, that I should occupy much of your time in going into their history, or speak of them in any detail. At the "Peak" reefs, as they are now called, for there appears to be more than one reef, there are large deposits of ore which will yield from 6 to 8 dwts. of gold to the ton, and Mr. Chambers tells us, after a most careful and close investigation of the whole matter, that something like 3 dwts. should be the outside amount of gold required to meet working costs. At the England reef there are already some 5,000 tons of 6 to 10 dwt. ore in sight, and the extent, as Mr. Chambers tells us, of that deposit has not yet been proved. This reef can be readily worked, because for some time to come it can be dealt with as an open quarry, and therefore you will understand at what a moderate rate of expense it should be mined. Then, again, at the Pirate reef, there is another large deposit of 8 to 10 dwt. ore, and here Mr. Chambers is able to give us the very satisfactory information that from 1½ to 2 dwts. will pay the working expenses. Each of these reefs is strong (I think there can be no doubt about that), and each has been proved to a sufficient extent to warrant the commencement of crushing operations, and the arrangements for the treatment of the ore will be proceeded with as rapidly as possible. In the case of England reef it appears the battery must be worked by transmitted electrical power. It is within the recollection of many of the shareholders (those principally who came into the company at the commencement) that in the report written by my firm which accompanied the prospectus we made special mention two years ago of one great feature in favour of this property, namely, the magnificent water power on the spot, and said that,

IF TRANSMITTED ELECTRICALLY,

it would be available for driving the mills and other purposes. Since that time we have had considerable experience of the working of mills by power transmitted electrically for very long distances, and, consequently, I am able to speak now with the utmost confidence as to the desirability of adopting this mode of transmitting power. The instance I have principally in view is one of a mine in California of which my firm has the management, which has now been working for about 12 months—100 h.p. being conveyed upwards of 2 miles, and something like 3,000 tons a month treated—so that I am not speaking of a mere experiment, nor does it admit of the slightest doubt as to the admirable way in which the work can be done. I may tell you I most

FULLY CONCUR IN THE OPINIONS MR. CHAMBERS EXPRESSES

to you in his report, that we shall soon get good returns from the different reefs about to be worked, and that the future of the company is a bright one. (Cheers.) In addition, of course, to these large bodies of ore to which I attach so much importance, I will repeat that we have most reasonable and proper grounds for hoping that other rich deposits similar to that found at the Devil's reef will be met with. I will conclude by saying that I feel sure you all agree with me that our most cordial thanks are due to Mr. Chambers for the great trouble he has taken in the interests of this company, in which we are all so much concerned. (Cheers.)

The CHAIRMAN here invited the fullest discussion.

NUMEROUS QUESTIONS.

Mr. W. F. TURNER: There is an item of 7,700*l.* in the balance-sheet of liabilities and expenses in connection with winding-up the old company. I take it that that is really an addition to the cost of the property, and that the total cost to this company is, therefore, 249,000*l.* I think that must be so, but if it is it will be as well to indicate it in the accounts, because, otherwise, it leaves the impression on one's mind that 7,700*l.* might have to be written off to revenue at some date or other. Then as to the other side, I should like to ask whether the 28,077 shares still to be allotted to members of the old company have been or are likely to be claimed, because, if not, the capital will be so much less. With regard to the report of Mr. Chambers, it seems not only to be able, but also satisfactory, under all the circumstances, though I dare say there are shareholders present whose expectations will not be reached even by that report. Still, I should like to point out that it is stated, in connection with Devil's reef, that the stamps, it is expected, will be running next month; but there is no indication as regards the working of the other reefs, and when the stamps there are likely to be running. May we take it that all the four reefs at which payable ore has been found in considerable quantities are likely to be worked in the near future?

A SHAREHOLDER UNDER A WRONG IMPRESSION.

Mr. GREY: I should like an explanation of the item of 3,000*l.* for expenditure in London. Also, what is the holding of the directors at the present time, and what number of shares they have sold or dealt in during the past 12 months? It is curious that this discovery, which we have heard is quite exceptional, happened so soon after the allotment to the vendors of the shares to which they were entitled.

A SHAREHOLDER: There were no vendors—it was the shareholders themselves who took the shares. (Hear, hear.)

Mr. MCMORLAND: I should like to have the details of the expenditure. Sundry expenses are 449*l.*; directors' fees, 838*l.*; home management, 566*l.*, and office expenses, 690*l.* These items seem very heavy.

The CHAIRMAN: They refer to quite a year and a-half.

Mr. MCMORLAND: They do not say so in the report.

ACCOUNTS AND CABLEGRAMS CRITICISED.

The CHAIRMAN: At the very top of the page you are looking at it says from the commencement of the company to Mar. 31, 1891.

Mr. MCMORLAND: What is the difference between home management and office expenditure? It seems we have 2,985*l.* 9*s.* 7*d.* expenditure, and the nett revenue is 4,400*l.*, in addition to which there are sundry

expenses, 1,194*l.* Then I see preliminary expenses, including brokerage, 3,000*l.*, and expense of issue of new capital, making a total of 5,107*l.* That, I understand, was the brokerage, and what was done with reference to the re-construction? Is Mr. Murray the manager, and is he still at the property? Rumour says that he has made a large sum of money and is coming home. (Laughter.) How is it we get such extraordinary telegrams, which are not disclosed until some time after their arrival? Telegrams arrive from Mr. Murray, but is he authorised to send any except to the office? On Feb. 23, two rich deposits were cabled as having been found, and on Feb. 24 another cable stated "the reef has pinched out." It must be an extraordinary reef to pinch out in 24 or 48 hours.

The CHAIRMAN: We cannot trace the telegrams you mention.

Mr. MCMORLAND: I do not say the directors had the telegrams, but I repeat what I say as to dates.

The CHAIRMAN: I can assure you, you have fallen into error in saying that any cable reached the company, or was published by it on Feb. 24, to say the reef had pinched out.

Mr. MCMORLAND: Shareholders require an explanation of the various reports which have been published, most of which have never stated that they have come from the manager. Considering the extraordinary fluctuations of the shares I think inquiries should be made how it is that such telegrams and notices should be sent one after the other. Shareholders have seen the shares at 2½, and they are now 5*s.* 6*d.*

WHO KNOWS IT?

It is well known on the Stock Exchange that the manager has dealt in the shares, and I ask whether he has any right to trade in them. I want to know how the cables arrive, and why they vary so much?

The CHAIRMAN: Will you specify any particular cables as to which you wish information, and I will endeavour to satisfy you?

Mr. MCMORLAND: I have not the cables with me, but have told you of two.

The CHAIRMAN: Where you are definite I will endeavour to answer, but in the absence of definition it is difficult to do so. I ask the messages to which you make special allusion?

Mr. MCMORLAND: All the messages you have published.

Mr. DOVE: In view of the fluctuating reports, have the board full confidence in Mr. Murray as a capable and efficient manager? What number of stamps does the company possess?

Mr. H. H. THOMPSON asked questions which had already been put, and

Mr. GREY, in reply to a further question, was told that the interest on the first mortgage debentures was 10 per cent.

Mr. MCMORLAND, having drawn attention to an anonymous letter which had appeared, the directors, with the concurrence of the meeting, decided to pay no attention to it.

REPLIES BY THE CHAIRMAN.

The CHAIRMAN: Mr. Turner asks whether the 7,726*l.* represents the debt of the old company, paid by the new as purchase money or additional purchase. It does. The new company took over the old one subject to the payment of its liabilities, which are represented by that figure. With reference to the unissued ordinary shares, it is probably within the knowledge of most shareholders that for each share in the old company this company undertook to issue an ordinary share. The ordinary shares in the old company come in from time to time, and as they do so are exchanged for shares in this company. The figure that appears in the accounts was correct at the date of their issue, but has varied since. With reference to the commencement of operations at the different proposed mill sites—we are advised, and believe, that the 10 stamps at the Devil's reef will be running some time next month. I do not feel justified in speaking with more definition than that, and the board cannot pledge themselves, but they are advised to that effect both by Mr. Chambers and Mr. Murray. As to the other reefs, we are now considering tenders for Huntington mills. We cannot begin crushing at the Pirate reef for some time to come, because the mills will have to be conveyed from this country to the company's property. With reference to the electrical plant, we are also considering tenders for it. The order in which we hope to proceed is this: first, there will be 10 stamps put to work on the Devil's reef; next, the Huntington mills will go to work at the Pirate reef, and afterwards at the central station at the Peak and England's reefs, but in regard to the two last, I cannot pledge myself as to the time. As to the London expenditure, you have been told it is for one and a-half years.

SHARES HELD BY THE BOARD.

The holding of the directors is upwards of 8,000 shares. (Cheers.) This is considerably larger than when the company started, and I am not aware that in any case those holdings are less, or materially less. The board quite believe in the future of the property, and are unlikely to reduce their holdings. Mr. McMorland has put a long string of questions which I will take *seriatim*. As to the difference between the home and office expenses—the former is represented by the fees of the Messrs. Taylor for approximately one and a-half years—566*l.* They are the managers in London, and I can assure you

THEY GIVE CONSTANT AND ASSIDUOUS ATTENTION

to the company's affairs, and their co-operation is extremely valuable. (Loud cheers.) The office fees are the salaries of the secretary, clerks, the office rent, printing and stationery for one and a-half years, which together amount to 690*l.* As to the payment in Africa of 1,194*l.* 10*s.* 11*d.*, the items represent multifarious payments by the manager extending over 12 months. Sundry expenses in London represent outlay in reference to the title to the property and extension of the lease. The property is held under a concession from the Swaziland King, and we had some trouble in getting it confirmed. Certain items now appearing in the accounts will not recur. The preliminary expenses include an underwriting fee of 10 per cent. on 30,000*l.*, and payment of a report by the Messrs. Taylor, as well as advertising, registration fee, printing prospectus, charges of solicitors here and on the spot, stamping of new debenture bonds, and a number of other items. Mr. Murray, I can tell you, is on the property, and the rumour to which Mr. McMorland has given currency here reaches us for the first time. Mr. Murray is also said by rumour to have made a large sum of money, but it is certainly not to our knowledge. If you can give us any information we shall be happy to consider it.

Mr. MCMORLAND: I have seen a report on the other side to that effect.

RUMOUR'S MANY TONGUES.

The CHAIRMAN: Rumour frequently lies—(cheers)—and there are many reflections which tell with greater force upon the person who makes them than upon the person against whom they are made. As to the alleged telegram of Feb. 24, there was no such cable sent to us as that to which you refer. As to the manager's right to telegraph to private persons, he has a perfect right to do so on his own concerns, but not to convey information which belongs to his employers. As to dealing in shares, I should certainly hesitate to say that a manager has no right to buy shares in the mine he directs, but I would say that he has no right to traffic in them. As to anonymous letters in the public Press, the board takes no notice of them, and certainly would not reply to them. As to Mr. Murray being a capable manager—Mr. Chambers has been out to the property, and amongst the other duties cast upon him, there was, of course, the one of conferring with Mr. Murray and of considering whether the property was being satisfactorily managed; and he will tell you his impressions. He considers Mr. Murray has shown the greatest activity, and that he is indefatigable in the company's interests. Of course we deplore the fact that he fell into the error he did, but the man who has never made a mistake has done but little. He was too sanguine, but we do not think that sufficient to make us cast out of sight the other qualities which we believe render him a valuable servant to us, or to take hasty or unjust action. We have 40 stamps on the property. (Cheers.)

All the gentlemen who put the questions expressed themselves satisfied with the chairman's replies.

The report was unanimously adopted, and on the motion of a SHAREHOLDER, seconded by Mr. VERE SMITH, Messrs. Cooper Bros. were re-elected auditors, at a remuneration of 25 guineas.

Mr. W. E. FAULKNER: I have great pleasure in seconding the vote of thanks proposed to Mr. Chambers by Mr. Taylor. (Cheers.) (Carried unanimously.)

WHAT MR. CHAMBERS THINKS OF THE MANAGER.

Mr. CHAMBERS: People have said to me, I hope you have had a pleasant trip, but I have not, as I went out for hard work and had plenty of it. I was away from England three months, and travelled 16,000 miles. I spared neither myself nor anybody else, and Mr. Edgar Taylor will say that he never had such a hard time of it as when I was out there. (Cheers.) There was no information I did not endeavour to ferret out, and in supplementing Mr. Smith's speech, I will say that I am perfectly satisfied with Mr. Murray. I am sure he is doing good work for the company.

A cordial vote of thanks to the chairman closed the meeting.

LATEST REPORT.

Report for week ending July 11:—Devils reef—The 200-ft. level: Drove for the week 35 ft.; close timbered and rails laid up to face. The 200-ft. level, north end: Drove for the week 28 ft.; close-timbered, and rails laid up to face. Drive on top of the main shoot: Drove for the week 6 ft.; total, 76 ft.; very hard ironstone, and no gold in panning. Prospecting drive: Drove for the week 10 ft.; good-looking rock, stained with copper; no gold in panning. One white man and six boys getting out foundations for battery site. Remaining boys making road, cutting wood, and unloading waggons. McGready's works—Shaft: Sunk for the week 5 ft.; total, 35 ft. 6 ins.; no change since last report. Cutting 65 ft. long, and 3 ft. deep; shows a few colours in panning. England's reef: Cutting for main drive, 54 ft. long, and 20 ft. face in solid rock. Now ready to start driving. Cuttings 60 ft. long by 5 ft. deep. Peak—Pigg's drive, cross-cut north: Drove 12 ft.; total, 32 ft. Struck hard rock, so suspended work for the present. Cross-cut south: Drove for the week 21 ft.; shows no gold in panning.

THE DRAKEWALLS MINING CO., LIMITED.

A CHAIRMAN WHO WILL NOT PROPHECY, BUT WILL LET SHAREHOLDERS KNOW THE BEST AND THE WORST—WHAT IS THOUGHT OF DRAKEWALLS IN THE NEIGHBOURHOOD AND BY VISITING SHAREHOLDERS.

The ordinary general meeting of shareholders was held at Dashwood House, New Broad Street, on Tuesday, to receive the directors' report and statement of accounts, to elect a director and an auditor, and to transact the general business of the company.

Mr. J. W. Paine

(chairman of the company) presided.

Mr. W. J. LAVINGTON (secretary) read the notice of meeting.

ACCOUNTS.

The CHAIRMAN: Gentlemen, I am very pleased to see you all once more, so as to give you an account of our stewardship as regards our expenditure and receipts, and also what we hope to do in the current year. The report, I think, very fully deals with the main items. On the side of expenditure, we have as usual exceeded our anticipations. I think if there is one thing in mining we may depend on with more certainty than another, it is that there will be some unlooked for expenditure. It has been each year our lot to incur some expenditure which we did not anticipate—in fact, some of that which we had to provide for last year no man could have anticipated. I purpose giving you a short account of the difficulties we had to contend with, and then something on the other side. You will see that our calciners are all now in full work. Our costs as regards the jigging machinery have told against us, and helped to swell the outlay. There is also an item of expenditure, which is not set out separately, and that was to repair the damages caused by the terrible snow storm in the winter. There was, in fact, a blizzard, which unroofed our buildings, and played great havoc with us in other respects, and the expenditure it entailed had to be met. In fact, there have been all sorts of difficulties to be overcome, but I think we have done our best to surmount them, and we know that your money has been well laid out. One very large item you will see is for coals. We have also had to provide two new boilers during the year. The jiggers

have been erected, and our soot contract having run out we have made a new one, though, unfortunately, not at so good a price. But for our expenditure on capital account, sinking the shaft and erecting machinery, &c., we have almost paid our way. There is a small sum which it is proposed to write off, so that in the event of our arriving at the stage of paying dividends we may have a clear book, and be able to take that step without any delay in writing off. I regret that we have not been able to carry out our anticipations, but when you look at other mining companies which have entirely gone under, and proved utter failures, and when you look at some of the more substantial undertakings, such as banking institutions, and see what has happened to them, and how one big firm had to be propped up, and some others have utterly collapsed—although we have not done so well as we expected, we may be thankful for being no worse off than we are.

PROSPECTS OF REDUCED EXPENDITURE.

Having now told you one side of the story I will proceed to touch upon the other. As against our new arsenic contract, for which we do not get so much, our jigging apparatus will, I trust, enable us to burn richer mundic. That is, jiggers shake off the light portion of the ores, and we send to the calciners the heavy portion, which is of far more value, so that I hope from this we shall be able to return as much as we did previously. Then, as regards the coal expenditure—we are trying a cargo of less expensive coal, and have offered for a supply at a less cost than last year, and that is a large item of expenditure I think we may fairly look for a reduction in the cost. Then as regards the tin—in our bottom level (the 160) at one portion we had some 40 lbs. to the ton. I need hardly remind shareholders here that the object for which this capital was subscribed was to go down and endeavour to reach the tin, because if we succeed in that we shall have accomplished the object for which this company was formed. We are sinking at the present time, and when we get a little lower, that is, in about three months time, it is quite possible below that portion of the mine where the 40 lbs. per ton was found in the corresponding position they may open tin in far greater quantity. Those in the neighbourhood have every confidence in the success of this undertaking. I may say at times I feel very dispirited and fearful as to the result, but when I go down there, the people all round, and the agents and everybody at all acquainted with the property, express

NOT THE SLIGHTEST MISGIVING AS TO THE FUTURE SUCCESS OF THIS COMPANY.

I met a shareholder, a new shareholder, down there a short time ago, and said, "Well, I find you have been buying some Drakewalls shares." "Oh, yes, it is bound to be a good property, and it is going to pay dividends again." "Well (I said), I hope it will, but the great point that puzzles me just now is to know whether it will do it with the capital we have in hand, or whether we shall have to call up the other 6d." But he seemed to think that a mere matter of detail. I said it was a matter of great importance as far as we were concerned, for if we were anything like near the turning point it would greatly encourage the shareholders, but certainly in the locality there is a feeling of confidence in our success, and where you find in the neighbourhood those who know the property having such confidence that they put their money into it, it is a matter of great satisfaction to others outside who may not be so well acquainted with the facts. I do not know that there is any other point that strikes me at the present moment. Your mining agent on the spot has lived there, and had experience for a lifetime in the neighbourhood, and his concluding words in his report are as follows:—

"That considering the very encouraging and interesting points named above, the shareholders have every reason for encouragement, and, that, in my opinion, a grand future may be looked for at no distant date."

Since Sir James Bain, who is a colleague of mine, has been elected a member of Parliament, we have had the advantage of his help and experience more frequently in London, but, unfortunately, he is unwell and cannot come to-day. In a letter he sends, he concludes by saying "Considering the additions we have made to plant and machinery and the extension of the mine, I consider our accounts show favourably, and Capt. Rodda's report gives us a hopeful view of the future." I have dwelt upon the difficulties we have had to contend with, the increasing and unlooked for expenditure, and I have also told you what are our hopes as regards the future. I think

SHAREHOLDERS SHOULD KNOW BOTH SIDES

of the question, and that when there are difficulties they should know them also, so that in the event of the mine not succeeding it should not come upon them as a surprise. They should know the good and the bad, and be able to form their own opinion. Now, we are here to-day expressly to answer any questions and give any information which we may have, so that you may be as well able to judge what is likely to happen as we are ourselves. There is one great satisfaction to me in this company, and that is that the best is being done with your money. It is being applied to the purpose for which it was subscribed, and you have every chance of getting full value for the expenditure. I wish shareholders would visit the mine and see what is going on down there. We had a letter the other day from a Scotch shareholder who has visited the property. He is Mr. Neilson, from Glasgow. He was surprised at the magnitude of the works, and wrote to say that what astonished him was that with all the work going on we were not paying dividends, and he suggested that we should sell a little more stuff and then be able to pay a dividend. I must say that that idea had occurred to your board here before he suggested it, and that was precisely what we had been endeavouring to do. (Cheers and laughter.) I have now to move: "That the directors' report and statement of accounts, as circulated, be received and adopted," and I shall be glad to give any further explanation, and answer any enquiries from shareholders. (Cheers.)

Mr. HENRY WILSON (director): In seconding the resolution moved by the chairman, it does not seem necessary I should make any remarks in supporting it. The statement which he has made, lucid and exhaustive as it is, will, I venture to think, be sufficient to commend the resolution to your adoption.

Mr. PETER WATSON: I cannot congratulate the chairman to-day on his very brilliant speech. He makes a much better County Councillor for Middlesex than chairman of the Drakewalls Co., and in presiding over this meeting. Whether he is suffering to-day from the influenza or hoarseness, which the nation at large has been

experiencing for the last 12 months, or not, I cannot say, but it was in consequence of that malady I was not at the last meeting, and I think also at the meeting before, and although the chairman has given us his feelings and opinions, yet I think, under the circumstances, he has been rather of a damper to-day, or his remarks have been so modest with regard to the future that he has not dared to enter into it, though that is what we really wanted to hear a little more about. So far as the past is concerned, I have

ONLY ONE THING TO REGRET IN DRAKEWALLS,

and that is that the shaft is not down 30 fms. deeper than it is at the present time. Few men in Cornwall or in this room associated with Drakewalls perhaps know more about the concern than I do, for I and my family have been directly connected with it for more than half a century, and, therefore, it is a source of satisfaction to me, at any rate, to see that the shaft is at last being sunk for another level. I have maintained, and people have heard me do so from time to time, that there was only one great object in the development of Drakewalls to make it a success, which was to effect the drainage of the mine by the adit level, which Mr. Bawden, when he took it in hand, continued to extend for something like 70 fms. deep, so as to take off the water. This eased the costs enormously, and has continued to do so year by year. The great point after that was to push down the shaft as deep as we could to

GET INTO THE GRANITE FORMATION.

Here I want to impress upon the shareholders, as I have done many times before, the importance of passing out from the killas formation into the granite formation. We know that the successful mines of the west—Dolcoath, Carn Brea, Tincroft, East Pool, and all those mines that are paying such enormous profits, had to experience heavy calls before they arrived at their prosperous stage. I remember when the calls were every two months, and year by year as one set of shareholders died out another came in, as is always the case in mining, and prosecuted the work until the reward eventually came. I have considerably increased the holdings of my friends in this mine—several new shareholders are in this room who were introduced by me—and this shows my faith, at any rate, in putting my friends into the concern at the present ridiculous price of a few shillings per share. These shares ought to be five or six times the present price at which they are now found knocking about the market. I suppose, however, the decline is only in sympathy with other undertakings. I say—put down your shaft into the granite formation, and whether I am here or elsewhere you will find my words true, that

DRAKEWALLS WILL YET BE THE PIONEER MINE

of that district, as, indeed, it has been for the last century. Drakewalls is a mine that has produced certainly over the seven figures—over a million sterling worth of mineral. I remember the time, in 1845, when I kept the books of the Drakewalls Mine, and my uncle held half the concern, and had to pay the calls until he brought the property into a dividend state. We had then something like 30 tons of tin a month, with which, having tin at a lower price than it is now, we paid good dividends. I want to give heart to the shareholders, and although I compliment the chairman now upon the points upon which he dilated, yet I think that under the circumstances, knowing what I do, and having visited the mine four or five times already, he might have told you a little more of the hopefulness of the future; but his modesty doubtless restrained him. (Cheers.) He wants to show you at the next meeting that we are in a fair way to have dividends, or, at any rate, profits, but he hesitates to speak. (Laughter.) At the same time I quite endorse his remarks, that at hardly a mining meeting has there not to be reported extra charges. The extra charges here are for the boilers, which naturally form part of your capital expenditure. Then he referred to the blizzard in the west. Such a storm all along the coasts of Cornwall and Devon have not often been known, and it reached our various mining districts and caused serious interruptions to the industry. The wonder to me is that it did not do a greater amount of damage both to life and property. Fortunately for the whole district it was not so, though the interruption was great, but for which, I daresay, our returns might have been more than they are, whilst the expenditure would certainly have been less. As regards the management, I have every confidence in Capt. Rodda and Mr. Bawden doing their best for the concern, and I hope the day is not far distant when you will have good profits to divide amongst the shareholders. (Cheers.)

QUESTIONS.

Mr. HOWARD: What is the surface area of the property?

The CHAIRMAN: There are two setts over which we have mining rights, and I should think from the one extreme to the other it runs over a length of about a couple of miles that we have the right of mining under. As to the surface where our buildings are, some portion of that is freehold, which we own, and we have tramways, calciners, water rights, and various shafts extending over a good many acres of property.

Mr. WATSON: The important point is that the 2 miles are on the course of the lodes.

Mr. BAWDEN: The property is more than a mile wide.

The CHAIRMAN: It is very extensive. There is one sett which may be of considerable value to this company as soon as we get those profits which we still hope to make, and are able to work the western portion of the mine. I will now allude to Mr. Watson's strictures upon my chairmanship.

Mr. WATSON: Not strictures. (Laughter.)

MR. PAINE WILL NOT PROPHECY.

The CHAIRMAN: I felt that every word he said was perfectly true as regards having the ability to address you and give you a rosy account as to making profits and declaring dividends. In that respect I must admit I am a lamentable failure, because Mr. Watson has had far more experience of that sort of thing than I have. (Laughter.) He thinks it part of his duty to cheer up the shareholders whatever may be the facts, but as for me, I pitch my music in the minor key. I have myself in other concerns been led on and on by rosy statements, only to be disgusted in the end; so that I determined, if ever I should address shareholders as their chairman, I would not lead them on to expect something, which it was possible they might have, but as to which there was still an uncertainty. (Cheers.) In Cornwall

you are all called adventurers, and it is the proper name for you. (Laughter.) When we got this money together to go on working, I said clearly and distinctly that it was for a venture, and that you should not put money into it that you could not afford to lose. Now, we have had the best advice, and we are doing the best we can for your interests and for our own. We on the board are large shareholders, and I tell you that my colleagues have recently increased their holdings. We hold, as a board, about 10 per cent. of the entire capital and more than we did when we started the company. We have every faith in our still having good prospects before us. Mr. Watson has echoed the sentiments to which I have alluded, that there is a grand future for the company, and that is the firm belief down there. I cannot pretend to prophesy when the day of success will come, or even that it will come at all, but you will be better pleased to have it stated in a circular, specially sent to you, than to have a mere forecast from me now. My experience, however, in mines does not lead me to make promises, or to hold out hopes which may be unrealised. (Hear, hear.) I wish you to know the worst as well as the best, and then to judge for yourselves. All concerned in the mine are doing their level best to bring it to a successful issue, and when people in the neighbourhood buy the shares I think you cannot have a better proof of what might be the possibilities of the mine, or of the success which may come to you. (Cheers.)

MR. LILLEY SEES THE MINE, AND BUYS SHARES.

Mr. LILLEY: I went down to the mine recently, but I was not a shareholder. I, however, had everything shown to me. I had conversations with the officials, and was struck with the honest intention that was exhibited in everything. If the gentlemen here were to go and see all the works progressing, they would observe how the appliances are kept in good working order, and if they were to hear the opinions of the people there, and how enthusiastic they are as to the results which must accrue, they would not pay any attention to the adverse opinions they read in financial or daily papers, because, from what I gathered when there, Drakewalls is one of the most hopeful of properties. If you go and lift the piece of the stone they are taking up, it is heavy, and I have always been told that when that is the case there is something in it. (Laughter.) I went to lift a piece of stone which it seemed to me I could grasp with ease with one hand, instead of which I had to use two. There is a strong opinion that the stone from the lower levels is becoming increasingly valuable. I am not surprised at Mr. Watson's remarks urging greater depth, for on that hinges the future of the concern. I am not fond of mining shares, but when I find a mine that seems to have fair prospects, and when I know that all the money is being spent by the board honestly and economically, and that consideration comes before expenditure, then I may have confidence. Although mines are but ventures, I do feel that this is something more than a venture, and I have great pleasure in becoming a shareholder. I have only to wish that those gentlemen who feel any doubt about Drakewalls would go and see it for themselves. (Cheers.)

VIEWS OF MR. BAWDEN.

Mr. BAWDEN: I think it is almost a gross libel on the property, the adverse statements I have seen in certain financial papers. I have been associated with the mine for many years, and have had nearly 1,000 shares from the first, and some of them (although they nominally appeared at 19s. 6d. each) have cost me 27s. 6d. I have been associated with this mine from 1873, and know that all the money subscribed for it has been fairly and honestly spent, and the improvements that have taken place from one level to the other have been such as to warrant the sinking of the shaft as rapidly as possible, and that is being done. I am of the same opinion as the manager, that when you get deeper you will reach a fine paying property for tin. I believe Drakewalls is looking better now and has produced more mineral at its depth than any mine of its kind in the west of Cornwall. We are only sinking below the 160, and even now the richest tin mine in the west, and the richest point of that mine is over 400 fms. deep. Drakewalls lode is not a small one—it is 40 ft. wide, and the whole of it has been taken away, and is going to market in some form or other—in the form of tin, copper or arsenic, and I believe that as we go on we shall have a good paying property. I have stuck to my shares without selling one from the commencement, and I mean to stick to them still.

Mr. J. H. MACE: I have visited the mine, and it is in consequence of what I have heard and seen on the spot that I am still a shareholder. (Hear, hear.)

The report was unanimously adopted.

MR. HENRY WILSON'S SERVICES.

The CHAIRMAN, in proposing the re-election of Mr. Henry Wilson, said: He has been connected with this company for a very long time. He is very diligent in his attendances, and always ready to give his services in the interests of the shareholders. He is one of my colleagues who has increased his holding since he has been on the board as a director. Many of you know him, and I do not think he requires any encomiums from me. (Cheers.)

Mr. ANDERSON seconded the motion, and said that Mr. Wilson was a most valuable member of the board.

The report was unanimously adopted.

Mr. WILSON: I have only to express to you my grateful acknowledgments for the compliment you have paid me in re-electing me a member of this board. Hitherto I have endeavoured to contribute in my humble way to promote the important interests committed to our charge, and henceforth I shall continue to do so. I will venture to say, on my own behalf, that the policy which is being pursued by the present board in connection with the development of the Drakewalls Mine is a policy which will be universally approved by every shareholder in it—with this exception, and it is not an unimportant one, that the sinking is somewhat slow. We must use our best endeavours to expedite and get down to the border land of prosperity as soon as possible. (Hear, hear.)

The CHAIRMAN said he desired to say that from Mr. Lavington he had received the greatest possible assistance from his vast experience in connection with mining, and shareholders would bear him out in saying that whenever they called at the office they received from him every attention, information and courtesy. (Hear, hear.)

Mr. PETER WATSON, as knowing Mr. Lavington for a very long time, cordially endorsed what the chairman had said, and expressed the satisfaction it afforded him to do so.

Mr. Turner, after a short discussion, on the motion of Mr. MACE, seconded by a SHAREHOLDER, was elected auditor at a fee of five guineas.

On the motion of Mr. WATSON, seconded by Mr. MITCHELL, a cordial vote of thanks was passed to the chairman, which Mr. PAINE briefly acknowledged.

LATEST REPORT.

Aug. 13.—Owing to the breaking of the plunger pole at the 117-fm. level on Thursday last it has caused a delay in sinking the engine shaft. During the past week a further depth of 2½ ft. has been attained and the ground continues much the same for exploration. We have commenced cutting abroad the lode at the 160-fm. level east for further proof as suggested in my report for the meeting, and so far as seen it is producing 6 tons mundic per fm., and rich stones of tin. The lode in the 160 driving west has improved a little, and is now yielding 2 tons mundic per fm., and a little tin. In the 147 east we are not yet through the cross-course; ground easier for exploration. The lode in the stope in the back of the 160 west is producing 11 tons mundic per fm. and saving work for tin. No. 2 stope 8 tons mundic per fm., and No. 3 stope in the back of the 160 west is yielding 7 tons mundic per fm. and a little tin. The stope in the bottom of the 147 east continues to produce 14 tons mundic per fm. and rich stones of tin, and the stope in the back of the 132 west of the cross-course is yielding 2 tons copper ore and 4 tons mundic per fm.—H. RODDA.

FIFESHIRE MAIN COLLIERIES, LIMITED.

EXCELLENT PROGRESS OF THE COLLIERY — SATISFACTORY REPORTS FROM THE MANAGER AND VISITING DIRECTORS.

THE statutory meeting of this company was held at Winchester House, on Wednesday.

Mr. A. Middleton Lewis

presided.

Lord Alfred Churchill (chairman of the company), being unwell, sent a letter apologising for his absence.

Mr. A. C. ADAMSON (secretary) read the notice of meeting, and also Lord Churchill's letter.

WHAT HAS BEEN DONE.

THE CHAIRMAN: Brother shareholders, you are all aware that this meeting is convened to comply with the requirements of the law, and that little is expected from directors as a rule in the way of news, the meeting being merely a statutory one within four months of the incorporation of the company; but when your directors have news that must be gratifying to the shareholders, it is desirable that all the information they possess should be communicated to them. Referring to the prospectus, you will recollect that the property was mentioned as being a very valuable one, and it is my good fortune to-day to be able to report that the recent developments and subsequent borings all tend to confirm the reports contained in the prospectus, and that we have every reason to feel satisfied with the property which you have acquired. The company was registered on Apl. 15 last. The leases and title deeds to the property have been duly transferred to the company, and are all in order. The directors have

SECURED THE SERVICES OF MR. ROBERT CALDERWOOD, JUN.,

a well-known mining engineer (of more than 20 years' experience in the management of collieries in England and Scotland), and formerly one of the managers to the Shott's Iron Co., as resident manager upon the field, and work is now proceeding as fast as possible. Mr. Calderwood has had also considerable experience in fire and other brick-making. The coal proves to be of very good quality. The 5-ft. seam will, in the opinion of the manager, turn out to be coking coal of excellent character, which, of course, considerably enhances the value of the seam. Trial bores are now being made in order to fix upon the most advantageous position for sinking a second shaft, and this will probably be decided upon within the next few days. We also hope to conclude contracts shortly for

SINKING THIS SECOND SHAFT.

The orders for the engines, boilers, and pit head gear have already been placed, and are in hand. I am pleased to inform you that negotiations have been concluded by which the pits will be forthwith connected with the main line of railway, at Oakley station, by a branch line. I will now read you

EXTRACTS FROM THE MANAGER'S LATEST REPORT.

"The existing shaft has been pumped dry and drained, the shaft has been repaired, and the splint coal sunk through, and levels to win the coal have been set off and driven on each side of the shaft; pithead staging has been erected, and a quantity of splint coal is now on the pit bank. The coal in these levels is 3 ft. thick, and looking exceedingly well, considering it is so near the crop, and as soon as a weighing machine be procured a cash sale business will be established almost immediately. Arrangements are being made for the purchase of a suitable engine and boiler for pumping, and as soon as this is fitted up the present pumping engine will be turned into a winding engine, and is expected to supply the local sales until the new shaft is sunk and ready for work. As soon as these pumping and winding arrangements are complete, I propose to drive a dook in the 5-ft. coal, in the direction of where we expect to sink the new shaft for the permanent output of coal, so that when this new shaft is down the two pits may be in underground communication quickly, and the present shaft used for ventilating purposes, and an output of coal may be got in a very short time after the sinking is finished. One thing these trial bores that are being put down have proved (and it is very important) is that the coals are much firmer and of better quality than at the out-crop. The cart-road from Blair to the works has been repaired, and a new cart-road has been made from Saline turnpike road to the works. Every expedition has been used to carry forward the work; the 5 ft. coal is being worked just now for fuel purposes for our own use, but the best means of disposing of it, either

for steam or coking purposes, will be inquired into. In conclusion, from what I have seen of the property, I am of opinion the company has acquired that which will be remunerative within a short period of the pits being sunk."

Aug. 5.—"I am glad to be able to report very satisfactory progress at the little pit. The levels are now in very clean coal, and the people in the neighbourhood are very anxious for sales to commence, the price at present, I am told, being 10s. per ton at the pit's mouth, and I think we will be able to sell every ton we put out of the little pit during the winter for cash. I went down the pit and examined both the 5 ft. and splint coals, and consider them of very fair quality, and the more I see of the concern the better I like it. The borings to fix the site of the new pit are not sufficiently advanced yet to decide, and I expect to be on the ground permanently on Friday morning first.—R. CALDERWOOD."

I may also add that in view of the expeditious manner in which development is being carried out, the

DIRECTORS COULD NOW RAISE 50 TO 100 TONS PER DAY

provided they had proper railway transport. It now merely remains for me to express the hope that at our next meeting the directors will be in a position to report substantial progress upon your property with satisfactory results.

DISCUSSION.

MR. DREW: Did I understand you it would be four months before the railway would be completed, so as to enable you to dispose of the coal already extracted from the pit?

THE CHAIRMAN: We hope it will be finished sooner, but do not wish to exaggerate, and, therefore, have stated four months as the limit of time. We have local sales going on at the present time for consumption about the spot, but we are not yet connected with the main line, and, therefore, our developments at the colliery itself are rather in advance of our means of getting the coal into the market.

MR. DREW: The line then is in course of construction?

THE CHAIRMAN: We have just arranged the heads of agreement with the railway company, one of the conditions being that the line should be commenced immediately.

MR. DREW: Something was said in the prospectus about a railway coming near the property.

THE CHAIRMAN: The Caledonian Railway Co. have applied for powers to run through the north-east portion of the property, and I understand the Bill was passed in the House of Commons, and thrown out by the House of Lords. The latter added a sort of rider that as the North British Railway were prepared to make the line which the Caledonian Co. had applied for powers to make, the House of Lords gave the former the power to do it.

MR. DREW: I suppose, because the North British entered into an agreement to make the line, the Lords threw out the Bill promoted by the Caledonian line.

THE CHAIRMAN: I am not prepared to state the reasons which led the Lords to throw out the Bill, but I know the North British people undertook to make the line, and I believe the House of Lords was satisfied with what they said, and thought there was no need for two railways. If they do make the line, the North British people will then have

TWO LINES RUNNING THROUGH OUR PROPERTY

instead of one. They border the property for about a mile on its south side, and this line is to connect our pits, which, in a straight line, would be about a mile, but in consequence of the contour of the ground will probably be 2 or 3 miles long.

A DIRECTOR VISITS AND REPORTS ON THE PROPERTY.

MR. BAINBRIDGE (director): I have come direct from the colliery, for last Thursday a colleague and myself were on the ground and saw all that was going on, and the railway manager told us he considered the railway would be put down within six or nine weeks, so that we gave an ample margin when we said four months. He said he would be ready for us by the time our No. 2 shaft was down. We had also the pleasure of seeing what was on the bank, or at the pit's mouth, of the splint coal, and all we saw and heard bears out the statements of the manager, though at the outcrop the coal was a little tender. As soon as he has the workings deeper, he has no doubt this coal will prove to be of value. The 5 ft. seam we did not count much on, but now it has been fully proved to be of first-class coking quality, and we have also good prospects in the briquette making. We can use a good deal of the blaes from the fire-clay, of which we have taken no account in the report. I am sure any of you who would take the trouble to visit the property would see what an immense one it is, and the great prospects there are of making it second to none in the district, and kingdom of Fife. I am sure you will agree with me that the directors are losing no time in placing the property in a first-rate working condition. We have only now to get our shaft down, by which time the railway will be ready, and we will be ready also—ready to compete with any one and every one, and our competition will be fair, because we can get our coals much nearer the surface than any of our rivals in the district. I think the quality of our coal will bear any inspection to which it may be subjected, either by analysis or use. (Cheers.)

MR. DREW: What is the depth of No. 2 shaft?

MR. BAINBRIDGE: 22½ fms. is the present depth, and 37 fms. the proposed depth.

JUSTICE TO THE BOARD.

A SHAREHOLDER: I have much pleasure in proposing a vote of thanks to the chairman for his excellent speech, and for the prospects he has held out to us. We cannot expect immediately a thing is started that it should pay a dividend of 20 per cent.; but I am sure every effort has been made to make the company a success.

MR. DREW seconded the motion, which was carried unanimously.

THE CHAIRMAN, in returning thanks, said: I am quite sure, without taking undue credit to ourselves, it would be difficult to find a more assiduous board on any company. Not a day passes but two or three directors are present in the office doing all that is possible to make the concern a success, and the Scotch directors are weekly on the ground to see what is going on. I hope at the next meeting we shall have a much better account to give you than we have been able to present to-day.

THE RUSSELL MINES CO., LIMITED.

A VIGOROUS EFFORT TO BE MADE TO MAKE THE MINE
PERMANENT AND VALUABLE—ENCOURAGING STATEMENTS.

AN ordinary general meeting was held at the Office, No. 2, Drapers' Gardens, on Monday.

Mr. Thomas Stephens
(chairman of the company) presided.

Mr. E. ASHMEAD (secretary) read the notice of meeting.

POSITION CLEARLY EXPLAINED.

The CHAIRMAN: The directors' report with balance-sheet, and the report of Capt. George, which have been in your hands for some time, give most detailed account both as regards work done at the mine, and also of our financial position. It will therefore be unnecessary to trouble you with a speech to-day. I think our proceedings should partake more of a conversational character, and if shareholders require explanation on any particular point I shall be pleased to give any further information in my power. Another reason for not occupying your time is that our manager is present, and will be far better able to tell you what has been accomplished since the formation of the company, and give a more authoritative opinion as to our property than I possibly can. With regard to the accounts, I would like to say that since the balance-sheet was issued the amount of calls in arrear has been reduced by 177. 3s. 9d., and we have every reason to believe that 3057. 12s. 6d. will be paid within the next fortnight. The balance of 1877. 10s. I am afraid we must consider at present a doubtful debt. This amount is owed by one shareholder, and although he will cease to be a shareholder, he will still be responsible, should he, as we hope he may, at any future time be in a position to pay. With regard to the other items in the accounts, you will notice that, with the exception of 1537. for London expenses, the whole of the subscribed capital has been spent in carrying out the objects for which the company was formed, and not a shilling has been paid in directors' fees, and I may say that Mr. Hamilton, who on several occasions has visited the mines, never even charged travelling expenses. We believe that only a little extra time and money is now required to bring about the success we desire, and as the directors and their friends are prepared to take their share of the new capital, it only remains for other shareholders to subscribe their proportion, to enable the directors to proceed at once with the necessary developments. I will now call upon Capt. George to make a few remarks.

VIEWS OF THE AGENT.

Capt. W. GEORGE: I can only confirm what I have endeavoured to explain in my report. The work proposed at the last meeting has since been fully carried out. I may say that we have sunk the shaft, and communicated the different levels to the 80-fm. level. The shaft has been fully equipped with the necessary material, and the pumping gear fixed from the surface to the bottom. The skiproad has been fixed, and everything is in full and complete working order. The 25-in. engine has been erected, and will be fully equal to our requirements for some years to come. The adit level has been driven nearly 200 fms., or an average of 13 fms. 5 ft. per month, and the floors have also been extended, and the necessary appliances for returning the tin put up, so that really I do not know what more can be done as far as the machinery and erections go. As regards the mine, there has been nothing done towards proving the lode since the last meeting other than by sinking the shaft about 3 fms. below the 80. There we find we have good stones of mundic containing from 30 to 40 lbs. of tin to the ton. This stone will be put through the stamps and will go partly, if not entirely, towards meeting the expense of sinking the shaft. I have no doubt in my own mind that a great deal of the ground laid open in the 80 will pay well for taking away. The returns of tin and mundic from what is on the floor have turned out equal to what I expected. Of course, there is a certain quantity of tin in the stuff on the floors that will eventually be cleaned, but we are unable to do it the first time of treatment. The rougher part has yet to be stamped, and will be calcined and more tin got from it. I am

FULLY PERSUADED WE HAVE A GOOD MINE

there, and it only remains for you to supply the necessary means to sink the shaft to open out what I believe will be a permanent concern. We have also driven on the copper lode 6 or 7 fms., and sold from 307. to 407. worth of copper from it, representing merely the picked stuff from the lode. If we could have crushed and returned the whole of it, I believe we should have had double that quantity for the 6 fms. gone through, which in itself shows that we have a productive lode there. I estimate by continuing the shaft 25 fms. deeper these lodes will form a junction, which is a most important matter. The one lode is underlying a little flatter than the other, and in from 20 to 25 fms. we may calculate on meeting the junction, when we may expect to find better results than we have had at the 80. There we have driven 40 fms. and risen 10 on the course of the lode, and the whole of this ground has proved from actual sales to be worth 57. per fm., and I believe what is remaining on the mine will bring up the average to what I stated at the last meeting, namely, 67. per fm. I still believe if we sink the shaft we shall have a good and lasting mine.

Mr. STOREY: What is the thickness of the tin vein?

Capt. GEORGE: The tin is disseminated through the lode, and can be stoped at from 35s. to 40s. a fm.

The CHAIRMAN: There is an improvement in the lode from the 80 for the last 3 fms.

Capt. GEORGE: The stuff we have had from the bottom of the shaft below the 80 has turned out very well indeed; the 80-fm. level we did not get tin until we got 3 or 4 fms. west of the shaft, and now we are down 3 fms. below the 80 the tin ground has come in, showing that it is dipping east.

IMPORTANT QUESTIONS.

Mr. STOREY: Is there no tin in the adit?

Capt. GEORGE: No; we did not drive on the lode there.

The CHAIRMAN: The adit was brought up to unwater the mine and afford an exit for the produce of the lode discovered in the shaft.

Mr. STOREY: What will be the cost of a calciner?

Capt. GEORGE: From 4007. to 5007. We should, of course, only put up one to commence with.

The CHAIRMAN: I will state that we have applied to the Duke of Bedford's local agent to be allowed to erect a burning-house, but were told by him that according to the terms of the lease we could not do so without special permission, although we previously thought we had that right. We had an interview with Mr. Wing, the Duke's chief steward, on the subject, and laid our views before him. I think if we go down to the junction of the lodes, and can thereby prove to the satisfaction of the agent that we have a permanent mine, there will be no difficulty offered to our erecting a burning-house somewhere in the immediate neighbourhood. Of course, I am only expressing my opinion, as we have received no assurance from the steward, but I feel we can safely place ourselves in their hands. I now move the adoption of the report and accounts.

Mr. EDWARDS seconded the motion, which was carried unanimously.

Mr. STOREY moved the re-election of the chairman as director.

Mr. LEE seconded the motion, which was carried unanimously.

The auditor having been re-elected, the business of the ordinary meeting was brought to a close.

EXTRAORDINARY MEETING.

AN extraordinary general meeting was next held, for the purpose of considering, and if thought expedient, of passing the following resolutions, with or without modification, namely:—

(1.) "That it is desirable to re-construct the company, and that with a view thereto the company be wound up voluntarily, and that Mr. Edward Ashmead, of 2, Drapers' Gardens, E.C., be and he is hereby appointed liquidator for the purpose of such winding-up." (2.) "That the said liquidator be and he is hereby authorised to consent to the registration of a new company, to be named the Russell Mines, Limited, with a memorandum and articles of association, which have already been prepared with the privity and approval of the directors of this company." (3.) "That the draft agreement submitted to this meeting, and expressed to be made between this company and its liquidator of the one part, and the Russell Mines, Limited, of the other part, be and the same is hereby approved, and that the said liquidator be and he is hereby authorised, pursuant to section 161 of the Companies Act, 1862, to enter into an agreement with such new company (when incorporated) in the terms of the said draft, and to carry the same into effect with such (if any) modifications as he thinks expedient."

TRIBUTE TO THE LANDLORD.

The CHAIRMAN: In moving these resolutions, which I do *en bloc*, I wish to say that we have received every consideration from the Duke of Bedford and his agent, and we are paying no rent and no dues during his Grace's pleasure. (Hear, hear.) I must point out to the shareholders that unless this money be raised the mine is worthless, for past expenditure will have been in vain. The mine can only be made valuable by the further expenditure we have recommended. Therefore it will be necessary for all the shareholders to join the board (who will certainly do their part with their friends) in taking their proportion of the responsibility of raising the new capital.

Mr. PAXTON seconded the motion, which was carried unanimously.

Mr. LEE proposed a cordial vote of thanks to the chairman for his unpaid and valuable services to the mine.

Mr. STOREY seconded the motion, and with the brief reply of the chairman the meeting ended.

SOCIETE D'EXPLORATION MEXICAINE.

THE DULNESS OF THE TIMES HINDERS BUSINESS.

THE ordinary general meeting was held on Tuesday, at the Cannon Street Hotel, E.C.

Mr. Seward Brice, Q.C.

(chairman of the company), presided.

The CHAIRMAN, in moving the adoption of the report, said the period that the company had been in existence had been one of the most depressing that had been experienced for 20 or 30 years, not only in London, but on the Continent, and, therefore, it had been impossible to deal with anything in the nature of speculative enterprises. During the year 20 or 30 matters had been brought before the directors in connection with Central America and Mexico, and in prosperous times many of those might have been put before the public; but, after considering the matter, they did not see their way to doing so. The company had, however, undertaken, in conjunction with the Mexican Explorations, Limited, and the Mexican Association, Limited, to provide the necessary funds for the acquisition and

DEVELOPMENT OF A GROUP OF SILVER MINES

at Mexico, which the directors believed would prove to be of great richness. In connection with the two other Mexican companies, they had joined a syndicate for the purchase of a large tract of valuable building land in the city of Mexico, arrangements for the development of which were being rapidly pushed forward, and from which good results were anticipated. After stating that the Paris directors had recently resigned their seats on the board, and that it was the intention of the board to open an agency in Paris, he stated that the company retained the bulk of its capital in Consols and French Bonds du Trésor, and on deposit at its bankers.

Mr. JOSEPH OPPENHEIM seconded the motion, which was adopted.

Subsequently an extraordinary general meeting was held, at which one of the articles of association was rescinded, and in lieu thereof the following article substituted, namely—"The number of directors shall not be less than three nor more than seven."

The proceedings terminated after a vote of thanks had been accorded to the chairman.

WE regret to have to announce the death of Mr. Thomas Edward Briggs, which took place on Aug. 12, at Rutland Villas, Wanstead. He had been connected with the London and South African Bank, but was lately the managing clerk of Messrs. Richardson and Chadbourn.

THE MONEY MARKET.

CITY, FRIDAY EVENING.

IN spite of the fact that the prohibition of the export of rye from Russia in consequence of the failure of the harvest has reduced the value of the rouble over 3 per cent., drained the rate of discount in the Berlin market, and reduced the Exchange to the point at which gold can be taken from the Bank with profit, thus reviving once more the German demand for the precious metal, and in spite also of the accumulation of more claims for money upon the market than for a long time past, the supply is so abundant that these direct influences have had little effect. Apparently they have only sufficed to prevent a further decline in discount rates, and, so far as short loans are concerned, they have only enabled lenders to obtain $\frac{1}{2}$, $\frac{3}{4}$ instead of $\frac{1}{4}$, $\frac{1}{2}$ per cent. The Stock Exchange settlement proved so light that money, instead of being in demand, was paid off, but Treasury Bills paid for have taken, on balance, over 200,000*l.* from the market, and besides a call of 650,000*l.* due on India Scrip, loans to a considerable total have been called in by the India Council to meet debentures due to-morrow. The Bank return was featureless. The reserve improved 239,000*l.* (owing to a return of notes) to 17,106,000*l.*, against 13,335,000*l.* last year, but with a slight increase of liability under deposits the proportion is only $\frac{1}{2}$ better at 44*½* per cent. The private securities have further run off 88,000*l.*

With the settlement in progress, this week at the Stock Exchange has passed off quietly and easily enough, and the markets have not been at all bad, the only disturbing feature being Foreign Bonds, on which the Russian wheat scare, a serious failure in Austria, and decided weakness on the Berlin Bourse operated adversely. The condition of European politics as to what may be the outcome of French effervescence towards Russia should be duly noted by those holding International Securities, especially if there be any truth in a statement that the prohibition of rye from Odessa has been overestimated, and that the same is in reality an act of retaliation against Germany and Austria. Consols improved, and Colonial Inscribed Stocks are maintained. Foreign Bonds have fallen, and Spanish were the weakest market, but Greek, Mexican, Argentine, Brazilian and Chilean are better. South Americans improved, because in some demand on the moratorium in Buenos Ayres being repealed, and the foundation of a new bank, which is to entail a new paper issue among English railways. The Scotch stocks show a severe fall, chiefly on dividend considerations, and fears that British Deferred will get nothing this time, and because the Caledonian new capital creation is an indifferent success. The Southern passenger, Great Eastern, and heavy lines are firmer on the contrary, because so scarce for delivery. Grand Trunk were dull from realisations, and Mexican Railways flat on dividend estimates. Argentine lines advanced, also most United States descriptions, on the likelihood that 200,000,000 bushels of wheat will be exported to Europe. Traffics are generally expanding, moreover, but neither the Norfolk nor Union Pacific Co.'s make headway, and the embarrassments of the latter have caused heavy fluctuations and sales of their shares. Banks receded, while Nitrates recovered on improved trade, and restrictions of output, and Primitiva have realised 8*½*. Breweries improved, including Allsopp's, while speculative Miscellaneous undertakings usually receded.

A firmer tendency has occupied the Money Market to-day, owing to the India Council calling in a due instalment on their last year, and preparations for redeeming 1,400,000*l.* debentures to-morrow. Moreover, dividends involving several millions more are on the eve of distribution, so that a tolerably large lock-up of money must of necessity exist. The banks refused to lend until next week under 1 per cent., but day money in the discount market was $\frac{1}{2}$, $\frac{3}{4}$, and bills of three months were not dearer than 1*½*, $\frac{1}{2}$.

At the Bank of England, 35,000*l.* was received from Lisbon, whilst 10,000*l.* in sovereigns were withdrawn for Roumania and the continent. Bar silver remained at 45*½*d.

Business to-day has been extremely limited, all the speculative markets being quite idle, but a fair amount of investments continue to support all good securities. The Funds were steady during the day, but relapsed $\frac{1}{8}$ at the close to 96*½* and 96*¾* for money and account respectively. India stocks were firm, and Colonial steady. The offer made of 97 for one and a-half millions of New South Wales Three and a-half per Cent. Stock has not been accepted by the Government. In Foreign Securities prices were firm in sympathy with the bourses, and rose $\frac{1}{4}$ to $\frac{1}{2}$ for all "Internationals," except for a decline of $\frac{1}{8}$ to $\frac{1}{4}$ in Egyptian Unified and Russian Argentine Securities were in request and improved, especially the Railway and Guaranteed Stocks. Uruguay advanced $\frac{1}{2}$, on the proposed formation of a committee for the protection of the 5 per cent. bondholders' interests. Home Railway Stocks were quiet, and save for a rise of $\frac{1}{2}$ in Brighton "A" on an unexpectedly good traffic, no particular feature transpired, the heavy lines, led by Midland, being firmer, but others, especially the Scotch, weaker. Americans are lower; they opened good, fell away, and after a temporary recovery closed at their worst. Louisville fell to 67*¾* sellers, and closed $\frac{1}{2}$ lower than yesterday on forced sales. Other descriptions mostly fell $\frac{1}{4}$ to $\frac{3}{4}$, including Erie Shares, but the Preference rose 2, the Second Mortgage, 1; Lake Shore and Reading Income Bonds, 1; and New York Central, $\frac{1}{2}$. Grand Trunk Stocks have fallen $\frac{3}{4}$ to $\frac{1}{2}$ on the dividend at the rate of only 1 per cent. on the Four per Cent. Guaranteed Stock. Primitiva Nitrate, and Peruvian Corporation were flatter.

Annexed are the final quotations to-day:—Consols Account, 96*½*, 96*¾*; Egyptian Preference, 90*½*, 91*½*; Egyptian Unified, 95*½*, 95*¾*; French Four-and-a-Half per Cents, 104*¾*, 105*¼*; Hungarian, 88*¾*, 88*¾*; Italian, 89*½*, 89*¾*; Mexican, 83*½*, 84; Peru Five per Cents, 8, 8*½*; Peru Six per Cents, 20, 20*½*; Russian 1889, 95*½*, 96; Portuguese, 38*½*, 38*¾*; Spanish, 70*½*, 70*¾*; Turkish 1871, 94*¾*, 95*¼*; Turkish Defence, 91*¾*, 92*¼*; Caledonian Railway, 112*½*, 112*¾*; Great Eastern, 89, 89*½*; Great Western, 161*½*, 161*¾*; Brighton "A," 146*¾*, 146*¾*; North Western, 175*½*, 175*¾*; Metropolitan 81*¾*, 82*¼*; Metropolitan District, 22*½*, 29; Midland, 154*½*, 154*¾* x*d.*; North British, 37*½*, 38*¾*; North Eastern, 154*¾*, 155 x*d.*; South Eastern "A," 80*½*, 81*¾*; Mexican Railway Ordinary, 32*½*, 33*½*;

Grand Trunk, 81*½*, 9*½*; Grand Trunk First Preference, 63*¾*, 64; Grand Trunk Second, 42*¾*, 42*¾*; Grand Trunk Third, 22*¾*, 23*¾*; Canadian Pacific, 84*½*, 84*¾*; Denver Preference, 41, 41*½*; Erie, 19*¼*, 19*¾*; Milwaukee 65*½*, 65*¾*; Lake Shore, 112*¾*, 113*¼*; Louisville, 67*¾*, 68; Atlantic First, 30, 30*½*; Ontario, 15*¾*, 15*¾*; Ohio, 17*¾*, 17*¾*; Norfolk and Western, 47*¾*, 47*¾*; Reading, 14, 14*½*; Reading Bonds, 77, 78; Union Pacific, 35*¼*, 35*½*; Wabash Preference, 23*½*, 24; Ottoman Bank, 11*½*, 12*¾*; Anglo-Telegraph, 43*½*, 44; National Telephone, 41*½*, 43; Hudson's Bay, 153, 153*½*; Suez Canal, 109*¾*, 110*¼*; Guinness, 328, 331; Allsopp's Ordinary, 25, 27; Bryant and May, 13*¾*, 14; Eastmans, 5*¾*, 5*¾*; Primitiva, 7, 7*½*.

CORRESPONDENCE.

We do not hold ourselves responsible for the Opinions or Statements of our Correspondents.]

To the Editor of the MINING WORLD AND ENGINEERING RECORD.

CORNISHMEN AND OUTSIDERS.

SIR,—I have been a subscriber to your paper for years, and was very pleased with your remarks on the position in Cornwall in your issue of Aug. 1. I cut out your article and sent it to one of the papers here, but I suppose they thought "prudence the best part of valour," and they have not ventured to combat it.

I now enclose you a cutting from a Cornish paper of yesterday about Tregurtha Downs. The tone of their remarks fully justifies what you have written about the feeling entertained in Cornwall towards outsiders. During my 16 years residence in Cornwall I have tested it many a time and out, and have found it exactly as you describe.—I am, &c.,

G. E.

Aug. 11, 1891.

["TREGURTHA DOWNS.—It has been resolved to abandon this mine, a course which throws some 300 men out of employ. The day shift went down the shafts as usual on Wednesday morning in last week, and were informed some time before noon that peremptory orders had been received from head-quarters for the immediate 'knocking' of the concern, and the stopping of the engine. There is said to be absolutely no probability of Tregurtha being worked again. This is another 'limited' mine, having an authorised capital of 100,000*l.*, in shares of 1*l.* each, of which 67,000 have been issued and paid-up. The mine was commenced in May, 1886, so that in five years they have lost at the rate of more than 12,000*l.* a year, in addition to which 43,567*l.*—the proceeds of the ore raised—has been also spent in development. It would be satisfactory to the shareholders if a statement were issued showing how this 110,567*l.* has been disposed of. The directors are Mr. Henry Rydn Lewis, of Bartholomew House, London; Mr. Matthew Loam, the well-known engineer, of Liskeard; and Mr. Walter Molesworth St. Aubyn, for some time M.P. for Helston, and subsequently a candidate for the Truro-Helston Division."]

THE VICTORY MINE.

SIR,—It goes without saying that your correspondent who, in your last issue, says a good word for this mine, and signs himself "A Contented Shareholder in 16 Mines," does not own shares in many such concerns as this.

However, with regard to the Victory Mine. The manager must have been altogether incompetent, or he must have misrepresented the state of things at the mine, otherwise we should have had some definite results before this.

As far back as Mar., 1889, Mr. Nichols talked of opening up ground for stoping, and having splendid looking ore ready for milling. On June 1st following, the directors "have received advices that the mill of five stamps will start running May 6—further stamps in course of erection." Next we hear that the mill has been stopped, after running 20 hours from lack of water, and that they are about to sink a water shaft to get a supply. Some time after this we are told it is necessary to sink a new and larger shaft to cut the lode in depth. Needless to say, it has not been cut yet.

It seems that, according to the late manager's (Mr. J. D. Russell) statement, dated Dec. 10, 1889, there were 100 tons quartz at grass ready for milling; and Mr. Nichols reported Apl. 16, 1890, that the mill of 15 stamps was then running. It might be running to this day for aught I know, as there has been no advice published of a clean up, or breakdown. In fact, I find no further mention of the mill in the reports. Now, have these 100 tons of quartz been crushed, and what is the result? Has the information been withheld from the shareholders?

In respect to the Board of Trade inquiry, I cannot see what good it will do. We know enough and too much of the management on this side, and the Board of Trade cannot take itself off to Venezuela to inspect the mine and make assays. What we require is a good board of directors who will look after the shareholders' interests, and then a capable manager. I should be sorry to see Mr. Hallett on the directorate, as his present action only seems calculated to damage greatly the concern. Pending the inquiry, the mine is lying idle, and probably filling with water, and the machinery is certainly not improving. So much for the inquiry. The mine seems to be a fairly rich one, if a lot of lies have not been told respecting it, and only wants working properly to be a success. Thanking you, Mr. Editor, in anticipation for the insertion of the above,—I am, &c.,

SHAREHOLDER.

Leeds, Aug. 13.

GRAVEL GOLD.

SIR,—Will you permit me, through your columns, to call attention to the very unsatisfactory state of affairs at the mine. Brought out in Feb., 1889—now in Aug., 1891—we seem as far as ever from any returns to the shareholders. At the meeting in May, 1890, we were told the washing would be begun probably in Aug. Well, Aug. passed, and so did Dec., and still no washing. On Jan. 28, 1891, "Mr. Welton, the engineer who is constructing the ditch," wired "Commence washing end Feb.," but Mar. and Apl. passed and yet no washing. On May 2 Mr. Welton wires, "Commenced washing with

1,000 ins. of water," and it was under the benign influence of this fact that our meeting was held on May 30, when we were told washing had been going on for four weeks with no fear of interruption. This hopeful state lasted for *over six weeks* (N.B. Mines are within reach of wire to England), when on June 18 Mr. Griffiths informs us that from Mar. 30 to May 21 (date of writing), one accident after another happened, and he could not report any washing going on. I was then informed that all would be well in three weeks. And the latest bulletin, July 24, informs us another three months must pass before the mine can be got to work; also that a very important part of the work must be given up *pro tem*.

The MINING WORLD of Aug. 1 reports Mr. Welton personally supervising the work on the *Loma Mines*, aided by Mr. Jones, "late of the Rica" (our mine). Why is not "the engineer entrusted with the construction of the ditch" at the Gravel Gold Mines "personally supervising" that work? I see Mr. Griffiths arrived at the mines on Apl. 20. Mr. Welton sends his gratifying telegram on May 2, and apparently scuttles off to another mine, leaving our engineer to patch up his botched work. I hear now one of the syphons placed by Mr. Welton must be moved.

It seems to me, looking back on the past history of this mine, that it is *very* doubtful if the water will ever be satisfactorily laid on by Mr. Welton's scheme.

May I ask Mr. Welton to explain his telegram on May 2—to say why we were kept in ignorance—for over six weeks—of the renewed breakdown at the mines, and why he is not doing the work we pay him for, viz., to turn the mine over to our engineer in good working order.

Perhaps the board can explain these matters. I think one of them should go to the mine and let us shareholders know the real state of affairs, which I very much doubt our doing at the present. I hope, Sir, in the interests of all concerned in this mine, you will be able to publish this letter in your columns.—I am, &c.,

THOMAS DE HOGHTON,
Commander, Royal Navy.

Cirencester, Aug. 12.

THE FRONTINO AND BOLIVIA CO.

SIR,—Having been absent from England for some months I only saw your journal of June 6 last, containing the report of the meeting of the above-named company, a few days since, and as the report shows some errors and misstatements with respect to my management of the said company's mines I beg the favour of a little of your space to correct them.

Silencio.—Mr. Peter Watson is reported as saying:—"In justice to Capt. Hodge, the late manager, it was only fair to state that the starting of this mine was largely due to his initiative, and that the present manager was only continuing what Capt. Hodge commenced." Now, this is a complete misapprehension, as Capt. Hodge's position in the matter was precisely that which Mr. Watson assigned to the present manager.

Silencio from being a rich mine had become exceedingly poor, with a pinched out lode in the bottom, when I took charge in 1885, and being expensive to work under the existing conditions, it was a question whether the mine should be closed or not, the financial position at the time not permitting much outlay upon unproductive work. But after a careful examination I made a special report on the mine to the directors, and recommended that a thorough change should be carried out in the working arrangements to give facility and economy in the exploitation, and then that a serious trial of the mine should be made by deep sinking, believing, as I did, that the lode was only pinched locally, and that it would expand and become profitable again in depth. The directors accepted my views of the matter, and gave me a free hand to do whatever I deemed best. The re-arrangement, which included some very tedious work, was then carried out, as circumstances permitted. The shaft was sunk to the 220, where levels were driven, and the first new shoot of ore struck in the north end. Thus, when Capt. Hodge arrived in Jan. of 1888 all the dead-work was practically completed, the shaft was in course of sinking below the 220, and regular returns of gold were being made that left an increasing monthly profit.

Cordoba.—Capt. Hodge is reported to have said "Mr. Gifford had made arrangements with the directors to let Cordoba house," thus implying I had begun to abandon this mine. In reality the said house was let as far back as 1884, during the chairman's visit to the country, and continuously after that, for the simple reason that, being at a distance from the mine and of no use to it under the existing circumstances, letting the house was the best means of preserving it from falling into ruins.

Mr. Hodge is said to have further stated that "Mr. Gifford was so much in despair that he had actually the papers drawn out to let it (Cordoba) as a tribute mine." This is simply a gratuitous piece of pure imagination. The exploitation of the mine had been continuously simplified till reduced to a minimum on Mr. Hodge's arrival. A wheel had been built and machinery ordered for a new mill, a deep adit was driving—the now No. 7—to reach the mine 130 ft. deeper, on the lode, there was a reserve of ore blocked out, with some 100 fms. of ore ground to drive through at the No. 6 level, and, lastly, a profit had been made of some 3,000*l.* during the last year, with a security of its continuance for some time, even if No. 7 level should develop nothing. The mine was the easiest to work of any the company had, and it was one of the most profitable. There was consequently not the slightest reason for tributing it, and such a thing was never thought of.

Cecilia.—As stated, this mine is difficult to work, chiefly from its large hard lode, with soft or weak enclosing rock, and the large quantity and bad quality of the timber that has to be employed. But here, too, the working had been made simple and systematic, and a reserve of 10,000 tons of ore had been created, with a long run of profitable ground to drive through in the bottom level. The last six months' working showed a profit of over 2,000*l.*, and I have no hesitation in saying that had the mine received the attention it required, profits could easily have been maintained, and with improved machinery and augmented milling power they should have increased. Having got into a bad condition, as stated, it will naturally be a work of some difficulty and time to restore the mine again to a prosperous state.—I am, &c.,

SAMUEL GIFFORD.

Clifton, Aug. 7, 1891.

GOLDEN LEAF, LIMITED.

A PROFIT ON THE MONTH AND GOOD PROGRESS REPORTS.

THE secretary of Golden Leaf, Limited, announces the following telegram received from Mr. F. Henry Longmaid, the company's general manager:—"During July the mill at Empire worked 60 stamps for 27 days, crushed 5,000 tons, and the yield was as follows:—Bullion, \$11,000; sundries, \$1,300; total, \$12,300. The working expenses for the month were \$9,200—\$3,100; expended on capital account, \$2,300."

MANAGER'S REPORT UPON EMPIRE FOR MONTH OF JUNE.

East drift, Empire: This has been driven during the month 66½ ft., all the distance on a strong vein of quartz, from 4 ft. to 9 ft. in width; but on an average carrying not enough gold to pay. For a distance of 12 ft. to 15 ft. pay ore was encountered, 1 ft. on the hanging wall assaying at one time \$18.04, and at another, 5 ft. on the hanging wall, \$9. Lately the vein has pinched to 4 ft., but, though not as yet pay ore, looks very encouraging. A contract for labour alone was let on this drift at \$6.50 per ft.; but, air being very bad and ground harder, we had to resume operations with air drills. No. 3 tunnel, No. 4 winze: This has been sunk 20 ft. in a strong vein, averaging in assay about \$6 per ton gold, a small vein or streak 8 ins. or 1 ft. in width on the hanging-wall being higher grade, one assay carrying \$415 in gold. The stopes in No. 2 winze are a fair average this month, and improve towards floor of tunnel. Stopes at east end of tunnel have become poor, with the exception of 1 ft. of ore we are extracting from floor of No. 2 tunnel, which is very high grade, but of no great extent. No. 2 tunnel: Stopes to east of large pillar just above tunnel have been stopped for the present; but from 60 ft. below, and to the surface, the vein has widened, and there is a great improvement in grade of ore. Stopes east of No. 1 shaft are 12 ft. to 18 ft. in width, and are now turning out the main part of our ore supply. No. 4 tunnel—Winze: This was sunk only 15 ft. on what proved only an unusually large stringer, giving out entirely in the bottom of winze. Smithville: During the month, and still more recently, these stopes have been a surprise to us, and are now yielding from 20 stamps only, an average of \$160 a day in bullion, and about \$25 a day nett in concentrates. Two veins, separated in No. 4 tunnel by a horse of soft slate, were proved to join about 25 ft. above, and there formed a strong body of above average grade ore, carrying more silver and lead. The stopes to the east in No. 1 level are also proving better as we come east, and though the body is now being worked from both ends, it will produce ore enough for 20 stamps for several months to come, and in the meantime we anticipate finding other bodies to the west. Tailings mill: This has been running since June 23 on our last winter's tailings, a little more than paying expenses. We have now uncovered the old Whippoorwill and Empire 15-stamp mill tailings, and hope to realise, judging from our daily product not yet realised, a very fair profit. I am now corresponding with a view to obtaining best rates on concentrates, and hope to ship, and realise to very good advantage, owing to condition of lead ore market at present; but until concentrates are sold it is difficult and unwise to estimate the profit on our present work. The outlook is more encouraging than when my last report on June 20 was written, due to the splendid showing of stopes east of No. 1 shaft in Empire and Smithville new discovery, and also a decided improvement during the last few days in No. 4 winze of No. 3 tunnel. I estimate dead work in mine as follows: Empire, east drift 66½ ft. at \$20, and No. 4 winze at \$16. No. 4 tunnel: Winze 15 ft. at \$12. Smithville: East drift, 100 level, 32 ft. at \$6, and sundry raises and cross-cuts, 30½ ft. at \$6 per ft., prices including all costs, labour, material, and air compressor operation.

MANAGER'S REPORT UPON GOLDEN LEAF FOR MONTH OF JUNE.

Golden Leaf Mine: Main south drift has been driven towards Wadham's shaft 53 ft. on a contact, showing so far no ore. No. 3 raise has been completed to surface, the last 30 ft. being through broken lime. Being anxious to hole to the surface we left vein in the hanging wall, and will prospect this as we stoep from below. Distance raised for month, 69 ft. No. 2 tunnel: On June 8 ground was broken for a tunnel to tap the Wadham's ore body, at a depth of 300 ft. from the surface, and to enable us to make connections with main south drift from the Golden Leaf. The tunnel will be approximately 700 ft. in length, and a contract has been let to nine men to drive same at \$7 per ft. 106 ft. have been driven to June 30. No. 1 winze: This has been cleared of ore, and waste filled in, the footwall side cut down a couple of feet, and sunk 6 ft. further. From bottom of winze a cross-cut intersects vein at about 20 ft., exposing a large body of ore and vein matter of no practical value. From intersection we have drifted to the south 73 ft., finding bunches of ore assaying up to \$8 per ton, and to the north 64 ft., following in centre of drift a small vein of quartz, which assays up to \$30, and will probably lead us to the continuation of ore bodies extracted in main level. Both drifts are being driven day and night, and to the south we soon hope to have favourable changes to report. New mill: Work has been greatly retarded, and at one time completely stopped by the unusually heavy and long continued rain storms, making the roads quite impassable to our wood, lumber, or freight teams. The first loads of machinery and lumber, since the stop, came in yesterday, and we now hope to have no further delays until completion of mill. Store: Goods are at Dillon, but cannot be hauled until all machinery is in. Stage is bringing in small quantities daily, and store has been opened, but sales will be light for July month. Plans: Surveyor arrived here on July 3rd, and complete plans will be prepared and sent you shortly.

Mr. Longmaid has since forwarded the following additional information:—Bannack: Machinery gathered from Empire, Helena, Carlisle, Chicago, San Francisco and Butte, is all at Dillon, and enough at Banuack to keep mechanics and carpenters fully employed. The weather for the past week has been very bright and warm, and we are hoping that at last the rainy season is over, and our work will be completed, as work so long dragged out, as our mill has been, is very discouraging to all concerned. Store goods are being hauled in, and sales will improve, as we have purchased a fairly complete stock. I fully realise importance of starting mill as soon as possible to enable me to operate without drawing upon you, and earn a dividend.

SUPPLEMENT.

The Mining World AND ENGINEERING RECORD.

ESTABLISHED 1871.]

SATURDAY, AUGUST 15, 1891.

[ESTABLISHED 1871.]

REPORTS OF MEETINGS.

THE MEXICAN EXPLORATIONS, LIMITED.

A LONG MEETING RESULTS IN A GENERAL EXPRESSION OF CONFIDENCE IN THE BOARD, AND MUTUAL ARRANGEMENTS BY WHICH ALL CONCERNED ARE SATISFIED—IMPORTANT FACTS AS TO PALMAREJO.

AN extraordinary general meeting was held on Monday, at Cannon Street Hotel, for the purpose of considering and, if approved, passing, the following special resolutions, subject to such modification (if any) thereof as shall be agreed upon, namely:—

1. "It is hereby declared, pursuant to the Companies Act, 1879, that the sum of 10s. per share on the ordinary shares in the capital of the company, numbered 101 to 250,000, both inclusive, constituting (together with 100 deferred shares in the capital of the company) the first issue of 250,000% of the capital of the company, shall not be capable of being called, except in the event of, and for the purpose of, the company being wound-up." And to pass such further resolutions as shall be deemed necessary, with respect to the existing fully-paid shares, and the amount of 5s. per share, which will remain after the above resolution has been passed. 2. "That article 99 of the articles of association of the company be amended by striking out the word 'five' and substituting the word 'four' in lieu thereof."

Mr. Seward Brice, Q.C.

(chairman of the company), presided.

Mr. G. E. MARTIN (secretary) read the notice of meeting as above.

OBJECT OF THE MEETING.

The CHAIRMAN, who was received with cheers, said: The notice, which has just been read by the secretary, informs you of the purpose for which the directors have convened this meeting. It refers specially and primarily to the uncalled liability on the shares. This has been before the minds of the directors for a long time. They have considered it carefully, and as the result determined to call the shareholders together, with the view of taking their opinion, and at the same time considering what will be best generally in the interests of the company with regard to the uncalled liability which would still remain (if the special resolution be passed) of 5s. a share—whether anything should be done as to that, and if so, what. As many of you know, upon the top of this circular from the directors came another from Messrs. Mocatta, Son and Browne, which was sent to many shareholders. That second circular, having regard to the present time of the year, and its subject matter, I think, should be dealt with as far as possible at this meeting. It was suggested at the time the requisition was served on the directors that it should be so considered, and that being the case I shall have to explain to you somewhat more fully than I should otherwise have done the position of the company, although, as a matter of fact, it has not greatly altered from what it was at the time of the last general meeting. I think details had better not be gone into at any great length, though, as far as the directors are concerned, they have no objection to placing them fully, completely and exhaustively before the meeting if the shareholders think it advisable, but such a course would be strongly against my own advice. (Cheers.) In dealing with the circular of Mocatta, Son and Browne, I shall have to speak, and intend to

SPEAK, FRANKLY, FREELY AND CLEARLY,

in the best English I can employ. I may have to say things which are disagreeable, but you will kindly understand that I do not intend to say them with personal intent or motive, and I hope in the discussion that will take place (which I trust will be full and exhaustive) that the same frankness and clearness will be employed without its being thought that there is any idea in your criticism of us to injure or to unnecessarily hurt. (Hear, hear.) The main subject before you will be with regard to

THE QUESTION OF CALL OR NO CALL,

and before we approach it I wish to say—the business does not want a call, but if the business is going to extend I think it may. (Hear, hear.) I know as well as anybody that calls are not in these times even so pleasant as they were when times were better, and when if you paid 5s. one day you might get 10s. back in improved market value the next. I have no wish to put my hand into my pocket for a call unless it be in the best interest of the company. Now, as to the position of the company:—The shareholders know perfectly well that those who have a real interest in it can at any time they think fit arrange with the secretary to have such information, and to make such inquiry as may satisfy them. The statement I made on the last

occasion I make again now—that any gentleman having a real stake in the company shall, if he so wishes, for *bona fide* purposes, be allowed to examine into all matters of business connected with the company. (Cheers.) The circular contains a copy of the requisition. A requisition of any shape served on directors seems to imply (certainly to my mind it does imply) that there might be a refusal. That is perfectly without foundation in this case. Then we have to remember that the firm whose name is appended to it, and that its leading member, is on intimate terms with the directors of this and the Palmarejo Co., with which we have a considerable financial transaction outstanding or almost complete. Now, not one single word was said with respect to that requisition on behalf of the firm, or the gentleman referred to, down to last Monday morning, just before our own board meeting, when it was mentioned to me in a private manner, and I said, "You need not trouble to complete the requisition; bring it to the board at two o'clock and it will be considered." Now I say plainly that it is impossible directors can do their work, or a company which is a promoting company can go on, if these circulars are to be flying about or if the shareholders have not the fullest confidence in their board and support them in every way. (Cheers.) I am on intimate terms not only with the source from which the circular emanates, but with two out of the three names of the suggested committee. I should have considerable confidence in their examination, as far as it might go.

PALMAREJO.

More than this, this serious matter must be considered:—Palmarejo, upon which about half a million has been expended, is now arranging, and I believe has practically arranged, the last details of a final loan to complete its works. It is a very important matter for that company, and also for this, though not in the same degree, that that arrangement should go through. It will relieve us from considerable trouble if it does. Now, if a circular of this kind comes out with regard to that company, unintended as it may be, it may very seriously damage and prejudice Palmarejo, and in prejudicing them also prejudice us. (Cheers.) It might do so because it refers to Palmarejo twice, unnecessarily in my opinion. It might lead the public to think that Palmarejo is in such want of money that its shares might go down. I am, however, quite satisfied that the circular was not intended to damage Palmarejo, but there have been very heavy transactions in the shares during the last fortnight. One firm alone sold and transferred 8,000 or 9,000 shares, which is a very heavy number, and a circular of this kind might send prices down considerably.

HOW THE COMPANY STANDS.

I now come to the main purpose of our business, but, first, I had better tell you how we stand. The capital for which we are liable to the shareholders is about 67,000% ; the assets, as nearly as we can get at them, are about 80,000% to 82,000%. With regard to the assets—the first is the wood business we are carrying on in Yucatan and British Honduras. It is impossible to say at present what is its precise value. I propose to add nothing for goodwill, but roughly put the whole wood business down at 12,500%. Then there is a ship load of 500 tons of logwood and rosewood on the road, and we may put that at 3,500%. Are those fair figures as an estimate? I think they are very much under the mark. That business has given us considerable trouble and anxiety. We have been led by Mr. Hunter, our agent out there, to suppose we should have considerable returns from that business and much earlier than has been the fact, though a great deal of excuse is to be found for him. In practically creating a new business, delays take place which cannot be anticipated, and, moreover, the yellow fever was a formidable impediment. We have felt the position so much, that finally we sent out Mr. Plummer, a gentleman well recommended, to see Mr. Hunter and consult with him, and, of course, to bring back a report, which might or might not confirm the information we have derived from Mr. Hunter. A cablegram to hand states that Mr. Plummer is on his way home, and though his full report is not to hand, in so far as we have heard from him the news is perfectly satisfactory with regard to the position of the company in general and the wood business in particular. Mr. Hunter is a gentleman of scrupulous honesty and long experience in British Honduras and Central America, though he has his faults, the chief of which seems to be that he is more quarrelsome than he need be, and is not always able to get along with his neighbours. These are serious defects, but do not interfere with his exertions on behalf of the company or with the position into which he has got the business at present. He says, in a letter dated July 7:—

"It is impossible for you to manage your business from this end, and if I am to be allowed to make it a success you had better allow me to take my own measures. I may be wrong, but somehow or other considering the time the business has been established, and the amount of capital invested, the results obtained are highly satisfactory. Roughly, the position from the beginning of the business to the end of June (including June) shows that I have drawn 17,186%." Then he refers to two wood cargoes of 2,300% and 3,000% which reduces, he says, the amount of his drawings to 12,000%. The cargo on the road should fetch 3,500%. 1,500 tons of logwood at 7% ; 250 tons

of rosewood at 7l.—1,750 tons in all, and the figures, to my mind, are very low—15,750l., or a profit of 3,964l., to which must be added the value of the steamer, lighter, mills, &c., which you may put down at 8,000l. as a low figure, for the ship alone cost close upon 4,000l., and there are stores of every description. It may be a sanguine estimate—I do not think it is—but at the end of the year it will be something like 10,000l. to 12,000l. over and above what we have expended on the business. I take the assets of that business at the amount expended by us as nearly as one can fix, and the two run to 16,000l. My opinion is that Mr. Hunter would put them at 8,000l. to 10,000l. higher, and he would be right in so doing. We have 200 tons of wood at Liverpool, which I hope will realise 1,800l. The next item is

PALMAREJO DEBENTURES 12,500l.

That is a company which paid, I believe, 300,000l. for its property, and spent 100,000l. upon it, whilst in addition there has been expended by another company 150,000l. upon a railway and water-conduit. Palmarejo in addition has raised 75,000l. in debentures, nearly the whole of which has been expended in connection with the mill—altogether over 300,000l. actually expended upon the undertaking and assets of that company. Our connection with that company arose in this way. The directors asked us a year ago to act as issuing agents for certain money they proposed to raise. We were willing to do so. It turned out that the full amount wanted could not be raised in that way, and ultimately, at the beginning of this year, what was arranged was that 75,000l. debentures should be issued. We were asked to guarantee interest and principal, and after much discussion we suggested the best thing would be to issue 100,000l. in debentures, when, subject to terms, we would guarantee the issue. The debentures were to be a first charge upon the whole undertaking, and if things went wrong the Mexican Explorations would appropriate the whole affair. Mr. Martin Innes Browne, on behalf of Palmarejo Co., saw us frequently, and so did the directors, until, finally, I said I thought 2½ per cent. per annum was enough on the outstanding debentures, with 5,000l. in debentures as a douceur. Mr. Ashby (one of our directors) did not think this enough, and, finally, at his instigation, the terms were arranged at 3 per cent., and 12,500l., which belongs, of course, to this company.

MEMORIES DIFFER.

Mr. BROWNE: I was never present at any meeting at which 3 per cent. was fixed, or anything like that. Where did it take place?

The CHAIRMAN: At the Mexican Explorations Office.

Mr. BROWNE: Was it referred to before the Palmarejo guarantors came in, and the company went to allotment?

The CHAIRMAN: Certainly.

Mr. BROWNE: I have no recollection of it.

The CHAIRMAN: I have a very distinct recollection and so has Mr. Ashby. We considered that was a good piece of business for the Mexican Explorations, and I am satisfied it is. Its position is this. Here are first mortgage debentures for 100,000l. issued and secured on the whole undertaking and assets of the Palmarejo Co. There is nothing before that issue, and we are under no liability with regard to them so long as the interest is paid. We get 3 per cent. (3,000l. a year) on the amount outstanding. The debentures are payable by drawings out of profits, and are payable 10 years hence. If anything should occur in breach of the agreement, the clauses of which are stringent, we can take possession of the whole Palmarejo undertaking and have no liability, and can sell the affair for such a sum as will realise the first liability upon it.

IT WOULD INDEED.

It would be hard, extremely hard, upon the shareholders; but that is a matter for them and not for the Mexican Explorations. At the present moment Palmarejo has found that the amount required for completion (not completion of its own undertaking for that is complete) of the Mexican Mineral Railway works is more than expected, chiefly owing to a bad month (June), when sickness laid up the engineer and foreman, and drove away a number of the work-people—I say they found an amount was required for completion, which I am told

HAS PRACTICALLY BEEN RAISED.

(Cheers.) I am glad to hear it because it relieves us of anxiety, and because also these further mowies will be expended in making more valuable the undertaking on which we have, in the event of difficulties, the first claim. We have also a large interest in the deferred shares of the Mexican Association, Limited. That is a matter which I put, as the result of arrangement, at 6,600l. Then there is a debt, as regards which interest has been paid to the present moment at 10 per cent. It is secured; though whether we consider it fully secured is somewhat doubtful—the debt is that of Mr. Charles Pond, 4,500l. Interest has been paid to July 1.

Mr. TRINDER: What is the debt for?

The CHAIRMAN: It was in connection with a transaction in the Mexican Association's deferred shares. If you take my advice you will not go into the matter fully. We have security for the debt—the security of that gentleman (Mr. Pond), who, I believe, is known to many present.

Mr. POND: I have not the slightest objection to your going into it if you wish to do so.

The CHAIRMAN: As to the amount of cash in hand, last Monday we had 9,800l., and there is an amount of 5,500l., which has been cabled in, and which in a short time will be arranged for by actual payment, or a continuation of the transaction, which would be judged satisfactory if I were to give you the details. There are also various small investments, which it would be unwise to disturb. One is of 1,500l., now worth a trifle over that; another of 2,500l.; another of 1,875l.—altogether 5,875l. which might be called in. We have also 5,000l. invested in the shares of the Mexican City Property Co., to which I add nothing for interest, but from all we hear we think that worth considerably more than we have put it down at—probably 6,000l. to 7,000l. Then we have 6,500l. of shares in the French Exploration Co., the estimate of which will depend entirely upon the way the company goes on, and there are small amounts of interest and other debts due to us (about 2,000l.) Finally, our interest in the Western and General Development Syndicate of 5,100l. is put at merely the amount we have put into it. The syndicate is part owner of

AN UNDOUBTEDLY RICH GROUP OF MINES,

out of which an enormous sum was obtained from comparatively

shallow workings. We are satisfied with the way in which the mines have been developed now, and it is impossible to put a value upon our investment, which would in any way accord with what is the estimated value of the property, but a little development would probably multiply it by three or five, though the agreement between the syndicate and others also interested contemplates very much bigger figures than these. That is roughly the position of the company, and that is how

OUR ASSETS TOTAL UP TO 81,000l. OR 82,000l.

With regard to the reduction of liability—our Palmarejo arrangements in no way interfere with that. As to the way this reduction of liability will affect us, the directors think the amount now in hand sufficient for the business at present being conducted. If you are going to make this company a big one with potentialities larger than it has at present, and much more imposing results, undoubtedly we shall want larger working capital, and it will be for you to consider whether it would be well to attempt to develop the company simply with the present capital or not. I hope you have read the circular of the directors, from which you will see that the proposal is to reduce the working capital by turning 10s. out of the 15s. uncalled into a reserve liability, which will remain only for the purposes of winding up. It cannot be called up by either directors or shareholders. You could not undo the resolution afterwards if you passed it to-day—you could only create new shares, and it is for you to consider whether you wish the resolution passed, but I gather from what I have heard that it will meet the views of all present. I now, as a matter of form, move the resolution (as above), and subsidiary ones will be proposed afterwards. (Cheers.)

Mr. BUSH (director): I second the motion.

The CHAIRMAN: There are some fully-paid shares which you cannot alter, and which it might be desirable to pay back out of revenue; and as to whether a call shall be made, we will take your opinion and act upon it.

Mr. BROWNE: Do we understand that the directors do not propose to bring forward a motion for calling up the 5s.?

The CHAIRMAN: Yes; but they will take the opinion of the meeting. If you ask me as a shareholder I recommend that the resolution be passed; but if you ask me as a director, I leave it entirely to you.

MR. POND EXPLAINS.

Mr. POND: The matter in which I am concerned was a profit which you have secured. You were very particular not to mention details, but you mentioned inadvertently this one with which I am connected, and I beg to state, on my own behalf, that this amount is a profit upon which the interest has been paid, and for which I have given you security. (Cheers.)

Mr. TRINDER: I think it would be unwise to pass the resolution. Money that we can use for our business is surely more useful than money we simply put aside with which to pay our creditors in the event of winding up. Is there any special reason why this resolution should be passed?

The CHAIRMAN: No reason—except in consequence of the suggestions (not from many) that have come to the ears of the board.

A SHAREHOLDER: It practically amounts to this—you asked us originally to subscribe 1l. a share, and now you ask us to pass a vote of want of confidence in you by releasing ourselves from half of it. If we had confidence in you originally up to a sovereign, what do you want us to knock it down to 10s. for? (Cheers.)

A SHAREHOLDER: Perhaps some gentlemen want to clear out, and these suggestions come from them.

VOICE OF THE REQUISITIONISTS.

Mr. BROWNE (Mocatta, Son and Browne): This suggestion applies to all the capital, part of which 6,000l. or 7,000l. is paid in full. If you carry this resolution, the further resolution you will propose will be that those shareholders who have paid up shall have 10s. returned of their capital, which will place them in the favoured position of getting back half their money at par value, whereas the ordinary shareholders stand with their shares at 70 per cent. discount. It is material that no one body of shareholders should receive favouritism. As to the necessity, I think it is needed that something should be done. I have learnt, much to my surprise and dissatisfaction, that the Mexican Explorations credit is bad in the City. The chairman was in error in saying I met the directors after Palmarejo had gone to allotment on 25,000l. or part of the debentures. Palmarejo directors sent to me as a broker, asking on what terms I could assist to place the balance. Being a large shareholder in that company, and this (and I have a great idea of the value of Palmarejo property), as a matter of business, I inquired at the bankers, and could have got an advance of the 35,000l. required, but what stopped it? The shares of this company were quoted at a discount, and financiers said there must be something wrong, or the good prospects of the company would be borne out by the price of its shares on the market. That was the answer, and it is the business and the duty of the board to see that the credit of the company is maintained. I am glad the operation was successfully carried through, for the credit of both companies. That is a reason why everything should be done to raise the credit of this company, because otherwise if it be allowed to fall, it will stop all business from being done. One reason for the poor credit of the company is on account of the wood business, and I am of opinion that the whole position should be looked into by an independent committee. The board have confidence in the manager out there, which, from other information that reaches me, it is a mistake on their part to retain. His previous estimates, I think, will have been proved not to have been realised, and the latter ones may not be so. All these matters require investigation, and my firm is wishful to protect the interests of its clients. If the board have made clear statements to-day, and if they are not relying too much on paper promises, then a committee's report on the position would strengthen their hands, and certainly it could do no harm in depressing the shares, which are as low already as they can well be. On the contrary, it might enhance their value. I beg to move as an amendment—"That no further calls on the shares be made without the consent of a general meeting."

The CHAIRMAN: You must either vote for or against the resolution.

Mr. PAGE: I oppose the resolution. It does not matter whether

you call it a reserve liability or not—the liability is there all the same. So little is gained by the resolution that

YOU ARE TEPID AND LUKEWARM ABOUT IT YOURSELVES.

I, therefore, move the direct negative. Will Mr. Browne's matter be dealt with here or at another meeting?

Mr. BROWNE: I must insist upon it being dealt with to-day, or the objects of the resolution being carried out.

The CHAIRMAN: If a committee is desired by the shareholders to assist the directors it will not be opposed by them, but it must be a committee representative of the whole body. The directors cannot help looking upon this circular in the light of a slur, and I do not think that is the feeling of the meeting. (Cheers.) I am certain that many of these gentlemen did not know what they were signing. With regard to the price of the shares, everybody knows that all shares (especially those with a liability upon them) are below par. A gentleman said we are "tepid" about the resolution, and so we are.

A SHAREHOLDER: Why tie up the capital uncalled, upon which we could raise 70,000% debentures?

Mr. KING: The two resolutions must be considered together—the reserve liability and the call. If you transfer the liability to reserve, which can only be called in case of liquidation, and then call the 5s., you will destroy your credit. I

CANNOT CONCEIVE ANYTHING MORE DISASTROUS

than such a course. You cannot escape the liability, but you are positively going to deprive yourselves of the use of it. You should withdraw the resolution.

The CHAIRMAN: I will now put the resolution; those in favour—those against—it is lost by a large majority. (Cheers.) The next question is that of the call. The available working capital is practically 10,000%, apart from amounts which we might call in to add to it. If you keep us to the amount of capital we have you will undoubtedly cripple the company considerably, as we have matters of business on hand which it may be desirable to entertain. We wish the views of shareholders.

A HINT TO THE BOARD.

Mr. RING: Instead of asking the advice and suggestions of the shareholders, I wish the directors would stiffen their backs and guide the company themselves. (Cheers.)

Mr. REID (of Leeds) said his name had been associated with the timber business, and he had acted as salesman for the company. He was impressed with the sanguine nature of Mr. Hunter's statement, which he advised him to moderate. The first cargo that came was excellent, and was sold at very satisfactory prices, and so also was a shipment of logwood that came to Goole of 200 tons; but there was one shipment that was particularly vaunted by Mr. Hunter, which, on arrival, his customers would not look at. He took the captain to lunch—(laughter)—and asked him, "Where was that wood which he had bought wrecked?" He said, "20 miles north of the Lees." This was a cargo that had been lying at the bottom of the sea, and some of it was rotten, although it had been sent to this company's order as a cargo of fresh wood. He wrote on the subject to the board, and received a letter from the secretary, saying, "The board desire me to say that your management of this wood business has been such"—well, he would not go on with it, but it was tantamount to a want of confidence in him. When he saw Mr. Brice about it he said

"I THINK MARTIN PUT IT A LITTLE BIT TOO STRONG."

(Laughter.) Shareholders laughed, but he felt it very much. (Laughter.)

A SHAREHOLDER contended that after all the board had done, though slight mistakes might have been made, which were pardonable, he did not consider they deserved a vote of want of confidence (Cheers.)

MR. PIGOU'S VIEWS.

Mr. PIGOU (chairman of Palmarejo Co.), who was received with cheers, said: My name has been taken in vain in various circulars issued and by various persons. Let me explain that during the time I was on the board of the Explorations Co. I had no dispute whatever with the directors, but will take my share in all the criticism or blame that may be brought to bear upon me. I simply left them for the reason that I felt my attention was so entirely given up to the other business that I could not devote myself to that, and also give the same amount of thought and time that the work here required. That is a full and sufficient explanation of my leaving the board of the Mexican Explorations Co. (Cheers.)

TIMBER.

The CHAIRMAN: The timber matter has been a worry and annoyance to the board. As to this cargo—it was the view of Mr. Hunter that it was a very good sample, and in that view Mr. Leslie (who was engaged by us) concurs. It is evident that on timber, as well as on other things, opinions differ. Mr. Plummer writes (July 2):—

"Mr. Hunter's estimate is about the mark, and, if anything, under, rather than over."

Our next general meeting will be in Jan., and it would be a serious matter if you passed this resolution preventing the board from making a call even if they considered it necessary.

Mr. BROWNE: I must put in my proxies on this question.

The CHAIRMAN: The show of hands is of no importance, as Mr. Browne's proxies will carry the resolution, and therefore it may be considered carried. The next matter is as to the directors, and I move the second resolution as above, viz.:—"That article 99 of the articles of association of the company be amended, by striking out the word 'five' and substituting the word 'four' in lieu thereof." We do not wish, nor intend as far as possible, that the members should be reduced to less than five, and propose it only to meet eventualities. In fact, we have a gentleman in view who has consented to serve, who occupies a high position in London in connection with the Government of Mexico.

Mr. BUSH seconded the motion, which was carried.

Mr. BROWNE proposed the appointment of the committee of three to enquire into the affairs of the company—Mr. Arthur Middleton, Mr. J. C. Reid and himself.

BOARD'S POSITION TO A COMMITTEE.

The CHAIRMAN: The board say "yes" and "no" to the resolution. They say *no*, if it is to be a hole and corner committee, and they say *yes*, if it is to be a committee representative of the whole body. I wish to ask—is it a fact that Mr. Middleton has no share in the company?

Mr. BROWNE: It is. (Loud cries of "Oh" and laughter.)

Mr. TRINDER: Then I think that ought not to have been withheld from the shareholders, and if we have a committee at all it should be from amongst our own body. (Cheers.) As the board are willing to have a committee I shall propose that it consists of five, though I would much rather not have a committee at all.

Mr. PAGE: I will vote in favour of Mr. Brown's motion if he can tell me a single instance in which a committee has done a company any good. It is preliminary to wrecking a company. Look at Allsopp's. (Hear, hear.) We do not want a committee.

A COMPROMISE SUGGESTED, AND ACCEPTED.

Mr. TRINDER: I think Mr. Browne might be content with having a member elected on the board to represent the interests for which he appears here, and another member also should the Mexican gentleman named be not elected.

Mr. POND: I, as a very large shareholder—probably the largest—think this a very excellent suggestion, and that it will be a great mistake to have a committee of investigation. (Cheers.)

Mr. BROWNE: We want a little more control, but if the board will accept the nomination of one shareholder from the interests I represent, and also of another in the event of the Mexican gentleman not being elected, that will satisfy me. (Cheers.)

The CHAIRMAN: Let this be distinctly understood, that we will elect one gentleman nominated by Mr. Browne, and also another should we for any reason fail to elect the Mexican gentleman of whom we have spoken.

Mr. BROWNE: I am perfectly certain that will meet the wishes of all parties, and I have now great pleasure in

PROPOSING A VOTE OF THANKS TO THE CHAIRMAN

for the way in which he has presided, and also to the directors generally for their conduct of the affairs of the company.

The motion was carried by acclamation, and the meeting of nearly three hours duration was brought to a close.

REMARKABLE PASSAGE TO THE CAPE OF GOOD HOPE.

THE Union Steam Ship Co.'s new twin-screw royal mailsteamer *Scot*, which left Southampton on Saturday, July 25, with the outward Cape of Good Hope and Natal mails, arrived at Cape Town at 4.40 a.m. on Aug. 10. The *Scot*'s passage was made in 15 days 2 hours 10 minutes net steaming time, giving an average speed of 16.5 knots per hour. No voyage to the Cape has ever been made in so short a time, and the Union Co.'s anticipations of speed have been fully realised by the *Scot*.

**VAN RYN GOLD MINING
COMPANY, LIMITED.**
(IN LIQUIDATION).

The South African Trust and Finance
Company, Limited, have been instructed by
Mr. E. C. Jamieson, Johannesburg, agent for
the Official Liquidators of the Van Ryn
Company, to request that all Share Certificates
be sent in to be cancelled and the proportion-
ate amount of new fully paid up shares
allotted, to which the owners of old shares
will be entitled.

The share register will be kept open a
sufficient time to allow of shares, forwarded
by the South African Trust and Finance
Company to Johannesburg not later than the
31st August, being duly registered in the
transferees' names, and allotments of new
shares made in accordance with such
register.

Shares should, therefore, be lodged with-
out delay with the South African Trust and
Finance Company, Limited, 19, St. Swithin's
Lane, London, E.C.

London, July 29, 1891.

CORNWALL.

WEST WHEAL GRENVILLE, LIMITED,
Crown, near Camborne, Cornwall.
To be Sold as a Going Concern.

A. J. TANGYE, Auctioneer, Cam-
borne, has been instructed by the
Liquidator of West Wheal Grenville Mining
Company, Limited, to SELL by PUBLIC
AUCTION, on the Mine, on TUESDAY,
September 1, at half-past three o'clock in the
afternoon, in one lot, as a going concern
(subject to such conditions as shall be then
and there read), the whole of the WEST
WHEAL GRENVILLE MINE with the
Plant and Machinery thereon, comprising
one 70-in. Cylinder Pumping Engine, 10 ft.
stroke, fitted with Oldman's patent piston,
with three 11 ton boilers attached; one
23½-in. Cylinder Winding Engine, fitted with
Oldham's patent piston with capstan and
winding cage connected, and one 11 ton
boiler attached; surface balance bob,
about 120 fms. pitch pine main rods,
from 15-in. to 12-in., with strapping plates,
35 fms. 15-in. pumps, 80 fms. 14-in. do., 25 fms.
12-in. do., 15 fms. 9-in. do., 50 fms. 8-in. do.,
one each 15-in., 14-in., 13-in., 12-in. poles
and pole cases, with bottoms complete, one
each 14-in., 10-in. and 8-in. door pieces and
windbores, about 300 fms. 2-in. air pipes, 103
fms. 8-in. ventilating pipes, with patent
ventilators, 200 fms. tram road, 50 fms.
bucket rods, 200 fms. 4½ in. steel wire rope,
230 fms. 3¼-in. do., one 11 ton boiler, one 10
ton weigh bridge, 66 ft. pitch pine shears, two
pitch pine shaft tackles, dry tube, carpenters'
benches, two smiths' bellows, anvils, smiths'
tools, two skips, two landing waggons, two
underground waggons, a quantity of useful
wood and iron, account house, furniture, &c.

The sett is situate in the Parish of Crown,
near Camborne, and is very extensive, and it
is supposed that the Lodes of South Con-
durrow and Wheal Grenville pass through it.
There have been cross-cuts driven from the
shaft north at the 100-fm. level, 63-fm. and
at the 120-fm. level, 106 fm. for the purpose
of cutting the Great Flat Lode, and the most
practical mining experts of the day are of
opinion that with a continuation of the 120
cross-cut the lode will be found in a short
distance driving. The whole of the buildings
and machinery are of a substantial character,
and well adapted for carrying on an extensive
mine.

To view, apply to Capt. J. Skcat, on the
Mine, and further particulars may be had of
the Liquidator, Sydney W. Jackson, Esq.,
7, Union Court, Old Broad Street, London, or
of the Auctioneer, Chapel Street, Camborne.
Dated, August 19, 1891.

SUNBURST GOLD MINING COMPANY,

CHARTERS TOWERS, QUEENSLAND.

THE CAPITAL OF THIS COMPANY IS £24,000, IN 48,000 SHARES OF 10s., OF WHICH 2s. 6d. PER SHARE IS PAID UP. NO LIABILITY AS TO REMAINDER.

This mine is an area of 13½ acres on the same main line of reef as the Brilliant, Day Dawn, Queen, Golden Gate, &c. It is a comparatively new mine. After the usual period of dead work, during which the mine was well opened up below ground at a cost to the shareholders of 2s. 6d. per share, the reef was reached, and in November, 1890, the mine began its regular output of highly payable stone. The first crushing was completed on November 27, since which date the mine has paid dividends, aggregating 9s. 6d. per 48,000th share, besides defraying the cost of a powerful plant of steam machinery on the mine, and creating a reserve fund.

The list of crushings to date is as follows:—

	Stone.	Gold.	Value.	Dividend.
	Tons.	Ozs.	£	£
1890.				
November 27	130	713	2,700	1,200
December 20	184	1,180	4,100	1,200
1891.				
January 14	240	780	2,900	1,200
February 28	400	1,810	6,300	2,400
ERECTING MACHINERY.				
May 22	360	1,136	3,980	1,200
June 6	250	1,080	3,600	2,400
„ 20	250	916	3,400	2,400
July 6	240	871	3,050	2,400
„ 20	343	1,373	4,600	2,400
Aug. 1	262	1,108	3,900	3,600
„ 15	250	1,139	4,000	2,400

Total yield for nine months 2,997 12,136 £42,530 £22,800

The dividends paid during this period, £22,800, are equal to 9s. 6d. per share on the present issue of 48,000 shares, or at the rate of 500 per cent. per annum on the paid-up capital.

It is announced that the mine, having opened out on a permanent body of stone, will henceforth crush continuously and pay regular dividends.

On June 22 last the company was converted from 24,000 shares to 48,000 shares.

P.S.—The splendid returns obtained by the Sunburst tempted the holders of the three adjoining mines, viz., Golden Gate, Queen Consolidated, and East Sunburst, to sink shafts to a corresponding level, and ascertain if the Sunburst shoot of rich stone extended into their respective areas. In each case the result of this enterprise is highly satisfactory. All three of the mines have, during the past month, cut the rich shoot, and while their discoveries benefit themselves, they treble enhance the value of the Sunburst Mine, by proving that the reef extends the whole length of its area.

The second half-yearly meeting of shareholders in the Sunburst Gold Mining Co., Limited, was held at the registered office, Mining Exchange, Mosman Street, Charters Towers, on Monday, April 28, 1891, at 8.30 p.m., Mr. T. Raine in the chair. The minutes of the previous meeting were read and confirmed. The directors' report and balance-sheet were received and adopted. Messrs. T. Raine, W. Carroll, J. Kennedy, J. J. Connolly, and A. Bowry were elected directors, and Messrs. R. Gibbon and W. Tilley were re-appointed auditors for the ensuing half-year.

DIRECTORS' HALF-YEARLY REPORT.

TO THE SHAREHOLDERS.

Charters Towers, April 28, 1891.

LADIES AND GENTLEMEN,—In presenting our second half-yearly report, we have much pleasure in stating that the dividends foreshadowed in our last have

become a pleasing reality, and we take this opportunity of congratulating the shareholders on the event.

At the mine operations have been steadily carried out with a view to opening out the mine to the best advantage, also keeping in view the most economical mode of working. The principal work performed underground has been as follows:—The No. 1 level has been extended west a further distance of 189 ft., making total from the shaft 239 ft., and carried a first-class reef, from 1 to 2 ft. in thickness, for a distance of 150 ft. or 200 ft. from the shaft. Since that point was reached the reef has been of a very irregular character, occasionally cutting out altogether, and making again in bunches, through the formation. The stopes from this level have turned out the greater part of the stone raised during the half-year, and at present carry about 1 ft. of good quality throughout. Two winzes have been sunk from this: No. 1 winze at 60 ft. from the shaft, and is now connected with No. 2 level below; No. 2 winze was started at a point of 100 ft. further in the drive of No. 1, and has been sunk 46 ft. to date. The former carried a splendid reef all the way down, varying from 1 ft. to 5 ft. in thickness; the latter had 1 ft. where started, but this did not continue regularly. At present there is a reef making of apparently good quality.

No. 2 levels have been opened and driven 100 ft. west and 9 ft. east. The level west met the shoot worked in No. 1 at about 30 ft. from the shaft, and has since carried an average of rather more than 1 ft. of stone, having at present 2 ft. of good quality in the face. The eastern level is not extended sufficiently far to enable us to speak authoritatively regarding its prospects. The stopes over the western level look exceedingly well, having from 1 ft. to 3 ft. of first-class stone. A large quantity should be extracted from this block during the coming half-year.

The underlie shaft has been sunk an additional depth of 90 ft., and carries fair quality stone from 1 to 2 ft. thick. You will perceive by the statement of accounts that a large sum has been expended on plant and machinery. This was absolutely necessary, as the old machinery was altogether inadequate to fulfil our requirements, so we were compelled to procure a more effective plant. A good substantial set of poppet legs and brace have also been erected (by contract), and we now have a first-class surface plant.

During the half-year 668 tons 17 cwt. of quartz have been reduced at the batteries for a return of 2,955 ozs. 18 dwts. 9 grs. of gold, or an average of nearly 4½ ozs. per ton. There are now 320 tons in the paddock, 170 tons of which were raised during the past fortnight; the quality is about the same as last crushing, or 3 ozs. per ton.

We have had the pleasure of declaring four dividends of 1s. each during the half-year, equal to £4,800, in addition to spending £1,026 16s. 8d. in surface improvements and plant.

The overdraft at your bankers is £705 17s. 3d., but this may be properly placed against the stone now at grass, which is much more than equivalent to that sum.

In conclusion we desire to point out that independently of future discoveries, there is sufficient stone in sight between No. 1 and No. 2 levels to pay good dividends for a considerable time to come, and we can also reasonably expect to increase the output of stone when the underlie is deep enough to open levels No. 3. The shaft is at present 40 ft. below No. 2 plat, and these levels should be fairly opened by the date of next meeting.

In reference to the state of the company's finances we would refer you to the statement of accounts and balance-sheet presented by your secretary, which has been duly signed by your auditors as correct.

The directors and auditors now retire from office, but are eligible for re-election.

On behalf of the directors.

THOMAS RAINE, Chairman.

TELEGRAPHIC ADDRESS—

QUINLAND—LONDON.

MINING MARKET.

CITY, FRIDAY EVENING.

A DECIDED REVIVAL—PRICES HIGHER, BUT NOT REPRESENTING THE ACTUAL VALUE OF MINES—SPECIAL NOTES AS TO PAHANG CORPORATION, MOUNT ZEEHAN, FLAGSTAFF, AND OTHER SHARES.

THE week, to the business close of which we have now to all intents and purposes come, will be remembered as one of surprises. On Monday morning, for example, few would have dared to predict that there would have been an almost immediate revival of prices, followed by an equally unexpected flow of business. For the most part brokers have not thought it worth while for several weeks past to appear on the Mining Bialto until Tuesday. Their habit has been to leave town on Friday night or Saturday morning, and remain at the seaside until the following Tuesday, and for all the business that has been transacted until this week they might even further have prolonged their stay. But on Monday a change came over the spirit of the dream, and the ball of mining prices began fairly to roll.

The improvement was ushered in by one in American railways. There began an inquiry for special classes of shares, followed by active dealings. Brokers no longer stood in the market place without tangible reason for being there. Orders came from all parts either to buy or to sell, and no one seemed to be able to account for the unexpected life of the market unless by the somewhat ambiguous statement that the wind bloweth whither it listeth, and with this explanation everyone was obliged to be content. With scarcely an exception, South African Gold, Land, and Diamond shares, all Copper shares, all Indian shares, and many in the Miscellaneous group, mark better prices than they did a week ago. A reference to our comparative table speaks eloquently as to the upward movement that has taken place.

But the truth of the matter is that business has been "in the air" for weeks past. We have endeavoured to point this out, and have probably done it so often that our readers have begun to be sceptical—not we trust of the honesty of our intentions, but of the practical character of our information. At the same time, far be it from us to lay undue emphasis on what has occurred this week, but we must express our conviction that it indicates a healthy state of things in regard to the closing months of

a (so far) disappointing year. We also wish to point out that it is rarely indeed a movement of this character takes place in the dullest part of the dead season, and that it may be accepted as a sure and certain sign of a degree of life in the Mining Market which some have disputed in part and many have denied *in toto*.

We know full well that the past few months have been a trying period to the holders of many mining shares, bought, in most cases, at prices much above those now quoted. These persons may be assured of our heartfelt sympathy and of our desire to see mining prices, not inflated simply that speculators may get out at a profit, but rise at least to a more accurate representation of the real value of the mines themselves. Should this be so we do not hesitate to say that in some cases shares would be quoted at double, treble, or even quadruple their present prices. Such a position might be maintained in fair debate against all comers. As it is, we are bound to confess that, although we have known periods of depression in mining, we have never experienced one that has been more trying or of more prolonged duration than the present.

An index to the state of affairs may be found in the absence of new enterprises offered to the public. "There are 300 companies waiting to come out," said one to-day who is in a good position to know, but judging from our own experience, we should say that the number is infinitely larger. Every second person you meet has a prospectus in his breastcoat pocket, which he is ready to show with his list of directors and everything arranged, only waiting for the hour to strike. When the rush comes, as come it will, the greatest caution will be needed to be exercised by the public, and they will require to act with the utmost deliberation. Some think the new burst of business will take the form of mining companies, others those for the development of electrical patents, others breweries, while many predict it will be a *melange* of the whole. But, in any case, a need for the greatest caution is obvious. It is, however, for the public to consider whether shares that they can now buy at a few shillings in existing companies are not better worth their attention than those they can only purchase at par in new and untried enterprises.

It is undeniable that there is a vast amount of money circulating in the country at this time. The railways, the banks, with the other large commercial institutions have held their meetings and are distributing their profits amongst the shareholders. Many millions sterling must in this way be waiting investment. Then also the harvest promises to be fairly good though the rains of the past week have somewhat clouded the earlier prospect. All this money is available, as we say, for investment, and of one thing we may rest assured which is this—it will not be left lying at the bank at 1 per cent. interest.

The chief feature of the mining week has been the advance in Kaffir land shares, and notably in Oceanas, consequent upon the announcement that a railway will be made to pass through a part of this property. Goldfields of South Africa, which were unduly depressed last week, have quite recovered, and there has also been an improvement in Exploring, Silati, Transvaal Gold, Land and Exploration and other descriptions in a minor degree, and *without exception*. There was also a recovery in the gold department in which all the best shares participated, including Shebas, in the future of which mine we have often expressed confidence. Diamond shares have also been better. De Beers have been largely dealt in at improved prices, and have been higher than the market called them at the close.

Telegraphic information from Kimberley states that the appeal by the Bultfontein Mine against the London and South African Exploration Co. has been decided in favour of the latter concern. The directors have had a hard struggle over this matter, and are thoroughly to be congratulated not only upon the position they originally took up, but upon the doggedness and success with which they have maintained it.

Copper shares also without exception are better, but the Australian market has been weak. A good telegram from Mosman did not advance the shares as might have been expected. It announces quartz struck in the Wyndham shaft 2 ft. thick, with visible gold. We have frequently referred to Mount Zeehan Mine in Tasmania.

as likely to make its mark in the future. A satisfactory telegram about it will be found elsewhere. The difficulties which have been encountered with the management on the spot have now been overcome, and a considerable measure of prosperity seems to be in store for the company. This will not be lessened by the rush that is now taking place to the district, and the rapid location of claims of which many persons on the spot think that Mount Zeehan Co. has the best.

Indian shares "firmed up" this afternoon on the receipt of a telegram announcing the cutting of the lode in Nundydroog at the 600 level 6 ft. wide, and assaying 3 ozs. We have repeatedly referred to the shares of this mine as being extremely cheap, and are somewhat surprised that the market did not respond more to this news than the lists show. Possibly when the telegram gets known throughout the country there will be a more decided upward movement. We must express our surprise that Goldfields shares, considering the tribute the company has levied, and promises yet to levy from other concerns, should be as low as they are. Mysore have been active, and close decidedly better, whilst Balaghats are also a shade firmer. In Ooregums there has been an active market, at one time of the week 2½ being bid for the shares. Sept. 1 is the last day on which applications for Mysore Reefs new shares can be received. The first batch of allotment letters was posted to-day.

In the Miscellaneous market there is little of importance to speak of. From a telegram received by New Russell Company it would seem that the difficult problem of dealing with its low class ores has been satisfactorily solved by the Gold Ores Reduction Co. If this turn out to be the case there will be a good future for North Carolina Mines, such as Parker, New Gold Hill and Appalachian.

In regard to Home mines, we have, unfortunately, only the same miserable tale to tell of falling prices. Nearly all the mines are down, and the outlook for the moment is far from encouraging. Wheal Grenvilles are firmer, along with East Pool and South Crofty.

From Pahang Corporation the news continues to be extremely satisfactory, and the increased attention which has been given to the shares this week by the market proves that this fact is not altogether unknown to those most interested. The output is increasing month by month, though the rate of progression is not rapid, but this point has to be borne in mind, that the monthly expenses have not been increased correspondingly. There have been rumours that the company has run short of money, but we believe them to be baseless, though it is quite on the cards that before the developments, so strongly insisted upon by the management, are fully carried out further funds may be required. The new manager has given every satisfaction to the directors, and the position of Pahang Corporation, as a whole, may roundly be taken to be better than it has ever yet been.

We publish this week the full particulars of Flagstaff ore sales—the accuracy of which may be relied upon. It is thought upon the market that in the course of a few weeks there will be again considerable activity in these shares. Emma is selling quantities of ore, but not anything like so large as one would have thought from the character of the reports that have been received.

Tesoro Golds have again been largely bought, and close at 2s. 3d. to 2s. 9d., thus once more justifying the opinion from time to time expressed concerning them. Report says that advices of an important nature may be expected in a few days, and that in view of the prospects of the mine it is therefore to be expected that quotations will continue to move upward.

The outlook for next week is decidedly good, and we expect that it will be characterised by a considerable amount of business.

KAFFIRS.

Those largely dealt in at improved prices have been Sheba, City and Suburban, Crown Reef, Jumpers, Robinson, and Wemmer. May Consolidated shares are also better, and have been bought considerably to-day. Salisbury (New) were offered last week, but during this week have received much support and close higher. There is a better market for most shares, and the majority have risen, the only exception of note being Heriot and Kleinfontein which are lower.

Business.—A rise is shown in Joe's Luck of 1s.; Pigg's Peak, 6d.; Pigg's Peak, Preference, 1½; Sheba, 2s.; City and Suburban ¼; Croesus, 1s.; Crown Reef, ½; Durban-Roodepoort, ¼; Ferreira, ¼; Geldenhuis, 1½; Henry Nourse, 1½; Jubilee, ½; Jumpers, 1½; Langlaagte, ¼; Langlaagte, Block B, 2s.; Main Reef, 2s. 6d.; May Consolidated, 3s.; Modderfontein, 1s.; Moss Rose, 1s.; Randfontein, 3d.; Robinson's, 1½; Salisbury, New, ½; Wemmer, ½; Witwatersrandt (Knight's), 1s. 6d.; and Wolhuters, 1½. The only falls are Po. has Reef, 6d.; Heriot, 1½; and Kleinfontein, ½.

DIAMONDS.

De Beers have fluctuated during the week, and at one time were dealt in at 12½. This price, however, was not maintained, there being very little to support it. They have since touched 11½, but this afternoon slightly hardened, and close 12½ middle. Ottos Kopje received some attention, and consequently are higher.

Business.—A rise is shown in North Eastern Bultfontein of 1½, and Ottos Kopje, 9d.; whilst a fall has taken place in De Beers of ½. Others remain unchanged.

AFRICAN LANDS.

Since the sudden fall last Friday in Goldfields of South Africa shares they have been sought after, and close considerably higher and have more than recovered the loss. British South Africa Chartered shares have varied but close strong. Ophirs are also better.

Oceanas have been forced up 1½ higher—Silatis sympathising. Explorings have almost gained their fall of last week.

Several others are fractionally better, including Transvaal Gold. These latter have been dealt in largely.

The market on the whole closes very steady.

Business.—A rise is shown in Bechuanaland of $\frac{1}{8}$; British South Africa Chartered, $\frac{1}{8}$; Exploring, $\frac{3}{4}$; Gold Estate (Transvaal), $\frac{1}{8}$; Goldfields of South Africa, $\frac{1}{2}$; Oceana, 20s.; Ophir, 9d.; Silati River, 1s. 6d.; South African Gold Trust, $\frac{1}{8}$; Southern Land, 1s.; Transvaal Estates, 2s.; Transvaal Gold, 6d.; Transvaal Lands, $\frac{1}{8}$; and Zoutpansberg, 6d. There is no fall to note.

AUSTRALIANS.

Dealings in this class have been fairly active, though with very little change in prices.

Australian Broken Hills have received most attention, but close lower, although higher than they have been in the course of the last few days. Of Mosmans and New Queens purchases have been made to a small extent.

Business.—A rise is shown in Day Dawn Block of 3d., Mosman 3d., Mount Morgan Extended 3d., and New Queen 3d., whilst a fall has taken place in Australian Broken Hill of 1s., and Wentworth Proprietary $\frac{3}{16}$.

INDIANS.

The feature in this class has been the support given to Mysore Gold shares, they having been bought up to $\frac{5}{8}$; although not closing so high they show a fair improvement on the week. Goldfields of Mysore have improved. Nundydroogs, after being quoted at 2, close better than last week. These should go higher ere long. Ooregum "Preference" are $\frac{1}{8}$ better, whilst the "Ordinary" shares, after improving to $\frac{2}{16}$, close steady. Several transactions have taken place in the low-priced shares, such as Indian Consolidated, Mysore West, Nine Reefs, &c., but there is no appreciable difference in price.

Business.—A rise is shown in Balaghat of 3d.; Goldfields of Mysore, 1s.; Mysore Gold, $\frac{1}{16}$; Nundydroog, 1s.; Ooregum Preference, $\frac{1}{8}$. The only fall being in Mysore West of 3d.

COPPER.

The shares in this class are fairly steady. Rio Tintos, after being put to within a fraction of 22, close firm as last quoted.

Various operations have taken place in Capes and Libiolas. Others do not call for remark.

Business.—A rise is shown in Capes of $\frac{1}{8}$; Copiapo, $\frac{1}{8}$; Libiola, $\frac{1}{8}$; Quebrada, $\frac{1}{8}$. Others remain as last quoted.

GENERAL FOREIGN.

On receipt of the good news from St. Augustine, the shares were considerably bought, and consequently are better. Amadors and Balkis have also improved. Golden Feather and Golden Gate have moved up and down, and close much about the same. Colombian Hydraulic, Callao Bis, and Gravel Gold are firm. Lisbon Berlins have been bought, and close slightly better. Pahang Corporation shares, after touching 4s. last week, rose during this week to 12s. 6d. buyers. There was a reaction to-day, and they close about 10s., which is still a substantial rise on the week. Better prices are talked of. Yankee Girls and Pahangs have been offered and close lower. They appear cheap at present quotations. Richmonds are dull.

Business.—A rise is shown in Amador of 9d.; Balkis, 6d.; St. Augustine, 9d.; and Tesoro, 3d. The falls are in American Belle of 6d.; Golden Feather, 6d.; Palmarejo, 6d.; Richmond, $\frac{1}{8}$; and Yankee Girl, $\frac{1}{8}$.

The following list shows the principal changes which have taken place:—

	Last Week.	This Week.
Amador	2/9 3/3 ...	3/6 4/
American Belle	7/6 8/6 ...	7/ 8/
Australian Broken Hill ...	$\frac{1}{8}$ $\frac{1}{16}$...	18/ 20/

LATEST FROM THE MINES.

INDIAN MINES.

INDIAN GOLD (GLASGOW).—Information from the mines:—July: Total amount crushed is 810 tons, yielding 62 ozs.

MYSOORE REEFS.—All transfers of shares in the Mysore Reefs Co., Limited, entitling the transferees to an allotment of shares in the new company, must be lodged at the company's office on or before Sept. 1 next, to which date the time for sending in applications for shares has been extended, and after which the final allotment will be made.

NUNDYDROOG.—Telegram dated Aug. 21 reads as follows:—"Cut lode in the 600-ft. level, 6 ft. wide; assaying 3 ozs."

COLONIAL MINES.

BRILLIANT ST. GEORGE.—A cablegram from Charters Towers Aug. 18, reports that in the Brilliant St. George United Mines, that day, the Brilliant reef was cut in the bottom cross-cut, and good stone is being raised therefrom.

BRITISH BROKEN HILL PROPRIETARY.—The yield for the week ending 20th inst. from the furnace at the mine was 614 tons of ore treated, including 240 tons of iron ore, yielding 104 tons of lead, containing 4,912 ozs. silver.

BROKEN HILL PROPRIETARY.—A cable states that "the yield for the week ending 20th inst. was 4,043 tons of ore treated, yielding 687 tons of lead, containing 177,892 ozs. silver."

DAY DAWN BLOCK AND WYNDHAM.—A cablegram from the general manager at Charters Towers gives the result of the crushing for the fortnight ending 15th inst. (cleaned-up one day earlier):—"625 tons crushed; yield of gold, 718 ozs.; approximate value, 2,475 $\frac{1}{2}$; fortnight's expenses, 1,150 $\frac{1}{2}$." The directors have sold, through Messrs. Johnson, Matthey and Co., Limited, the bullion obtained from the crushings of May 23 and June 6, viz., 1,357 ozs. 13 dwts., ex s.s. Tara, and which realised on sale 4,818 $\frac{1}{2}$ 12s. 5d.

DAY DAWN P.C.—A cablegram from the manager at Charters Towers gives the result of this company's crushing for the fortnight ending Aug. 15, viz.:—"1,080 tons, 1,193 ozs." (Estimated value, 4,175 $\frac{1}{2}$.)

GOLDEN GATE (AUSTRALIA).—Cablegram from Charters Towers, Aug. 17, reports:—"Crushing from Golden Gate Mine during past three weeks concluded on Saturday; 610 tons, yielding 1,417 ozs. gold; value 5,000 $\frac{1}{2}$. A dividend of 2s. 6d. per share is declared on the 24,000 shares."

HARRIETVILLE.—Telegram from the mine, Aug. 20: "Cleaned up Aug. 19, Mons Meg Mine, 810 tons 444 ozs.; Tiddledec Mine, 195 tons 34 ozs.; amalgamating pans, 53 tons 94 ozs."

MOSMAN.—Cablegram from the general manager at Charters Towers:—"Have struck quartz 2 ft. thick in Wyndham shaft with specks of visible free gold."

MOUNT LEYSHON.—A cablegram, dated 17th inst., from the manager at Charters Towers gives the fortnightly crushing:—"1,080 tons crushed, 340 ozs. gold; 30 stamps mill ran 288 hours."

MOUNT ZEEHAN.—Telegram, dated Hobart, Aug. 14:—"Argent, No. 4 lode, 2 ft. 6 ins., solid galena." This refers to the lode on the Argent section lately announced as having been cut.

NEW QUEEN.—Cablegram from Charters Towers, Aug. 19: "We have shipped 920 ozs., per Jumna."

SUNBURST.—Cablegram from Charters Towers, Aug. 17, reports: "Sunburst Gold Mining Co. had the usual fortnightly clean up on

Saturday; 250 tons, yielding 1,139 ozs. gold; value, 4,000Z. The usual dividend of 1s. per share on 48,000 shares is declared."

WENTWORTH GOLDFIELDS PROPRIETARY.—Cablegram from Mr. H. H. Irwin, the company's manager:—"Progress for the week: Total sinking, 100 ft.; driving, 24 ft. The developments show further improvement. In the Phoenix shaft the Happy-go-Lucky vein is giving 3 ozs. to the ton; good progress is being made with repairs to the Reform shaft; have cross-cut 10 ft. towards the footwall of the Chapel Hill quartz reef, the quartz being very white."

FOREIGN MINES.

ANTIOQUIA.—The directors have received advices for June, viz.:—Produce, 610Z.; cost, 472Z. 1s. 3d.; estimated profit, 137Z. 18s. 9d. Spent on capital account, 38Z. 7s. 8d.

CORTEZ.—A cablegram from the superintendent at the mines shows the results for the month of July:—"Production, 31,432 ozs.; expenses, \$13,580; tons crushed, 575; development expenditure, &c., \$9,507.

ELKHORN.—Information from the mine:—"Bullion produced for week ending Aug. 15, \$7,615.

EMMA.—The following cablegram has been received from the manager at Salt Lake City:—"19 tons of concentrates sold at \$54 per ton equal to \$1,026; 14 tons of concentrates sold at \$77 per ton equal to \$1,078; 3 tons of ore sold at \$84 per ton equal to \$252; total, \$2,356. Machinery working smoothly and well."

GOLDEN FEATHER CHANNEL.—Cablegram from Col. Frank McLaughlin, the general manager at Oroville:—"Foot dam finished. Will drain claim this week."

GUIANA.—Cable for the fortnight:—"Gravel treated, 750 tons; gold produced, 13,240f."

NEW PIERREFITTE.—The company has sold 260 tons blende to J. F. Kimmel, Esq., at 5Z. 3s. 6d. per ton, f.o.b. Bordeaux.

NEW RUSSELL.—Cablegram:—"Confirming my telegram of Aug. 10. The principal part of the gold is in pyrites, which the Gold Ores Reduction Company's process can treat successfully.—BAILEY."

PACIFIC.—The following information has been received by cable from the company's manager at the Santa Rosa Emerald Mines in Colombia:—"Everything going on well; prospects excellent; 75 men at work; the vein improves as it goes down; stones improving in colour; work is being pushed ahead."

PITTSBURGH CONSOLIDATED.—Cable, Aug. 19: "Bullion shipped, \$3,000; there is a great scarcity of water; two mills working at present."

ZARUMA.—The produces for May and June have been sold and realised, 1,093Z. 19s. 3d. nett.

HOME MINES.

PENHALLS.—This mine, writes the *West Briton* correspondent, is likely to be worked. Mr. A. Strauss has offered to assist to find capital, and he is expected at St. Agnes shortly, when, no doubt, arrangements will be made to carry out the undertaking. Penhalls is a very easy mine to work, as the water charges are light, and the mine is shallow. It is considered by the practical miners in the parish to be one of the best pieces of tin ground in the district.

AND ALL PARTICULARS OF FOREIGN AND HOME MINES

SEE PAGES 282 AND 283.

AFRICA.

LATEST FROM THE GOLD AND DIAMOND MINES.

SHEBA.—A cablegram from the general manager states:—"Level No. 6: Good ore is still being found."

GRASKOP MILL AND MINING.—The consignment of gold from the June crushing of 241 ozs. has been sold through Messrs. Johnson, Matthey and Co., Limited, for 922Z. 12s. 11d., or 3Z. 16s. 7d. per oz.

NORTH EASTERN BULTFOUNTAIN.—Telegraphic advice to hand announces for last week's work 9,400 loads washed; yield, 1,050 carats. Increase of blue ground on floors, 4,200 loads. A test washing of 40 loads, screenings from the 140-ft. level, has given 21 carats.

EDWIN BRAY.—Report for week ending July 18.—Winze: Measurement at date, 46 ft.; work done for week, 6 ft. Work is now pushed in the winze by day and night shifts. At 41 ft. down the drilling assayed 2 ozs. 5 dwts. 17 grs. (fire assay). At 46 ft. we have met with a rich vein panning remarkably well. Reserve of quartz: I have begun to send to the mill some of the quartz extracted last year from our No. 1 quarry. This will enable us to push the sinking of the winze, and at the same time give us a little dumping ground at the mine. Ropeway: The ropeway has delivered to the mill 218 tons of quartz during the week. Mill: The battery is working very well, and with 25 stamps running crushed during the week 230 tons.

CERRO DE PASCO.—The following advices have been received from Mr. Howse, the manager, dated Barberton, July 20: The drive south on the lately discovered reef in our main cross-cut is looking well, but the quartz is rather mixed with schist, and the gold occurs somewhat irregularly. The following assays have been made by the Government Analyst here, to supplement those taken by myself, viz.: Quartz from reef 10 ft. wide, 7 dwts. 20.16 grs. per ton, and 16 dwts. 8 grs. per ton; quartz from reef 2 ft. wide, 11 dwts. 2.56 grs. per ton, and 13 dwts. 1.60 grs. per ton; quartz from reef 4 ft. wide, 4 dwts. 13.26 grs. per ton. Average of quartz, 16 ft. wide = 10 dwts. 5 grs. per

ton, and this average is fairly borne out by the results of frequent pannings taken daily from all parts of the reef.

TRANSVAAL GOLD EXPLORATION AND LAND.—The general manager writes July 20:—Mining—Ophir hill—Theta: Ore extracted, 160 tons; assay value, 1 oz. 17 dwts. per ton. This ore was all obtained from the low-grade body cut through in drive 1,069a, and not from Theta vein proper. Brown's hill—Nu vein: Ore extracted at 1,209, 35 tons; assay value, 3 ozs. 18 dwts. per ton, and at Nos. 1,211 and 1,220, 30 tons; assay value, 1 oz. 18 dwts. per ton. Some rich ore was also broken out at 1,209, which had not been assayed. Prospecting: Extensive work was done at the places referred to in last report. At Glinister's 10 tons of ore had been obtained; assay value, 1 oz. 4 dwts. per ton. Mill: All machinery worked satisfactorily throughout the week. Transport of ore had been well maintained for the time of the year.

CITY AND SUBURBAN.—The total measurement of driving, sinking, and rising executed during the month was 422 ft., of which 194 ft. 6 ins. was on south reef, 220 ft. on main reef leader, and 7 ft. 6 ins. on cross-cuts. The ore mined was 2,739 tons, being 669 tons from south reef, and 2,070 tons from main reef leader and main reef. Of the total, 448 tons came from drives and rises, and 2,291 tons from stopes. The ore crushed during the month, with 30 stamps running 26 days 14 hrs. 34 mins., was 2,487 tons, of which 441 tons came from south reef, and 2,046 tons from main reef leader and main reef. The gold produced from the above, including the clean-up of old battery, was 952 ozs. 5.8 dwts. smelted gold. The average yield per ton equals 7.66 dwts.; the average fire assay value of the mill tailings equals 5.72 dwts., showing the value of the ore to be 13.38 dwts., and the percentage of extraction by the mill 57.25. The average quantity crushed per stamp head per day equals 3.11 tons.

PIGG'S PEAK ESTATE.—Mine report for week ending July 18.—Devil's reef: The 200-ft. level, South end: Drove for the week, 35 ft.; total, 70 ft.; timbered up to face and rails laid; ground getting a little harder. North end: Drove for the week, 50 ft.; total, 78 ft.; timbered and rails laid up to face. Drive on top of the main shoot: Drove for the week, 6 ft.; total, 82 ft.; cut the hanging-wall of the lode; suspended work for the present. Prospecting drives: Drove for the week, 20 ft.; 20 ft. of cuttings on top of the main shoot; six boys cutting timber; nine boys getting out foundation for battery; remaining boys making roads and unloading machinery. McGready's works: Shaft: Sunk for the week, 3 ft. 6 ins.; total, 39 ft.; lode very small, and only shows a few colours in panning 100 ft. of cuttings at a depth of 3 ft. Durnin's new reef: Cutting 54 ft. long by 7 ft. deep by 8 ft. wide. England's reef: Main tunnel: Drove for the week, 4 ft.; 50 ft. of cuttings in different places. Peak: Pigg's drive: Drove for the week, 6 ft.; total, 27 ft.; cross-cut south.

HENDERSON AND FORBES.—Report for fortnight ending July 15:—North-west portion of concession—Road shaft: Fair progress is being made in the sinking here, and in the bottom on side nearest the reef there is a little water coming in. Northern range—Cross-cut at foot of Krantz: Here there is no change to mention in the nature of the ground beyond its being a little dryer. Kennedy's shaft: In the drive west from bottom of shaft we have cut through a few stringers of quartz, but they carry no gold. Godfrey's shaft: Here we are still driving on a good body of quartz, but can get no gold in panning. New shaft: We are now on what appears to be the back of hanging-wall to reef mentioned in last report. Williams' cross-cut foot of northern range: Steady driving has been carried on here during the fortnight with no change in the nature of the stone. Godfrey's drive: Here we have come on a few float stones of quartz, carrying no gold; this drive is now being timbered. West camp—Diamond drill: Here to test dip of No. 2 reef, and at this depth must have come on a fissure for we found the water was getting away as quickly as we pumped it in, thus preventing our working the drill. The whole depth of the hole was through soil giving no core. In washing the dirt sticking to the pipes I got a small prospect of gold. We are now putting down another hole about 50 ft. from this.—G. W. HALL.

THE ORIENTAL AND SHEBA VALLEY UNITED GOLD MINING CO., LIMITED.

A DETERMINED EFFORT TO BE MADE TO BRING INTO BEARING A VALUABLE PROPERTY.

In consequence of the unsatisfactory results of work done for some time past, one of the directors was deputed to visit the property, and he appointed a mining engineer to thoroughly investigate the causes of the very disappointing returns from the mine. The engineer has reported that we, undoubtedly, have a valuable property, but not sufficiently developed at present to keep the 60 stamps supplied with good payable rock; it was therefore decided to shut down the mills and proceed to extensive development, as advised, for which purpose, and for paying off the present liabilities, further capital is required. In the event of this resolution being carried, the directors propose, in order to afford the shareholders an opportunity to continue their interest in the mine, that every shareholder shall be allotted at least one preference share in respect of every four shares held, provided application be made before a date to be hereafter named. The 60-stamp mill is in good working order, and the repairs to the 50 stamps are nearly completed, so that as soon as work at the mine is far enough advanced crushing will be resumed with 110 stamps. The tramway, ropeway, and water race are all in first-class order, and work very satisfactorily. Since last meeting 12 claims have been added to the property immediately to the north of the Nil Desperandum block, which claims, it is thought, will prove valuable upon development. In order to obtain an official quotation for the shares of the company it is necessary to alter the articles in accordance with resolutions No. 2 and 3, which will be submitted to the meeting.—E. PHILLIPS, Secretary.

REPORT OF MEETING.

THE VIRGINIA (TRANSVAAL) GOLD MINING AND DEVELOPING CO., LIMITED.

RE-CONSTRUCTION RESOLUTIONS UNANIMOUSLY CONFIRMED.

AN extraordinary general meeting of the above-named company was held at the Offices, 26, Budge Row, Cannon Street, E.C., on Monday, Aug 17, in order that the subjoined resolutions, which were passed at the extraordinary general meeting of the company, held on July 29, at the Cannon Street Hotel, might be submitted for confirmation as special resolutions, that is to say:—

1. "That it is desirable to re-construct the Virginia (Transvaal) Gold Mining and Developing Co., Limited, and that with a view thereto the company be wound-up voluntarily, and that Richard Lawrence Spicer, of 26, Budge Row, London, E.C., the secretary of the old company, be and he is hereby appointed liquidator for the purposes of such winding-up." 2. "That the said liquidator be and he is hereby authorised to consent to the registration of a new company, to be named the Virginia (Transvaal) Gold Mining and Developing Co., Limited, with a memorandum and articles of association, which have already been prepared with the privity and approval of the directors." 3. "That the draft agreement submitted to this meeting, and expressed to be made between this company and its liquidator of the one part, and the Virginia (Transvaal) Gold Mining and Developing Co., of the other part, be and the same is hereby approved, and that the said liquidator be and he is hereby authorised, pursuant to section 161 of the Companies' Act of 1862, to enter into an agreement with such new company (when incorporated) in the terms of the said draft, and to carry the same into effect."

Mr. Alfred Jones

presided.

Mr. R. LAWRENCE SPICER (secretary) read the notice calling the meeting.

The CHAIRMAN moved the confirmation of the resolutions. He pointed out that the directors had received proxies for 8,136 shares, so that they had complied with the articles of association, and he had to announce that the circular and forms of applications for shares in the new company would be posted to each of the shareholders to-morrow evening. They would also send over to the Cape a copy of the notice to be posted up, so that those who were shareholders over there might avail themselves of the opportunity of taking shares if they so wished. They would have the option until Oct. 1, but in England the option would only be for 21 days after the formation of the new company, which would take place to-morrow. The 2s. 6d. per share would be called up in England by two calls of 1s. each and one of 6d., spread over a period of two months from the date of the formation of the new company; but in the Transvaal the whole 2s. 6d. would be called up at once. The liquidator would have the power to admit such warrant-holders within a reasonable time who had made application to him. Their latest advices from the property were very encouraging, and it was believed that the Von Brandis property would be the making of the district.

The resolutions were seconded, and unanimously carried, and the proceeding closed with a vote of thanks to the chairman.

METALS.

THE Metal Market has been quiet during the current week.

Bank rate remains $2\frac{1}{2}$ per cent. Bar silver closes $45\frac{3}{4}$ d. per oz.

COPPER has been quiet. G.M.B. warrants improved from 52 $\frac{1}{2}$ 10s. to 53 $\frac{1}{2}$ 10s. cash, and 53 $\frac{1}{2}$ 10s. three months, declining again to 52 $\frac{1}{2}$ 7s. 6d. cash, and 52 $\frac{1}{2}$ 17s. 6d. three months. To-day prices are 52 $\frac{1}{2}$ 6s. 3d. cash, and 52 $\frac{1}{2}$ 16s. 3d. three months. The arrivals of copper in Liverpool and Swansea during the first 14 days of this month were 4,208 tons; deliveries, 3,483 tons. Increase in stock of 725 tons. The visible supply on 15th inst. was given as 57,911 tons against 57,782 tons on 1st inst. We quote English tough, 55 $\frac{1}{2}$ 10s. to 56 $\frac{1}{2}$ 10s.; best selected, 57 $\frac{1}{2}$ to 58 $\frac{1}{2}$; strong sheets, 65 $\frac{1}{2}$ to 66 $\frac{1}{2}$; India sheets, 60 $\frac{1}{2}$ 10s. to 61 $\frac{1}{2}$; yellow metal, 5 $\frac{1}{2}$ d. to 6d.; ore, &c., 9s. 9d. to 10s. 9d. per unit.

TIN has improved in value. Straits sold from 91 $\frac{1}{2}$ 5s. to 92 $\frac{1}{2}$ 2s. 6d. cash, and 92 $\frac{1}{2}$ 2s. 6d. three months, easing yesterday to 91 $\frac{1}{2}$ 15s. To-day prices are easier, 91 $\frac{1}{2}$ 10s. in all positions. Forward tin is much about the same price as spot. Australian still scarce, and commands about 35s. to 40s. premium over Straits. Last quotation, 93 $\frac{1}{2}$ 10s. for spot parcels. English ingots, 94 $\frac{1}{2}$ 10s. The Dutch market is quiet. Banca and Billiton quoted f55.

TIN PLATES are quiet at about 13s. 3d. to 13s. 6d. for ordinary coke Liverpool.

SPELTER weak. Sellers of ordinary brands at 23 $\frac{1}{2}$ 10s. ex ship here.

LEAD has been dull and easier. We quote soft Spanish sellers at 12 $\frac{1}{2}$ 2s. 6d.; soft English, 12 $\frac{1}{2}$ 5s. to 12 $\frac{1}{2}$ 10s.; L. B., 12 $\frac{1}{2}$ 15s.; sheets, 13 $\frac{1}{2}$ 5s. export, and 13 $\frac{1}{2}$ 10s. home trade.

QUICKSILVER dull. Rothschild's price, 7 $\frac{1}{2}$ 10s.; seconds, 7 $\frac{1}{2}$ 9s.

ANTIMONY dull. Hallett quotes 43 $\frac{1}{2}$ for shipment to America; ordinary brands and delivery, 41 $\frac{1}{2}$ to 42 $\frac{1}{2}$.

DIVIDENDS DECLARED AND ANNOUNCED FOR WEEK ENDING AUG. 22.

Appleton, French, and Sraffon	...	10 per cent.
Aberdeen Heritable Securities	...	10 per cent.
Birmingham Midland Hotel	...	10 per cent.
B. and E. McHugh, Ordinary	...	8 per cent.
B. and E. McHugh, Preference	...	6 per cent.
Campbell Gas Engine	...	10 per cent.
Dandicolle and Gaudin	...	7 per cent.
Furness Railway	...	$2\frac{1}{2}$ per cent.

Great Southern and Western Railway	...	5 per cent.
Isle of Wight Railway	...	4 per cent.
Leipzig Trams	...	3 per cent.
Leeds Trams	...	5 per cent.
Leamington and Warwick Trams	...	3 per cent.
North Staffs Trams	...	5 per cent.
North Sea Steam Shipping	...	$2\frac{1}{2}$ per cent.
P. Davis and Son	...	10 per cent.
Ross and Monmouth Railway	...	12s. per share.
Robert Owtram and Co.	...	$7\frac{1}{2}$ per cent.
Severn and Wye and Severn Bridge Railway	...	4 per cent.
Sheffield Rolling Mills	...	10s. per share.
Samuel Fox and Co.	...	15 per cent.
Vickers, Sons and Co.	...	$2\frac{1}{2}$ per cent.
Woking Water and Gas	...	$3\frac{1}{2}$ per cent.

BRITISH MINING INTELLIGENCE.

DEVON GREAT CONSOLS (Aug. 20).—Watson's engine shaft: In the 172-fm. level west the lode is 2 ft. wide, yielding a little copper and mundic ores. In the 160-fm. level east the lode is 4 ft. wide, and will yield 3 tons of copper and mundic ores per fm. In the 160-fm. level west the lode is 3 ft. wide, producing saving work of copper and mundic ores. The stopes throughout the mines continue to turn out good quantities of arsenical mundic.—W. CLEMO.

GAWTON (Aug. 20).—The stope in the bottom of the 105-fm. level east is yielding 10 tons of arsenical mundic per fm. Stope in the back of this level is a little improved, and now yielding 10 tons of mundic per fm. The stope in the bottom of the 95-fm. level east is also improved, and yielding 14 tons of arsenical mundic per fm. Stope in the back of this level is yielding 10 tons of mundic per fm. The stope in the back of the 95 west of cross-cut is looking a little better, and yielding full 14 tons of mundic per fm., mixed with good rock of yellow copper ore.—G. ROWE.

HEXWORTHY.—Mine agent's report for four weeks ending Aug. 15:—Low's adit level has been extended 3 fms. 5 ft. 6 ins. by four and six men. In our last monthly report we said the lode was split and rather disordered. Since that time we have had a good improvement. In the last 3 fms. we have driven through a good paying lode, which is about 20 ins. wide, the level now being 26 fms. 2 ft. south of Low's engine shaft. Low's engine shaft: In the bottom ends we have been driving and stoping; the lode is about 1 ft. 6 ins. wide, and in the south end is very rich for tin. Taylor's shaft: No improvement has taken place, but we hope, by our next report, to have something better to report on. Our stuff is looking very good at the stamps.

LEADHILLS (Aug. 17).—Brown's vein: The 145-fm. level north of Jeffrey's shaft shows a vein above 4 ft. wide, mostly spar of good character, mixed with ore worth 5 cwt. per fm. The stope above the 145 north of Jeffrey's shaft is worth 15 cwt. of ore per fm. The stope above the 145 south of Wilson's shaft is worth 50 cwt. of ore per fm. The stope above the 145 north of Wilson's shaft is worth 30 cwt. of ore per fm. The three stopes above the 130 north of Jeffrey's shaft are worth 25, 15 and 25 cwt. of ore per fm. The stope above the 130 south of Wilson's shaft is worth 35 cwt. of ore per fm. The 115-fm. level north of Jeffrey's shaft is in a nice looking vein, 8 ft. wide, mainly spar with ore, worth 35 cwt. per fm. The stope above the 115 north of Jeffrey's shaft is worth 25 cwt. of ore per fm. The 100-fm. level north of Jeffrey's shaft keeps in a vein above 4 ft. wide, charged with kindly spar and ore worth 10 cwt. per fm. Cleaning out the stope above the 100 south of Wilson's shaft. The 85-fm. level north of Jeffrey's shaft continues in an improved vein above 4 ft. wide, showing a fine rib of spar, but yet without ore; the feeder of water is still very heavy, which is a good indication, and the pumps in the bottom have nearly got the better of it. The 70-fm. level south of Wilson's shaft is in a vein $3\frac{1}{2}$ ft. wide, well mixed with kindly spar, but without ore. The two stopes above the 35 south of Flat Rod shaft are worth 50 and 35 cwt. of ore per fm. respectively. Sarrowcole vein: Gripp's adit north of George's Roust vein is in a vein $3\frac{1}{2}$ ft. wide, of spar of nice appearance, but only one spot of ore to be seen.—T. NEWBIGGING.

SOUTH CONDURROW (Aug. 19).—We have secured the fall of ground in the 50-fm. level east of King's shaft, and the tributaries are now busily engaged tramming their tinstone. The stopes in the back of the 40 east of engine shaft are much the same as when last reported on. We are sinking Marshall's shaft below the 138 for skip pit and trip plat. The ground is favourable for driving in the 138 north on the cross-course. We are stoping west of the winze on the flat lode in the bottom of the 123. The lode west is worth 11 $\frac{1}{2}$ per fm.; east of the winze it is worth 15 $\frac{1}{2}$ per fm. The stope in the back of the 123 east of the cross-course is worth 12 $\frac{1}{2}$ per fm.—W. RICH, W. THOMAS.

SOUTH DARREN (Aug. 20).—The shaft is 65 ft. under the 142-fm. level, having been sunk 3 ft. this week. No lode has been broken down since last reported. The winze in the 130 west is worth 17 cwt. of silver-lead ore per fm. The tramroad has been completed over the stope in 142 west, and stoping can be commenced when the men finish tramming out the stuff from the old stope. There is enough stuff to last two weeks more, and it is now richer than it was. On Saturday next we intend to sample 15 tons of silver-lead ore.—J. MITCHELL.

FOREIGN MINING INTELLIGENCE.

ANDALUSIAN (Aug. 10).—Saturno Mine: The 4th level east carries a little ore now, and the sides that had squeezed up are opening out. The 4th level west is worth $\frac{1}{2}$ ton. The 3rd level east is also worth $\frac{1}{2}$ ton, with a wide, kindly-looking lode. The rise from our 4th level east to our 3rd has holed, and gives us good ventilation in these two levels east of shaft. We have now told the taker of both ends to work with three cores of men in both these levels so as to push them on and discover new ground. I feel very glad at seeing our 3rd level in this direction discovering paying ground; it is of the utmost importance, because this extends the paying part of the mine, where we have plenty of ground. The stope nearest our 4th end west carries about $\frac{1}{2}$ ton; the one in same level further east is worth 1 ton. The stope above our 3rd level east of shaft is worth from $\frac{1}{2}$ to $\frac{3}{4}$ ton.—HASELDEN.

AUSTRALIAN BROKEN HILL CONSOLS.—The mining manager reports by mail for the fortnight ending July 9:—Engine shaft, 280 level west, rise on rich vein: In rising northward we holed with the 180 level, passing through in the last 10 ft. a nice vein of ironstone, carrying chlorides and some sulphide of silver, which we are now proceeding to open upon. The course of this vein is due east. Incline shaft in rich shoot sunk 12½ ft.; total, 106½ ft. The intrusion, mentioned in last report, has continued the whole fortnight, added to which we struck a large volume of water on the west side of the shaft, which has impeded progress very much. This water has now been got under, and there are signs that the vein is getting stronger and more oxidised. Rise north-west from incline risen 13½ ft.; total, 22½ ft. Completed connection with winze. Block 95: Shaft on underlay of lode sunk 4½ ft.; total, 42½ ft.; water increased to such an extent as to stop further sinking until steam machinery is provided. The sudden and great inflow of water coming from the Proprietary side of the shaft proved that an important change was near at hand. Block 97: North shaft sunk 22 ft.; total, 153 ft.; lode improving.

BRATSBURG.—Report for week ending Aug. 8:—Hoffnung Mine: No. 2 adit level maintains its value of 1 ton per fm.; No. 1 rise in the back, 1 ton per fm.; and No. 2 rise, ½ ton per fm. No. 3 adit level is yielding about ½ ton per fm., whilst the rise has improved, now worth 1 ton per fm. No. 4 level is producing about ½ ton per fm.; and at Murchison's trial level we are still meeting with a good lode, value 1 ton per fm. Johannes Mine: The western level on Howard lode continues to yield about ½ ton per fm., and the eastern level ¾ ton per fm. The rise continues to open up highly satisfactorily; still worth 1 ton per fm. Surface work and remarks: Dressing work is progressing with regularity and despatch, and I have pleasure in reporting that the first ore barge went through the Nlefos Strengen Canal on the 7th inst., and we now hope to be able to regularly forward our ores this way for the remaining season, which will be a great saving in cost and time. The Edward Arthur, according to advice from Skien, doubtless was fully loaded on the 8th inst.—J. D. HOLMAN.

BRATSBURG SMELTING AND REFINING.—Report for week ending Aug. 8:—You will be pleased to hear that the smelting was conducted during the past week to the entire satisfaction of all concerned, and 204 perfect anodes were produced, which have been delivered to the electro deposition department, with the exception of a few yet remaining to be driven up. The tanks here are more than half full now, and if we continue as we are doing will be quite full in the course of a very short time. Electro deposition is being conducted as quickly as possible on the copper already under operation. As last week's work on the converters was only conducted by day, and the furnace kept slowly going by night, the regulus produced being put through the following day, thus securing good full converter charges, and no waiting. We have got rid of some of the flue dust by mixing same with the converter slag as it is poured off in the operation of slagging the converter, but whether we shall get rid of each day's dust in this manner we are not as yet in a position to say. It, however, appears to go very well, and would be a great saving of both labour and time if we could manage to treat it all in this manner. The following shows the week's operation:—3rd inst., re-lined water-jacket and forehearth; 4th inst., produced 31 anodes; 5th inst., produced 35 anodes; 6th inst., produced 42 anodes; 7th inst., produced 54 anodes; 8th inst., produced 42 anodes; total, 204 anodes. On the 6th, 7th and 8th insts. a proportion of ore from Næsmark was included in the charge. The charge for the water-jacket was as follows:—60 kils. coke, 150 kils. converter slag, 100 kils. raw ore, 150 kils. roasted ore, 100 kils. regulus, 50 kils. limestone—daily number of charges averaged 22. By night the charge was varied somewhat, as only raw ore was used, and 18 charges on an average were made. The converter lining difficulty is apparently overcome, as only one converter per day has been used, and no complaint has been made as to the quality of the lining.—T. F. SMITH.

BRITISH BROKEN HILL PROPRIETARY.—Mining manager's report for week ending July 8.—No. 1 shaft, 50-ft. level: The south drive has been extended 26 ft. during the past week, making its total length now 234 ft. Connection has been made between it and the bottom of the quarry by putting down a small shaft for a distance of about 40 ft. This gives good ventilation in the drive now, and will be used also as a shoot from the quarry. The north drive has been lengthened 15 ft., making its total 97 ft. We have begun to stoep out iron ore in this drive. Second level: The work on the new section and the stopes in the western body is going on fairly well, but without any alteration of importance. No. 2 shaft: All the stopes in this part of the mine are doing well. A winze has been put down in the north stopes (No. 2 cross-cut) to test the depth of carbonate ore below the sill, and has reached 14 ft. without bottoming. No. 5 shaft: 5 ft. has been added to its depth without change in the country. Surface: No. 2 tunnel has had 5 ft. added to its length, making its total 59 ft., at which point it has been stopped. No. 3 is being continued, and has passed through several small seams or bands of carbonate ore, probably leaders from the main lode. Its length is now 87 ft.; 19 ft. having been added since last report.—J. HOWELL.

CAPE COPPER.—June report.—Ookiep: The ground in the 117-fm. level east of 72 winze is producing occasional stones of copper ore. The rock in the 117-fm. level north of 72 winze contains spots of copper ore. The 117-fm. level south towards the new shaft is still in massive quartz. The ground in bottom of 115-fm. level north-west of main-east level having become unproductive, stoping has been suspended, and the men are put to resume the driving of No. 6 level northwards at this depth, back about 11 fms. from this point (extreme forebreast). We have started a level eastward to prove the productive ground passed through at this place. The 92-fm. cross-cut north of east level still presents spots of copper ore. The stopes in the 92 and upper levels continue to yield their usual quantities of copper ore. Trial Mines—Springbok: After having driven very extensively in various directions at the 59-fm. level without revealing anything of great value, and the character of the rock at the extreme points not looking very favourable for the production of copper ore, we have suspended all operations at this station. Kotzees Mine: The ground in bottom of shaft sinking below the 25-fm. level is yielding stones of copper ore. In the course of a few days more we shall be deep enough for a 40-fm. level, and at this depth we purpose driving out east and west to prove the productive ground passed through in sinking. Nababeep south: The 59-fm. level south-east of north-east level is producing fully 1 ton of copper ore per fm. The 59 fm. cross-cut north of south-east level is yielding saving work,

and the ground in the 59-fm. level north-west is spotted with copper ore throughout. Ookiep east: The ground in bottom of winze sinking below 66-fm. level is worth about 3 tons of copper ore per fm. The stopes in the back of the 66 fm. and 58-fm. levels continue to produce large quantities of mineral for the smelting works. Speetakel: The rock in the 46-fm. level south-east of incline having become hard and spare for progress and unfavourable for copper ore, it has been suspended. The stoep in the 36-fm. level south-east of Kelly's shaft is yielding about 2 tons of copper ore per fm.—Capt. HENWOOD.

—Returns for June: Ookiep, 1,760 tons of 24 per cent. Arrival at Port Nolloth: The Foxhound. Bills of lading received: 1,250 tons of ore per Gance, and 1,050 tons per Abercarne.

COLORADO.—The manager, writing July 31, reports that there are 20 different points at work in the mines owned by the company. He calls attention to the improvement in the various workings since the last report, and particularly to the 8th level now being driven west from the main shaft on the Terrible. This is now in 521 ft. from the shaft, and referring to it he says:—The vein of ore in the 8th level of the Terrible is now forming on the footwall of the lode, and has every appearance of being one of the old reliable Terrible ore bodies. The mineral vein is very firm on the footwall, and from present indications I hope to soon realise all that we have expected from this western ground. The Rubado drift on the Coin lode has a decided improvement in the last 6 ft. drifted. Ore assays 147 ozs. silver per ton. The Babcock and Fonia stopes in the Brown Mine have both considerably improved since last report, the mineral vein in the former being 3 ins. wide, and in the latter 4 ins. Work has been resumed in the old Rockwell stoep on the Brown adit level. Four men are drifting and stoping, and it is hoped that this will develop ore of equal or even better quality than in the Coughlin stoep in the level above. The West Terrible drift has been temporarily suspended, but owing to the improvement in the 8th level west, the manager is making arrangements for its resumption. Returns of ore sold will be reported by next mail.

COLOMBIAN HYDRAULIC (July 12).—The following are the details of the operations during the month of June:—Mine operations: Since the last clean-up we have been, and are still, washing at the same spot south of the centre of the channel. At the very centre the gravel has now become so hard that our present water pressure makes very little impression on it. The clean-up will be made probably the first week in Aug., and after that I think it will be necessary to make a run at Clarke's bank while putting in sluices at the head.—A. E. OAKES.

CORTEZ (Aug. 1).—Report from superintendent at the mines.—Work at the mines for the week ending this date has been as follows:—Cross-cut from No. 1 east advanced 2 ft. No. 2 tunnel west, stoped 5 tons of ore; No. 3 tunnel west, stoped 6 tons of ore; north-east raise, stoped 28 tons of ore; north-west raise, stoped 140 tons of ore; run into ore-house, 175 tons of ore; trammed to mill, 185 tons of ore; worked at the mill, 149 tons of ore. Average assay for the week, 65.55 ozs. silver per ton. On July 28 shipped 12 bars bullion, containing, as per our assay, 13,950.55 ozs. fine silver. The assay of the gold not yet made.

DAY DAWN P.C.—Report for the fortnight ending July 4:—The output of quartz is 1,047 trucks. Sent to the Excelsior mill 1,074 tons. No. 13 level has been extended a further distance of 17 ft., making a total distance of 56 ft. from the shaft: the formation is 10 ft. wide, carrying 2 ft. of stone of fair quality. No. 12 level has been extended a further distance of 15 ft., making a total distance of 373 ft. from the shaft. The reef in this level has widened out to 10 ft., which is highly mineralised, and should crush well. The leading stoep over this level is carrying 4 ft. of stone, of good quality. In the Nos. 2 and 3 stopes we have 6 ft. of stone, of good quality. In the No. 1 stoep nothing has been done this fortnight. In the No. 1 stoep going west from the No. 2 winze there are 6 ft. of stone, of fair quality. No. 11 level hanging-wall drive has been extended a further distance of 10 ft., making a total distance of 100 ft. This level is carrying about 2 ft. of stone, of medium quality. I have taken the men out of this level and put them in the leading stoep over the back of the level, which is carrying 2 ft. of stone, of fair quality. The leading stoep over the footwall drive is carrying 2 ft. of fair quality stone. In the No. 6 stoep we have 5 ft. of stone, in the Nos. 4 and 5 stopes 4 ft. of stone, and in the No. 3 stoep 6 ft. of stone; in the Nos. 1 and 2 stopes the reef will average 4 ft., all of which is good quality stone. No. 5 winze on this level has been sunk a further depth of 13 ft., making a total depth of 41 ft. This winze is carrying some very good stone, about 2 ft. thick. No. 10 level: The block of stone over the footwall drive has been all beaten up to the No. 4 winze. I have taken the men out of this stoep, and put them in a stoep over the hanging-wall drive, which is carrying 1 ft. 6 ins. of fair quality stone. The stoep going east from the hanging-wall winze is carrying 1 ft. of stone of good quality. The 240-ft. level going east has been extended a further distance of 10 ft., making a total distance of 96 ft. from the shaft. No further change has taken place since last report. The number of trucks of quartz hauled from each level is as follows:—No. 13 level, 13 trucks; No. 12 level, 337 trucks; Nos. 10 and 11 levels, 527 trucks; No. 2 shaft: Stopes under No. 5 west level, 70 trucks; stopes over No. 5 west level, 100 trucks; total, 1,047. No. 2 underlie shaft: No. 5 level east has been extended a further distance of 17 ft., making a total distance of 430 ft. from the shaft. We are still driving through a very hard granite formation, carrying a well-defined footwall, but no hanging-walls. No. 5 level west: The stopes under this level are carrying about 1 ft. 6 ins. of stone, of medium quality. In the stopes over the back of this level the stone is getting very small. In the No. 1 stoep under the No. 1 winze we have about 6 ins. of stone; and in the No. 2 stoep under the No. 2 winze we have 1 ft. of stone, of medium quality. No. 4 west level has been extended a further distance of 20 ft., making a total distance of 429 ft. from the shaft. We are driving through a very soft diorite formation, which requires close timbering, but carrying no stone. No. 3 Straight shaft: The work in connection with the brace and poppet legs is being proceeded with as fast as possible. I have started to take the water out of the shaft with a steam pump, which has been lowered to a depth of 59 ft. from the surface. Lease No. 1,280: The eastern drive has been extended a further distance of 6 ft., making a total distance of 184 ft. from the shaft. There is no change to report here. A good deal of our time has been taken up this fortnight in getting the water out and making the underlie ship-

shape, fixing skids, ladders, &c. The water has been lowered 50 ft., and had this last week not been a very broken one it would have been lowered considerably more. The next fortnight should see us pretty near the bottom of the shaft if all goes well.—T. LESTER.

EAST BROKEN HILL CONSOLS.—The mining manager reports by mail for the fortnight ending July 9:—Main engine shaft: Sunk 8 ft.; total, 38 ft. Rails laid, and temporary brace erected. Tenders now coming in for sinking 100 ft. Surface work: Boiler bedded, and building nearly completed; foundations for engine well forward. South engine shaft: Sunk 5 ft.; total, 92 ft. Contractors threw up their work after close of last fortnight, and a delay of five days occurred in getting tenders for new contract. This has been let, and new contractors started on 2nd inst. Trial shaft on No. 2 cross-lode: Formation gradually turned into ironstone. Further work postponed until we can cross-cut from the engine shaft.

EMERALD MINES OF COLOMBIA (July 3).—The manager says: Since I wrote to you last the trench has been finished, and the water of the pond falls down at the foot of the Vulcan, but lately I have taken it above the newly-discovered vein to clear the ground there as well. This vein, running in an oblique direction down to the foot of the former salts, will have to be followed up to the rock land in the lowest point possible to be worked by shaft. At the old bridge, where we have now arrived 15 metres in rock, we shall not be able to go on lowering much more without destroying the fall.

ESMERALDA (Aug. 4).—The superintendent writes as follows:—Esmeralda ledge: Our south drift has been advanced 7 ft. during the past week; making a total of 23 ft. The ground is still hard, but breaks better, so will make more headway in future. Have had a 6 in. streak of ore on the west side of the drift, though it has come in and out in spots and not developed into any body as yet. The 6 ins. have averaged 1½ ozs. of gold to the ton. It is possible that these bunches adjoin a body of ore to the west of the drift further in the ledge, and in about a week's time I will start a cross-cut.

FRONTINO AND BOLIVIA.—The directors have received advices from the mines, dated June 23 and July 7. Also a letter from Messrs. Restrepo, dated July 13. The statement for the month of June is as follows:—1,259 tons of ore produced (bar gold) 1,611 ozs.; tributary gold produced (bar gold) 968 ozs.; total, bar gold, 2,579 ozs.; also 3,443 lbs. of sulphurets, valued at 535½. 12s.; estimated value of the gold and sulphurets, 6,310½. 0s. 9d.; cost at the mines, Medellin, and in London, and paid for gold bought of tributary, 5,239½. 6s. 8d.; estimated excess of returns, 1,070½. 14s. 1d.

GARFIELD (Aug. 1).—Report from the mine.—The following work has been done at the mine:—Western Mine, 180-ft. level: The north-east drift has been extended 30 ft., making a total of 169 ft. We are still driving in favourable ground, the face of the drift being in porphyry. The ground we have had for some time has been most likely looking for ore, which makes it disappointing not getting any.

GRAVEL GOLD (July 20).—Works: During June the number of men employed has been maintained at the usual average. On the Agua de Dios section some fluming has still to be put in, after which the San José syphon will be jointed, and the water passed on to Rica. On the Guali section the ditch proper has been cut as far as the main cutting has been made, and the cleaning and making preliminary cutting is being pushed on to Guali. The cutting in rock for the Reposo syphon was deepened, and the pipe re-jointed and turned on, when the upper portion gave way from some defect in the rivets, which appear to have become brittle from the vibration caused in hammering them at the time of making the pipe. The lower portion of the syphon, which is under a pressure due to a head of 546 ft., has remained firm and tight, and a piece of the thinnest pipe placed at the bottom of the syphon has also remained perfect, so that the failure in a portion of the upper rivets may possibly be due to part of the rivets being made of hard "short" metal, which would become crystallised under the process of hammering. Under these circumstances it has been resolved to move the syphon higher up the Reposo valley, where there will be a reduction of pressure of nearly 50 lbs. per square inch, when we consider that the syphon will give us no more trouble. The operation of moving the syphon will be carried on with all possible speed.—W. S. WELTON.

GYMPIE GOLDEN CROWN.—Report for the fortnight ending July 3:—I have to report that on the March reef at the 105-ft. level the drives and stopes north and south are being continued from the rise in both the north and south workings; the country is rather broken up at present, consequently the reef is not well defined, and is not showing much gold. At the 240-ft. level the stopes have been discontinued, as the stone was too poor. Lease 777, 2 mile: At the main shaft the drive north on the Peter and Paul reef is being carried in. The reef and slate is improving as we drive north. At the eastern shaft the south drive is being pushed forward; the ground is very hard; boulder conglomerate, and bad for breaking. The north drive is also being carried in; in this drive the reef is about a foot in thickness of good stone, which contains a great deal of mineral, and every indication of good gold bearing stone being met with.—T. RAMAGE.

HARRIETVILLE (July 10).—Fortnightly report:—Mons Meg Mine: Rise on new shoot north of tunnel J advanced 16 ft.; total, 147 ft.; the lode is 3 ft. wide, but continues poor. An escape drive has also been extended 6 ft. from this rise during the fortnight. Drive north of shaft 50 ft. below tunnel J extended 1 ft.; total, 38 ft.; the lode is small and poor. South drive at same level advanced 18 ft.; total, 68 ft.; the lode is 6 ft. wide and payable throughout, although not quite so rich as it was a few feet back. There is good stone under foot, and we expect an improvement as driving progresses, the main portion of shoot not having yet been reached. Drive north 100 ft. above tunnel J advanced 15 ft.; total, 190 ft. A lode 4 ft. wide has been met with here, which, however, is barely payable. Drive north of tunnel K extended 20 ft.; total, 380 ft.; lode 3 ft. wide, carrying a little gold. Guerdon Mine: The drive north of tunnel J has advanced 24 ft.; total, 151 ft.; the lode is 6 ft. wide, of which about 2 ft. 6 ins. is fairly rich stone, some very good specimens being occasionally met with. The south drive on the same—Guerdon—lode has advanced 10 ft.; total, 122 ft.; the lode here being 6 ft. wide, and carrying a little gold. At 70 ft. south of tunnel we have risen 15 ft. on this lode. At this point the auriferous vein was only 8 ins. wide in the drive, but has now opened out to 4 ft. in width, of which 2 ft. 6 ins. is fairly rich stone. It is doubtful whether either this or the shoot just discovered has been seen at the surface. We have here 500 ft. of backs standing intact, so that it may reasonably be hoped that these developments will much enhance the value of the company's property, and that they will produce large quantities of

payable stone for some time to come. Tenders have been called to extend tunnel K to this lode, in order to promote ventilation as well as to facilitate the working out of these fresh discoveries. A portion of the mill is now running on ore obtained from the north drive and rise on the Guerdon lode. South Mons Meg: Work has been suspended on this mine for a time. Tiddledee Mine: Drive south of tunnel D towards Mons Meg advanced 27 ft.; total, 1,176 ft.; the lode is well defined, its width not being known, and carries a little gold. We shall cross-cut into the hanging or eastern wall later on, from which side there is a heavy influx of water. Drive south-east of tunnel D towards Tracy's extended 12 ft.; total, 122 ft.; the lode is small, but of promising appearance. Cross-cut east of drive towards Mons Meg advanced 6 ft.; total, 99 ft. This is again in hard sandstone. Drive south of tunnel C on new shoot extended 23 ft.; total, 455 ft. This has now passed through the main shoot, and the lode is poor. Driving has been suspended and the men put into the stopes. Drive south of tunnel B towards new shoot advanced 15 ft.; total, 369 ft.; the lode is small, but carries a little gold. Rise on ore shoot south of tunnel B advanced 5 ft.; total, 14 ft.; the lode is 6 ft. wide, of which 3 ft. is payable. Jackass Mine: We are now making preparations to sink on the Jackass main lode, below the level of our deepest tunnel A.—T. G. DAVEY.

KAPANGA (July 7).—The manager writes:—We have crushed for the month 107 tons of quartz, which yielded 117 ozs. of amalgam, giving 36 ozs. 18 dwts. of retorted gold. The machinery throughout is working fairly well.

LOMA.—The secretary reports having received the following advices:—The mine manager writes from Tablazo, July 15:—Since last writing a good piece of the line has had a narrow banquo cut, so that at once a large gang can be put on, and no fears of the Peons getting off the proper level. I am glad to see the work started in this manner, and although slow at start it will save no end of time later on. I have every hopes of getting a good ditch cut, and when finished will give little or no trouble in getting the water to the mine. I will report each month on this work. Mine: I hope to clean up about the 23rd inst., when I will remit you result with what I have here, and cable you the value of the bar. After clean up we must put in a few boxes of sluice and move pipe. You may rest assured I will get out as much as possible from the mine while new supply is being brought on.

—The contractor writes from Partidos, July 19:—Works: I am now happy to be able to report that 3¼ miles of ditch has been graded and a cutting 3 ft. wide made for the whole length. The whole of the forest has been cleared off this portion of the line for a width of 50 ft. and 900 ft. of cutting 10 ft. wide in solid ground has been completed. Three divisions of men are now employed making the main cutting, and I expect to be able to double this force by the end of the present month.

MESQUITAL DEL ORO.—The directors have received this week from their mining superintendent, Mr. Davis, the following:—San Carlos: We have driven east and west a total length of 45 ft.; the lode has an average width of 3 ft.; the ore is good, and assays a value of \$12 per ton. We have taken out 35 tons, which will be carried to the mill at a cost of 56c. per ton. Fortuna: Here we have struck an irregular mass of quartz 3 ft. in thickness, lying horizontal. It shows considerable visible gold. What it will eventually amount to our developments are not yet sufficient to enable us to form an opinion. The above is important, because it is outside the Mesquital Mine proper, and therefore may prove to be an important addition to the main source of production.

MYSORE REEFS (July 23).—Fortnightly report:—Harvey's shaft: 520-ft. level north advanced 16 ft. 6 ins., now 74 ft. from shaft. We are now driving on the lode, which shows a width of 4 ft., composed of branches of quartz and ribs of hornblende schist, intermixed with arsenical pyrites, assaying 3 dwts. of gold to the ton. I expect an improvement shortly, as this end will soon be underneath the shoot of quartz gone down in the 460-ft. level. The 520-ft. level north of west cross-cut: We have driven 8 ft. 9 ins. in this direction. The lode is split up in small branches, and has much the same appearance as it has in the north end, therefore there is no advantage in driving this, which was suspended a week since, and the cross-cut continued west. A sample of the quartz from this end assayed 11 dwts. 17 grs. of gold to the ton. The 520-ft. level cross-cut west has been extended 13 ft., now 47 ft. from the level. We are cutting through hard sterile rock, and shall continue it a week more, and if there is no change suspend it and continue the 520-ft. level south. I started the men yesterday who were assisting the Englishmen to put down the skip-road, &c., to resume the sinking of the winze below the 460-ft. level. This must be put through for ventilation and to prove the lode. The 400-ft. level south has been advanced 13 ft. 6 ins., which now makes a distance of 150 ft. from shaft. This end is most difficult to blast, but the lode is 6 ft. wide, with a good hanging-wall, composed of quartz and small ribs of horn-blende schist mixed with arsenical pyrites, assaying 3 dwts. 22 grs. of gold to the ton. The drive of the 400-ft. level north was resumed on the 16th inst., since which 9 ft. have been driven; now 208 ft. 5 ins. from shaft. This end is now in a dyke or hard bar of ground, which can be seen crossing the formation at surface. The rock is fearfully hard, and the progress will be slow until we get through it.—M. SCANTLEBURY.

NEW DEVALA MOYAR.—Mine manager's report for week ending July 27:—Drive west in the 186-ft. level: 5 ft. driven; total, 25 ft.; lode matter slightly better value. 186-ft. level east: Hand labour, 2 ft. driven. No. 4 winze in bottom 116: Sunk 4 ft.; total, 10 ft. Mill running two 12-hour shifts, in lieu of two eight-hour shifts; results better.

NEW GOLD HILL (Aug. 1).—Ore report: July 25, ore in stock, 201 tons; Aug. 1, ore from winze, for the week, 8 tons; Aug. 1, ore in stock—total, 209 tons.—R. EAMES, jun.

NEW VISO (Aug. 15).—Manager's report: Good progress is being made in driving the California adit north, and the lode maintains its very promising character. At present it is not yielding quite as much tin as it has done, but still it is not barren, and its very kindly appearance leads us to expect that ere long we shall find it remuneratively productive again. The alluvial washing in Mi Amor fully maintains its yield of tin. Our other operations are going on as usual. On the 8th inst. I sent off the parcel of tin for sale referred to in my last report.

NEW CALIFORNIA.—The directors have received the following cable from the manager, dated Aug. 20:—"July output 490 tons,

yield 136 ozs. of gold; value, 430l.; costs, 610l.; expenditure on mine development and exploration, 240l."

— Mine report for second half of July:—2,000-ft. level west of shaft main drift in 891 ft.: We are able to report a decided change in the end of this drift, which is now yielding milling ore from a 2 ft. vein of soft porphyrite material, carrying some good mineral. The appearance to-day warrants us in looking for a fine run of pay close at hand. The vein is letting out a stream of water. 2,000-ft. level west of shaft, rise up to 53 ft.: The vein in the rise is 15 ins. wide, and opening out. We have got 15 ft. to go yet to connect with the intermediate drift from No. 2 winze, which connection effected stoping will be carried on to better advantage. 2,000-ft. level west of shaft intermediate drift is 131 ft.: This drift is now in 131 ft. from No. 2 winze, and is going forward on a 2 ft. vein of good milling ore. In my last report we were looking for a decided improvement there, which I am glad to be able to confirm. 2,000-ft. level, west of shaft, stopes east of No. 2 winze: There is no change to report in these workings. 1,800-ft. level, west of shaft, prospecting works: By means of a rise and intermediate drift we are proving up a piece of ground east of No. 2 winze at this level, and have a lode 2½ ft. in width, part of which is going to the mill. 1,500-ft. level, west of shaft, south vein east of junction, and 1,500-ft. level, west of shaft, south vein at cross-cut and stopes in bottoms: The vein in these stopes has pinched considerably in the last few weeks, and the force moved to the winzes going down on this body on the cross-cut side of this vein where the stopes are turning out 6 tons of ore per fm. of good grade. The vein averages 2 ft. in width. We are just about to resume work at the 2,100-ft. levels, the water having subsided to that depth.—F. RICKARD.

NEW EBERHARDT (Aug. 2).—The mine manager reports as follows:—Eberhardt: Drift south from top of upraise 2 advanced for the week 3 ft.; total length, 32 ft. No change in the character of the ground; it is still a mixture of quartz and spar, but it has been a little harder during the past week. Drift north from No. 2 upraise advanced for the week 4 ft.; total length, 15 ft.; this drift remains unchanged, the face is still in hard spar and quartz. Cross-cut east from north drift in No. 3 upraise advanced for the week 6 ft.; total number of feet made for the three weeks past, 19 ft.; total length, 19 ft.; this work should have been reported to you in my letter of last week but for some unaccountable reason it escaped my memory altogether. The ground in this cross-cut looks quite favourable for ore. We have about 14 ins. of quartz in the bottom of the drift, and in this quartz we find some few colours, or copper stains; the quartz looks quite lively, although it is as yet but low grade. Cross-cut west on tunnel level advanced for the week 7 ft.; total length, 30 ft.; face of drift continues in hard lime. Cross-cut west advanced for the week 3 ft.; total length, 19 ft.; the men have not been working in the face of drift but a few days during the week; but have been blasting down a little on the side at mouth of drift to enable us to put in car track, hence the small number of feet for the week; the face of this driving remains unchanged. Treasure Hill: I have been doing some repairing in our old mine on Treasure Hill during the week. I stated in my letter to you of last week that we should be running south, but I am running easterly. I thought for the present this would be the better way to run instead of running south-westerly. This drift or cross-cut is started on what is known on our maps as the 285-ft. level, and I think it best to call this the Beecher cross-cut east. This has been advanced for the week 9 ft.; total length, 9 ft.; face of driving in good-looking ledge matter. Monitor: I desire to hand you at this time the statement for the two weeks ending Aug. 1. Total weight of ore extracted and assorted for the two weeks, 42 tons; assay value of same as per mine samples, \$36 per ton. Ore team: Previous to the laying off of the quartz team on July 23, it delivered on the mill dump 30 tons of ore, making a sum total to date of 425 tons on the dump. The general prospects at the mine remain unchanged, the quartz team having caught up with the dumps at the mine. We shall now suspend the further hauling of ore until such time as the mill starts, which will be in September.

NEW VIOLA.—The manager of the mine, under date Aug. 3, writes:—The total expenditure for July was \$2,114.91, and the total work done during the month in driving and sinking was 217 ft. I have started a drift from the bottom of the Bore Hole shaft, and hope to prove up something with it. The shaft has been sunk through short lime. Near the bottom some patches of iron were encountered, and the lime is somewhat stained with iron in the bottom. The material breaks well, and I hope to make rapid progress with the drift. In shaft P. Barkis claim, we have been working on a pot of the nicest looking iron talc and decomposed lime I have seen on the hill outside of the old ore bodies. So far we have not been able to find where it goes down, but I am still working at this point, and hope it will prove up something. It may prove to be a pot missed by the forces, which formed the gulch on that side of the ridge. I feel more encouraged now than any time in the past six months, and I do sincerely hope some of the numerous indications we have lately gotten on to will lead to something worth proving. I am making a tracing which will be forwarded some time this month. We are having some trouble in securing men, but hope to do better as soon as the crops are gathered.

ORITA (July 15).—The following are details of the operations during run No. 57:—After a run of 29 days I cleaned up 250 ft. of main sluice yesterday, which gave \$3,435.45. Operations: I have 20 men in the deep cut increasing grade and excavating to get in 60 ft. of sluice at head. Channel: The extra grade given of late in deep cut has allowed us to get 9 ft. deeper in the channel, but we have only uncovered more enormous granite boulders bedded in fine blue gravel, which, from prospecting with pan, shows but little gold; at the same time, I believe the good coarse blue gravel is below it—in fact, it is showing up here and there. We have our sluices plenty low enough, but the work to bring in the grade is excessive to say the least of it. Branch and fourth opening: I am bringing in the pipe to both of these faces by a new line, so that the pipe that works the bank on the rim may be attached. This cannot be completed till I wash more at the rim. It seldom happens, but on this occasion we are obliged to lose eight days while we get in sluice at head. Next run: This will be in part from north rim of mine and channel. At both sections we have plenty of pipe-clay to clear away.—H. J. FRENDR.

OSCAR (Aug 13).—The manager writes:—Hodgkinson lode: The 300-ft. level north is being driven by two men who are making good headway. The lode still presents much the same disturbed appearance; yesterday, however, the men met with a quartz leader,

about 8 ins. in width, of a very promising character, and assaying 4 dwts. 13 grs. gold per ton. There is no alteration to note in the 200 north; strings of quartz are met with, which assays have shown to carry from a trace to nearly 4 dwts. gold per ton. The winze sinking in bottom of 200 north is in a good lode. The quartz averages 30 ins. in width, containing more than the average amount of mineral. Assays show the quartz to have value 3 dwts. 19 grs. gold per ton. The winze is now 46 ft. under level. The cross-cut west is being driven by four men. The ground is very hard, and during this week the men have scarcely made the usual progress. The stope in the back of the 200 north is still breaking good ground; the quartz is nearly 2 ft. in width, contains galena and copper, and occasionally shows visible gold. William's lode: The winze going down on this lode is carrying quartz over 2 ft. wide; it contains but little mineral. The average of several assays from this working gave the quartz a value of over 3 dwts. gold per ton. Quartz containing galena and showing gold was yesterday taken from the outcrop of this lode, about 50 ft. north of the winze. This is the first occasion we have seen galena in this lode. All the other points are without alteration.

PESTARENA UNITED (Aug. 15).—Mid-monthly report:—No. 1 lode: The 150-fm. end north is following along a division, but produces no ore. In the 90-fm. end south a good division has again been met with, which has a great underlie to the west, the rock adjoining it, however, is of a quartzose nature, and shows particles of pyrites, but at present it produces no ore. In the 70-fm. end north the ore-bearing part of the lode is about 50 centimetres wide in the bottom, narrowing down to 10 centimetres in the roof of the level, producing 4 tons of ore per fm.; worth 18 dwts. per ton. The south end is still being stoped forward, but does not give quite so much ore as when last reported. Caunter lode: In the 55-fm. end east there is no change to remark in the lode; it still produces about 4 tons of ore per fm., worth 1 oz. 5 dwts. per ton. The end driving west shows a small branch of ore, but does not produce any of value. The latter remark applies also to the 46 fm. end west. Val Rossa: An old level—which is about 600 ft. above Peschiera—has been cleared to the end, 178 metres. It shows a regular vein, and in places the roof has been stoped, but I do not think that great quantities of ore have been taken away; the vein is not rich in pyrites. The stopes produce about the same quantity of ore as reported on the 3rd inst. The machinery, both at surface and in the mine, is in good order. Val Toppa Mine: There is no change here that calls for remark since the report of the 4th inst.—W. ROBERTS, W. H. TRELEASE.

RUBY.—Report for week ending Aug. 1.—Dunderberg: We have five tributaries at work here. The ore seam in the 500 winze having given out, I have started a drift on the best looking part of it, about 15 ft. from the bottom. On the 800 level we followed up two small pipes of ore into the old chambers, and at the beginning of the week we started an upraise on another small pipe, making up toward the main workings under the 700, and this evening the top of the holes were in low-grade ore. Lord Byron: We have eight tributaries at work here. The ore looks rather better since my last report. Bullwhacker: We have four men at work here. The mine looks about the same.

— Telegram received Aug. 8 from Eureka:—"39 tons tribute ore shipped and smelted, producing to company \$467."

SOUTH-EAST MYSORE (July 28).—Fortnightly report of mine agent:—The winze below the 520-ft. level north has during the past two weeks been sunk 12 ft., which now makes a depth of 26 ft. below the level. We expect to do a little more in the next fortnight, as time has been lost in fixing tackle and donkey pump since my last report. I am pleased to inform you that the lode is still of a most promising appearance, being 4 ft. wide, and showing good walls. On the footwall there is a leader of quartz 18 ins. wide, assaying 9 dwts. 2 grs. of gold to the ton. Against the hanging-wall the quartz is 9 ins. wide, assaying 8 dwts. of gold to the ton. The filling between the two leaders of quartz is composed of hornblende schist, with stringers of quartz in it containing a little gold. This, I expect, will disappear in a few feet more sinking, and the two leaders of quartz amalgamate. Should this expectation be realised the lode no doubt will considerably improve.

TILT COVE.—East Mine: Output for month, 3,900 tons of 5 per cent. wet assay. Bodens level: Temporarily suspended, the men and rock-drills being required for increasing extraction from mine, the supply of labour being inadequate. Minnie winze: The drills from Bodens level are at work stoping in bottom of the winze, and are doing good work. Arrival at Swansea: The s.s. Rochefort with 104 tons of regulus of 24 per cent.

TOLIMA.—Advices by the mail of Aug. 20 from the mines show:—Frias June returns (estimated), 7,988l. 1s. 9d.; Frias June cost, 3,210l. 3s. 5d.; Frias June profit, 4,777l. 18s. 4d.

PALMAREJO MINING CO., LIMITED.

CIRCULAR TO THE SUBSCRIBERS 12 PER CENT. MORTGAGE DEBENTURES.

Aug. 18.—The directors, in arranging dates for payment of instalments, trust that the subscribers will appreciate their decision to complete the works at once, so that upon the chairman's arrival at Palmarejo the railway may be finished. The directors have transmitted to Palmarejo the requisite funds for equipment of mill. As announced in the public Press during last week, the full amount of \$50,000 has been subscribed and remitted. The debentures and shares will be ready for delivery after the final instalment has been made payable.—A. J. SCRIVEN, Secretary.

HOLLOWAY'S OINTMENT.—The great climatic variations which soldiers and sailors experience render them liable to a variety of diseases, the development of which is favoured by exposure and hardships—often, it is to be feared, by their own carelessness as well. Holloway's remedies afford a safe and easy means of cure for those constitutional and local maladies which are so frequently engendered by residence in unhealthy climates and by incautious living. The Ointment is a wonderfully healing application, as it cleanses the surface of foul sores and ulcers, soothes the throbbing and pain in cases of inflammation, and checks the progress of skin diseases. The Pills purify the blood, cleanse the liver, and remove all noxious matter from the system.

CORRESPONDENCE.

We do not hold ourselves responsible for the Opinions or Statements of our Correspondents.]

To the Editor of the MINING WORLD AND ENGINEERING RECORD.
FRONTINO AND BOLIVIA.

SIR,—My attention has been called to a letter from Capt. Gifford in your issue of last week.

At the meeting of shareholders held on June 5 I cast no reflection on Capt. Gifford's management. I neither desired to do so nor to stir up any difference of opinion between Capt. Gifford and Capt. Hodge. I never even mentioned Capt. Gifford's name. I give an extract from your report of the shareholders' meeting on June 5 of my remarks on the points referred to by Capt. Gifford:—

"I hold in my hand the report issued in May, 1888. There I find that the whole of the places worked in Silencio at that time were valued at 4½ ozs., but to-day they are valued at 22½ ozs., or nearly five times the value of the earlier period. (Cheers.) Cordoba was then worth 4 ozs. to the ton in all places worked, and is now worth 9 ozs. I do not think it necessary to call attention to other portions of the mine, but the report of to-day and the report of 1888 are in most promising contrast. I see here Capt. Hodge, who was then our manager, and to whose initiative in a large measure Silencio was started, so that the present manager is simply continuing what Capt. Hodge commenced, and it is only due to the latter gentleman to say so."

This morning, without having in any way communicated with him, I have received from Capt. Arthur Hodge, the late manager, the enclosed communication, and I think it is only due to him and to the shareholders who are interested in this valuable property that the same should be published in your issue of to-morrow.—I am, &c.,

PETER WATSON.

8, Finsbury Circus, London, E.C.
Aug. 22.

Redruth,
Aug. 18, 1891.

Peter Watson, Esq., 8, Finsbury Circus, London, E.C.

Dear Sir and Friend,—I saw a letter in the MINING WORLD, signed by Mr. Gifford.

It is not my intention to make the slightest comment on his remarks, but I shall, in all fairness to you, give you the means to believe that your remarks were well and truthfully founded on his, Mr. Gifford's, own reports which were published by the company.

Mr. Gifford's last report of Silencio, Dec., 1887.

Arthur Hodge's last report of Silencio, Sept., 1890.

Please note the work being done by Mr. Gifford when I received the mines, also average yield per ton in ounces.

Please note the work being done by me when I left the mines. The difference is simply astounding, and is more than sufficient to confirm my statements and your remarks. I have sent you, by book post, two books of reports, Gifford and Hodge; you will notice slips of paper with remarks on them to note the place to look for reports. May I ask you to take care of them for me.

Yours faithfully,
ARTHUR HODGE.

P.S.—The shareholders do not require any explanation from me. The chairman more than confirmed my statements as to the actual position of the mines during my term of office, by giving several dividends (over 34,000l. in three years) to the shareholders; also the reports of Mr. Eustice, who even stated that the mines were better than I had myself reported them.

During my term of office there were:—

New buildings constructed, area sq. ft. over	30,000
" water courses ft. in length	17,754
" tram roads ft. in length	7,617

Mills: Two new mills of 16 heads each, and another being constructed.

New mines: 26 new mines added to the company's property with water, timber and land rights.

Land: Over 10,000 acres of freehold added to the company's property.

Mr. Watson,—There is not a director nor shareholder who has had such a long and exhaustive knowledge of this property as you have had. Can you remember the property giving more regular dividends? I think not. Were they worked in depth? No. Are they now? Yes.

It only requires reference to the usual monthly reports since 1886 to see in whose time the mines were best worked, to the benefit of the shareholders.

It is a great pleasure and a duty on my part to give you the most reliable and truthful evidence in support of your remarks in my favour at the last meeting.

Yours faithfully,
ARTHUR HODGE.

You can use my correspondence as you think fit.—A. H.

THE DEPRESSION OF PRICES.

SIR,—I noticed lately in your paper some correspondence from a disgusted shareholder in mines, and an answer from a satisfied one. The latter pats himself on the back, and virtually says what a clever boy am I, and what a "hass" the other fellow is. Well, what can the poor British public do, who have no special means of getting reliable information except through financial papers and brokers' circulars. My advice is, take in the MINING WORLD, and stick to its advice, as I have found the information therein contained wonderfully reliable. This deadly dullness in the mining market has, I feel sure, arisen from the outrageously bad advice given in some financial papers and brokers' circulars. I will name a few instances, and you will readily see that people who have lost heavily by following this pernicious counsel have no means left, either to average or go in for new ventures. Besides, if they have any money left, they have had such a sickener that they will not touch anything,

however promising, and advise all their friends to fight shy of mines, as they are "gigantic swindles." Well, now for my instances. A weekly financial had a special article on the Bentong Tin Mine, and after pointing out its advantages, and certain future success, wound up in the most fatherly way by saying: "We like to find out mines below their intrinsic value and give our readers a chance of getting into a good thing cheap!" The shares were then about 1½, but on the strength of this kind advice they rose to 2½; now they are unsaleable at 9d. to 1s. 3d. The same fatherly paper had a long and glowing description of the Kangarilla Mine and compared it to the Broken Hill, rather to the detriment of the latter. The shares went almost at a bound from about par to 7½. Now they are below par.

Let us turn to some brokers' circulars and post-cards; both, I may say, equally reliable? Week after week one reads: "Buy Tetuan: for a great rise; will probably go to as many pounds as they now are shillings." What are they? 6d. to 1s. Is there such a mine at all? I own to becoming very sceptical, especially with the facts recently unearthed about the scandalous United States Placers, about which mine this same circular inserted a portion of a letter from a son to his father: "Don't sell a Placer share, they are worth 5½ a piece." This company is, I believe, wound up. Though it was proved that the mine had never been paid for, still the directorate had collared the shareholders' money, but, *mirabile dictu*, they are not in Portland or Dartmoor, but roam at large, to the detriment of the widow and orphan. Surely obtaining money under false pretences is a penal offence. With regard to Tetuan, I think you will allow that I have some very good grounds for my scepticism. It is now one and a half years since the shareholders have heard a word about their property. Before then reports used to be published pretty frequently as to the progress made; but since the telegram in Feb., 1890, that the water was actually laid on to the mine and the ditch completed, there has not been a sign from the directors. As there is still 6d. a share to be called up, I fancy the shareholders will hear something when the inevitable call is made, as no mining carcass was ever left till the bones were picked clean. I could multiply instances, *ad nauseam*, but where is the use. The present generation have been bitten too badly to be taken in again readily, hence the utter stagnation of the mining market—for one and all say as I do—

ONCE BIT, TWICE SHY.

VICTORY MINE.

SIR,—I am exceedingly pleased with the letter of "A Shareholder" which appeared in your last Saturday's paper, and agree with all he says therein.

To the instances and terms of information he gives I could add others, both from the late manager, Mr. Russell, and also would call special attention to the information given by Mr. Larchin, and reported by you in your issue of Apl. 23, 1889, on page 734 of that week's issue, in which it is stated that he, Mr. Larchin, had got from the lode we have lately been seeking for, gold of 23 ozs. per ton. Now, I would like Mr. Larchin or the directors to say if this was truth, and also for the directors to say if they believe these statements to be genuine which have been issued by them so frequently from time to time, and which question must and shall be asked them by the shareholders at our first meeting; as also if Mr. Nicholls is trustworthy in his statements, and what reasons has he or they to give to us shareholders why the working of the mine has been so long delayed, and is being so still, for I cannot for my life see how the Board of Trade's action will prevent them going on developing the mine.

Their continued silence in regard to our property, and what is being done in it, is quite unbearable now, and I should like much to see some of our London brethren take this matter in hand, and do something to bring our board to their senses, for they seem to treat us with all the scorn they are capable of. As I live miles from the centre of influence, I am sorry at being unable myself to do so.—I am, &c.,

ANOTHER SHAREHOLDER.

Aug. 19, 1891.

REVIEWS.

THE ANCIENT GOLDFIELDS OF AFRICA—FROM THE GOLD COAST TO MASHONALAND. By J. M. Stuart. London: Effingham Wilson and Co., Royal Exchange, E.C.

The present book is the outcome of a previous work on the same subject. The author remarks that the ordinary reader has little time to study beyond the daily newspaper, or the occasional magazine. But a book of selections from standard authors has its value on such an important matter as the Ancient Goldfields of Africa. The scope of the present work has been compiled from the writings of the best known men, both of ancient and modern times. Copious and admirable illustrations add to the value of the work.

REID'S HANDY COLLIERY GUIDE AND DIRECTORY FOR THE COUNTIES OF NORTHUMBERLAND AND DURHAM. London and Newcastle-upon-Tyne: Andrew Reid, Sons and Co.

This little work refers almost exclusively to the northern coal-field, and will be a welcome addition to those already in the field. It has been the author's aim to give in concise form such information as may be of service to those whose time is too limited to allow of their referring to the various authorities on such subjects they are likely to require. The matter has been specially compiled by Mr. S. Oliver, who has been indebted to several colliery books for a great part of the tables.

EXPLOSION IN AN IDAHO MINE.—A Burke, Idaho, telegram to Reuter, states that 200 lbs. of giant powder exploded at the mouth of the tunnel of the Black Bear Mine yesterday. The explosion was terrific. The earth was torn up, and the tunnel utterly demolished for a distance of 100 ft. Eight miners who were near the scene of the explosion were blown to atoms.

SUSPENSION OF A MELBOURNE BANK.—The Anglo-Australian Bank, whose head office is at Melbourne, has been compelled to close its doors in consequence of the failure of the British Bank of Australia. As yet no details have been received on this side, but it is surmised that the suspension has taken place owing to a sudden demand being made by the British Bank for the repayment of an advance.

THE YURUARI CO., LIMITED.

MR. PRYOR COMES HOME, AND GIVES AN ACCOUNT OF HIS STEWARDSHIP.

WE have received the following letter from the secretary of this company:—

Balmoral Place,
Redruth, Cornwall,
Aug. 17, 1891.

To the directors of the Yuruari Co., Limited.

Gentlemen,—I have to report my arrival in this country, and in addition to Capt. Rogers' report would venture to submit a few facts, which cannot fail to interest shareholders.

As stated in my letter before proceeding to the mines, I have strictly carried out during my residence there the work which I sketched out as necessary so as to develop the Water shaft, and open out good stopping ground, which I have no doubt will still prove to be the case at an early date.

With regard to the mine, I may state that in view of the fact that the rock obtained in No. 4 stope east has run at times 2 ozs. to the ton in bulk, although the average yield was not so high, no one was more disappointed than myself when that lode gradually pinched out, as at the time the quartz was the best looking obtained in that portion of the mine. From the run of the lode I calculate that the same quartz ought to be met with in the shaft with further sinking, or, in other words, that the lode will show a considerable improvement in the shaft at an early date.

I anticipated, as promised, a telegram from my successor as to the connection having been completed between levels 9 and 6 Cenicero and Water shaft respectively, as only 10 to 12 ft. remained to complete the connection when I left the mine.

I have all along looked upon the western levels as those from which good results were almost certain to be obtained. After 150 ft. driving the lode in No. 5 level west looked as good as one could wish, and I anticipate that good ground should be found in No. 6 level west at an early date.

At the bottom of Water shaft, while the lode was small, the hanging-walls were continuous and regular, so that, taking the run of the lode and the good ground found immediately above to the eastward, it is by no means sanguine view, in my opinion, that a good lode should be found with some further sinking.

I would suggest that a winze should be sunk from No. 5 east to No. 6, and also from No. 5 west to No. 6, as there is nearly 120 ft. between these levels, and to the east good ground was found, so that it may be safely assumed that quartz of a paying character may yet be found here.

In the palmiest days of Callao I have seen the lode in the shaft then the deepest point in the mine, not look so well as in the bottom of the Water shaft.

After two years' management of this property, I have no hesitation in re-affirming what I have several times already said, viz., that all that is wanted to make a valuable property of the Water shaft is further developments.

I can fully understand that in view of the brilliant results which have been obtained from this property at different times shareholders may be disappointed that no returns have been obtained for some time, but the explanation is very simple, in addition to the necessity and my instructions to economise, that I have been left to carry out developments which, as I previously said, should have been accomplished years ago, but I understand were not undertaken owing to the enormous expenses then essential to mining in that district. The necessary work, however, has now largely been carried out, and I feel satisfied that from the indications in the Water shaft, at no distant date, with, as I have already said, some further developments, as far as one can predict, returns as high as formerly should be obtained.

As requested, I paid several visits to the Eureka property, and made general inspections. There is still the 20-stamp mill there, and some machinery which had not been utilised on our property. In the assays recently forwarded I would call your special attention to some quartz obtained in the top tunnel at the most easterly point of one of the Eureka Mines, which assayed nearly 1 oz. 2 dwts., while at two other points the lode showed 11 and 10 dwts. respectively.

I consider this and the property generally well worthy of attention, as it is to the dip of our property, favourably situated for mining, and the quartz is found in tunnels and also in the shafts, at less than 100 ft. of depth from the surface, the yield of which, to my knowledge, has been as much as 3 oz. per ton in bulk, which, in view of the greatly reduced scale of mining expenses in the territory, would show profitable results.

I will be glad at all times to give any further information or suggestions which may be of service.

Yours faithfully,
J. PRYOR.

NOTICE OF REMOVAL.—Messrs. Fredc. C. Mathieson and Sons have removed their works and offices from Bartholomew House to Nos. 19—22, Copthall Avenue. The office at 10, Old Broad Street, which is connected by private wire with the works, will be continued as before.

WHEAL UNY (Aug. 19).—We are opening out east and west at the 244 by boring machine; lode unaltered since last report. All other points in the mine without change since last week. Full report next week.—J. WHITE.

NOTICE TO READERS.

Replies to Annual Subscribers will be sent by wire or letter, as
may be necessary.

Donachie.—No. 1. You may see better prices by holding, as the mine is being
actively worked. We would not advise you to buy more, however, as the pros-
pect is too uncertain. No. 2 is a capital share to buy for a substantial market
rise.

E. D. (Anerley).—Not a subscriber.

Beadle.—Do not buy them just now.

Silver King.—We will inquire for you. They have, however, not yet had a
settlement.

A. Blagg (Abergavenny).—Yes. It is a good opportunity to average.

Robinhood.—The concern is well managed, and will pay in time.

Careful.—There are a few only that we care to recommend. Indian shares
we advise you to hold.

W. C. W. (Rocbdale).—Rather doubtful. Have nothing to do with them.

Knotty.—Send us the date you purchased them. We will trace the matter for
you.

Gabriel, J. T.—Take your profit at once.

M. B. R.—The mine is looking well. Hold on.

Roadster.—You cannot expect to get such a small number at the market price.
He has charged you fairly, we consider.

G. L. B. (Pennsylvania).—Encouraging reports are coming to hand that will,
do doubt, put the price of the shares better.

Wraith.—Likely to do well. They are very cheap shares.

B. B. (Ryde).—Do not buy any more just at present.

Samaritan.—Simply a rumour. However, perhaps it would be as well to clear
out at the small profit shown.

Mysore Holder (W. A.).—They rank for dividends the same as the old shares.
You have been misinformed.

Speculator nor under the control of any clique.*

MINING PROSPECTS AFTER THE HOLIDAYS.

THERE was a decided improvement in the quotations of several
mining shares on Monday, which was fairly maintained throughout
the week. It was led off by a rise in American Railway Stocks, which
it has been noted again and again, for some occult reason, always has
a beneficial effect upon mining prices. The connection between the
two is beyond the power of mortal ken to discover, but experience
has established it. The shares in which the improvement occurred
are fully dealt with in our "Mining Market," but a few words here as
to the possibilities they indicate may not be without service.
For many weeks past the barometer of prices has been so
low in regard to mining prices that despair had begun to seize
upon those who hold the shares, and even upon those who deal in
them. The latter, if not the former, should, however, know that,
generally speaking, in mining, as in other mundane affairs, the
darkest hour is that which precedes the dawn. The tendency of the
public has been to sell at any prices, and this has been stimulated by
the financial Solomon Eagles, who have been going about the City
pronouncing its monetary doom, and crying, "the crash must come."
If these persons were only half as wise as they look, then
the outlook would be gloomy indeed, but they are not. They
are, as a rule, persons in indifferent health, to whom
the knowledge that they have a liver is a painful fact, and to whom
the pangs of dyspepsia are the reverse of strangers. These people
who, as a rule, have little to lose themselves, take a morbid joy in
infusing into the minds of their hearers, whose financial position is
better, the uneasiness begotten of their melancholy croakings, well
knowing that after all about the most sensitive part of a man is his
pocket. The cup of their delight is full when they can get the
papers to insert their financial ravings, and, as at the present
time it is somewhat difficult to make "copy," their effusions receive
more attention than they would if times were brisker, and if the
business world were at home to pull the strings of commercial life
and activity. The croakers are however about played out. Their
listeners have waited so long for the "crash" that "must come,"
and that has not come, that they have ceased to believe in them, and
have turned their attention to the prospects of numerous mining
concerns as viewed through the kaleidoscope of changing prices.

They have done well. They cannot survey the field of finance in general and mining in particular without coming to the conclusion that prices are lower than circumstances justify. To give logical effect to that conclusion. Many are beginning to cast about to buy the stocks they consider most desirable. Hence the movement that occurred on Monday. Here comes in the utility of those organs in the Press which have no interest to serve other than to indicate to their readers shares which are cheap to buy, because offering every reasonable prospect either of a market rise or a dividend investment. We have not hesitated to do this in our "Mining Market" as occasion has required, although well knowing that if the probable event occurs few there be who will return thanks, whereas if it should happen the other way (as it may do from circumstances which none but a prophet can foretell), bitter and hard to bear will be the recriminations that will follow. Be this as it may, we state again that which we are tired of repeating, that mining prices are too low, and that a wise selection of shares at this juncture ought to yield handsome profits before the close of the present year. The first signs of activity have been seen on the market even in Aug., when everybody is supposed to be holiday making, and the augury is good for business in the remaining months of the year.

YURUARI.

AFTER managing Yuruari affairs for two years, Capt. Joseph Pryor finds himself upon his native heath in Cornwall, and from there indites a valedictory letter to the shareholders. He has returned home convinced that the mine is most valuable, and that it has only to be developed in certain directions, which he indicates, when the lamentations of the shareholders will be turned into rejoicings, and when to the protracted period of calls there will come the welcome change to dividends. He says that when these explorations are carried out, "returns as high as formerly should be obtained." But of what good will these be to the shareholders if they do no more in dividends for them than the past returns have done? In considering Yuruari affairs, one is always struck with the immense amount of gold that has been extracted from the mine, and the little advantage it has been to the shareholders, either in saving them from calls or in putting the proceeds into their pockets. We know that the difficulties of management, and also the expenses, have been exceptional, and that the London board has grappled with them in a determined, if not always in a successful manner; but it has been very annoying to the shareholders to read of monthly, and sometimes of fortnightly, crushings, and to know that all this gold coming out of the mine in the way of returns has simply gone back into it in the way of developments. It has also been excessively irritating to them to find that the returns have been interrupted for long periods together, sometimes by stress of weather, sometimes by failure of machinery, and sometimes because developments are needed, and that during such intervals the mine has, to use a saying, been eating its head off. Shareholders have always been assured of the superlative value of Yuruari, to which they have replied in as many words—if so valuable, why are not the tangible profits forthcoming? Or, in other words, they have asked, as the Yankees do: "What is the good of a man's goodness if he don't do any good?" Take, for example, one statement in Capt. Pryor's letter:—"In the palmiest days of El Callao I have not seen the lode in the shaft, then the deepest point of the mine, look so well as in the bottom of Water shaft." What could be more favourable—what more promising than this? but if no more comes of it than has resulted from similar statements in the past, it will to the shareholders be little better than sounding brass or tinkling cymbal. It is now quite ten years since Yuruari, *alias* New Chile, *alias* Old Chile, has been wandering in the wilderness of promises, but never emerging into the clear and open ground of performances, though, in justice to Capt. Pryor, we are bound to say it has come nearer the latter under his management than under that of any of his numerous predecessors. If, however, language has any meaning at all, then the statement that the lode in the bottom of the Water shaft is "better than that of El Callao in its palmiest days," implies that Yuruari is the better mine of the two, but it is at the provoking point of performance that Yuruari always breaks down, and that its managers fail to bring up their returns to the platform of their asseverations. Shareholders are asking why they should be subjected to re-construction after re-construction, and call upon call, if they have a better mine than El Callao. These are points for which enlightenment will be sought in Capt. Pryor's letter in vain. Is it that it costs more to get the gold than it is worth, or what is it? When Callao was in "its palmiest days" the expenses of mining in Venezuela were almost double what they are now, and at the present time, with those expenses reduced, why cannot Yuruari, with a better lode in the bottom of its shaft, give the shareholders, if not the brilliant profits of El Callao, at least a moderate dividend or two, just to prove that the managers are right, and that the wealth of Yuruari itself is not a myth. We note much that is encouraging in Capt. Pryor's farewell letter, but fail to find the answers to those pertinent questions that every shareholder is putting to himself or to others every time he thinks of Yuruari. Yuruari is, in truth, like the tree in the fable—it is waving with golden fruit, but scarcely within your reach. The

new managers will earn, indeed, the laurel wreath if they can bring that fruit to a point at which shareholders can taste it, for they have never done so yet; and we know that poor Richard in his Almanack says—"He who lives on hope dies fasting."

THE TRUTH ABOUT FLAGSTAFF.

THE observations respecting "Flagstaff," in our last week's issue, were, we find, made under a certain degree of misapprehension. The facts are, that not only were the 2,000 sacks, then mentioned, filled with ore, but over 3,000 were so filled, and the ore sold (and at a good price too), before Prof. Vincent's departure from the mine for London, where he now is, and where, we understand, he intends to remain only for a space of four weeks before returning to Salt Lake City. In the meantime, as we are informed, a further 400 tons of ore are to be sent down from the mine, and to be ready for "sampling" and sale by Oct. 1, when the Professor will again be present to conduct, in person, both these important operations. After the sale of this second instalment of 400 tons other substantial shipments and sales are, we understand, to follow, up to Dec. 1, when the tramway to Wasatch will shut down. But as, in the meantime, the "Flagstaff" new engine-house will have been completed, and the thoroughly over-hauled machinery (now as good as it ever was) will have been got into perfect running order, all mining and underground operations will be actively carried on throughout the winter. The latest news from the mine is highly encouraging. The 6th level was still yielding good ore, and first-class silver-lead and carbonates had been come upon in level No. 7, a hundred feet lower down than were the ore-bodies from which the recent yields have been derived.

TRADE STATISTICS.

THE past month's foreign trading shows a considerable falling off in both imports and exports, but the re-shipments have been exceptionally large, which is so far favourable that it has taken off surplus stocks, although the chief increase is in wool. The decrease otherwise shown is more a matter of comparison, for in the corresponding month the totals were abnormally swelled by the rush to get goods to the States before the McKinley tariff came into operation in respect of some of the more important articles of shipment. Of the home exports the total was 21,945,000*l.*, or nearly 10 per cent. less, reducing the average decrease on the seven months to 3½ per cent., while the imports were 32,284,000*l.*, being ½ per cent. less, as against a considerable increase in the previous month, and making the augmentation for the seven months only slightly over 2 per cent.; the total reshipments reached 6,104,000*l.*, or over 12 per cent. greater, reducing the loss on the year to 1½ per cent. The falling off has been mostly in yarns and textile goods, metals, and chemicals, as regards exports. The shipments, however, of coal, machinery and apparel, show an improvement, but those of iron and steel have decreased over 100,000 tons, and ¼ of a million in value. Every branch of the trade exhibits a reduction, and all countries have taken less, especially the United States. The principal drop, however, is in pig iron, which of itself is 50,000 tons less, and the value 163,000*l.* Among the imports food products arrived more largely, although those of wheat have been considerably less, chiefly due to small shipments from Russia, where exports have now been stopped, but the supply from Egypt, India and Canada augmented, although from the States the larger exports from the Atlantic side have been balanced by reduced shipments on the Pacific coast. Imports of raw materials for textile manufactures were good, but others fell off and show a general decline including metals. As regards the latter, the import was valued at 1,840,000*l.*, or a decrease of 280,000*l.*, while the total for the seven months was 13,366,000*l.*, being a decrease of 463,000*l.* On the other hand, the exports were 3,246,000*l.*, a decrease of 870,000*l.*, and for the seven months, 24,685,000*l.*, or a falling off of 1,920,000*l.*, the excess of export over import representing the manufactured value of the metal in the form of copper, tin, lead, iron, or steel work. The value of machinery exported was 1,549,000*l.*, an increase of 10,500*l.*, and for the seven months, 9,423,000*l.*, or a falling off of 89,700*l.*, the increase for the month being chiefly to Holland, Spain, Brazil, and Australia as regards steam engines, and to France, Belgium, Russia, Sweden, the United States, Brazil and Australia as regards other descriptions.

The following tables in our usual form give the particulars as to metals, &c., for the month:—

		IMPORTS.		Increase or decrease	
Article.	Quantity	Value	per cent.	Quantity.	Value.
	Tons.	£			
Copper ore	5,064	29,137	—34.6	...	—53.5

THE COPPER PRODUCTION OF THE UNITED KINGDOM.

THE production of copper ore and copper precipitate, which was 9,310 tons in 1889, has been raised to 12,481 tons in 1890, and the metallic copper obtainable by smelting in the former year was 905 tons, as compared with 936 tons last year. The value of the ore at the mines in 1890 was 32,471*l.*, as compared with 29,697*l.* in 1889. Directing attention to the main sources of supply, it will surprise some of our readers to know the Parys Mines (a name that will recall mingled memories to British investors) is still at work, but only produced 118 tons, the value of the ore at the mine being but 150*l.* Cardiganshire only produced 33 tons of dressed copper ore, and Carnarvonshire (from one mine only) 600 tons. The production in Cornwall has been 5,271 tons, of the value of 15,301*l.* Devonshire exceeds it by a production of 6,038 tons, but the value was only 9,197*l.* The greater portion of this came from Devon Great Consols, that is, 4,368 tons out of 6,038 tons. The principal copper mines in Cornwall are Levant and Callington United. Ireland only produces 70 tons. The mean average price for 1890 was 2*l.* 5*s.* 6*d.*, as compared with 3*l.* 1*s.* 9*d.* for the previous year. As some of our readers may be puzzled to understand the meaning of the copper standards we append the following explanation:—

"The standard is the amount given for a ton of fine copper in the ore, together with the returning charges. The average standard of a week's sale is the average amount per ton paid at that sale, together with the returning charges. The produce is the number of tons of fine copper contained in 100 tons of ore, or the percentage of fine copper contained in any quantity of ore. The average produce is the average percentage of a week's sale. The returning charges are the charges made by the smelter for extracting the copper from the ore; for carriage, freight, agencies, interest on capital, profits, &c. In Cornwall the returning charges are 2*l.* 15*s.* on every ton of copper ore. The price of a ton of copper ore is the net price paid by the smelter after deducting the returning charges." At the public markets or "ticketings"—"Copper ore is sold by the ton of 21 cwt. dry weight; the allowance for water being made according to the loss obtained by evaporating 11*lb.* avoirdupois of the ore to dryness."

The exports of copper and copper ore from the United Kingdom, including metallic copper extracted from foreign ores imported in 1890, was 76,100 tons, as compared with 63,324 tons in the previous year. The total imports were 111,023 tons, as compared with 136,517 tons in the previous year. The quantity of regulus imported was 107,907 tons, as compared with 114,050 tons in the previous year.

AFFAIRS IN SOUTH AFRICA.

[From our Own Correspondent.]

Kimberley, July 27, 1891.

OUR DIAMOND INDUSTRY.

FOR some reason or other the authorities have decided not to publish any information for the future respecting the output and export of diamonds, but before very long, when this fact is realised by the public, I expect there will be a hubbub over the matter. I am, therefore, only enabled to send you some comparative returns which I extract from the Government Mining Inspector's reports up to the end of 1889, selecting the years 1887, 1888 and 1889, being the first three years under the great amalgamation scheme, and I will classify them as follows:—

KIMBERLEY MINE.

The inspector reports a depth of 740 ft. at the end of 1887; 825 ft. in 1888; 845 ft. in 1889, and no further depth in 1890. The following is the return of diamonds obtained in this mine during the three years named:—

	Carats.	Value.	Per carat.
		£	s. d.
1887 ...	1,333,832	1,410,208	21 1½
1888 ...	1,332,809	1,270,873	19 0½
1889 ...	816,135	1,132,490	27 9
Totals	3,482,776	3,813,571	21 10½

The number of claims registered in 1887 was 324, and in 1888, 289, but no later returns are given.

DE BEERS MINE.

In this mine 469 claims were registered in 1887, and 578 in 1888; no returns since. Depth attained in 1887, 700 ft.; in 1888, 805 ft., and for 1889 the report is an "enormous development of ground." The whole mine was absorbed in the De Beers Co. when the amalgamation took place in 1887. The following return is published:—

	Carats.	Value.	Per carat.
		£	s. d.
1887 ...	1,014,048	1,022,878	20 1½
1888 ...	1,003,406	935,444	18 7½
1889 ...	947,195	1,312,872	27 8½
Totals	2,964,649	3,271,194	22 0½

DUTOITSPAN MINE.

This mine reached a depth of 400 ft. by the end of 1887; 510 ft. in

1888, and 800 ft. in 1890. During the past year it has been virtually closed. Returns as follows:—

	Carats.	Value.	Per carat.
		£	s. d.
1887 ...	696,576	987,284	28 4
1888 ...	569,013	758,464	26 8
1889 ...	450,336	897,586	39 10½
Totals	1,715,925	2,643,334	30 9½

Although this mine is said to be closed down because it does not pay, it will be noticed, as a curious fact, that the average price, per carat, is higher than that of any other mine.

BULTFONTEIN MINE.

Depth reached at the end of 1887, 460 ft., and 620 ft. at the end of 1889. No return since. Amalgamations took place in 1889, and were completed in 1890, with the exception of 500 new claims marked out in 1890 on the north-eastern side of the mine. The returns of diamonds obtained from this mine read as follows:—

	Carats.	Value.	Per carat.
		£	s. d.
1887 ...	602,246	612,963	20 4½
1888 ...	659,887	642,763	19 5½
1889 ...	541,301	746,817	27 7½
Totals	1,803,434	2,002,543	22 2½

ST. AUGUSTINE'S MINE.

Previous to Dec. 1, 1887, the work at this mine was very irregular, and but little ground was washed. By the end of 1888 the main shaft had reached a depth of 450 ft., and No. 2 shaft 160 ft. No work was done after June, 1889, and in 1890 there was very little washing, but the shaft was sunk to the 524-ft. level in blue ground. The following are the returns:—

	Carats.	Value.	Per carat.
		£	s. d.
1887 ...	197	250	25 4½
1888 ...	78	105	26 4
1889 ...	152	254	33 5
Totals	427	609	28 6½

OTTO'S KOPJE MINE.

This syndicate sunk two shafts by the end of 1888—one of 620 ft. and the other 270. By the end of 1889 the principal shaft reached 800 ft. Work was suspended in 1890. Returns showed:—

	Carats.	Value.	Per carat.
		£	s. d.
1887 ...	—	—	—
1888 ...	580	563	19 4½
1889 ...	85	128	30 1½
Totals	665	691	20 9½

RIVER DIGGINGS.

The following returns from the river diggings will show the higher quality and value of the diamonds, as compared with those found in the mines:—

	Carats.	Value.	Per carat.
		£	s. d.
1887 ...	45,365	92,706	40 10½
1888 ...	31,980	61,031	37 6½
1889 ...	29,492	78,285	53 1
Totals	106,837	232,022	43 5

GRAND TOTALS.

The following is an abstract of the returns of the above mines for the years 1887, 1888, and 1889:—

	Carats.	Value.	Per carat.
		£	s. d.

River Diggings ...	106,837	232,022	43 5
Totals	10,094,713	11,963,964	23 9

PRINCE ALBERT GOLDFIELDS.

During the last two or three weeks the Colony has been in a state of excitement over the alleged discovery of gold in the Prince Albert Division of this Colony, and adjoining the Ootshoorn district, where the unfortunate Knysna Fields are situated. The reports are very contradictory, but evidently something of importance has turned up, as the Government proclaimed them public goldfields last Tuesday. In my next I hope to send you some reliable information on the subject.

THE STOPPAGE OF TREGURTHA DOWNS.

THE leading fact in connection with the stoppage of Tregurtha Mine is that the debenture-holders have taken possession. The mine until recently was doing fairly well, and the returns were considerable, but it came into a zone of poor ground similar to what was passed

through above. This made those chiefly interested alarmed, with the result that they have foreclosed, though what substantial benefit they hope to reap by so doing it is difficult to see. It is believed by the management that had the mine been allowed to go on another month it would have been paying its way. Capt. Josiah Thomas reported upon it, and though his opinion was not altogether favourable, yet he thought that another three months' trial should be given so as to allow time to see whether the confident opinions of the agent as to early success would be justified or not. This period of grace will not be given, for the debenture-holders are unwilling to find more money, and the directors felt that an appeal to the shareholders would have been useless. Hence the collapse, but there is some talk, after the sale, of making another attempt to develop Tregurtha Downs. The stoppage of this mine is rather a serious thing for Cornwall, for it throws out of employment 300 people.

RE-CONSTRUCTION OF BRYANT, POWIS AND BRYANT, LIMITED.

THE shareholders of Bryant, Powis and Bryant, decided on Monday last to re-construct. The company since its formation has had many misfortunes to contend with, not the least of which has been the extreme depression through which the timber trade generally has been passing. The company has a valuable goodwill, and under these circumstances the shareholders, no doubt, acted with prudence in the course they decided to adopt, especially as no liability is incurred thereby. It appears the old company had not the power to issue preference shares. A new company will therefore be formed, the shareholders receiving share for share, and the fresh capital will be raised by the issue of $7\frac{1}{2}$ per cent. cumulative preference shares.

SOUTH AFRICAN PROSPECTING AND MORTGAGE CORPORATION, LIMITED.

THE decided improvement that has this week taken place in South African Land, Gold, Diamond and Development shares, almost without exception, will come in the nature of a further stimulus to this company after its successful meeting on Monday last. The year has been a very bad one for South African ventures generally, and so far from blaming the board for the somewhat unfavourable report presented, the shareholders appeared gratified at the good account (all things considered) the directors were able to give of their stewardship. The corporation has substantial assets which cannot fail to be benefited by the long looked for Kaffir revival, which at last seems to have set in, and it has collateral advantages which shareholders cannot and will not ignore. The impression left by Monday's meeting was distinctly favourable, and we shall be greatly surprised if Mr. Archibald Parker and his colleagues (who are working wholly without remuneration) are not able to present a greatly improved report at the next meeting.

ENGLISH CROWN SPELTER CO.

IN these days of trade depression, when people are glad to get a modest 3 or 4 per cent. for their surplus cash (if they are so fortunate as to have any), a company that can pay to its shareholders 10 per cent. on their investment is indeed a spectacle for the gods. Such is the happy position of the English Crown Spelter Co., Limited, whose meeting was held on Tuesday last. The meeting may be described as the most satisfactory the company has ever held. The profit for last year was larger than in any previous year, and the prospects are in every way encouraging. This happy result, we may mention, is entirely due to reduction in the mine costs, and not to any increased productiveness of the mine. On this fact all connected with the management of the company deserve the highest praise.

THE FIRST MYSORE ALLUVIAL MINE.

(From a Correspondent.)

DURING the long-continued financial depression through which we have been passing, one of the few departments in the Mining Market which has withstood its general effects has been notably that relating to the shares of the several Mysore companies, which throughout have stood their ground with marked firmness. This is so far satisfactory, as it should be, and shows the discrimination of the investing public, who never lose sight of the actual facts as regards produce of the precious metal. So long as this shows steady increase no financial panic can affect the price of company shares. The Mysore Co., since the commencement of its operations, has produced gold amounting in value up to end of last year to no less than 638,613 $\frac{1}{2}$ l., and, as we all know, the last dividend declared was at the rate of 75 per cent. We look forward to a considerable rise in the present price of these shares, as also those of the Ooregum and more prominent companies in which movement the shares of the low priced companies are sure to participate; indeed, we look upon these latter as specially deserving the attention of speculators, several being quoted at a few shillings only, and which may, before long, command pounds. Amongst the low-priced shares more frequently dealt in lately have been those of the Mysore-Nagar Gold Mines, Limited, at present quoted at 5s. 6d. to 6s. 6d. for the 1 $\frac{1}{2}$ share. We find, first, that the property has been endorsed by Mr. Lavelle, the discoverer of the Kolar Goldfield, and that it has acquired an area of 1 square mile, largely consisting of rich alluvium, from which almost immediate returns are expected. Mr. Mervyn Smith, whose name has been indented with the gold

mines of Chotta-Nagpore (Bengal), which district created much excitement and speculation in Calcutta last year, has also reported on the Mysore-Nagar Gold Mines, Limited, and he writes as regards the rich alluvium, that "in every instance gold was got," adding that "two experimental pits were sunk, each 6 ft. square, and that the result of these two pits gave 2 dwts. 7 grs. and 7 dwts. respectively, or about 10 $\frac{1}{2}$ grs. of gold per cubic yd. of material throughout." The property is reported to comprise also some wonderfully rich quartz reef (old mines), and some pieces sent home and assayed by Johnson, Matthey and Co. have given as high as 41 ozs. of gold to the ton; but these reefs will, of course, take time and capital to develop. The company is directing its attention first, we understand, to the large area of alluvium which can be worked at such small cost, and from which immediate returns are looked for. So far as we are informed, this is the first Mysore Placer Mine started, and the shares seem worth attention as a speculative purchase. The direction is highly respectable, and includes experienced men. Viscount Combermere is the chairman of the company.

SUNBURST GOLD MINING CO., LIMITED.

IN nine months this company produced from its mine 2,999 tons of ore, which yielded 12,136 ozs. of gold of the value of 42,530 $\frac{1}{2}$ l., and paid in dividends 22,800 $\frac{1}{2}$ l., or equal to 9s. 6d. per share on the present issue of 48,000 shares, or at the rate of 500 per cent. per annum on the paid-up capital, which is 2s. 6d. per share. Three similar mines adjoining have sunk shafts to levels corresponding with the Sunburst, and found that the original shoot of stone extends into their area. In the half-yearly report of this most successful company the directors congratulate the shareholders that previous predictions have proved a reality, and that as the mine has now opened out on a permanent body of stone "it will henceforth crush continuously and pay regular dividends." The result of the half-year may be gathered from that of the nine months, and the shareholders are assured that there is sufficient stone between levels Nos. 1 and 2 to pay good dividends for a considerable time to come, independent of future discoveries. Messrs. Arthur Forbes and Co., of the Australian and Mining Agency, 16, Cornhill, E.C., have done well to publish these remarkable facts for general information. They will not bring into greater prominence than we have done in our telegrams week by week the returns of this remarkable mine, but they will give fresh heart and hope to the shareholders in many colonial companies which now occupy a much better position on the market, and in public estimation than they did a few months ago.

THE MONEY MARKET.

CITY, FRIDAY EVENING.

IN consequence of the Russian Government having prohibited the export of rye, Germany with her deficient harvest has been preparing to import supplies of grain. The fall in the Russian rouble has further troubled Berlin, and the Exchange on London fell to a point at which sovereigns could be taken from the Bank of England, hence a rather large total was taken, but the demand was not pressed, and the Exchange has now recovered. The fears, however, which it created of a draw of gold concurrently with the usual enquiry at this season for Egypt, coupled with some temporary absorption of the supply of money afloat from last week's claims, and the disturbance caused by the distribution of some of the largest railway dividends this week, led to a rise in the rates for discount, and the quotation for Three Months' Bills has advanced to 1 $\frac{3}{4}$ per cent., while money rose to $\frac{1}{2}$ per cent. for call, and to $\frac{1}{4}$ per cent. for short loans, but the tendency is now easier with some increase in the supply. The prospects of the harvest here are poor, and in France it is short, so that altogether the demand will absorb the surplus that America, happily, has to spare, a fact which has already created an incipient boom in the New York markets in expectation of better trade. The Bank return shows a small reduction in the Reserve, which now represents 45 $\frac{1}{2}$ per cent. of the liabilities.

Quite a miniature boom has taken place on the Stock Exchange, but the activity was chiefly among dealers only, for the public continue to lie low, and business on their account is limited to the Funds, Colonial and India Stocks and English Railways. This sudden revival in speculation, if allowed to continue, is, however, calculated to do a lot of good, and the keynote is with American Railroads, for if New York only support this market a universal recovery is almost a certainty, as the improvement in Yankees is based on a solid foundation, and their bountiful harvest should be an admirable lever to move the rest. A wholesale reduction in the "bear" account has, of course, followed, and, despite numerous realisations, there has been no marked reaction from highest prices. The average gain in United States descriptions is about 3 $\frac{1}{2}$ per cent., and such specialties as Atchison Bonds, Milwaukee, Denver Preference, Louisville, Northern Pacific, Norfolk Preference, and Union Pacific can show decidedly more, but the latter are looked upon with suspicion, which is justified by their position, and consequently they are more sold than bought. Grand Trunk Securities and Mexican Railways have risen, the latter because the Inter Oceanic has sustained serious damage by floods. Argentine Railways have recovered smartly, a movement which is fully shared by the debt or debts of the Republic. Uruguayan are also much firmer, and Foreign Bonds are not so bad now as they were, although the Berlin market is in a very queer state. Trusts have sensibly advanced, likewise Nitrates and some Industrial Miscellaneous undertakings. In English Railways, while Brighton "A" has fallen, nearly all other lines have expanded in value, and the Scotch and heavy stocks, especially Midland, South Eastern Deferred and Chatham descriptions, can exhibit a good record. The last-named companies are attempting to arrange a working agreement.

Money from day to day was abundant at $\frac{1}{2}$ per cent., while short loans were not always lendable at $\frac{1}{4}$ l. Discount rates this afternoon

further improved, and three months' bills closed at 1½, with a fair amount of merchants' paper in the market. 9,000*l.* in sovereigns arrived at the Bank of England from Portugal, whilst 27,000*l.* were withdrawn for Germany. Bar silver fell to 45½*d.*, and Mexican dollars to 44*d.*

The markets to-day have held their own and rather more, which is a most encouraging feature and full of promise. It would not do, however, to be too sanguine at present, and although there seems more confidence, caution should be displayed in entering into commitments. The Funds have been dull, and sales have further reduced the price of Consols to 95½, ¾ for cash, and 95½ for account, being a decline of ½, due to fears of dearer money and realisations to invest in other lower priced securities in view of a recovery now that the worst appears to be over. Indian and Colonial Government Securities were also rather dull, but in the Foreign Market both the International section and that for South American Securities was good, Argentine in particular further rising, the 1886 Customs Loans and Funding Loan being 2 per cent. and 1 per cent. higher respectively, the latter being quoted now 60½, 61. The Cédulas have also responded, the National ½ and the Provincial ¼, although the premium on gold has risen again to nearly 300 per cent. Portuguese Bonds show a rise of about 1 per cent., and other securities ¼ to ½, except for Uruguay and Brazilian. Home Rails show an improvement of ¼ to ½, but Brighton "A" was rather flatter, the continued rainfall affecting traffics and the crops. American again advanced with some support from New York, and prices left off at their best, or a rise of ¼ to ½, with 1 per cent. in Wabash. Mexican Railways further rose 2 to 3½, on the breakdown on the Inter-oceanic Lines, and Miscellaneous issues showed strength.

Annexed are the final quotations to-day:—Consols Account, 95½, 96½; Egyptian Preference, 91, 91½; Egyptian Unified, 96½, 96½; French Four-and-a-Half per Cents, 104½, 104½*xd.*; Hungarian, 88½, 88½; Italian, 89½, 89½; Mexican, 83½, 84; Peru Five per Cents, 9½, 9½; Peru Six per Cents, 23½, 23½; Russian 1889, 96, 96½; Portuguese, 40½, 41½; Spanish, 71½, 71½; Turkish 1871, 95½, 95½; Turkish Defence, 92½, 92½; Caledonian Railway, 113½, 113½; Great Eastern, 89½, 90; Great Western, 162½, 162½; Brighton "A," 146½, 146½; North Western, 176½, 177½; Metropolitan 82½, 82½; Metropolitan District, 28½, 29½; Midland, 157½, 157½*xd.*; North British, 39, 39½; North Eastern, 156½, 157½*xd.*; South Eastern "A," 82½, 82½; Mexican Railway Ordinary, 36½, 36½; Grand Trunk, 9½, 9½; Grand Trunk First Preference, 64½, 65½; Grand Trunk Second, 43½, 44½; Grand Trunk Third, 23½, 23½; Canadian Pacific, 86½, 86½; Denver Preference, 45½, 46½; Erie, 22½, 22½; Milwaukee 68½, 69; Lake Shore, 115, 115½; Louisville, 73½, 73½; Atlantic First, 32½, 32½; Ontario, 16½, 17; Ohio, 20, 20½; Norfolk and Western, 51½, 51½; Reading, 15½, 15½; Reading Bonds, 79½, 80½; Union Pacific, 36½, 36½; Wabash Preference, 25½, 26½; Ottoman Bank, 12½, 12½; Anglo-Telegraph, 46½, 46½; National Telephone, 4½, 4½; Hudson's Bay, 15½, 16½; Suez Canal, 110½, 110½; Guinness, 328, 331; Allsopp's Ordinary, 26, 28; Bryant and May, 13½, 14; Eastmans, 5½, 5½; Elmore's Copper, 3½, 3½.

THE GYMPIE GOLDEN CROWN MINING CO., LIMITED.

THE CHAIRMAN VISITS AND REPORTS FAVOURABLY ON THE PROPERTY.

REPORT OF THE DIRECTORS.

THE directors present the annual statement of accounts made up to Apl. 30, 1891, duly audited. On the occasion of the issue of the last annual report particulars of the acquisition of the new ground of 25 acres on the "Two Mile" were given. The development of this ground is being carried on vigorously; and, from the reports from the mine manager, which have been regularly published in the mining and financial papers, our prospects here are encouraging, fair gold having been reported in the latest advices. In the old workings stone is still being raised, and, although poor, it about pays expenses. Mr. De Lissa, the chairman, has thoroughly inspected the mine, and written a full report on our future prospects; this is annexed, and will give every information, which he will no doubt supplement in his address to the meeting. In order to admit of Mr. De Lissa presiding, the meeting has been fixed about a month later than usual, and the directors feel sure this will meet with the approval of the shareholders, as they will thus get reliable news at the earliest date from the chairman who has been over the property and personally inspected all the workings. From the accounts it will be seen that the expenditure has not been very heavy considering the amount of work done. The mill, as formerly, has, by crushing for other companies, not only covered all expenditure and repairs to plant, &c., but has earned money on balance, besides crushing this company's own stone. Mr. Sinclair MacLeay retires on this occasion, but being eligible offers himself for re-election. The auditors, Messrs. Monkhouse, Goddard and Co., also retire, but being eligible offer themselves for re-election.—B. P. WARD, Secretary.

THE CHAIRMAN'S REPORT.

In the course of his interesting and instructive report, which is accompanied by an admirable plan, Mr. De Lissa says:—

Mr. Ramage, the manager, is concentrating his work on the Peter and Paul reef in the slate break. The reef, on which we are now driving, is about 1 ft. thick, and they may at any time come on to a good part. All that it is possible to do is being done—rigid economy is being exercised—all the three shafts, only two of which are in line, are being worked by the one winding engine at the main shaft by an ingenious arrangement of Mr. Ramage's. All the works are of a substantial nature, and in good order. Gympie Golden Crown old mine: I next visited this, but as so much has been reported thereon from time to time, I need not go quite so much into detail. Here, our great disappointment has been the failure of the ground with depth. All our very heavy expenditure sending the shaft down to 1,230 ft., with the heavy cross-cuts east and west, and some 800 to 900 ft. of drives at the 830 and 930-ft. levels being wasted, but we had to try it, of course. Whether the reefs do or do not do any good, at a depth is now being proved for us by our neighbour the No. 1 North Phoenix Co. Mr. Ramage is, therefore, now taking out what he can from the higher levels, working the 240 ft. one from which some decent crushings up to 1 oz. have been recently made, and some of it came out of the ad-

joining ground which we purchased as a tailings area some time since. Great harmony exists between the managers, and they do what they can to assist each other. This new reef then, in the Phoenix, gave us some hope as regards the eastern portion of our old ground. The battery is all in good order, and as usual has earned money in crushing for other companies, but competition in this respect is very keen at present. I looked into the finances and find that the old ground has paid its way; and lately pulled up 1,500*l.* of arrears. 5,000*l.* has been spent in opening up the new lease. There is no waste anywhere, and the management is all that could be desired, and most economical, Mr. Ramage having the happy knack of getting as much work as possible out of his men, and with a good will. Mr. Ramage is not well at present, and the doctor has recommended a change. I have given my sanction to the local directors giving him a month's holiday. He has never before had a holiday. Messrs. Ferguson and Atkinson, the local directors, look after things closely, and showed me every possible courtesy and attention.

BROMFIELD-INGERSOLL HAND-POWER ROCK-DRILL.

THIS drill is the outcome of several years of study and experiment by Mr. S. Ingersoll, the inventor and original patentee of the well-known Ingersoll Steam Rock-Drill, and also of the Ingersoll Duplex Hand-Power Drill, patented by him in 1886. Mr. Ingersoll claims that the Bromfield-Ingersoll Drill is a long step in advance of any previous invention in this line, and that in it he has overcome all the difficulties heretofore considered inseparable from hand-drilling, especially in the matter of economy of power; every other effective hand-drill now in the market calling, he alleges, for more power in continuous working than one or two men can be expected to give. Among the special features contributing to this result, and ensuring regular and rapid work, without delay or disappointment, the following are mentioned:—No recoil or rebound, and no weights are necessary, as in all other makes of hand-power rock-drills. The recoil is taken up by a "compensating lever mechanism"—a new and effective device, closely

patented, which causes the blow to be delivered with an increasing instead of a diminishing velocity, at any angle of work, which gives it a practical advantage over every other drill, in mining and all kinds of tunnelling work. As described by the inventor, it can be worked at any angle, above or below the horizontal line, whilst it has a perfect and true rotation, by a method insuring accuracy of touch in boring. The force of the blow is regulated at pleasure up to 350 lbs., and it has also an improved automatic feed, accommodating itself to the rock, and is so constructed as not to interfere with the action of the drill bar or steel.

Several of these drills have been put to severe and prolonged tests in contract work in Connecticut, U.S., and their thorough practicability been assured. They are now said to be used in 17 distinct countries. This drill, with two unskilled men, it is said will readily do the work of five or six skilled men using bits and sledge hammers. It does not tire out the men, and two men can take entire charge of a drill and work it continuously, with the best of results. Testimonials from centres in which they have been used are extremely favourable and are distinctly in support of the foregoing statements. It is a drill which, no doubt, will have a large sale amongst contractors, quarry owners, colliery owners, and, in fact, all classes of works where rock-drilling has to be done.

WEST ARGENTINE, LIMITED.

THE VISIT OF MR. S. JENNINGS TO THE UNITED STATES
CULMINATES IN THE ISSUE OF A REPORT TO THE SHARE-
HOLDERS.

MR. SAMUEL JENNINGS, who was deputed to visit the Silver Ledge group of mines, in which this company recently acquired an interest, has embodied the result of his labours in a very full and exhaustive report, which has been deemed by your directors to have so important a bearing upon the interests of the shareholders of this company, that they have determined to circulate it, and copy is sent you herewith. The plans referred to in the report can be seen at the office. The directors are now seriously engaged in considering the basis for formation of the definite working company, so that the material interests of the shareholders may be fully secured.—W. P. OWEN, Secretary.

ABSTRACT OF REPORT BY MR. SAMUEL JENNINGS. SITUATION AND EXTENT OF PROPERTIES.

In compliance with your request I have visited the Silver Ledge group of claims in the Red Mountain District of Colorado, in which you are interested through the Silver Ledge Syndicate, and have thoroughly examined the property as to its present appearance, and with a view to its future development. The property consists of the following claims, situate upon Mineral Creek, about 3 miles below the Guston and Yankee Girl Mines:—Silver Ledge, Iron Silver, Morning Star, Addie S., Copper Bell, Blue Bird, Oriental, and about 3 miles further down the creek, Lone Star. The titles to these properties have been thoroughly investigated, and are pronounced by Judge Campbell to be perfectly unassailable. The Silverton Railway passes through the property, and trains stop when necessary directly above the works of the syndicate. The main shaft is now sunk to a depth of 255 ft. below the tunnel level, which is 40 ft. below the floor of the shaft house. The value of the ore in one strike in No. 2 level has been ascertained by assay to be 145.70 ozs. of silver and 17.32 per cent. of copper, and \$5.40 of gold per ton.

PROBABLE PROFITS.

The quantity of milling ore in the mine is now very considerable. In estimating probable results you must bear in mind that I do not profess to any personal knowledge of the values of ores. My figures are those of experienced men, whom I had the opportunity of consulting on the spot. The figures have been arrived at by careful calculation of every detail, and I think they may be relied upon, when they indicate an approximate net profit of about 60% per month, exclusive of the shipping ore, based upon a minimum supply of ore and estimated value of same.

MILL.

The directors will consider whether, in spite of the improved prospects of the mine, it will not be to the distinct advantage of the company that no time be lost in furnishing the necessary mill, as urged when the property was acquired. As to the cost of a suitable mill, I have made inquiries and find that all we want can probably be purchased locally upon easy terms. The work could be completed in three months from start, and the total cost would probably amount to 3,000%, so that, upon the estimate of mill earnings given above, the entire cost ought to be covered in six months.

TIMBER AND WATER.

There is fine timber on the mountain side above our mining claims, but so much building and mining is going on and likely to increase that the cost of timber is sure to become a serious matter, and already there is a keen enquiry for timber claims, and I have considered it desirable to locate two or three claims close to our property for the sake of the valuable timber standing upon them. The nett cost of location and necessary labour is settled for \$250.00, which will soon be recovered in the value of timber. The Silver Ledge property is amply supplied with water for seven months in the year, but in winter there is usually but little water running in the creek. There is also a fine mountain stream, which falls into the creek, immediately to the south of the shaft house and proposed mill site.

Mr. Jennings sketches a "plan of campaign" for the shareholders, and concludes thus:—I commend these facts to the serious consideration of the shareholders, and beg them to remember that they have a chance to acquire a property larger in extent than that of any two separate holdings in the entire district; that they may acquire this merely upon prospect terms; that even as the mine now stands it will pay with the addition of a concentrating mill; that good shipping ore worth \$180 per ton has already begun to appear, and that the shaft though only 300 ft. deep is at the bottom entirely in excellent milling ore. These are solid reliable facts which need no expert opinion, and if in addition to this it is considered what rich ore has been won and is still being found in neighbouring mines upon the same mineral belts, though invariably at a greater depth than that we have reached, I do not think there need be any hesitation about raising adequate capital for the purpose of carrying out the undertaking to a successful issue. In my opinion not less than 30,000% to 40,000% should be provided, inclusive of the amount already raised, and the nominal capital of the definitive company ought not to be less than 150,000%.—S. JENNINGS.

THE NEW GUSTON CO., LIMITED.

MR. HARVEY, the mine superintendent, under date Aug. 6, reports on the mines, viz.:—No. 3 level—South drift: No work has been done here during the past fortnight, the men being employed on repairing work at No. 6 level. No. 5 level, north drift, No. 1 stope: Length of stope, 30 ft.; height over back of level, 17 ft. North portion of stope, ore much broken in appearance. South end of stope: Ore 1 ft. thick; worth from 40 ozs. to 500 ozs. silver per ton. No. 6 level, No. 6 ore body stope: Length of stope, 54 ft.; height over back of level 65 ft. 6 ins. Width of ore 11 ft.; value from 90 ozs. to 3,000 ozs. silver per ton; gold, ½ oz. to 2 ozs. per ton; copper, 3 per cent. to 7 per cent. The appearance of stope is remarkably fine. South drift, new stope: Height of stope over back of level, 32 ft.; length, 28 ft.; width of ore, 11 ft.; value from 50 ozs. to 200 ozs. silver per ton; gold, ¾ to 1 oz. per ton; copper, 2 per cent. to 8 per cent. North drift—Stope north end of winze: Length of stope, 16 ft.;

height over back of level, 23 ft.; width of ore, from 2 ft. to 6 ft.; value, from 120 ozs. to 150 ozs. silver per ton; gold, ½ oz. to ¾ oz. per ton. Stope—South end of winze: Length, 45 ft.; height over back of level, 25 ft.; width of ore, 6 ft.; value, from 130 ozs. to 200 ozs. silver per ton; gold, ½ oz. to ¾ oz. per ton. The stopes look well throughout. South drift: Total length driven from south end of winze, 17 ft. We have had good ore in this drift during the past fortnight, but at present it is poor. North drift or Pioneer level: Drift driven from north end of winze 22 ft. No. 7 level—No. 7 ore body stope: Length of stope, 53 ft.; height over back of level, 14 ft.; width of ore, 9 ft.; value from 40 ozs. to 1,500 ozs. silver per ton. This stope looks well. South drift: Drift driven 32 ft. There is no ore of value at present in the face. Shaft: The main shaft has been sunk 27 ft.; total depth below base No. 7 station 70 ft.

TELEGRAM.

Output for first half of Aug. month:—The mine superintendent cables to the following effect: "Ore shipped, 600 tons; value (estimated), 7,000%."

AMERICAN BELLE MINES, LIMITED.

A CABLE has been received from Mr. Harvey to the effect that the cage roads are completed—gallows frame not yet finished—ore house track completed, and timbers for ore house partly framed. It is expected that the shaft will be ready for hoisting ore about the end of this month.

YANKEE GIRL SILVER MINES, LIMITED.

A CABLE has been received from Mr. Harvey this morning to the following effect:—"To 15th August shipped 250 tons; estimated value, 2,066%. The reason for not shipping more high-grade ore is that the Robinson shaft is being repaired; repairs have also had to be made to the timbers in the principal stopes Yankee Girl. It will take to the end of August month before the necessary works can be effected."

CORNISH TIN MINING.

(FROM A CORRESPONDENT.)

WITHIN the last few years many causes have conspired to discourage this once thriving industry. But amid all the changes which time has brought there is no exhaustion of the mineral wealth of the county. It still invites the industry of the miner, and, what is more, it promises him a rich reward. Cornish mining suffers only because for the time being attention has been diverted into other and inferior enterprises. Wealth, fabulous in amount, has been extracted from this classic ground, but there is left behind more tin ore than ever has been taken out, and to modern enterprises, if they be well directed, this ore is easier of access than ever. British tin mining is *par excellence*, the enterprise in which large fortunes have rapidly been made. The famous Dolcoath has been better than a gold mine to the fortunate proprietors. East Pool has returned upwards of £60 per share, although the amount paid up is only 10s. per share, Carn Brea has paid back its capital several times over, and West Kitty on a capital of 3,600% has yielded dividends to the amount of 70,000%. In the whole range of industrial investments there is nothing to be compared with the successful Cornish Tin Mines. It is true that some of the old mines have ceased to yield to the full their former large profits, for the workings have become deeper, and consequently the expenses have been seriously augmented, while the imports from Australia and other places have depressed the markets, and native enterprise has been dulled by foreign competition. That competition, however, has found its level, the price of tin is steadily rising, and is likely to rise for some time to come. Fortunately at this crisis the historic fame and the splendid fortunes of Cornwall are revived in some of her most recent undertakings, and the whole county, excited by new and extraordinary developments, is on the alert and is full of the expectation of a boom in Cornish Tin Mining such as the generation has not known. The Tregrehan Consols Tin Mine, where these extraordinary developments have taken place, is situated in the midst of exceptionally rich tin deposits, or to use a Cornishman's phrase, it lies "in the lap of fortune." It is surrounded on all sides by mines that have returned enormous wealth. Here the shareholders in East Crinnis made a profit of 200,000%, Old Par Consols gave at least an equal return, Fowey Consols enriched its proprietors with 400,000%, and the celebrated Wheal Eliza poured into the lap of the few lucky shareholders a wealth of tin, which, when transmuted by market operations into gold, represented a colossal fortune. The Tregrehan Consols Mine immediately adjoins this property and possesses parallel lodes. It is, however, better situated than Wheal Eliza or than any of the splendid circumjacent mines. The junction of the granite and the killas takes place within the Tregrehan property, and every geologist and practical miner knows that throughout the county at such junctions are to be found splendid courses of tin. After making several trial experiments to test the value of the lode at various points down to 45 fms., the miners found it tin-bearing, and several sales were made from it, the sinking thus nearly paying for itself. At an earlier stage, that is to say, at 30 fms. depth, was discovered the lode ranging from 12 ft. to 20 ft. wide and maintaining the same width all the way down. It has been found to be a continuous, unbroken, and masterly lode. It is a true fissure vein, excelling anything found in the adjoining Wheal Eliza, and it is declared by those competent to judge that it is one of the highly-productive lodes of the late Par Consols Mine. At the shallow depth of 45 fms. there have been laid open lode stuff, containing on the average 40 lbs. to the ton, some of the stones being fully quarter tin, giving reserves of black tin of the approximate value of 3,000%. Several of the principal mining engineers have inspected the property, and join in recommending the Tregrehan Consols as the richest and most promising mine that has been opened out in Cornwall for many a day, and one of the great mines of the future.

CUMBERLAND LANDS, LIMITED.—The following is the substance of a cable received from the chairman, who is now on the property:—"Carlisle, Aug. 14.—Daily applications are being made for town lots. Sawmill will be at work in a few days. Wharf almost completed. I am greatly pleased with the property.—BORRADAILE."

REPORTS OF MEETINGS.

THE ENGLISH CROWN SPELTER CO., LIMITED.

THE MOST SATISFACTORY YEAR IN THE HISTORY OF THE COMPANY—THE LARGEST PROFIT EVER MADE—GOOD DIVIDEND, 10 PER CENT., AND ENCOURAGING PROSPECTS—HEARTY THANKS ACCORDED BY THE SHAREHOLDERS.

THE eighth ordinary general meeting of this company was held on Tuesday at Winchester House, Old Broad Street, to receive and consider the directors' report, to declare a further dividend, and for the transaction of the ordinary business of the company.

Mr. E. A. Pontifex

presided.

Mr. J. MORRIS BOWEN (the secretary) read the notice calling the meeting.

The report of the directors, which was taken as read, stated:—An interim dividend of 5 per cent. for the year 1890, absorbing 4,200*l.*, has already been paid, and it is now recommended that a further dividend of 5 per cent. be declared, which will leave 5,575*l.* 6*s.* 11*d.* to be carried forward to next account.

The CHAIRMAN said: Gentlemen, it will be a source of gratification to us all that, at a time when many industrial undertakings have to lament a diminished prosperity, we are able to lay before you a report and statement of accounts which exhibit

A LARGER PROFIT THAN HAS BEEN EARNED IN ANY PREVIOUS YEAR SINCE THE FORMATION OF THE COMPANY.

(Hear, hear.) The profit which has been made during the past year—exclusive of the balance brought forward—amounts to 13,943*l.*, as against 11,070*l.* for 1889, which, until now, had been our most prosperous year. This increased profit has been mainly due to the satisfactory price of spelter which has ruled for some time past, and which, in view of the large demand for the metal and the relatively short supply of high quality ores, would seem likely to continue. This profit has been earned in spite of considerably higher prices for labour and fuel. A glance at the table given at page 4 of the directors' report shows that the increased profit is not due to any increased productiveness of the mines. On the contrary, it has fallen off, and is lower than in either of the last three years, though higher than the two preceding ones. As compared with the former period, our fixed charges have, therefore, to be divided over a smaller area. This naturally should have increased the cost of raising each ton of ore; but we find that, on the contrary, it has diminished. The average cost of our ore, ex ship at Swansea, was 3*l.* 15*s.* per ton in 1888, 3*l.* 10*s.* 6*d.* per ton in 1889, and 3*l.* 5*s.* per ton in 1890. Of the saving in costs in 1890, 1*s.* 10*d.* per ton was effected by a somewhat lower rate of freight. The balance is due to lower mine costs. A reduction in this last-named direction is, in our case, a not unmixed good, because our cost of mining is very greatly influenced by the amount of exploratory or dead-work which has been performed. I have on previous occasions explained the peculiar kind of mining which the intermittent and bunched nature of calamine deposits entails. As the various lenticular masses, or bunches of calamine, which are being worked upon show signs of approaching exhaustion, others have to be sought for, and the judgment of the superintendent is required, almost from day to day, to decide whether the search in each particular direction offers sufficient encouragement to justify its continuance, or whether the time has come for its abandonment, and the sacrifice of all it has cost, and that attempts should be commenced in some other spot.

CALAMINE MINING

is quite a different thing and is much less reliable even than ordinary lode mining, which, at least, affords some guide to the miner as to the direction in which he should seek. It would seem from the reduced quantity of the ore raised, combined with its lower cost, that a little over-caution has been exercised at the mines during the last year, and that a little more enterprise in looking for new ground would now seem to be desirable, especially seeing that spelter is at such a remunerative price. In addition to the 6,644 tons of raw ore raised from our own mines, we consumed during the past year 3,259 tons of blende, zinc ashes, &c., besides a considerable quantity of calamine which we purchased from the Modigliani Mines under our contract with their proprietors. We turned out from the works 4,945 tons of spelter, which realised an average price, delivered at Birmingham, of 23*l.* 2*s.* 7*d.* per ton, and it, as already stated, resulted in a net profit for the year of 13,943*l.* It is not possible to dissect the combined results obtained from our mines and smelting works so as to compare accurately one year with another, because the ores raised in one year from the mines are, to a large extent, smelted at the works in the year following; so that, if you compare the figures given you in the annual reports, you will find a difficulty in making them fit. Taking the mines by themselves the costs and returns are as I have stated them. In regard to

THE SMELTING WORKS,

the cost of production has considerably increased owing to the great rise in the price of coal and of wages. It has cost us 1*l.* 3*s.* more for each ton of metal smelted in 1890 than in 1889, equal to a total extra cost of 5,686*l.*, the bulk of which is attributable to the higher price of coals. Although we have smelted 40 tons less metal, we have paid 3,793*l.* more for coals than in the previous year. Of this, however, nearly 1,000*l.*, as Mr. Arthur Richardson points out in his report, is due to the smelting mixture having been of a lower assay; so that 1,000 tons more material had to be treated to produce about the same quantity of metal. This result points to the advantage of having as rich a smelting mixture as is possible—an object which we can only attain either by buying zinc ashes, which are exceptionally rich in metal, or high quality blende, which is somewhat scarce. The competition for zinc ashes is very keen, and we were only able to obtain about half the quantity in 1890 that we bought in the previous year. Mr. Arthur Richardson directs attention to the prejudicial effect upon our smelting results of the partial withdrawal from the market of the rich and high quality Minera blende, which we formerly were able to buy. It is, therefore, fortunate that we acquired an interest in the adjoining

property, now known as the New Minera Mine, about which I will read a letter, dated a few days back, from

MR. H. E. TAYLOR, WHO IS IN CHARGE OF THE MINE.

Mr. Taylor, I may mention, is brother of Mr. John Taylor, of the eminent firm of John Taylor and Sons. His letter to me is as follows:—

"New Minera Mining Co., Limited,
"45, Newgate Street, Chester,
"Aug. 10, 1891.

"Edmund A. Pontifex, Esq., 113, Cromwell Road, S.W.

"My dear Sir,—In reply to yours, I am glad to tell you that the mine is looking well, and we have a monthly product of 140 tons lead ore and blende, but chiefly the latter. The dressing apparatus was, as a matter of caution, put up on a small scale at first; but we are now following the development of the mine by additional crushing and other machinery, and hope to double the output before the end of the year. The ore-ground was discovered by driving from the shaft in Oct. last, and it is being opened out as quickly as possible by four levels, at depths varying from 255 yds. to 315 yds., with other necessary workings for ventilation and delivery of the stuff. The mine is at present being wrought at eight separate points, all in paying rock, valued at from 2 tons to 8 tons per fm. The quality of the blende is excellent, but as you know all about that, I need not enlarge upon the subject.

"The lead ore we are also able to turn out at a high standard, and it commands the top price in the market for lead, but does not contain much silver. New Minera Mine may safely be considered as an established success, and all the expectations held with regard to it at the outset have been more than realised. The vein has proved rich, an immense body of ore has been proved, the water is as nothing to that pumped by our neighbours, and the concern throughout is placed upon a basis for a prosperous future.—Yours truly,

H. E. TAYLOR."

Now, you will have observed from Mr. George Francis' report that he again dwells upon the very profitable results which may be expected from the erection of dressing works at the mines, by means of which he would propose to wash our first quality ores, so as to improve them for smelting purposes, and also to treat the very large and continually increasing quantities of refuse ores, or discariche, as they are called. He says that we have enough of this latter, irrespectively altogether of any further supplies from the mines, to keep our smelting works employed for some years to come. Our neighbours at the Arera Mines are, under his management, trying this experiment of putting up dressing works. It has, I fancy, taken them a longer time and cost more money than had been expected; but they are probably now not far off from arriving at a result which may either be a guide or a warning to us. Should we, as Mr. George Francis believes, be able to treat our refuse ores successfully, it will very largely enhance the prosperity of our company. The most recent advices from Italy point to a considerable improvement in several important points at the mines, so that we may hope for a good output for the rest of the current year. With the mines looking well; with a prospect of being able to make our refuse ores a source of considerable profit; with the improvements which we have for some time past been making at our smelting works with a view, so far as possible, to compensate by mechanical arrangements for the increased cost of labour, and with every appearance of a good price for spelter being maintained—with all these things I think that we may

LOOK FORWARD WITH SOME CONFIDENCE

to a continuance of greater prosperity than we at one time ventured to hope for. (Applause.) I now beg to move the adoption of the report and accounts.

Mr. S. LOVERIDGE: I have great pleasure in seconding it.

The CHAIRMAN: If any gentleman has any questions to ask, I shall be happy to answer him.

No questions were asked.

The resolution was carried unanimously.

The CHAIRMAN: The next resolution of the agenda is a very pleasant one, viz., "That a final dividend for the year of 5 per cent., making, with the 5 per cent. already paid, 10 per cent. for the year, be and is hereby declared payable on Friday, Sept. 4 next." I beg to move it. (Cheers.)

Mr. LOVERIDGE seconded the motion.

The resolution was carried.

The CHAIRMAN said that the next business was the re-election of the retiring director, Mr. J. C. Richardson, who was, as the shareholders knew,

THE LARGEST SHAREHOLDER IN THE COMPANY.

He devoted himself very much to the interests of the company, and paid great attention to its affairs. He was very constant in his attendance, although he was unable to be present that day. He (the chairman) had very much pleasure in moving that he be re-elected.

Mr. T. W. ROBERTSON seconded the motion.

The resolution was carried.

Col. S. S. MOCK then proposed the re-election of the auditors, Messrs. Spain Bros., at a remuneration of 50 guineas.

Mr. FROST seconded the motion.

The motion was carried.

The CHAIRMAN said that that concluded the business of the meeting, and he was very much obliged to the shareholders for their attendance.

Genl. ROCKE begged to propose a vote of thanks to the chairman and directors. He expressed very great satisfaction at the highly satisfactory statement that they had listened to from the chairman that day.

RETROSPECT.

He (the speaker) had been connected with the company from the start, and remembered that when the prospectus was issued, about eight years ago, and various difficulties arose, they owed it to the skill of their present chairman and directors and secretary for being successfully overcome. He wished to ask the chairman whether the directors could see their way to take some step to dispose of some of the New Minera Mine shares, and to devote the money to the formation of the nucleus of a reserve fund, because they ought to be prepared for any emergencies, such as a fall in the price of spelter to 14*l.* per ton again. Now that an opportunity

occurred like the present, he thought that they ought to take a step to form something like

A RESERVE FUND.

He apologised for introducing these remarks in moving a vote of thanks, as he ought to have raised the point before, but he hoped that he would carry the meeting unanimously with him in giving a hearty vote of

THANKS

to the chairman and directors. If they did not carry that vote unanimously they would be very exacting, and far more exacting than he believed they were. (Hear, hear.)

The motion was seconded and carried.

The CHAIRMAN, in reply, said that he had, on behalf of himself and colleagues, to return their hearty thanks for the way in which this vote had been passed. It was true that in the past they had some very troublous times indeed—so much so that had some people had their own way, and if he had not had himself unbounded faith in the concern and its possibilities, they would not bethere that day, as only liquidation at one time was talked about. As to the suggestion that had been made by Gen. Rocke, for the making of the proceeds from the sale of the New Minera shares the nucleus of a reserve fund, he was glad to be able to state that the directors had already considered the matter, and they would be able to do what was wished. If they could sell half their shares at a price that would leave them upon velvet, and give them the remainder of their holding for nothing, or even better terms still. As to these shares which stood them at 1*l.* each, the estimate of Mr. Henry Taylor was that they were worth between 4*l.* and 5*l.* per share, instead of the 1*l.*, which they cost. He could only, in conclusion, express his satisfaction that the shareholders were satisfied with the efforts of the directors and the success that they had achieved in furthering the interests of the company. They had done their best for it, and they would continue to do so.

The meeting then separated.

THE SOUTH AFRICAN PROSPECTING AND MORTGAGE CORPORATION, LIMITED.

A BAD YEAR FOR SOUTH AFRICAN VENTURES—THE COMPANY HAS A RESERVE OF STRENGTH IN THE CONSORT AND OTHER MINES.

THE third ordinary general meeting was held at Winchester House, Old Broad Street, on Monday, "to receive the directors' report and accounts to Feb. 23 last, to elect auditors, and to transact the ordinary business of the corporation."

Mr. Archibald Parker

(chairman of the company) presided.

Mr. T. WATKIN DAVIES (secretary) read the notice of meeting.

BUSINESS OF THE YEAR.

The CHAIRMAN said: Gentlemen, our last meeting was held in May, 1890, and the present one would probably have been in the same month of this year, but that it was deemed advisable to wait the return from South Africa of our co-director, Mr. Geo. H. Raw, who has been on a visit to Johannesburg, and is now with us. A copy of the accounts and report has been sent to each shareholder, so I presume that we may take it as read. It is a matter of great regret to your directors that they are unable to put before you a more satisfactory statement. They have done their best in the interest of the Corporation, and have endured a great amount of anxiety, but the result is most disappointing. You will observe that we have written off to profit and loss account a debit of 18,518*l.* By deducting the reserve of 2,500*l.* this will be reduced to 16,018*l.* One of the principal objects of this Corporation was the assisting by cash advances, by way of mortgage, or otherwise, the developing or testing of properties, and working the same. Unfortunately, at the time we started, all the main reef at the Randt had been secured by others, so that we had to take what properties were considered the next best. In all those taken over there was no difficulty in obtaining gold, but we could not find sufficient to make them payable. A number of properties taken over for development have been written off entirely. Some of these had been worked from the very commencement of our company's existence. Sometimes we got very encouraging reports, and at other times very discouraging ones. They were just sufficiently promising to make us very unwilling to abandon them, and led us to go on spending money, but we have latterly been compelled to give them up. From the balance-sheet it will be seen that we have 21,568*l.* 10*s.* 1*d.* under the head of loans upon mortgage and interest. The borrowers, have however, been unable to pay off their loans as they became due.

PROPERTIES PARTLY ACQUIRED.

Two properties in which we have a half interest have fallen into our hands, viz., the Consort and the Vera, whilst the whole of the Orkney Co.'s Property is likely to become ours in a few days. Under the heading of "Properties under Development Syndicate Participations and Shares in other Companies," we have 19,326*l.* 15*s.* 4*d.*, but shareholders will please understand that the directors cannot take responsibility for the valuations; it must be taken simply as a very rough estimate. There are practically no quotations for many of the holdings, and where there are any, they are generally quite nominal. We understand that similar companies to our own have, during these depressed times, put down their assets at cost price; we have not done so. We have reduced them far below cost, but whether low enough or not, time only will show. They are mostly, indeed, nearly all, quite unrealisable at present, and if any were forced, it must be at an immense sacrifice. We now come to our present financial position. At our last annual meeting a resolution was passed, empowering the directors to borrow any sums not exceeding 150,000*l.*, but the depression, which had then begun, became so intensified that no attempt was made to do so. On Feb. 23, 1891, we had an overdraft, less a credit balance, amounting to 6,019*l.*, and since then we have had a certain amount of outlay, which was quite unavoidable, being in connection with properties we had already in hand. Our debit balance is now about 10,000*l.*, and we

estimate that our requirements, in connection with the Consort, Orkney, and other ventures, at about 7,000*l.*

CALL OF 5*s.*

As you are aware, our subscribed capital is 100,000*l.*, of which 10*s.* is paid, equal to 50,000*l.*, and we now purpose making a call of 5*s.* per share, or rather two calls of 2*s.* 6*d.* each, with an interval of two months between, which would give us 25,000*l.* We have been very anxious, and have used the most strenuous efforts to avoid making any call, and kept hoping for such an improvement as would enable us to realise some of our properties or shares, but we feel that it would be folly to force sales in the present depressed market, and that the time has come when it would be better to get rid of our liabilities, which these calls will enable us to do, and leave a few thousands on hand. If we intended entering on any new business of importance we would require more capital, but our aim is rather to nurse what we already hold until improvement takes place, when we may be able to sell. We would have liked to keep the 10*s.* of uncalled capital in reserve, but find it impracticable, and seeing our capital is so small, we have written to Johannesburg to reduce expenses to the very lowest point possible; in London we hope also to do so, and a few months ago we secured agencies of several companies which will help us to pay salaries and office expenses. I have mentioned that three properties have already, or are likely to, fall into our hands—the Vera, the Orkney and the Consort. The Vera consists of 10 claims, with 15 stamps. According to latest advices this was likely to be let on tribute. We have a half interest in it. The Orkney has not yet come into our hands, but we believe will do so in a few days. This will be entirely ours. It consists of a farm and mine, with all the machinery thereon. The farm is one of 1,600 acres freehold land, fronting the Vaal river, with a Mynpacht of 450 acres, a 25-stamp Sandycroft mill, 25 h.p. engine, and complete pumping plant; also a number of buildings. At the time the loan was made the ore was reported to be yielding 11 to 13 dwts. of free gold to the ton. The crushing of July in last year of 21 days was 379 ozs., and the profit was reckoned at 16*s.* to 18*s.* per ton. Our local directors thought that they had invested in what was safe, and, with certain privileges attached to the agreement, they expected it would yield a handsome profit; but on going further into the mine the ore was found to be refractory, and would only yield about 4 dwts. of free gold to the ton by the ordinary machinery.

YIELD OF ORE.

The assay value is, however, very much greater. As the 4 dwts. would not pay, and the company's capital was exhausted, work had to be stopped. As we are not at present in a position to supply working capital, it is proposed to let it on tribute—several applications have been made—or to wait till times improve, and then seek capital to purchase suitable machinery for working refractory ores. This property is favourably situated for cheap working, being only about 3 miles from a coal mine, across the Vaal river, and the supply of water is unlimited. The Consort, of which we hold one-half, we regard as a most important asset. You will observe from the report that the old company obtained, with a 10-stamp battery, nearly 10,000 ozs. of gold from 11,149 tons of quartz, and they paid dividends to a considerable amount. They commenced the erection of a 40-stamp mill of Fraser and Chalmers's make, with eight Frue vanners; they made a water-race and erected a number of buildings, the result being that they got into difficulties, and borrowed what they were unable to pay. In fact their working capital was too small, and they attempted too much before making the necessary arrangements for providing the necessary capital.

INVITATION TO SHAREHOLDERS.

This property having fallen into our hands, we require to raise the necessary working capital, but as it is useless putting anything before the public just now, an attempt is being made to obtain privately sufficient funds for re-commencing operations at once. Should shareholders be desirous of subscribing, they will please communicate with the secretary. At present the subscriptions promised are from the two companies interested, with their directors and friends, and any shareholder applying will be put on exactly the same terms. Should the result of working this property be what it has been in the past, it should lead to our recovering what has been lost. The main line from Delagoa Bay passes, I am informed, within about 16 miles distant, and the branch line promised to Barberton should come quite close. Our interest in these three properties would, a comparatively short time ago, have been saleable for much more than the whole of our paid-up capital. I now move "That the report of the directors and statement of accounts for the year ending Feb. 23, 1891, be and the same are hereby received and adopted." (Cheers.)

Mr. T. MORGAN HARVEY (director) seconded the motion.

DISCUSSION.

A SHAREHOLDER: I see an amount of 19,326*l.* described as "properties under development, syndicate participations, and shares in other companies." How is that arrived at? I understood you to say you took no responsibility for this valuation, but whose valuation is it?

The CHAIRMAN: They were valued at Johannesburg about Feb. 23. This is an estimate, and you can hardly call it a valuation. The report was carried with one dissentient.

The CHAIRMAN: Mr. Morgan Harvey retires at the present time, but we have induced him to stand again, considering the present state of matters, and he has consented to do so, although he is anxious to retire. I propose "That Mr. T. Morgan Harvey be and is hereby re-elected a director of the Corporation."

Mr. GEO. H. RAW (director): I second the motion.

Carried unanimously.

DIRECTORS TAKE NO FEES.

The CHAIRMAN: I ought to mention that the directors in London have not taken their fees for nearly 12 months—the last six months of the year included and the present six months also. (Hear, hear.)

Mr. FRY proposed the re-election of the auditors, Messrs. Broads, Paterson and Co.

Mr. CHAMBERS seconded the motion, which was carried unanimously.

The CHAIRMAN: Shareholders can get particulars of the Consort Co. by applying to the secretary.

DIRECTORS THANKED.

A SHAREHOLDER: It only remains that we pass a cordial vote of thanks to the chairman and board for their services to the company and attention to the business. I only hope that the prospects held out with regard to the Consort Mine will be fully realised.

The motion was seconded by a SHAREHOLDER and carried unanimously.

The CHAIRMAN: We have had a very anxious time, but are particularly pleased under the circumstances that you have thanked us. We will do our utmost for the company. We are all very large shareholders, so that it is our interest as well as our duty to make the concern a success if we can.

WHAT THE CONSORT MINE HAS DONE.

Mr. HARVEY: Being one of the original shareholders in the Consort Co., it may be of interest to those who have no knowledge of that mine if I say that personally I think it an exceedingly good investment. I was one of the original shareholders, and received something like 25 per cent. in dividends, which I now think it would have been better not to have paid. The money should have gone in more extensive developments, and in acquiring better machinery. They had only a 10-stamp battery, and though it is a hazardous thing to prophesy about any mine, I almost dare to say that we have a very valuable property there, and if it be developed, as we hope it will be, I think, with the chairman, there is very little doubt that we have good ground for anticipating the recovery of much more of the money than we have lost. I hope that will be the result, though it is very hazardous to indulge in anything like a definite prophecy in mining.

A SHAREHOLDER: Can you tell us where the location of the mine is?

The CHAIRMAN: In Barberton, and we can show you photographs. It is not far from the Sheba, but on lower ground, about 12 miles from Barberton and 16 miles from the main line of the railway.

BRYANT, POWIS AND BRYANT, LIMITED.

THE HISTORY OF THE COMPANY REVIEWED—REPORT ADOPTED—RE-CONSTRUCTION SCHEME APPROVED.

The sixth annual general meeting of the shareholders of Bryant, Powis and Bryant, Limited, was held on Monday last, at the Cannon Street Hotel, E.C.

Mr. Wilberforce Bryant

(the chairman) presided.

The SECRETARY (Mr. Charles T. Lake) read the notice convening the meeting.

A CLEAR STATEMENT.

The CHAIRMAN said: Gentlemen, I suppose you would like this report to be taken as read; it has been usual at these meetings to do so. (Hear, hear.) We thought it would be better, seeing that, as a rule, very few shareholders attend these meetings, to enter in that report very fully what has transpired in connection with the company and the trade done since our last annual meeting, and I think it will be seen that the quotations we have given from trade circulars show impartially what other people consider has taken place in reference to the timber trade during the 12 months. At the last annual meeting we entered very fully into what had happened in Quebec in reference to this company—the fraudulent proceedings of our agent, and the great losses directly involved through his frauds, and also indirect losses through transactions with others. We also submitted a statement of accounts, from which it appeared that we might reasonably hope, by the concessions which had been made on the part of some of the large creditors, that, with a careful and judicious realisation of the stocks and the collecting of the debts, sufficient working capital would be left to carry on this business. You know what has happened in the last 12 months, not only to the timber trade, but also to trade generally. Almost immediately after that meeting we had the financial crisis of last autumn, which made money very dear, and which affected your company in the matter of its loans. It also made it very difficult to realise the stocks which the company had been compelled to take over in connection with the frauds that had been perpetrated upon them; and, of course, instead of a normal condition of things, which would have enabled the company to secure a good portion of its working capital, the shrinkage in values very disastrously affected that working capital. Particularly I might allude to one item in Glasgow, in which the company had to take a second charge upon a very large parcel of goods there. The shrinkage of the value as affecting this company amounted to something like 12,000%. That just represents the kind of thing the directors have had to contend with in conducting the business during the last year. Of course, individually, I feel very much pained that a company with which one's name is connected should have come to such straits for capital as we are in to-day; but still the goodwill and connection of the company are intact, and it remains now for the shareholders to say whether more working capital shall be forthcoming or not. With that view it is proposed to voluntarily liquidate; but I might, perhaps, say, before alluding to that matter, that the directors would have endeavoured to get fresh capital by the issue of preference shares, but the articles of association prevented their taking that course, so that it was necessary that the company should be liquidated and a fresh company formed, giving the ordinary shareholders share for share in the new company, and, of course, the preference shares which would be taken up if the new company should be formed would afford the working capital. What we propose to you to-day is that the company shall be voluntarily liquidated, and that the liquidator shall be authorised to negotiate for the formation of a new company, provided we can see our way clear to getting the shares taken up and the money forthcoming. That more particularly affects the second meeting which we shall hold. What I have to submit now at this meeting is that the report and balance-sheet be adopted. Before putting that formally to the meeting I would say that I shall be pleased to answer any question that any shareholder may wish to put in connection with this report, or, if I am not able, Mr. Powis will do so. He will be very happy to enter into any particulars that may be desired.

No shareholder having risen,

The CHAIRMAN said: If there is no question to be put, I will now formally propose, "That the report and balance-sheet of the directors be adopted."

The motion was seconded by Mr. PERKS.

Mr. GRIDLEY asked on what basis the value of the stocks in London and Liverpool, amounting to 19,498*l.*, was arrived at, and whether it was based on the market price.

Mr. POWIS said the stocks were based on the market price, and they had since realised that amount.

The motion was then put and carried.

This closed the business of the ordinary meeting.

SPECIAL MEETING.

An extraordinary general meeting was then held at the same place for the purpose of considering, and if thought fit of passing the following resolutions, namely:—

1. "That the company be wound up voluntarily, and that Mr. Henry Ward Powis be and is hereby appointed liquidator for the purpose of such winding up." 2. "That the liquidator be authorised, pursuant to section 161 of the Companies' Act, 1862, to transfer the goodwill of the business property and assets of the company to a new company to be formed for the purpose of acquiring such property and to receive in exchange therefor fully paid up shares of such company for distribution among the members of this company."

Mr. CHAS. T. LAKE (secretary) read the notice.

THE SCHEME OF RE-CONSTRUCTION.

The CHAIRMAN said: There remains very little for me to say with reference to this meeting. I informed you just now that the capital of the company is lost, and therefore our hope is in raising fresh capital. I take it that when these resolutions are passed it will be the business of the liquidator to invite applications for preference shares from the shareholders, and if that is responded to sufficiently, of course, the whole matter is settled; if, however, it is not sufficiently responded to, then it will be his business, I imagine, to negotiate with parties to take up shares on such terms as may be possible. Of course I do not wish to convey to the shareholders that it is absolutely certain that the new company can be formed, if possible, to protect the interests that they hold in the present company, and I can assure you that no effort shall be spared by the directors to accomplish this desirable object, provided that the shareholders approve of the suggestions made in the resolutions. I may just say that it is not proposed immediately to invite the shareholders to subscribe, but to postpone that for a month or six weeks. In the meantime the business of the company will go on as heretofore. I will now propose: "That the company be wound up voluntarily, and that Mr. Henry Ward Powis be and is hereby appointed liquidator for the purpose of such winding up."

Mr. ROBERT PARKER seconded the resolution.

Mr. GRIDLEY said he should like to know if the present directors intended to be directors in the new company, if formed, and whether they would continue their holding.

The CHAIRMAN, in reply, stated that the shareholders were aware that the Liverpool branch had been disposed of to Mr. Parker, and, therefore, as he would devote his whole attention to that business, it would not suit him to remain a director of the company. Mr. Powis and himself, however, would, if it were the wish of the shareholders, remain directors of the new company; but, of course, the board would have to be materially strengthened with new names, inasmuch as two directors would not be sufficient. The additional directors would, of course, be elected at the first meeting of the new company.

A SHAREHOLDER inquired if it were not possible to raise fresh capital by issuing debentures. It seemed to him that that would save the expense of winding-up the company.

The CHAIRMAN stated that the matter had been carefully considered by the largest shareholders in the company, and they had come to the conclusion that the best course was to raise preference shares.

Mr. POWIS: It was unusual to carry on the business on debentures only.

Mr. STROHMINGER said he supposed every farthing of the share capital had been lost; but that the debenture-holders were all right in the event of liquidation. He wished to ask at what price the board intended issuing the preference shares.

The CHAIRMAN: 7½ per cent. cumulative preference shares at par.

Mr. POWIS: 10*s.* only would be called up.

Mr. GRIDLEY suggested, as an amendment to the resolution, that a shareholder should be appointed to act with Mr. Powis.

The CHAIRMAN said that there was nothing to be done before the confirmatory meeting was held.

Mr. GRIDLEY: I think the shareholders should have some voice in the liquidation, especially as there are large amounts to be dealt with.

Mr. POWIS stated that the liabilities and assets were 50,000*l.* less than they stood at in the balance-sheet.

Mr. RAFFETY asked for an explanation of the item of sundry debtors 74,000*l.*, and whether that amount was in respect of accounts or bills running in the ordinary way.

Mr. POWIS stated, in reply, that the amount referred to had been reduced by collections to 47,000*l.*

Mr. RAFFETY: What I want to know is whether the accounts are open, or whether they are drawn for in the ordinary way.

Mr. POWIS: They are both.

The CHAIRMAN stated, with reference to Mr. Gridley's suggestion—to appoint a shareholder to act as liquidator—that there was a difficulty in altering the resolution; but there would not be the slightest objection to two shareholders being appointed to consult with Mr. Powis in reference to the re-construction of the company.

Mr. RAFFETY desired to know whether the cash in the hands of the bankers, which, according to the balance-sheet, stood at 16,000*l.*, had been reduced.

Mr. POWIS: The cash at bankers now amounts to 14,158*l.*

Mr. RAFFETY said he saw that in the balance-sheet the goodwill, plant, and furniture in London were put at 34,000*l.* He wanted to know what proportion the directors considered fair to put down, and

how much of the amount constituted the value of the plant and furniture.

The CHAIRMAN: It is practically all goodwill.

Mr. RAFFETY: A very large sum for goodwill.

The resolution was then put and carried.

The CHAIRMAN then proposed the second resolution as above.

Mr. PARKER seconded the motion, which was carried unanimously without discussion.

The CHAIRMAN then asked the shareholders to nominate two of their body as a consultative committee to act with Mr. Powis.

No one being appointed,

Mr. GRIDLEY said that he was sorry no one would come forward to act on that consultative committee, and that being the case he thought it would be advisable to take no further steps with regard to it.

The CHAIRMAN: I can assure you, gentlemen, that we have always consulted with the shareholders, and we shall continue to do so. We have no interest at all apart from the bulk of the shareholders.

THANKS.

The proceedings then terminated with a vote of thanks to the chairman.

THE SNYDER DYNAMITE PROJECTILE CO., LIMITED.

EXTRAORDINARY GENERAL MEETING TO RECEIVE REPORT ON SUCCESSFUL FIRING.

AN extraordinary general meeting of shareholders of this company was held at Cannon Street Hotel, on Wednesday, to receive the directors' report of the successful firing which has taken place at Aberdare.

Mr. E. C. Warren

presided.

Mr. ALFRED WRIGHT (the secretary) read the notice calling the meeting.

The CHAIRMAN said: Gentlemen, in accordance with previous arrangements, this meeting has been called to lay before you the results of the firing with our patented projectiles. I need not apologise for the delays that have occurred before this firing could be made; you have already been informed on these points, both at the previous meeting and by circulars. No one has been more anxious to hasten the work than your directors and manager; but you must bear in mind that in dealing with high explosives, as they have never been used before, all we did was under the cognisance of the Government authorities, without whose permission, and also that of the Local Council, we dared not move a step; and we make bold to say that long as it was before we received our licenses, no person or persons living could have obtained them more quickly. Now as to the firing ground, which has been granted to us for use by one of our own directors, Mr. E. W. H. Brogden, all agree who have seen it—military men and civilians, directors and shareholders—that it is the most perfect firing-ground for experimenting with high explosives, and that there would be great difficulty in obtaining another such ground in the whole kingdom; our sincere thanks are due to Mr. Brogden, for the free use of this spot. Ever since the formation of the company, it has been the constant cry that it was impossible to fire shells filled with blasting gelatine from any guns with full charges of gunpowder. Shareholders and outsiders, both learned and unlearned in such matters, have joined in this cry, and urged it most persistently! Well, gentlemen, if ever there was any reason in this objection, then we have performed the impossible, for we have most successfully fired our projectiles filled with

THE STRONGEST FORM OF EXPLOSIVE,

viz., nitro-gelatine, or blasting dynamite, from the 6-in. naval breech-loading rifled gun, and from the 7-in. muzzle-loading rifled gun, with full charges of gunpowder, without exploding the projectile until it struck the target at which it was aimed. We have thus proved the main point claimed in our prospectus. But there was another persistent objection raised, viz., that the projectiles would be dangerous to load, or to handle after being loaded, and that a very slight shock or jar would cause them to explode, and that this would prevent them coming into general use. This objection, like the former one, we have proved to be a myth, for he have repeatedly fired both 6-in. and 7-in. loaded shells with full gunpowder charges into the hillside, consisting of loose stones and debris at a distance of 300 to 400 yds. without the dynamite in the shell exploding. This demonstrates beyond all doubt the ease and safety with which our projectiles can be handled and used when fully charged with nitro-gelatine. As a matter of fact our shells explode instantly on striking an iron target or rock, and by using a detonator they will explode instantly on striking earth or other such soft substance. I should like to say something about the recent experiments. On the 25th ult., in the presence of three of your directors, the manager and his assistant, and a gentleman from Liverpool, one of our shareholders, the first shell was fired from the 6-in. gun, to test (1st) the safety of firing a loaded shell, with full charge of gunpowder; and (2nd) whether the projectile would explode on striking the target.

SATISFACTORY TESTS.

Both tests were very satisfactory; a good hit was made, and the shell exploded on the face of the target. Some other shells were then fired from the 6-in. and 7-in. guns against the broken ground forming the lower part of the hill, and not one of these exploded. On the 1st and 3rd inst. the firing was renewed before the whole of your directors, manager, &c., and also a number of shareholders and others; the results were very satisfactory, proving my former statement, and fully satisfied all present of the value of this invention. Unfortunately, on the 1st inst. the foundations of the pivot of the 6-in. gun gave unmistakable indications of giving way, and the firing from this gun had to be suspended, and new and more solid foundations are now being put in. It was necessary this should be done before the demonstrations could be carried on before the different Governments, although this has nothing to do with our member representatives who have signified their wish to be present. We had present on the 3rd inst. a gentleman who has a profound knowledge of high explosives, but whose name and connection I do not feel at liberty to

disclose without his permission, and although he had the most serious doubts about our being able to fire the loaded projectile safely from the cannon when he arrived on the ground, he left it

A CONVERTED MAN.

In order that you should have placed before you reliable and independent evidence of the actual charges in the shells, guns, &c., &c., your directors obtained the services of Col. Studdy, a well-known artillery officer of great experience and many years standing. He was present on the 1st and 3rd inst., and his report the secretary will read presently. Gentlemen, we have good cause to rejoice at the great success of our firing. There is another point which has yet to be dealt with, viz., the employment of these projectiles for clearing a channel of fixed mines or submarine torpedoes. This is subordinate to the previous trials, but will now be proceeded with. There appears to be some misunderstanding with some of our shareholders, who say we have not given them an opportunity of witnessing the trials. Our reply is that as soon as we have obtained our licences to fire, &c., we issued a circular to every shareholder, stating that the experiments would take place in about a fortnight from the date of the circular; to every inquiry we received from shareholders, we sent at the earliest possible time notice of the exact date, time, and place where the firing would come off; we could not do more. At our last annual meeting it was stated that if any shareholders wished to witness the experiments, and would inform the directors, they should have an opportunity of doing so, always providing that too many applications were not made, for there is danger in finding perfect shelter for too many; that shelter is necessary, see piece of shell weighing 60 lbs. thrown back some 600 yds. from the face of the target (exhibited at the meeting). Gentlemen, we have

GOOD CAUSE FOR CONGRATULATION,

and we may hope that soon our company will take a position second to none. We have proved our case. True, it has taken a long time, and considerable expense to do so, and if we had failed it would have been a melancholy affair, but it is a success, and as such it is difficult to estimate how far-reaching the influence of this company may be felt. May the result be to amply repay every shareholder for all the waiting and delay which you have been unavoidably subjected to. Our next trials before representatives of different Governments will soon take place, and you will be informed of the date, and a certain number of shareholders can be present if they will inform the secretary of their wish to attend. I should like to read you a letter which I received this morning from Mr. Gawith, a gentleman from Liverpool, who was present at the firing:—

"My dear Sir,—I very much regret that I shall be unable to attend the meeting of shareholders to be held to-morrow, as I should have been able to testify as to the successful firing at Bwlfa on the 25th ult. and 3rd inst. I shall feel obliged if the secretary will kindly inform me when the demonstration to the representatives of foreign Governments will take place."

I will now ask the secretary to read Mr. Studdy's report:—

The SECRETARY then read the following report:—

Hopes Harbour, Stoke, Coventry,
Aug. 17, 1891.

Sir,—In accordance with the wishes of the Snyder Dynamite Projectile Co., conveyed in your letter of July 29 last, I attended the firing of the dynamite projectiles that took place at Aberdare on Saturday, the 1st, and Monday, the 3rd inst. I inspected the various magazines and buildings erected in compliance with the Board of Trade requirements. I also inspected the two guns, viz., 6-in. Naval Ordnance Armstrong breech-loader and 7-in. Blakeley's muzzle-loading rifled gun. I witnessed the weighing of the following shells and cartridges: 7-in. empty shell, 196 lbs.; 6-in. long empty shell, 124 lbs.; 6-in. short empty shell, 76 lbs.; 7-in. dynamite case, 15 lbs. 6 ozs., including case 3 lb.; 6-in. large dynamite case, 10 lbs. 8 ozs., including case, 2 lbs.; 6-in. short dynamite case, 5 lbs. 8 ozs., including case, 1 lb. 11 ozs.; powder cartridges, 30 lbs. 8 ozs. On Saturday, the 1st, there were fired three shells from the 7-in., and only one from the 6-in. None, however, of the shells exploded, which would show the shell is safe to handle, and not liable to explode with slight concussion. On Monday only one shell was fired from 7-in., which exploded, and a large piece of the head of the shell, weighing 60 lbs., hit the target, and fell some 400 yds. from the same at the right rear, showing the explosive effect of the dynamite on the shell when exploded. From witnessing this firing, I am of opinion that the Snyder dynamite projectile can be fired with equally good results from guns of any description, without incurring any expense beyond the substitution of the new projectile for the old; also, that no alteration in the charge of powder, or in the method of loading or firing, is required in any description of ordnance. The foundation of the platform of the 6-in. gun having become much damaged by the firing, it was prudently decided not to fire it again till the platform had been repaired. The shells fired on Saturday, the 1st inst., were laid low and hit the ground without striking the target, which would account for their not exploding, and also shows that considerable concussion is required to explode the shells, and removes the great danger of premature explosion. No injury, as far as I could discern, was done to either of the guns from the firing I witnessed.—Yours sincerely,

F. STUDDY.

To the Secretary Snyder Dynamite

Projectile Co., Limited.

The CHAIRMAN: I will ask our manager, Mr. Snyder, if he would like to say anything. If so, we shall be pleased to hear him.

Mr. SNYDER said that he thought the chairman had covered the ground as well as it could be covered, and he had, therefore, very little to add. He might, however, draw attention to one or two points. In the first place as to velocity. It had been said that they could not safely put in sufficient powder to cause the necessary velocity. That he had proved, however, not to be the case. He had not used the ordinary ordnance powder, but had used it mixed with one-third of black powder, which had greatly increased the velocity and made the charge much stronger. They had been able by those means to get a velocity of 535 metres per second. The target at which the practicing was carried out was at a range of 300 yds., which a great many people had said was no distance. The same projectile would, however, do just as much damage at

A 6-MILE RANGE

with a proper gun as it would 15 ft. from the muzzle of the piece.

The targets, however, in large guns were seldom set more than 100 yds. away, and in the United States seldom over 50 yds., or even 30 yds. The firing was done at an angle, as it was not intended to hit the target direct, and as you might drive a hole through the side of a vessel without doing any particular damage by direct firing, by firing at an angle the side of the vessel might be crushed in, or the machinery damaged by dropping a projectile upon her deck. He would be glad for some of the shareholders to see what had been done, which, he thought, would prove to them that the board had not been idle, and would, he thought, prove to them, as it had done to many others, that the Snyder Dynamite Co. was not a wind-worked scheme.

Mr. SCHALTZ said he had very little to add, but he would like to draw attention to the position which the company was in at present—having, in fact, "opened shop." Up to the present time they had been making arrangements for the goods and for carrying out the experiments. They had now got things in hand, and the next step would be to call together

THE REPRESENTATIVES OF THE FOREIGN GOVERNMENTS,

before whom experiments would be made. Within the last few months he had seen an illustration in *Black and White* of a new dynamite gun. The people who were putting the gun forward intended to work it, he believed, by means of air pressure. They intended to have in the projectile a compartment of compressed air, which would, when the gun was fired, force the shell through the air. They were, he thought, in a much better position, as they had a shell which had proved, beyond all possible manner of doubt, that

IT COULD BE SAFELY FIRED BY AN ORDNANCE,

and that it would travel at the same velocity as ordinary shots. The further working out of the patent was simply a matter of time and detail, and he was heartily pleased to be able to congratulate Mr. Snyder upon the results which he had to show at the present time. A great many people had shown distrust, and had been sceptical upon the matter of the invention, but one gentleman, who had shown great unbelief, had said to him after the experiments, "My eyes have been opened; I never expected to see what has been done to-day;" to which he had replied that there were many things to be done further. He hoped that the company would be a great success, and soon in a dividend earning position.

Mr. BEAD, in proposing a vote of thanks to the chairman and directors, said that he had been much interested in the speech of the chairman on that occasion, which had put the results of the experiments so clearly before them. He trusted the experiments before the representatives of the foreign Governments would lead to satisfactory results.

Mr. SHARP seconded the resolution, which was carried unanimously, and the shareholders having been invited to inspect

THE PHOTOS AND USED SHELLS

in the room, which had been brought for that purpose, the proceedings terminated.

HILL'S WATERFALL ESTATE AND GOLD MINING CO., LIMITED.

RESOLUTIONS CONFIRMED AND LIQUIDATION ARRANGED FOR—DIRECTORS UNANIMOUS FOR THE FULLEST INQUIRY—PROSPECT OF A RETURN TO THE SHAREHOLDERS.

AN extraordinary general meeting was held at 183, Gresham House, yesterday, when the subjoined resolution, which was passed at the extraordinary general meeting of the company held on July 31, 1891, was submitted for confirmation as a special resolution:—"That the company be wound-up voluntarily under the provisions of the Companies' Acts, 1862 and 1867." Notice was also given of a further resolution for the appointment of Mr. William B. Peat, of 3, Lothbury, chartered accountant, to be liquidator for the purposes of such winding-up and fixing his remuneration, and also of a further resolution:—"That the winding-up be placed under the supervision of the Court."

Mr. Nicholas J. West

(chairman of the company) presided.

Mr. J. JAMESON TRURAN (secretary) read the notice of meeting.

The CHAIRMAN: Gentlemen, you have heard the notice of meeting read, and the business that is before us to-day of course will take us but a short time. It is to confirm or otherwise the resolutions put and carried at the extraordinary meeting held on July 31. The first resolution that was then proposed, seconded, and carried, was "That the company be wound-up voluntarily under the provisions of the Companies' Acts of 1862-7." That, of course, was carried, and it now wants confirmation, and it is the confirmation of the resolution that I move.

Mr. LINTILLAC (director) seconded the motion.

QUESTIONS AS TO THE LIQUIDATION.

Mr. DIXON: What cash have you in hand? Let us see how we start before the liquidation begins, and then we shall see how we stand afterwards.

The CHAIRMAN: We have between 1,200*l.* and 1,300*l.*

Mr. DIXON: There are calls unpaid.

The CHAIRMAN: These the liquidator will get in.

Mr. DIXON: Do you consider there will be sufficient to carry on and complete the liquidation?

Mr. HENWOOD (director): As a board we cannot say that. How are we to form any idea?

Mr. HOSKINS: There are assets besides the property.

The CHAIRMAN: There is no doubt about it, but the cash we have in hand, together with the value of the property, will more than cover the expense of liquidation.

A SHAREHOLDER: Yes; and we should also like to get some of our money back.

The CHAIRMAN: The balance due on the shares is not likely to be called, and also from the amount of cash obtained for the property and machinery, together with the money in hand, there ought to be a good surplus to be divided amongst the shareholders over and above the expenses of the liquidation.

The resolution was carried with two dissentients.

THE LIQUIDATOR.

The CHAIRMAN: The next resolution is as to the liquidator, and before I submit any proposal I should like to make a few remarks. I thought, as chairman of this company, I should endeavour to place before you to-day the sum the liquidator would expect to receive for his services. Mr. Peat very kindly came here, and the secretary and I saw him. You know, as well as I do, that the usual plan is for a liquidator to have a fixed sum, or to make his charges and let them be brought before the shareholders after the business is over, and that the sum for his services should there and then be fixed, or if not there and then agreed to should be fixed by the Court. With regard to the first point, Mr. Peat said, "I cannot tell you how I can fix any sum. If I say such and such a sum it may be too little or too much. (Laughter.) I, therefore, shall not propose that I receive any fixed sum whatever; but I am willing to liquidate the company with all due diligence, and after the work is concluded I will submit a bill to the shareholders, which, if the shareholders pass it, well and good, but, if not, they can go to the Court and get it taxed." That is so far the result of our interview with Mr. Peat, but since then the solicitors have seen him, and his remuneration is suggested by them to be fixed in this way:—Mr. Peat will receive for his personal remuneration 10*s.* per hour in regard to every hour that is used in the company's service, 3*s.* per hour for the first clerk, 2*s.* 6*d.* per hour for the second, and 1*s.* per hour for the third. (No, no.)

Mr. DIXON: Why, in that case it is his interest to keep the liquidation on as long as possible. (Hear, hear.)

The CHAIRMAN: That is according to the law under what they call "clause 4 and group B." With these few remarks, if shareholders have anything to say I will hear it before submitting any proposal to the meeting.

OBJECTION TAKEN.

Mr. DIXON: I trust you are not going to propose a resolution of that character, which will mean 1,500*l.* to the liquidator if this business is carried over a year. I should have been quite willing to award a fee of 100*l.* or 200*l.*, but not an unlimited amount like this. We know we are in your power, but it is a most improper proposition.

The CHAIRMAN: I do not understand why you should address me in that manner. I have simply told the shareholders the result of our interview with Mr. Peat and what subsequently happened, and I have submitted no proposal whatever. (Cheers.)

Mr. DIXON: I want to ask you if you are going to put that resolution? It is simply an insult to the shareholders.

The CHAIRMAN: I have not told you I am going to put it.

Mr. DIXON: Is Mr. Peat here?

The CHAIRMAN: He is not here.

Mr. BARNARD: It will be far more satisfactory (and I speak, I think, as the largest shareholder in the company) if the remuneration of the liquidator should be fixed here and now. I do not wish the company to be mean, but I have had a great deal of experience of liquidators and solicitors, and think

UNLESS THE REMUNERATION IS FIXED NOW

we shall find we shall have to pay up the 3*s.* 6*d.* simply for the benefit of the liquidator and the solicitors. Now, if we fix a moderate amount of remuneration it will be very much the same as having a pledge from the board that the 3*s.* 6*d.* will not be called up, and I think the directors ought to see Mr. Peat, and arrange with him a certain amount for his services no matter how long the liquidation takes.

Mr. HENWOOD: Mr. Peat has objected to fixing any sum beforehand. We did all we could to get him to name a sum, but he said, "No, I cannot do that, and shall not do it." (Laughter.)

A SHAREHOLDER: Is it not possible to fix a minimum charge? I am looking to saving my 3*s.* 6*d.*

Mr. DIXON: My experience in a similar case is this, that we will be offering an inducement for the liquidation to be continued as long as possible, and it will go on for a year or 18 months. What we want is the liquidation finished up as soon as possible. If Mr. Peat does not like to accept the terms I should be glad if Mr. Truran, our secretary, would. Should the liquidation last a year

IT WILL COST YOU 1,500*l.* AT LEAST.

Mr. LINTILLAC: Mr. Peat is your own selection.

Mr. DIXON: I object to it *in toto*, and I will go to the Court and oppose it. You, with the shareholders, can fix the remuneration now, and if Mr. Peat does not like to accept it we can appoint someone else. I am prepared to appoint Mr. Pascoe, who will be delighted to do the work for 100*l.*

Mr. HOSKINS pointed out that the present meeting was fully competent to appoint any liquidators it pleased.

Mr. BARNARD (to the directors): Your interests are the same as those of the shareholders, and you might be able to meet us as to the maximum fee.

A SHAREHOLDER: I think this a very unsatisfactory proposition.

The CHAIRMAN: I must remind you that it is not a proposition at all, simply an explanation.

Mr. HENWOOD: Like Mr. Barnard, I am a very large shareholder, and have taken a great deal of interest in the company from the beginning. I have been and am very desirous that a course should be adopted which will involve the least possible expense. I see no reason, if this company is wound up, why there should not be a considerable amount available for distribution among the unfortunate shareholders. We should, however, be very careful what we do. If we first appoint a liquidator we are in his hands, and he may nominate his own solicitors; but it occurs to me, as this meeting is competent to appoint a liquidator that we should support the appointment of Mr. Truran as liquidator, who would name the amount for which he could do the work. That is an arrangement I feel sure that would work out to the benefit of all concerned.

Mr. BARNARD: Is it possible that the auditors of the company would act?

The CHAIRMAN: What is in your opinion the amount that should be fixed?

Mr. BARNARD: I propose 200 guineas.

Mr. HENWOOD: The directors are desirous to do the best they can for the shareholders. (Hear, hear.)

Mr. BARNARD: I will propose Mr. Ford, the auditor of the company,

at a remuneration of 200 guineas, with such further amount as may be awarded to him by the shareholders in general meeting.

Mr. HOSKINS: I believe the interests of the shareholders generally are identical with those of the board, and that the board will do their best for the company. In their appointment of Mr. Peat, I think they fully believe that all interests will be best served. When, however, that gentleman takes a strong position as to what he will do and what he will not, as to what he will receive and what he will not, I reply to him by seconding the resolution that the auditor of the company be appointed the liquidator.

BOARD WISH ONLY TO CONSULT THE SHAREHOLDERS.

The CHAIRMAN: We wish to meet you as much as possible, for it is no desire of ours to prolong the agony of this company, or to go against what can be shown to be the interests of the shareholders. Mr. Peat was not a nominee of ours—in fact, we had no nominee. We simply wanted someone to do the work as quickly and cheaply as possible. If you like, we will put the resolution that Mr. Peat be appointed at a remuneration of 200 guineas, and failing his acceptance of the office that Mr. Truran be asked to take it.

Mr. BARNARD: Why not appoint the company's auditors?

The CHAIRMAN: We must appoint someone, because we cannot be altering the name of the liquidator at every meeting.

Mr. J. HOSKINS: I agree with the chairman, but nevertheless there is a matter which came before the meeting on the last occasion which neither reflected credit on the gentlemen who brought it forward or on the company. Certain persons were at swords point with one another, who then came to an arrangement that a certain gentleman should be submitted to the meeting as liquidator. That arrangement was come to because of certain contingencies into which I do not wish to enter, and which are best known to those who entered into them. I said the outside shareholders' interests would be best served by getting an independent liquidator, and I would vote for and support the nomination of Mr. Truran, whom I believe to be an honourable man, or Mr. Ford, who would act with him in the interests of all concerned.

The CHAIRMAN: After what was stated at the last meeting the speech just delivered is rather unnecessary, because there were no contingencies thought of by the board or arrangements entered into, and there was nothing but what was straightforward in regard to your interests. Therefore I think these matters should not be entered into again.

RESOLUTION.

I propose, "That Mr. William B. Peat, of 3, Lothbury, in the city of London, chartered accountant, be and is hereby appointed liquidator for the purposes of such winding-up, and that his remuneration be fixed at 200 guineas, and, failing his acceptance of the appointment on these terms, that Mr. Ford, of the firm of Ford, Rhodes and Ford, of College Hill Chambers, Cannon Street, chartered accountants, and Mr. J. J. Truran, of 183, Gresham House, in the city of London, be appointed joint liquidators for the purposes of such winding-up."

Mr. TRURAN: If it is the wish of the meeting I am ready to accept the post.

The CHAIRMAN: Mr. Truran is a gentleman of whom we have the highest opinion, and I think he will be quite enough acting alone. (Hear, hear.)

Mr. HENWOOD: As a director I should be rather pleased to have an independent liquidator associated with him as the company has been very much attacked.

Mr. DIXON seconded the motion as proposed by the chairman, and it was carried unanimously.

The CHAIRMAN next proposed "That the winding-up be placed under the supervision of the Court."

Mr. HENWOOD seconded the motion because he wished the whole matter to be under the fullest investigation.

Mr. DIXON: This resolution means about another 1,000% added to the expenses. Everything the liquidators do they will have to ask the Court to assent to.

A SHAREHOLDER assured Mr. Dixon that it was not so.

Mr. HOSKINS proposed a vote of thanks to the chairman, which Mr. DIXON seconded, and it was carried unanimously.

The CHAIRMAN: I have done everything in connection with this company to carry out my duties faithfully to the shareholders, and I have no fear of anyone, or favour to ask from anyone. (Hear, hear.)

THE PRINCE OF WALES MINE.

MINE IMPROVES—COSTS REDUCED—CALL OF 5s.

A GENERAL MEETING of the shareholders was held at the Office of the company, Gracechurch Buildings, yesterday.

Mr. Alfred Thomas

(chairman of the company) presided.

Mr. C. B. PARRY (secretary) read the notice of meeting.

The accounts showed a balance of assets over liabilities of 1,564l. 5s. 9d.

The CHAIRMAN: Gentlemen, with regard to the report and accounts, I have to ask you to receive and adopt them. As to the latter, you will observe that we have sold tin this time to the value of 565l., as against last time, 915l.; copper this time, 94l., against 137l. last time, and mundic 139l. this time, as against 103l. last time. It will be fresh in the memory of those who attended the last meeting, that we decided then to reduce our costs as low as we possibly could, consistent with the efficient development of the mine in depth. This policy I think we have carried out in accordance with the wishes then expressed. I at that time pointed out, however, that our sales of mineral must necessarily be less if not altogether cease for a time. However, you will see that notwithstanding this reduced cost

WE HAVE SOLD A RESPECTABLE QUANTITY OF MINERAL

amounting in the whole to 1,108l. With regard to profit and loss, last time we made a loss of 1,601l., and this time that loss has been reduced to 1,100l., due to a very considerable falling off in the costs. This I think must be satisfactory to the shareholders. At the same time, while we have reduced costs, we have kept going all the points of development in the bottom of the mine, where we are still hoping to make discoveries of value. In the 166 level going westward, we have gone through a cross-course and are now in a profit-

able lode, worth 16l. per fm., and this lode, according to the latest accounts I have received, is still improving. The bottom levels, that is the 180 east and west, have not up to the present time come up to expectations, but there is a strong tinny lode, and we have intersected in the western end the cross-course which we had in the level above and which changed the character of the lode, and therefore we reasonably expect a similar change in the bottom end to that which took place in the end above. We hope in the course of a week or fortnight that this point will materially improve in value, as it is one of the chief points in the mine and should be carefully watched by you. We are driving at the 166 to intersect

THE GOOD LUCK LODE,

and ought to have done so ere this. We have not yet had the "good luck" to do so, but find we have hardly extended the cross-course far enough. We were misled by plans made by the former dialler, who had made a mistake in the underlie of the lode which upset our calculations. However, we have a gentleman now who attends to our dialling, and who is there periodically, and he tells us we have still a short distance to drive, when we may expect to intersect this lode. This is a point of very considerable interest, but the lode itself I have so frequently described that it is unnecessary I should do so again. It has been seen as deep as the 40-ft. level, but no deeper. I think there is every probability that we shall intersect it considerably before we meet you again four months hence, and when we do intersect it there is every indication that it will prove highly remunerative. We agreed last time to suspend all tut-work bargains, and also tributing for tin above the 160-ft. level. Therefore, the only tribute we have going on now is for the raising of copper and mundic, which, although a small matter at present, is remunerative to a certain extent. I propose the adoption of the report and accounts.

Mr. SIMMONDS seconded the motion, which was carried unanimously.

The CHAIRMAN: The next point is the matter of the call. Our loss this time is 1,108l., but I am sorry to have to tell you that we have had several relinquishments, and the number of the shares has been reduced from 12,000 to 10,000. I cannot but express my sorrow that gentlemen should have thought proper to relinquish when

WE APPEAR TO BE ON THE EVE OF SUCCESS.

We are an extra month's cost in arrears, and it has been pointed out that like the other big mines of Cornwall we ought to make a call sufficient to overtake it. We shall be much better off by doing so, and shall stand higher in the opinion of those with whom we do business, and also in that of our absent shareholders. To pay our liabilities we want about 3s. 6d., but to catch up the extra month's costs we propose to make a call of 5s. The arrears are somewhat heavy, but we are endeavouring to get them in as fast as possible. Our position is not singular, for nearly all the mines at this time are making calls. There is already in mining affairs the distinct sign of improvement. (Hear, hear.)

Mr. SIMMONDS seconded the motion, which was carried.

The CHAIRMAN stated that the monthly costs had been reduced from 700l. to about 300l.

CENTRAL ASPEN SILVER MINING CO., LIMITED.

DEVELOPMENT WORK ACTIVELY PROGRESSING—PROVING OF THE CELEBRATED "CONTACT LODE."

THE first ordinary general meeting was held in the Cannon Street Hotel, London, on Wednesday, Aug. 19, at three o'clock in the afternoon, to transact the ordinary business of the company.

Mr. William Lees

(chairman of the company) presided.

The SECRETARY read the notice of meeting.

ORIGIN OF THE COMPANY.

The CHAIRMAN: As chairman of the board of directors, it was my duty, on behalf of my colleagues, to convene this meeting in accordance with the Act of Parliament, which provides that the first ordinary general meeting of a new company shall be held within four months of the date of registration. It is not expected that the directors can at a meeting of this kind produce any detailed statement of accounts such as they will submit to you at subsequent general meetings, and therefore it will not be necessary to detain you for any length of time to-day. As most of the shareholders present were probably shareholders also in the Pitkin Mining and Exploration Co., I may take it for granted that they are fully acquainted with the purpose for which this company was formed, namely, to acquire and develop a group of mining claims in the district of Aspen, Colorado. The requisite machinery had been purchased by the Pitkin Co. and set to work on the Badger claim, where a shaft had been sunk to a depth of 300 ft., at which point the existence was proved of the

CELEBRATED CONTACT LODE OF ASPEN.

This company was formed in Apr. to find capital to continue the working notably of the Badger claim, along with the others conveyed to it by the Pitkin Co. The resident manager (Mr. Derry) arrived on the spot about the beginning of July, and since then the directors have received letters and reports from him each week, in accordance with the instructions communicated to him before he sailed. I may inform you that the directors are most desirous of spending the amount of capital at their disposal in the manner most likely to prove at once economical and remunerative, and so they gave instructions to the resident manager that he must confine operations to the Badger State, by continuing the sinking of the shaft and thoroughly testing that part of the property before working ground elsewhere. That work is now being proceeded with and 12 men are employed. I may inform you that Mr. Derry writes very hopefully as to the progress that has been made up to the present time. The directors regret to inform you that Col. Slade has felt compelled to resign his position. He explained that he had been led to this step with great reluctance, because it had been intimated to him that His Royal Highness the Commander-in-Chief did not approve of officers joining the boards of direction of companies. The directors have therefore resolved that they will not fill up the vacancy—anticipating

that Col. Slade will rejoin the board at the termination of his present appointment.

FULL INFORMATION VOLUNTEERED.

I am not aware of anything about which the directors are in a position to report, but if you have any questions to ask I shall be happy to answer them so far as our information will enable me to do so. The statement I have made to-day is purely formal. We have the manager on the ground, and with him is an efficient staff developing the property, and, as I have intimated, his reports are highly satisfactory, so that if any shareholder chooses to ask questions (which we invite) we shall be pleased to answer them. (Cheers.)

Mr. HAMLEY (after a pause): I beg to propose a cordial vote of thanks to the chairman.

The motion was seconded and carried.

The CHAIRMAN: I am obliged to the proposer and seconder for this vote of thanks. All the directors are present, and I conclude from the fact that no questions have been asked that

THE SHAREHOLDERS HAVE CONFIDENCE IN THE BOARD.

(Hear, hear.) We shall look after their interests, as it is our duty to do, and in a few months from now I presume we shall have a very satisfactory report to lay before you. (Cheers.)

The meeting then closed.

NEW GREAT WORK.

PROGRESS OF THE MINE DESCRIBED BY CAPT. JOSIAH THOMAS.

The second general meeting of shareholders in the New Great Work Tin Mine (Limited) was held on the mine at Germoe, on Friday,

Capt. Josiah Thomas

presided.

The accounts showed that there had been paid to the vendor in cash and shares, 1,500*l.*; contractor on account of contracts for erection of engine-house, engine, 369*l.*; labour, 687*l.*; merchants' bills, 397*l.*; other expenses, 47*l.* There were no credits, but on the share capital called up there was remaining a balance of 171*l.*

On the motion of the CHAIRMAN, seconded by Mr. JAMES LOVELL (Penzance), the accounts were adopted.

The CHAIRMAN (Capt. Josiah Thomas) said the mine was situated exactly to the west of Old Great Work Mine, which was a rich tin mine for a number of years, and, he believed, produced the highest quality tin of any mine in the county. The same lodes that were so rich in Great Work were passing through that sett, and were in the same kind of granite. The directors were not paid for their services; they were doing the work for the good of the syndicate. They had a trustworthy agent in the person of Capt. Simon Thomas.

Votes of thanks concluded the proceedings.

PUBLICATIONS RECEIVED.—We have received from the Institution of Civil Engineers the following publications:—"Crompton on the Generation and Distribution of Electrical Energy," "Carrington on Refined Petroleum in Bulk," "Donkin on the Temperature of Cylinders of Steam Engines," "Harrison on Subterranean Water in the Chalk Formation of the Upper Thames," "Kühl on the Sulina Branch of the Danube," "Langdon on Railway Train Lighting," "Pearsall on a Hydraulic Pumping Engine," "Sheibner on the Florence and Fiesole Electric Railway," "Andrews on the Effect of Temperature on the Strength of Railway Axles."

(subject to such conditions as shall be then
and there read), the whole of the WEST
WHEAL GRENVILLE MINE with the
Plant and Machinery thereon, comprising
one 70-in. Cylinder Pumping Engine, 10 ft.
stroke, fitted with Oldman's patent piston,
with three 11 ton boilers attached; one
23½-in. Cylinder Winding Engine, fitted with
Oldham's patent piston with capstan and
winding cage connected, and one 11 ton
boiler attached; surface balance bob,
about 120 fms. pitch pine main rods,
from 15-in. to 12-in., with strapping plates,
35 fms. 15-in. pumps, 80 fms. 14-in. do., 25 fms.
12-in. do., 15 fms. 9-in. do., 50 fms. 8-in. do.,
one each 15-in., 14-in., 13-in., 12-in. poles
and pole cases, with bottoms complete, one
each 14-in., 10-in. and 8-in. door pieces and
windbores, about 300 fms. 2-in. air pipes, 100
fms. 8-in. ventilating pipes, with patent
ventilators, 200 fms. tram road, 50 fms.
bucket rods, 200 fms. 4½ in. steel wire rope,
230 fms. 3¼-in. do., one 11 ton boiler, one 10
ton weigh bridge, 66 ft. pitch pine shears, two
pitch pine shaft tackles, dry tube, carpenters'
benches, two smiths' bellows, anvils, smiths'
tools, two skips, two landing waggons, two
underground waggons, a quantity of useful
wood and iron, account house, furniture, &c.

The sett is situate in the Parish of Cowan,
near Camborne, and is very extensive, and it
is supposed that the Lodes of South Cou-
durrow and Wheal Grenville pass through it.
There have been cross-cuts driven from the
shaft north at the 100-fm. level, 63-fm. and
at the 120-fm. level, 106 fm. for the purpose
of cutting the Great Flat Lode, and the most
practical mining experts of the day are of
opinion that with a continuation of the 120
cross-cut the lode will be found in a short
distance driving. The whole of the buildings
and machinery are of a substantial character,
and well adapted for carrying on an extensive
mine.

To view, apply to Capt. J. Skeat, on the
Mine, and further particulars may be had of
the Liquidator, Sydney W. Jackson, Esq.,
7, Union Court, Old Broad Street, London, or
of the Auctioneer, Chapel Street, Camborne.
Dated, August 19, 1891.

THE BRITISH AND FOREIGN
MONTHLY MINING NEWS.

MESSRS.

PETER WATSON & COMPANY,

STOCK BROKERS AND SHARE DEALERS,

8, Finsbury Circus, London, E.C.

**CAMBORNE
SCHOOL OF MINES.**

SESSION, 1891-2.

CHAIRMAN OF COMMITTEE.

JOSIAH THOMAS, Esq.

PRINCIPAL.

Mr. J. J. BERINGER, A.R.S.M., F.I.C., F.C.S.

SECRETARY.

Mr. H. T. ROBINSON.

THE above School has been formed for
giving instruction in subjects specially
applicable to mining students, and in a
district where the practice of mining may
be observed at the same time.

The subjects taught include Mining, Ore-
dressing, Vanning, Assaying, Chemistry,
Geology, Mineralogy, Steam, Metallurgy,
Plan Drawing, Engineering, &c.

The managers of the principal mines in
the neighbourhood will afford facilities to
students of the School for studying practical
mining.

Prospectuses, and any further informa-
tion, may be obtained of the PRINCIPAL or
SECRETARY.

The Session commences on Monday,
21st September.

GEORGE GREGORY & COMPANY
STOCK AND SHARE DEALERS,

4, TOKENHOUSE BUILDINGS, LOTHBURY,
BANK OF ENGLAND,

OPEN SPECULATIVE ACCOUNTS with 1 per
cent. cover. All telegrams free.
Special Business in Mining, Miscellaneous and
Unquoted Shares. Hundreds of testimonials from
clients.

No Commission charged on buying, selling, or
carrying over.

Lend money to any amount on approved Stocks
and Shares.

Weekly, Fortnightly, and Monthly Circular,
showing

WHAT TO BUY, WHAT TO SELL, WHAT TO
AVOID, Free on Application.

Write for our work, entitled

"HINTS TO SPECULATORS" (136 pages),
giving a mass of information, and containing highest
and lowest prices of all stocks, together with divi-
dends paid for the past ten years. All post free. See
Press opinions.

GATES CORNISH ROLLS PULVERISER.

Simple, Durable, Compact, Dustless.

Giving a finished product direct from the machine.

The best Ore Granulator for leaching and concentrating in the world.

THE INGERSOLL DUPLEX HAND-POWER ROCK DRILL.

A SAVING OF 300 PER CENT. OVER ORDINARY HAND-LABOUR.

Send for full description, Price List, &c., to

WELLINGTON & CO.,
MANUFACTURERS, 73A, QUEEN VICTORIA STREET, LONDON.

It is perfectly automatic, and bores holes from ½ to 2½ inches diameter at the rate of 1 to 2 inches per minute in hard rock. It will work equally well in any direction or on any uneven surface. No skilled labour required to run it. No expensive repairs. Made in two sizes, and can be worked by electric motor if desired. Hundreds of these Machines are at work in all parts of the world in Mines, Quarries, and for all kinds of rock excavating. It is the only *effective* and *durable* hand-power Rock-drill ever made.

QUINLAND—LONDON.

MINING MARKET.

CITY, FRIDAY EVENING.

THE UPWARD MOVEMENT CONTINUES—A WEEK OF ACTIVE BUSINESS—SPECIAL REFERENCE TO YANKEE GIRL, HYDRAULIC, INDIAN, COLONIAL, AND OTHER MINES—INFLUENCE OF THE AMERICAN MARKETS.

WHEN last week we wrote that the outlook for business in mining shares was promising, the true key was struck in which the whole of the music of the Mining Market has been pitched this week. The pace has not been that of the slow movement of the sonata, or the measured pace of the cavatina, but rather the sharp incisive strains of the quick march. When brokers heard that prices were reviving, and that orders were coming in, there was a hurrying and a scurrying from all parts of the country, and the attendance on the Mining Market early on Monday was as large as usually at this time of the summer vacation it is small. They found the Rialto no longer in a state of suspended animation, but showing the most manifest signs of life. Shares which had been wholly neglected for months past suddenly exhibited a vitality which was as remarkable as it was prompt, and those in which the dealings have been more common moved upwards with an agility that was almost surprising. Into the dry bones of mining affairs there had been breathed the breath of life, and shares previously unsaleable were bought by the thousand, and at ever advancing prices.

We have always regarded the Indian section as about the best (viewed at as a whole) that the Mining Market presents, and the leading shares in this department advanced, and what is more, the close of the week sees prices quite as firm as at the commencement. For example, Champion Reefs went up promptly on the receipt of a telegram announcing the cutting of a rich lode. Mysore Golds have been wonderfully steady all these months, despite every possible influence that could be brought to bear to depress them. They have maintained the best quotations with every prospect of going better in the ensuing week. Nundydroogs, which we have long held are much too low in price measured by anything like their intrinsic value and the conditions of the mine, are also up; and Ooregums, despite the attack of cholera, which, fortunately, has been wholly confined to this one mine, are better along with Goldfields of Mysore and Balaghat.

Then there is the Anstralian section, which, next to that of the Indian, shows the most life at the present time. Australian Broken Hills were at one time as high as 22s. 6d., though they close a point below that, and there has been an active market at better prices for Bonnie Dundee, Day Dawn Block, Day Dawn P.C., Mosman, New Queen and Wentworth Proprietary. The rise in Day Dawn P.C. has been 2s., and Mosmans have advanced almost in the same degree. The publication by us last week of the report and balance-sheet of the (Colonial) Sunburst Co. has led to numerous inquiries for the shares. We close our observations about the Colonial section with the statement which cannot be contradicted, that since the boom first disappeared from the colonial mines, after their original flotation, their position in market estimation has never been so good as it is at the present time.

Then there is the General section. Who can look at our comparative list of prices without seeing that there has been an almost all round advance; in fact, with the exception of Yankee Girls (to which we shall come presently) there has scarcely been a single decline. It is quite true that prices have remained stationary in many cases, but who can say that the fractional rise in Almadas is at all commensurate with the improved prospects of that concern, or that the condition of American Belle is accurately measured by the miserable rise of one shilling? Don Pedros have risen 2s., but our surprise is that considering the prospects of the mine that advance has not been considerably accentuated. Frontino, Montana and Silver Mines of La Luz are all better, and so also would Goldon Gate and Golden Feather be if only some of the promises of Col. McLaughlin were brought to toe the performance line. However, we quite recognise that the Colonel has a difficult task, and, in common with the shareholders, will not be indisposed to give him still further time to consummate his plans. If, however, the present season passes over with the gold of Feather River still lying in its bed instead of in the pockets of the shareholders, the latter will be disposed, with Othello, to say to him, "Never more be officer of ours." Colombian Hydraulics rose 4s. on the meeting. Of this company and of Gravel Gold we shall presently speak, but in the meantime would wish to conclude this paragraph by stating that the heavy selling on the part of an embarrassed holder is the solitary cause to which the fall in Yankee Girl shares can be attributed. Let the shareholders distinctly bear in mind that Yankee Girl property is as valuable as ever, and is in no sense setting at nought either the promises of its prospectus or the speeches of its sponsors.

If we turn to the African market the prospect is not quite so encouraging, and no wonder when it is possible to hold such a meeting as that which took place to-day of the Oriental and Sheba Valley Co., where to all intents and purposes, the loss of a vast sum of money was announced. There have, however, been a few upward movements, but they have been counter-balanced by the declines in the same section. A feature of the week has been the steady buying of Transvaal Gold shares, and it is thought that Lisbon-Berlyns will presently have a rise. Land Shares generally have lost somewhat of the rise we chronicled last week, and Gold Shares have moved unevenly. In the Diamond section, our prognostications with regard to De Beers have once again been realised. These shares, which at one time during the week were as high as 12½, and have been as low as 11, close just a point above the latter figure, showing a decline on the week of about 27s. 6d.

The meetings of the week have been few. The gathering of Colombian Hydraulic was an exceedingly interesting function, the chairman being able to report that in four years and a-half the profits have been 74,000%. These profits, when certain additions to the water power are completed, which are now in course of being made, are likely to be considerably larger. It is generally thought, by those best acquainted with the facts, that Gravel Gold (in other words, the old Rica Mine) is about the best in this field, and the rise of 2s. a share this week is only partly indicative of the opinion the market entertains with regard to it. Talking of these mines—we have also been making enquiries as to others in the same district, and find that a very high opinion is entertained of Colon and Tesoro by persons who have

no interest whatever in the shares. An independent view of this kind is always of value. There is no doubt that the mines of Colombia will participate yet further in the improved state of affairs, which is now discernable on the Mining market. The doleful tale of Oriental and Sheba Valley Co. is told in our full report of the meeting, and in our leader columns. In the latter we have been at pains to show that the shares of the Guiana Goldfields, which are just now being industriously puffed by circulars and by rash speeches at meetings, are unworthy of public attention.

It only remains to say that the home market has moved somewhat unevenly during the week. At Wheal Uny to-day the shareholders faced with courage their debit balance, and practically wiped it off by a 10s. call. To this they were encouraged by the extremely improved prospects of the mine. Judging from the statements made by the manager, after a long and trying period it would really seem as if the shareholders are about to reap their reward. We sincerely trust that this may be so.

The outlook for next week is hopeful to a degree. The brilliant prospects of the American harvest will unquestionably stimulate prices there, and the reflex benefit is always felt on this side in the Mining section. It is also to be borne in mind that large sums of money are now in the country ready for investment, the proceeds of dividends and savings in trade, for it must be remembered that though we have passed through a period of extreme depression in mining, the general trade of the country has been, on the whole, fairly good.

LAND COMPANIES.

There has not been much movement in this class, and generally speaking prices are lower. Oceanas have been higher, and although not maintaining their rise have been freely dealt in. Transvaal, British Chartered and Exploring have receded 10s.

Business.—A rise is shown in Transvaal Gold of 9d., whilst the following have fallen, Bechuanaland, $\frac{1}{8}$; British South African Chartered, $\frac{1}{8}$; Exploring, $\frac{1}{8}$; Exploration, $\frac{1}{8}$; Oceana, $\frac{1}{4}$; Ophir, 3d.; and Transvaal Estates, 6d.

DIAMONDS.

De Beers have again been the sport of this market, and have experienced heavy fluctuations. They have varied between 12 $\frac{1}{2}$ and 11, and show a fall of 23s. 9d. on the week.

Business.—A rise is shown in New Jagersfontein of $\frac{1}{8}$; North Eastern Bultfontein, $\frac{1}{8}$; and Ottos Kopje, 6d., whilst the only fall is in De Beers of $1\frac{3}{8}$.

Making-up Prices, Aug. 26.	DIAMOND SHARES.	To-night's Prices.

KAFFIRS.

The market for this class has been somewhat unsettled, and in several cases prices have slightly receded, the exceptions being Ferreira, Jubilee, Simmer and Jack, and Langlaagte. Wemmers have fallen to the extent of 5s.

Business:—A rise is shown in Pigg's Peak of 6d.; Bantjes, 6d.; Ferreira, $\frac{1}{4}$; Glencairn, 6d.; Jubilee, $\frac{1}{8}$; Langlaagte, $\frac{1}{8}$; Randfontein, 3d., and Simmer and Jack, $\frac{1}{8}$. The following have fallen:—Crown Reef, $\frac{1}{8}$; Durban Roodepoort, $\frac{1}{8}$; Goldenhuis, $\frac{1}{8}$; Henry Nourse, $\frac{1}{8}$; Jumpers, $\frac{1}{8}$; Langlaagte, Block B, 6d.; Main Reef, 1s.; May Consolidated, 1s.; Modderfontein, 6d.; Robinsons, $\frac{1}{8}$; Salisbury, New, 6d.; Wemmer, $\frac{1}{4}$; Witwatersrandt, Knight's, 1s.; and Wolhuter, 2s.

AUSTRALIANS.

Wentworths have come to the front this week with a rise of $\frac{1}{8}$, and some brokers are taking them up to much higher figures. Day Dawn P.C., Day Dawn Block, Mosman, New Queen, and Bonnie Dundee are all firmer.

Business.—A rise is shown in Australian Broken Hill of $\frac{1}{8}$; Bonnie Dundee, 1s.; Day Dawn Block, 9d.; Day Dawn P.C., 2s.; Gympie Golden Crown, 3d.; Gympie Great Eastern, 6d.; Mosman, 1s. 9d.; Mount Morgan Extended, 6d.; New Queen, 9d.; and Wentworth Proprietary, $\frac{1}{8}$. Falls have taken place in Cumberlands of 3d.; and Kangarillas, 1s.

INDIANS.

A fairly good business has taken place in these shares, the chief rise being in Champion Reef, 4s. When the news of the cutting of the lode, showing visible gold, is confirmed, these shares should go much higher. Nundydroogs and Ooregums are both firmer, and shares are scarce.

Business:—A rise is shown in Balaghat of 3d.; Champion Reef, 4s.; Goldfields of Mysore, 6d.; Nine Reefs, 3d.; Nundydroog, 2s.; Ooregum Preference, $\frac{1}{8}$; others remain unchanged.

COPPERS.

These shares have been dull, and very few changes have taken place.

A rise is shown in Bratsberg of 3d.; Copiapo, $\frac{1}{8}$; whilst falls have taken place in Namaqua of $\frac{1}{8}$; Rio Tinto, $\frac{1}{8}$; and Tharsis, $\frac{1}{8}$.

GENERAL FOREIGN SHARES.

There has been a distinct improvement in this class of shares, and in many instances it would take but very little buying on behalf of the public to put prices considerably higher than those now ruling. This remark applies more especially to the low-priced progressive mines such as Almada, American Belle, Callao Bis, Dickens Custer, Gravel Gold, La Plata, Lisbon, Montana, Palmarejo, St. Augustine, and Tesoro. In each of these shares a slight rise has taken place during the week.

Business.—A rise is shown in Alamillos of $\frac{1}{4}$; Almada, 6d.; American Belle, 1s.; Barretts, 9d.; Callao Bis, 9d.; Colombian Hydraulic, 4s.; Dickens Custer, 3d.; Don Pedro, 2s.; Frontino, 3s.; Golden Feather, 1s.; Golden Leaf, 6d.; Graskop, 3d.; Gravel Gold, 2s.; La Plata, 3d.; Lisbon Berlyn, 1s.; Montana, 2s.; Monte del Oro, 3d.; Orita, 1s.; Palmarejo, 6d.; Silver Mines of La Luz, 6d.; Spitzkop, 6d.; and St. Augustines, 3d. The following have fallen: Balkis, 3d.; Flagstaff, 3d.; Golden Gate, $\frac{1}{8}$; New California, 3d.; Pahang Corporation, 1s.; and Yankee Girl, 2s.

The following list shows the principal changes which have taken place:—

	Last Week.		This Week.	
Alamillos ...	1	1 $\frac{1}{2}$	1 $\frac{1}{2}$	1 $\frac{3}{4}$
Almada ...	1/3	1/9	1/9	2/3

LATEST FROM THE MINES.

INDIAN MINES.

CHAMPION REEF.—A telegram from the mine, dated Aug. 25, is as follows:—"Have cut lode in cross-cut east Carmichael's shaft; quartz 2 ft. wide."

MYSORE HARNHALL.—The directors disclaim any responsibility for statements made concerning the mine other than those published by the authority of the board conveyed through the secretary.

NERBUDDA COAL AND IRON.—The sales of coal for the month of July were 984 tons.

COLONIAL MINES.

AUSTRALIAN BROKEN HILL CONSOLS.—The following telegram is from the managing director resident at Broken Hill, dated Aug. 21:—"Expected developments still deferred; work is being pushed ahead; have arranged to ship by next steamer 40 tons, containing 14,500 ozs. of silver."

NEW QUEEN GOLD.—A cablegram, dated Charters Towers, Aug. 24, gives result of crushing for the past fortnight:—"360 tons, yielding 270 ozs. gold."

MIDAS.—Cable: "Yield for fortnight ending Aug. 22, 33 ozs."

BROKEN HILL PROPRIETARY.—For the week ending Aug. 27, 4,551 tons of ore were treated, yielding 546 tons of lead, containing 177,489 ozs. silver. Cable also states that the usual dividend of 2s. per share for the month of Sept. has been declared on the 960,000 shares, and is payable in Melbourne and London on Sept. 16.

BRITISH BROKEN HILL PROPRIETARY.—For the week ending Aug. 27, 401 tons of ore were treated (including 160 tons of iron ore), yielding 76 tons of lead, containing 3,208 ozs. silver. Cable also states: "Furnace shut down for repairs 60 hours."

NEW LIVINGSTONE.—A call of 6d. has been made. In reply to the board's inquiry, the agents cabled on 8th inst. as follows:—"We advise to drive in on the vein, and to continue sinking. Formation looking better. Barren quartz cutting out. Shall finish contract next week." In view of the above advice, which is decidedly more favourable, the directors cabled the agents approving the course suggested.

FOREIGN MINES.

DON PEDRO.—Telegram, dated Marianna, Aug. 25:—"Canoe (lode) has been intersected in 50 fm. cross-cut; rich samples met with."

GOLDEN FEATHER CHANNEL.—The following has been received by cable from Col. Frank McLaughlin, the company's general manager at Oroville:—"Strengthening elevator; finish during week. Claim looking fine so far as drained."

GOLDFIELDS OF URUGUAY.—The Goldfields of Uruguay, Limited have sold, through Messrs. Pixley and Abell, the bullion produced during the month of June, which realised 1,536 $\frac{1}{2}$ 8s. 9d. nett.

GOLDEN GATE ALLUVIAL SYNDICATE.—The following has been received by cable from Col. Frank McLaughlin, the company's general manager at Oroville:—"Have claim very nearly dry; shall commence mining at two points Wednesday (26th inst.)."

NEW VISO.—The New Viso Tin Co. sold on the 27th inst. a small parcel of tin ore at 55 $\frac{1}{2}$ 10s. per ton.

YURUARI.—The manager advises 510 ozs. gold, value about 2,000 $\frac{1}{2}$. Extracts from reports will be published later.

OURO PRETO.—The directors have sold, through Messrs. Johnson, Matthey and Co., Limited, the gold obtained in the month of June, which realised 3,997 $\frac{1}{2}$ 1s.

AFRICA.

LATEST FROM THE GOLD AND DIAMOND MINES.

PAARL CENTRAL.—Crushings for last month, 1,050 tons, yielded 304 ozs."

HORO CONCESSION.—Cable from the office at Barberton Aug. 26:—"Total amount crushed is 1,850 tons, yielding 208 ozs."

NORTH-EASTERN BULTFOUNTEIN.—Summary of telegraphic advice for the four weeks ending 22nd inst.:—"Blueground on floors not yet ripe. Work done, mainly re-washings, 40,700 loads, producing 3,790 carats of diamonds. Increase of blueground on floors, 24,900 loads."

SIMMER AND JACK.—Cablegram:—"Dividend of 10 per cent. has been declared for quarter ending Aug. 31, payable Johannesburg to shareholders registered that date, payable after receipt of returns. Close register for transfer of shares for seven days from Sept. 1."

WASSAU (GOLD COAST).—The yield of gold for the month of June last was 101 ozs., standard weight, of the net value of 386 $\frac{1}{2}$ 13s. During this month the Adjah Bippo mill worked 19 days, and crushed 151 tons of ore. The Crockerville Mill 50 tons of sandstone ore, together 201 tons of ore; giving an average yield per ton equal to 0.50 ozs. The unusually heavy rains at this season were the cause of the falling off in produce. The manager of the mine is, we believe, now on his way to England, and on his arrival the directors will fix the earliest possible date for the annual meeting of shareholders.

PIGG'S PEAK ESTATE.—Mining report for week ending July 25:—"Devil's reef: Drive 200-ft. level south end: Drove for the week 40 ft.; total, 110 ft.; at present blasting ground. North end: Drove for the week 17 ft.; total, 95 ft.; blasting ground stands without timber. Prospecting drives: Drove for the week 16 ft.; nine boys cutting and piling wood for the battery; remaining boys getting out foundation for battery. Durning's reef: Cutting 14 ft. long; depth, 14 ft.; total amount of cutting, 61 ft.; started drive; drove for the week, 14 ft. McGready's works: Drive south 30 ft. from surface; drove for the week, 11 ft.; reef 7 ins. wide, carrying gold. England's reef: Drove for the week 4 ft.; total, 8 ft.; amount of cuttings, 60 ft."

TRANSVAAL GOLD EXPLORATION AND LAND.—The manager writes July 27:—"Mining—Ophir Hill, Theta vein: Ore extracted, 40 tons; assay value, 1 oz. 8 dwts. per ton; all from body of ore in proximity to Theta proper. Brown's Hill—Nu vein: Ore extracted at Nos. 1,211 and 1,220, 14 tons; assay value, 1 oz. 6 dwts. per ton; and at No. 1,209, 35 tons; assay value, 6 ozs. 3 dwts. per ton; 18 tons of rich ore, assaying 20 ozs. 1 dwt. per ton, which had been separated

and collected during the month, were sent to the mill during week. Prospecting: At Edin Hill work was proceeding on two small deposits, from 8 ins. to 12 ins. thick, which had an average assay value of 4 ozs. 6 dwts. per ton. On Ophir Hill and at Glinister's prospecting was still being carried on. Mill: Crushing operations were proceeding with regularity, and transport work was still fairly active.

EDWIN BRAY (July 25).—Manager's report:—Quarry No. 2: Only about 50 tons we re-quarried last week on account of our sending to the mill some of our reserve of quartz. Winze: Measurement at date, 51 ft.; work done for week, 5 ft. The quartz from the winze has been worth 15 to 18 dwts. free gold. The winze being now nearly sunk to the level of our ropeway loading station, we are getting everything ready to connect it with No. 3 drive, so as to load the quartz direct from the winze into the trucks. The ropeway worked well, and during the week transported 260 tons.

Note.—Accounts just received from the mine give the total cost for mining:—Transport and milling during the month of June at 10s. 6d. per ton. Out of this the transport of quartz from the mine to mill cost 1s. 9½d. per ton.

COMMERCIAL NOTES.

METALS.

COPPER has been fairly steady. In G.M.B. warrants a fair business has been done at 52½. 10s. cash, improving to 52½. 18s. 9d., and easing again to 52½. 12s. 6d. cash, and 53½. 2s. 6d. three months. To-day's prices are 52½. 12s. 6d. cash, and 53½. 3s. 9d. three months. A large quantity has been carried for three months at 10s. per ton. 50 tons of urmeneta landing was sold at 52½. 16s. 3d. We quote English tough 55½. to 57½.; best selected, 56½. to 58½.; strong sheets, 65½. to 66½.; India sheets, 60½. 10s. to 61½.; yellow metal, 5½d. to 6d.; ore, 9s. 9d. to 10s. 9d. per unit.

TIN has been steady. Straits improved from 91½. 10s. to 92½. 2s. 6d. cash, closing yesterday at 92½. To-day's prices are 92½. 2s. 6d. cash and 92½. three months. The price for three months prompt has been about the same as cash. Australian on the spot continues very scarce, and as much as 94½. has been paid for small lots of special brands. To-day's quotation is 93½. 10s. to 94½. The Dutch market is steady at f155 to f155½ for both banca and billiton. The billiton sale of 28,000 slabs yesterday in Batavia went at an average of f63.75 per picul, parity with f155½ per 50 kilos., or 92½. 10s. per ton in Holland. English ingots, 94½. 10s. to 95½.

TIN PLATES have slightly improved, but are irregular. We quote ordinary coke, 13s. to 14s. per box Liverpool.

SPELTER has been quiet. We quote ordinary brands 23½. 10s. ex ship here.

LEAD dull. We quote soft Spanish 12½. 2s. 6d.; soft English, 12½. 5s. to 12½. 10s.; L. B., 12½. 15s.; sheets, for export, 13½. 2s. 6d. to 13½. 5s.; home trade, 13½. 10s.

QUICKSILVER quiet. Rothschild's price is 7½. 10s.; seconds, 7½. 8s. 6d. to 7½. 9s.

ANTIMONY quiet. Hallett asks 42½. for export to America; ordinary brands and delivery, 41½.

DIVIDENDS DECLARED AND ANNOUNCED FOR WEEK ENDING AUG. 29.

Anglo-Californian Bank	...	7s. per share.
Blackburn and Over-Darwen Trams	...	5 per cent.
Cockermouth, Keswick and Penrith Railway	...	5½ per cent.
Canadian Pacific Land and Mortgage...	...	3 per cent.
Commercial Bank of Australia	...	17½ per cent.
Credit, Discount and General Agency,
Ordinary	...	5 per cent.
Credit, Discount and General Agency,
Preference	...	7 per cent.
Cassell and Co.	...	5 per cent.
Forth and Clyde Junction Railway	...	7 per cent.
General and Commercial Trust	...	5 per cent.
Glasgow Meat	...	6 per cent.
London Bank of Mexico and South America	...	4s. per share.
Mellis and Eye Railway	...	5 per cent.
Northern Plate Glass Insurance	...	6d. per share.
Oldbury Railway Carriage and Waggon	...	15 per cent.
Rhondda and Swansea Bay Railway	...	¾ per cent.
Surrey Commercial Dock	...	5 per cent.
Sydney City Bank	...	10 per cent.
Wrexham, Mold, and Connahs Quay Railway	...	2 per cent.

THE MONEY MARKET.

CITY, FRIDAY EVENING.

THE Money Market has tended easier, owing to the abundance of capital once more offering for short dates, and in spite of the continued demand for gold for Germany, which has been supplemented with that for Egypt, a constant small stream of sovereigns continues from Lisbon, and a sum of 344,030½. has just arrived from Brazil. However, discount is weak at 1½ per cent. for three months' bills, but the chief business transacted is in American Bills of two months' date, which are competed for at 1½ per cent. Money at call is nominally ¼, ½, and short loans covering the settlement, and that of Consols, ½, ¾ per cent. As regards the exchanges those of Germany are slightly firmer, and discount there, as elsewhere on the Continent, is receding, and the Russian rouble has had a severe fall, although for the moment there is a rally, owing to the accumulated payments to be made for imports of rye now prohibited from Russia, and for

other grain which it is feared may be yet included. European requirements, and the fact of America being able and willing to meet them, must of necessity lead to very important movements of bullion across the Atlantic, the full effects of which cannot as yet be foreseen. The Bank return shows an increase of nearly 100,000½. in the reserve 17,114,000½. (against 14,300,000½. last year), or 45½ per cent. of the liabilities, while the private securities have further run off 335,000½.

On the Stock Exchange there has been a distinct pause in speculative activity, owing chiefly to the settlement, but United States Railroads were an exception, and in that department there was scarcely the slightest diminution in business, for Wall Street has occasionally been an active buyer, and prospective railroad earnings are regarded in the same favourable light as the monetary outlook on that side. The continuous rainfall and the attendant fears regarding our harvest have, combined with depression in the iron trade, caused misgivings in the Railway market, although traffics are encouraging, and stock was rather more plentiful than was satisfactory to "bulls." A fresh fall in the rouble abroad has greatly disturbed the continental bourses, and provoked political rumours, but, notwithstanding, International Securities are not perceptibly lower. Argentine Loans appear tolerably firm, and Uruguay might be worse were it not that the bondholders intend taking joint action against the proposed conversion. Chilean have slightly advanced, and Brazilian are now better. Consols show heaviness, and among Home Railways Brighton "A," North-Eastern, and the Scotch lines are flatter, but the remainder are generally higher. Canadian and Mexican Railways have risen distinctly, and the gain to American lines during the week is again very considerable, which may be judged when it is remarked that prices during a fortnight have risen about \$5 to \$10, Northern Pacific, Erie, Illinois, and other Trunks or Granger lines being most prominent, while at the same time the rate of continuation was only 3 per cent. Nitrates were easier, Banks rather better, and Trusts and Breweries good. Speculative Miscellaneous descriptions receded.

Money to-day has been rather more wanted, owing to this being pay day at the Stock Exchange, and as the banks were not somehow free tenders, the quotation improved to ½, ¾ and ¾, 1 per cent., respectively for to-day advances and short loans. The Consol settlement commences to-morrow, and loans for the month are expected to rule 1 to 1½ per cent. Discount was also firmer at 1½, ¾ per cent. for three months' bills, and there was a good enquiry for two months' American paper at 1½ per cent. The weather apparently shows some improvement, but farmers every day are getting more and more anxious.

At the Bank 60,000½. in sovereigns was taken for Germany, while 23,000½. sovereigns were received from Lisbon. Bar silver remained at 45½d. per oz.

Public securities have been active to-day, for the account was adjusted without disaster, and a gleam of sunshine helped to stimulate new business of which there was a larger quantity in English, Canadian and Mexican Railways, but the markets were sluggish for most else; in fact a few like De Beers diamond shares, and Uruguayan bonds were freely sold on foreign and local account, and these fell 1½. and ½ to 1 per cent. respectively. Consols showed no movement, while New Zealand stocks were firmer. In the Railway department, a feature was a rise of 1 to just 2 per cent. in Midland and Chatham stocks upon a reported alliance between them so far that Midland trains shall run direct to Dover for Paris. Other lines also appreciably recovered, and upon a traffic increase of 68½. for yesterday, Brighton "A" jumped from 145½ to 147, but finished at 146½. Brazilian, Colombian, Guatemala, Russian and Mexican Government Bonds improved, while Turkish, Portuguese, Greek and Buenos Ayres paper loans receded; but as the gold premium has declined to 294 per cent., the Argentine Sterling Stocks improved. Grand Trunks, Canadian Pacific and Mexican Railways rose about 1 each, and as regards American descriptions, while rather irregular, final quotations are practically the best touched, and show a rise of ¼ to \$2 in Wabash Central and Northern debentures, but Milwaukee Pacific shares were exceptionally dull. Bell's Asbestos and Peruvian Corporation descriptions showed strength, the latter being again particularly strong.

Annexed are the final quotations to-day:—Consols Account, 95½, 95½; Egyptian Preference, 91, 91½; Egyptian Unified, 96, 96½; French Four-and-a-Half per Cents, 103½, 104½; Hungarian, 87½, 88½; Italian, 89½, 89½; Mexican, 84½, 84½; Peru Five per Cents, 9½, 10½; Peru Six per Cents, 26½, 27½; Russian 1889, 96, 96½; Portuguese, 39, 39½; Spanish, 71½, 71½; Turkish 1871, 95, 95½; Turkish Defence, 92½, 92½; Caledonian, 114, 114½; Great Eastern, 90, 90½; Great Western, 161½, 162½xd.; Brighton "A," 146½, 146½; North Western, 174½, 174½xd.; Metropolitan, 84½, 85½; Metropolitan District, 29, 29½; Midland, 158½, 159½; North British, 38½, 39; North Eastern, 157½, 157½; South Eastern "A," 83½, 84½; Mexican Ordinary, 36, 36½; Grand Trunk, 10½, 10½; Grand Trunk First Preference, 68½, 68½; Grand Trunk Second, 48, 48½; Grand Trunk Third, 25½, 25½; Canadian Pacific, 89½, 89½; Denver Preference, 46½, 47½; Erie, 24½, 25½; Milwaukee 69½, 69½; Lake Shore, 118, 118½; Louisville, 76½, 77½; Atlantic First, 34½, 34½; Ontario, 18½, 18½; Ohio, 22½, 23½; Norfolk and Western, 54½, 54½; Reading, 16½, 17½; Reading Bonds, 82, 83; Union Pacific, 40½, 40½; Wabash Preference, 27½, 28; Ottoman Bank, 11½, 12½; Anglo-Telegraph, 48, 48½; National Telephone, 4½, 4½; Hudson's Bay, 15½, 16; Suez Canal, 110½, 110½; Guinness, 320, 322xd; Allsopp's Ordinary, 25, 27; Bryant and May, 13½, 14; Eastmans Ordinary, 4½, 4½; Elmore's Copper, 3½, 3½.

BRITISH MINING INTELLIGENCE.

DEVON GREAT CONSOLS (Aug. 27).—Watson's : The lode in the 172-fm. level west of the engine shaft is 2½ ft. wide, yielding mundic and copper ores. In the 160-fm. level east of the engine shaft the lode is 4½ ft. wide, producing 2 tons of copper and mundic ores per fm. In the 160-fm. level west of the engine shaft the lode is looking more promising, and is yielding some saving work of mundic and copper ores. There is no important alteration in any of the workings throughout the mines since the date of last report.—W. CLEMO.

DRAKEWALLS (Aug. 20).—The sinking of the engine shaft is progressing favourably—3 ft. 9 ins. has been sunk in the past week. The ground consists of congenial granite, capel and occasional small veins of tin. In cutting into the north part of the lode at the 160 east, we are in 9 ft., and so far as seen the lode is producing 6 tons mundic per fm., and good saving work for tin. In the 160 driving west, the lode is producing 2 tons mundic per fm., and a small portion of tin. In the 147 driving east we are through the small cross-course and the lode has a pleasing appearance, and is yielding a little mundic intermixed with tin. The stope in the back of the 160 west is yielding 10 tons mundic per fm., and saving tin work. No. 2 stope : 9 tons mundic per fm., and No. 3. stope, 7 tons mundic per fm., and saving work for tin. The lode in the stope in the bottom of the 147-fm. level east of the engine shaft is now yielding 15 tons mundic per fm. and saving tin work, and the stope in the back of the 132 west 2 tons copper ore and 4 tons mundic per fm. We purpose turning the draught on Saturday next for another clean out of soot. The machinery throughout is in fairly good working order.—H. RODDA.

DRAKEWALLS (Aug. 27).—The ground in the engine shaft sinking below the 160-fm. level is composed principally of granite with occasional small veins of tin. A further depth of 3½ ft. has been reached in the past week. At the 160-fm. level east we are cutting into the north part of the lode for 5 fms. in length. It consists of a very fine capel, quartz, peach, and is yielding 6 tons of mundic per fm., and good saving tin work. The lode in the 160 driving west continues to produce 2 tons mundic per fm., and a little tin. In the 147 driving east we have cut into another small cross-course 6 ins. wide; most likely this has shifted the lode to the south. There is also a little water coming from the breast of the drive. The different stopes throughout the mine continue to produce their usual quantity of mundic and tin ores. We are cleaning out the arsenic soot as fast as possible, but the constant rain very much impedes our progress, as well as greatly interferes with all the surface work.—H. RODDA.

EAST GRASSINGTON.—Report, dated Aug. 20, from the mine manager :—Hammond shaft : The lode in the 47 west is slightly easier for progress, and the thin leader of clay and spar gradually opening out and containing nice spots of lead ore this morning. We are now within 7 fms. of being parallel to the old west or underlay shaft; when reached will rise and sink simultaneously to hole through and communicate the 27 with the 47 levels, and made large enough, and in line with the proposed new shaft from surface to the 27, to be utilised as continuation of same downwards. Stope in back of level in a vein 2 ft. wide, carrying spar, gossan and lead ore; worth 20 cwt. per fm. No. 3 sump : The intermediate levels have been advanced 16 ft. in a strong, masterly, and well-defined lode, yielding 20 cwt. of lead-ore per fm. Stope at intermediate level east of shaft in a lode 18 ins. wide, and producing 8 cwt. of lead-ore per fm. Harris main engine shaft : Excellent progress has been made during the past fortnight in deepening the eastern part of the mine, and the shaft is now down 54 ft. below the 47. The extremely wet weather of late has considerably increased the water in the bottom. The lode in the 47 east of No. 4 cross vein is 2 ft. wide, carrying highly congenial matrix well mixed with lead-ore. A stope in back of level in a lode 2 ft. wide yields 25 cwt. of lead-ore per fm. In the 37 east the lode is small, yielding saving work for dressing. Dressing and surface operations progressing favourably. July produce has been smelted, sold, and delivered, leaving a fair profit upon the month's operations.

LEADHILLS (Aug. 24).—Brown's vein : The 145-fm. level north of Jeffrey's shaft continues in a vein above 4 ft. wide, composed of spar mostly with ore; worth 20 cwt. per fm. The stope above the 145 north of Jeffrey's shaft is worth 10 cwt. of ore per fm. The stope above the 145 south of Wilson's shaft is worth 50 cwt. of ore per fm. The stope above the 145 north of Wilson's shaft is worth 30 cwt. of ore per fm. The three stopes above the 130 north of Jeffrey's shaft are each worth 20 cwt. of ore per fm. The stope above the 130 south of Wilson's shaft is worth 25 cwt. of ore per fm. The 115-fm. level north of Jeffrey's shaft keeps in a vein 8 ft. wide, mainly good-looking spar, but with ore worth only 10 cwt. per fm. The stope above the 115 north of Jeffrey's shaft is worth 30 cwt. of ore per fm. The 100-fm. level north of Jeffrey's shaft shows a vein above 4 ft. wide, well mixed with nice-looking spar and ore; worth 15 cwt. per fm. The 85-fm. level north of Jeffrey's shaft is still in a nice-looking vein above 4 ft. wide, charged with quartz and spar, but no ore; we have yet a good feeder of water. The 70-fm. level south of Wilson's shaft is in a vein above 4 ft. wide, showing a very nice rib of spar with dampness, but remains without ore. The two stopes above the 35 south of Flat Rod shaft are worth 45 and 60 cwt. of ore per fm. respectively. Sarrowcole vein : Gripp's adit north of George's Roust vein is in a vein 3 ft. wide of kindly spar, with spots of ore.—T. NEWBIGGING.

NEW MINERA.—Report for two weeks ending Aug. 14 :—The 275-yd. level—No. 2 rise and stope : The driving east is opening up some good ground, and the filling up of the space below will be finished in two or three weeks. The other stopes from this level are in good ore, varying from 2 tons to 7 tons per fm. The 295-yd. level : Driving west has been resumed in a lode 6 ft. wide, worth 4 tons blende per fm. Driving east : Little done here; the last week has been occupied in timbering and securing the winze. The 315-yd. level : The connection has been made to the winze from the 295 level, and the ventilation of the whole mine has been much improved; the vein at this point is vertical. The level is now 3 yds. west of the winze in a lode 6 ft. wide, worth 4 tons blende, and a little lead ore per fm. Dressing : Progressing satisfactorily with existing machinery. The foundations for the new crushing mill will be completed shortly. Roofing is being placed over the floors as speedily as possible without hindering dressing operations.

PHENIX UNITED (Aug. 17).—Setting report : We have at various points seven pitches, at tributes varying from 8s. to 13s. in the £ for tin.—J. WILLIAMS, J. RUNDLE, W. MANLEY, J. HOSKIN.

ROMAN GRAVELS (Aug. 20).—The 155 north is driven 15 fms. 4 ft.; the vein in present end being 4 ft. wide, producing 1 ton of lead ore to the fathom. There is every appearance of a further early improvement. The new winze being sunk in the level above is 7 ft. deep, and the vein seems to be improving in depth, its present yield being 2½ tons of lead ore to the fathom. The 155 on caunter vein is driven 16 fms., the forebreast is letting out a large quantity of water, and is producing 1 ton of blende to the fathom. This vein in the 140 forebreast is still worth 1½ tons of lead ore to the fathom, and in the rise 3 tons of lead ore and ½ ton of blende to the fathom. The 140 south is driven 11 fms. 5 ft. from No. 1 winze, but the vein shows no change of note for some time past. The 125 south is in a very promising lode, producing 1 ton of lead ore per fathom, its present appearance shows that the forebreast may now be on the point of entering a good shale bunch. With the exception that the stopes in back of the 80 south of Jones' winze are looking somewhat better than they did last week, we have nothing new to report to you from any point above the 125-fm. level. We sampled 20 tons of blende to-day for sale next Thursday, and shall sample 50 tons of lead ore on the 27th inst.—A. WATERS.

ROMAN GRAVELS (Aug. 27).—The 155-fm. level is now driven 17 fms. north, and the forebreast is in a vein 4 ft. wide, producing 1 ton per fm. The lode is very strong and promising-looking, but has not improved in productiveness to that extent which we anticipated last week. The 155 on caunter vein is driven 17 fms. 2 ft. : lode in present forebreast in two divisions together about 4½ ft. wide, letting out a strong feed of water, and producing 1½ tons of blende to the fm. The 140 south is driven 13 fms. 4 ft. from No. 1 winze, the lode being 5 ft. wide, producing saving stuff for blende; the forebreast has become much wetter during the past few days. The new winze in the 140 north is 1 fm. 4 ft. deep, the lode being about 3 ft. wide, producing 2 tons of lead ore to the fm., with saving stuff for blende. The three stopes in back of this level are together producing 4 tons of lead ore per fm. The lode at the 125 south is about 4½ ft. wide, producing 1 ton of blende and good stones of lead ore to the fm. The new winze being sunk in this level is 5 ft. deep; we calculate that the vein here will be intersected at a depth of say 4 fms. The two stopes in back of this level are together producing 2 tons of lead ore per fm. The 140 south-east on caunter vein is driven 14 fms. 3 ft., lode in present end 5 to 6 ft. wide, producing quite 2 tons of lead ore and good stones of blende to the fm. The stope in back of this level is producing at present about 2 tons of lead ore and 1 ton of blende to the fm. The three stopes in back of the 110 south of Watkins winze are together worth 4 tons of lead ore per fm. The three stopes in back of the 80 south of Jones' winze, average 2 tons each per fm. and the two stopes on east lode are each worth 1½ tons per fm. The 20 tons of blende sold to-day realized 130l. 10s., and we have sent out samples of 50 tons of lead ore for sale on Thursday next.—A. WATERS.

SOUTH CONDURROW (Aug. 26).—The men on Marshall's shaft are engaged in sinking below the 138-fm. level and cutting trip-plat. The cross-cut north is being urged on towards the lodes by six men. There is very little alteration to notice in any other part of the mine.—W. RICH, W. THOMAS.

SOUTH DARREN (Aug. 27).—The shaft is 68 ft. under the 142-fm. level; 3 ft. has been sunk this week. The lode is broken down, and is still worth 15 cwt. of silver-lead ore per fm. The winze in the 130 west continues worth 17 cwt. of silver-lead ore per fm. We have had a heavy flood of rain, but so far have kept the water out from the bottom.—J. MITCHELL.

TREGREHAN CONSOLS (Aug. 26).—In driving the 45-fm. level east, we met with a cross-course which we have cut through, and cut the lode on the east side of it, which is letting down a large quantity of water, showing that we have a large lode ahead. As soon as the water has got away a little we shall cut further into the lode to ascertain its value and more about it. I have purchased the new pumping engine and we are not a day too soon with it. We are proceeding with the foundation for the new engine house, and shall have sufficient stone in the quarry for its erection, without having to purchase. We have sunk the shaft 4 ft. below the bottom level for fixing cistern, and shall immediately go to sink again, so as to have down another lift by the time the new engine is ready, which I calculate will be in about three months.—F. W. MITCHELL.

VAN (Aug. 20).—Western part of the mine : In the cross-cut towards the south lode at the 150-fm. level, the branch of lead ore mentioned in last week's report has been passed through, and a similar one intersected last night. We regard these ore branches as indicating or coming from something good in advance of the present end. The two stopes in back of the 150 on the old lode are producing 15 cwt. each of lead ore per fm. The stope over the 135-fm. level on the south lode yields 25 cwt. of lead ore per fm. The stope over the 105-fm. level on the old lode is worth 20 cwt. of lead ore per fm. Eastern part of the mine : In the forebreast of the 120-fm. level east we are now cross-cutting north; the lode here is very hard for driving through, but is still spotted with lead and blende ores. The cross-cut going south behind this end continues in a strong lode containing a mixture of blende with spots of lead ore. The 150-fm. level driving east from Seaham's winze on the south part of the lode is in very promising ground, at present producing good blende for the dressing floors. We are looking forward to an early improvement here, and expect to cut into lead any day. The stope over the 90-fm. level is yielding 15 cwt. of lead ore per fm. The washing or dressing of ore will be resumed again as soon as there is sufficient water in the upper reservoir for the purpose.—J. PAULL.

VAN (Aug. 27).—The cross-cut at the 150-fm. level towards the south lode is still going forward in hard grauite, showing faces of lead in the joints crossing the forebreast. Six men with a rock-drill are pushing on this point. The two stopes over the 150-fm. level (on the old lode) are worth 15 cwt. of lead ore per fm. The stope over the 135-fm. level on the south lode is turning out 25 cwt. of lead ore per fm. The stope over the 105-fm. level west of Seaham's shaft will yield 1 ton of lead ore per fm. At the 120-fm. level east of Seaham's shaft we are still cross-cutting north in a large lode, spotted with lead and blende ores. The cross-cut driving south behind this end is not yet through the lode, but must be getting near the hanging-wall; the forebreast contains a little lead and blende. As soon as the lode is fully cut through here we intend putting theso four men to stope the roof, where ore ground was met with on the north part of the lode some short time ago. The 150-fm. level going east of Seaham's winze is making good progress by six men with a

rock-drill; the present end is producing very fine blende, and the lode is of the most promising character. The stope over the 20-fm. level is yielding 18 cwt. of lead ore per fm. Dressing operations have been resumed this week, and a parcel of lead ore will be got ready for market as quickly as possible.—J. PAULL.

WEARDALE.—Report for week ending Aug. 15.—Ore raised for week, 52 tons; ore dressed for week, 52 tons; ore and slag smelted for week, 136 tons; producing 70 tons of pig lead.

—Report for week ending Aug. 22.—Ore raised for the week, 71 tons; ore dressed for the week, 61 tons; ore, fume, and slag smelted for the week, 141 tons, producing 74 tons of pig lead.

WHEAL CREBOR (Aug. 18).—The following are the points in operation:—Driving the 156-fm. level east of new shaft, by six men, at 6 $\frac{1}{2}$ per fm. The part of the lode carried is worth 5 tons of mundic per fm. Driving the 132-fm. level west on the south part of the lode, by two men, at 5 $\frac{1}{2}$ 10s. per fm. The lode is worth 3 tons of mundic and copper ore per fm. Stopping the bottom of the 144 east of winze, by four men, at 3 $\frac{1}{2}$ per fm.; lode worth 2 tons of copper ore and 4 tons of mundic per fm. Stopping the back of the 144 west of cross-cut east of new shaft, by four men, at 3 $\frac{1}{2}$ per fm.; lode worth 3 tons of copper ore and 4 tons of mundic per fm. In the upper levels we have 12 men working on tribute, at tributes varying from 12s. to 13s. 4d. in the £. We hope to have the mundic ores ready for sampling by the end of this week, when we take samples and have them assayed, and as soon as the result is known it shall, together with the computed weight, be forwarded to the secretary. We regret that we have not yet been able to increase the number of tributaries owing to the scarcity of good miners in the neighbourhood. The 156 east is let on a contract for six men to drive the end 10 fms., at 6 $\frac{1}{2}$ per fm., which includes putting the stuff to shaft and laying down tram road.—P. D. HOLMAN.

WHEAL CREBOR (Aug. 25).—In the 156 east we have met with a crossing, which has somewhat impoverished the lode; it is not now worth more than 3 tons of mundic per fm., but we expect it will improve a little further on. We are driving the end about 7 ft. per week, and carrying 4 ft. of the width of the lode. The lode in the end driving west at the 132 is yielding 3 tons of mundic per fm. All other points in the mine are the same as reported last week. The mundic ores we have now ready for sale are as follows:—Computed 90, 50, 30, 18 tons. The copper ore sold on the 20th inst. has not yet been weighed off. We are now weighing off the mundic that was sold on the 19th inst.—P. D. HOLMAN.

WHEAL GRENVILLE (Aug. 26).—Monthly report:—At the 220-fm. level, east of Goold's engine shaft, during the past fortnight, we have been rising with the boring machine against the winze, sinking from the 205-fm. level, and last night we communicated these points. This has given good ventilation to our bottom level, which was much required, and opened a good section of stopping ground. We have to-day commenced to drive the 220-fm. level east of the rise. The lode at this point is large, we have no wall north or south. The part we are driving on for 6 ft. wide is worth 20 $\frac{1}{2}$ per fm. As soon as the end is a proper distance from the rise we shall put a pair of men to open out on the lode, and thus find its width and value. The 205-fm. level east of Goold's shaft is being driven by a boring machine. The lode in this end at present is small, and not so productive as it has been, it is worth 12 $\frac{1}{2}$ per fm. The last 20 fms. driven have been of much higher value. There is no particular change in our stopes or tribute pitches to report. Eastern section: At the new eastern shaft we have put in a double skip-road from the surface to the 150-fm. level, and the men have commenced to cut ground for a balance-bob, at 80 fms. from the surface. We have two pairs of men stopping ground for making the shaft full size from the 165 to the 178-fm. level. The shaft is nearly completed full size from the 150 to the 165-fm. level. The ground is hard, but the men are making fairly good speed. We are not making as much progress in our buildings and other surface work as we should desire, because we are having so much rain that the men cannot continue their work, but we are doing the best we can under the circumstances.—C. F. BISHOP, J. HOSKING, S. WILLIAMS.

FOREIGN MINING INTELLIGENCE.

AVALA QUICKSILVER (Aug. 1 to 15).—Half monthly report: The force at Shuplia Stena is 22 men. The ore in the rise 45 on the 37-metre level has developed very nicely; the rock near the lode is also impregnated. The average sample gave 3.6 per cent. hg., and carries bitumen. To my knowledge this is the first time that bitumen has been proved in the mine. The discovery of bitumen is so far important, as it forms another similarity between Shuplia Stena and the richest mercury mines. The stope yields 2 tons per day. The whole production of ore from 1st to 15th was 48 tons. The ore continues in stope 2, and is pretty fair. Owing to the very hard stone in the 72-metre level heading, progress made is slight. The new pump has dealt with the water in the shaft very easily, and we are now making progress in the lengthening of the shaft to 4 metres, inside measurement, and the timbering. We are obliged to renew a quantity of the timbering in the main adit. The reduction works have been working regularly and well. The condensation water is now returned to the well, so that we have a plentiful supply.—W. E. FRANKS.

BALAGHAT-MYSORE (Aug. 4).—Report of work done for the past fortnight:—The 600 north has been driven 47 ft., making a total of 167 ft.; the quartz is now 6 ins. wide; worth 1 oz. 11 dwts. 4 grs. per ton. The 500 winze north has been sunk 5 ft. 6 ins.; total depth, 93 ft. 6 ins.; the quartz is about 9 ins. wide; worth 1 oz. 0 dwts. 18 grs. per ton. The 500 winze south: Sunk 5 ft. 9 ins.; total depth, 25 ft.; carrying quartz 5 ins. to 6 ins. wide, but worth 1 oz. 2 dwts. 1 gr. per ton. The 500 south has been driven 3 ft. 9 ins., making the distance 114 ft. 3 ins.; there is nothing of any value in the end. The 500 midway drive: Driven 15 ft. 6 ins.; quartz about 3 ins. wide; worth 6 to 7 ozs. to the ton. The 500 back stopes: Quartz average 1 ft. wide; worth 2 ozs. 2 dwts. 3 grs. per ton. The 410 winze north: Sunk 7 ft. 6 ins.; total depth, 37 ft. 6 ins.; quartz now is 1 ft. wide; worth 7 ozs. 16 dwts. 19 grs. per ton. The 410 back stopes: Quartz 15 ins. wide; worth 1 oz. 1 dwt. 20 grs. per ton. The 270 south has been driven 13 ft. 9 ins.; total distance from shaft, 686 ft. 9 ins.; there is no difference to report in the character of the ground. The 270 midway drive: Driven 7 ft. 6 ins.; total distance, 38 ft. 6 ins., when we holed to the north engine shaft; quartz 1 ft. wide; worth

3 ozs. 2 dwts. 1 gr. per ton. The 205 back stopes: Quartz from 12 to 15 ins. wide; worth 1 $\frac{1}{2}$ ozs. Haines' shaft: The skip-road has now been put in from the surface to the 270. Timbering the shaft between the 330 and 410 is being proceeded with, but owing to the dangerous nature of the ground we are not making such satisfactory speed as I could wish.—A. S. B. OAKLEY.

BRATSBURG.—Mining report for week ending Aug. 15:—Hoffnung Mine: The several points of exploration at No. 2 adit level remain the same as when last reported on. At No. 3 adit level the lode has been irregular in value, but appears to be improving again; now yielding about $\frac{1}{2}$ ton per fm. The rise in the back of this level is worth 1 ton per fm. No. 4 level for the present keeps rather under $\frac{1}{2}$ ton per fm. in value, but the outlook just now is promising. At Murchison's the lode in the trial level continues to yield 1 ton per fm. Johannes Mine: The western level on Howard lode is yielding about $\frac{1}{2}$ ton per fm., and the eastern level 1 ton per fm., having improved more particularly toward the bottom of the level. The rise in the back is yielding fully 1 ton per fm. Surface work and remarks: Operations here are progressing fairly well, but the recent unusually heavy rain has rather hindered the regularity of the carriage of ore to Bandakslid. The Edward Arthur sailed a week since, and we have now in charter the Mary Owens for loading Sept. 1.—J. D. HOLMAN.

BRATSBURG SMELTING AND REFINING WORKS.—Report for week ending Aug. 15:—The smelting and converting were continued without intermission on Monday, Tuesday and Wednesday, and gave complete satisfaction in every way, but we had to stop late on Wednesday night, owing partly to the state of the furnace bottom and to the charging of the men, as yet very inexperienced in water-jacket smelting, resulting in the furnace getting choked. We, therefore, decided to blow out, and repair the bottoms both of water-jacket and forehearth, and be ready for a fresh start this morning. In all 116 anodes were produced, which were delivered to the Electro-Depositing Works. 56 tanks are now under operation here, and working night and day; so we shall soon have a parcel of conductivity copper ready for the market.—T. F. SMITH.

BRITISH BROKEN HILL PROPRIETARY.—Report, dated July 15.—No. 1 shaft, 50-ft. level: The contractors in the south drive have done 30 ft. this week, making the total length from the cross-cut 264 ft. The lead ore is still carried on the western side of the drive. The north drive has been extended only 7 ft., making its length 104 ft. A new contract was let for this end, but the contractors threw it up, not making wages. 2nd level: The stopping in the new section of timber, and also in the western body, is all making fair progress, but the grade of ore obtained varies very much from day to day. A cross-cut is being run through the galena from the old south drive to tap the crush just ahead of the new section face, and is now in 11 ft. from the drive. No. 2 shaft: The stopes continue to yield as usual. The winze in the sill floor of the north stope is down 25 ft., all through carbonate ore. No. 5 shaft has been sunk a further depth of 5 ft., and it is now 84 ft. below the second sill. No change has occurred in the country, but the supply of water has fallen off somewhat. Surface: The No. 3 tunnel has been lengthened 16 ft., making its total penetration into the hillside 103 ft. This work has been stopped for the present.

CALLAO BIS (Aug. 1).—Advices from the mines:—Since the 18th ult. the Independiente shaft has been sunk 6 ft., making the distance from surface 179 ft., or 39 ft. from the bottom of the No. 3 level; the ground continues very hard. No. 3 west level has been driven since last reported 26 ft. This has been driven in the footwall, where I found the quartz to be running. At this distance in the footwall I find quartz 2 ft. wide, but of little value. My opinion is this is only a part of the lode. I intend to drive on the hanging part of lode as soon as possible. Water is flowing freely from this point. No. 3 cross-cut has been driven 32 ft. After driving this cross-cut 25 ft. we found a footwall, and by all appearances it is the same we have in the No. 1 north-east winze. We shall raise in the back of this cross-cut to communicate with the No. 1 north-east winze. No. 2 west level has been driven 8 ft.; total distance from shaft, 321 ft.; lode same as when last reported. This has been suspended owing to scarcity of air. No. 2 winze on north-south lode has been holed to the east stope, and we have driven 3 ft. on course of lode, which is poor at present owing to the quartz dipping very fast to the south. Stopes looking well.

CHAMPION REEF (Aug. 4).—Fortnightly report:—Mysore section: Carmichael's shaft: The 225-ft. level north drift has been advanced 8 ft. 6 ins.; total, 18 ft. 3 ins.; and the south drift 14 ft. 6 ins.; total distance south from cross-cut, 101 ft. 9 ins. During the last 40 ft. of drive we have had a small branch of quartz in the end varying from 2 ins. to 6 ins. wide, but as this does not appear to improve we have suspended the drive, and are now cross-cutting east. Ribblesdale's shaft: The sinking has been resumed at this shaft, and will be pushed on as fast as possible. The cross-cut at the 240-ft. level has been driven 9 ft.; total length, 53 ft. Since last report we have intersected the lode at this point, which was about 3 ft. wide, carrying 18 ins. of quartz, assaying 11 dwts. per ton. We have since driven 11 ft. north, and 5 ft. 6 ins. south on the lode. In the south end the lode has improved, and now carries about 2 ft. 6 ins. of quartz; samples taken during the week give an average assay of 1 oz. 8 dwts. per ton. In the north drift the lode is a little smaller, and assays 1 oz. 1 dwt. per ton. The great improvement in the lode in the south drift in such a short distance appears to indicate that the most favourable results will be met with in that direction. We have rock-drills at work at both ends. The drift south near the shaft has been driven 3 $\frac{1}{2}$ ft.; total, 8 ft.; work suspended. Garland's shaft: Sinking 4 ft. 9 ins.; total depth, 253 ft. 3 ins. Cutting down the hanging of shaft for tip-plate 1 $\frac{1}{2}$ cubic fms.; the lode in bottom of shaft has improved, and now carries nearly 2 ft. of quartz. The 240-ft. level north has been driven 15 ft. 6 ins.; total length, 63 ft. 2 ins. The lode in the present end is a little disordered, and the main portion of the quartz is heaved a few feet to the west. The south drift at this level has been advanced 17 ft.; total, 51 ft. 6 ins. The lode has improved during the last few feet, and is now 2 $\frac{1}{2}$ ft. wide of quartz, assaying 13 dwts. 6 grs. per ton. Dalyell's shaft: Sinking 3 ft. 6 ins.; total depth, 250 ft. 6 ins. Driving at the 240-ft. level, 17 ft. north; total, 85 ft. 4 ins., and 11 ft. 6 ins. south; total, 68 ft. 9 ins. The quartz in the south end has pinched to a few inches in width. The new trial shaft on the old workings south of Carmichael's shaft has been sunk 32 ft.; total depth, 57 ft. We are following down the old workings, which are about 3 ft. wide in bottom.

of shaft, and dipping west about 35 degs. from vertical. Coromandel section: The north end at the 380-ft. level has been driven 6 ft. 6 ins.; total, 27 ft. 6 ins.; lode 2 ft. wide, of low grade ore. Cross-cut from the north level at the 320 has been extended 6 ft. 6 ins. The winze below the 320 level has been sunk 6 ft. 3 ins.; total, 26 ft. 6 ins.; the lode is about 2 ft., carrying $1\frac{1}{2}$ ft. of quartz, which assays $1\frac{1}{2}$ ozs. per ton. Drive at the 290 level south advanced $4\frac{1}{2}$ ft.; total, 181 ft. 6 ins. Cross-cut west from this level has been driven 4 ft. 3 ins., and is still in country rock. Surface and general work: At Mysore section the general surface work of building, &c., is progressing favourably. A few coolies have been engaged during the fortnight. Costeasing north of Carmichael's shaft to prove the run of the old workings up to the north boundary. Machinery working satisfactorily throughout the mine.—R. C. JONES.

COLAR CENTRAL (Aug. 4).—New shaft: 200 north has been driven 7 ft. 3 ins.; total distance, 33 ft.; quartz about 15 ins. wide, but poor, being only worth $2\frac{1}{2}$ dwts. per ton. The 200 south has been driven 7 ft.; total distance, 17 ft.; the lode is 18 ins. wide at this point, worth 15 dwts. to the ton. The 200 winze has been sunk 7 ft. 3 ins.; total depth, 6 ft. 6 ins.; quartz seems to be coming in at this point, and I have little doubt in a few feet more sinking we shall come across some better ore.—A. S. B. OAKLEY.

COLON.—The secretary reports that he has received a letter from the superintendent at the mines as follows:—"The result of my negotiations with the Government about the water question resulted in great disappointment to me after all the promises and the sanguine feeling of the Minister expressed in my letter. After another fortnight's delay the Minister informed me that by the result of consultations with the President he could not give a favourable resolution, so that our only course left was to petition the Government for a clearer definition of the obligations enforced by this law." Negotiations are now pending between Mr. Russell and the Government, by which it is hoped that arrangements may be made to permit the mine to continue working until Congress meets next year, and a cablegram may be expected shortly announcing the result of the same.

COLORADO.—The manager, writing under date Aug. 15, reports that the mines are being worked at 19 different points, and that the improvement in the various workings still continues. Terrible Mine: 8th level west is now in 525 ft. from the main shaft, and shows a lode, between two well-defined walls, about 4 ft. wide. The vein on the footwall is from 1 in. to 2 ins. wide, and the mineral is of a very fair grade. The 15th level east: Lode 4 ft. wide; mineral vein, 2 ins. to 3 ins.; last sale gave $1\frac{1}{2}$ ozs. gold, 35 ozs. silver per ton, and 8 per cent. lead. The 1st level: Last sale gave 527 ozs. silver per ton and 22 per cent. lead, and 129 ozs. silver per ton. The 2nd level: Last sale, 115 ozs. silver per ton, 13 per cent. lead. Chelsea Beach lode: Sale of ore gave 87 ozs. silver per ton. Brown lode—Rockwell adit level: Lode, 4 ft. wide; vein, 1 in. to 3 ins. mill run gave 266 $\frac{1}{2}$ ozs. silver per ton and 19 per cent. lead. Coughlin stope: Mineral vein 2 ins. to 3 ins. wide; ore milled, 171 $\frac{1}{2}$ ozs. silver per ton and 11 per cent. lead; 155 ozs. silver per ton. Brown tunnel level: Lode 4 ft. wide; last sales 167 ozs. silver per ton; 14 per cent. lead; 18 tons of clean ore sold since last report. The improved character of the ore now found in the eighth level west of the main shaft has decided the manager to commence driving the 9th and 10th levels also west, as he anticipates the same ore shoot passes through them.

CORTEZ (Aug. 8).—Report from superintendent.—Work at the mines for the week ending this date has been as follows:—South cross-cut, No. 1 east, advanced 2 ft. No. 2 tunnel west, stoped 5 tons of ore; No. 3 tunnel west, stoped 4 tons of ore; north-east raise, stoped 35 tons of ore; north-west raise, stoped 175 tons of ore; ore run out into ore-house, 205 tons; ore trammed to mill, 162 tons; ore worked at mill, 153 tons. Average assay for the week, 77 $\frac{1}{2}$ ozs. silver per ton.

EAGLEHAWK CONSOLIDATED.—The secretary sends us the following extract of reports received from the mine, dated July 11 and 20:—During the last fortnight we have extended the drive north 23 ft., making it 938 ft. from the cross-cut. There is plenty of reef. We are carrying 5 ft. of stone, and still leaving quartz to the west of the drive. The cross-cut west has been extended 22 ft. for the fortnight, making it 146 ft. west of the reef. The ground is hard blue-stone.

GARFIELD (Aug. 8).—Report from mine.—The following work has been done at the mine:—Western Mine—180-ft. level: The north-east drift has been lengthened 26 ft., making in all 195 ft. In the early portion of the week we had quite a change of ground, a formation of blue limestone coming in from the bottom of the drift, cutting out the favourable looking ground we were driving in. We have it at present in the face, with a thin seam of porphyry running across it.

GLENROCK (July 15).—Extract from battery manager's report:—Premier Mine: I am glad to be able to tell you that the stope looks very promising for giving us a supply of stone to crush as soon as the season starts. We have opened it back 30 ft. in all, and it shows all the way a good strong body of stone fully 4 ft. thick. It is certainly very mullocky yet. There is a little gold to be seen in the mullock occasionally; if it lives up and still keeps the strong body that is at present showing—and one very good feature in favour of it living is it is exactly the same nature of stone as that at the outcrop—the formation, water percolating, and the mullocky nature of the lode is all in favour of this idea. If you remember where I pointed out to you, where we first struck the water and about 18 ins. of stone, with a little gold showing. Well, it is a blank from this point into our stope, a distance of about 50 ft. I therefore think this is one and the same shoot of stone, and when we rise on it, it is my belief we will find them come together. We would in that case have a good thing, and a certainty of having more stone than we could crush with our present mills. Besides, as soon as the winter is over, we could push the old top tunnel of all ahead at bottom of Halliday's shaft. I reckon we would strike this shoot inside of 400 ft. The cry then would be for more stamps. We stopped the stope at the beginning of the week, and sent the men to finish their contract. Millard and myself will, in the meantime, timber up, so we can start stoping in real earnest. I think it would be the best plan for us to knock off driving as soon as this contract is finished, which will be in about three weeks, and start breaking down stone, so as to have a supply of quartz in the early spring. Crushing will therefore commence so soon as the present severe frosty weather is over.

— Mr. Farrell cabled Aug. 4: "Shall be able to crush Sept. 22."

GYMPIE GREAT EASTERN (July 9).—Fortnightly report:—There is nothing to report other than we have been constantly baling during the past fortnight. The water is going down slowly; it is now 18 ins. under the 364-ft. level, leaving 364 $\frac{1}{2}$ ft. to our lower level. The 10-head of stampers that were crushing for the No. 2 Great Eastern have been idle since July 2. The mill manager is making alterations to the shoots that carry the tailings from the tables. The winding engine and battery is in good working order. The shaft is also in good order. There are nine men employed—six on the mine and three at the battery.—J. JAMES.

INDIAN CONSOLIDATED (Aug. 3).—Phoenix section: No. 1 level has been extended 10 ft. There is no difference in the appearance of the lode matter and is not yet of milling value. Tramway level: Owing to the absence of the contractor, most of his coolies ran away and very little work was done, only 5 ft. being driven; the lode is now more like that in No. 1 level, with a strip of soft decomposed stuff, but not much quartz yet. Stoping: We have a full gang on at this work and are breaking out our usual quantity. There is no change to report in any of the stopes. We had a slip near entrance of tramway, but, except for stopping tramping for a few days, no harm was done. This is now being timbered.—C. A. PATERSON.

— (Aug. 4).—Colar section: No. 1 shaft has been sunk for the past fortnight 7 ft., making a total depth from surface of 236 ft. 6 ins. The ground here is very hard for sinking. No. 2 shaft has been sunk 20 ft. 3 ins., making a total depth on the underlie of 85 ft. 6 ins. There is no change in the lode since last report. The men have been hindered here three days putting in timber to secure the shaft, and have commenced to sink again this morning. The 240 main shaft west cross-cut has been driven 23 ft.; total distance, 456 ft. 6 ins. The end is still in the trap-dyke, and is letting out a little water in the last few feet of drive. No. 5 shaft: The 425-ft. cross-cut has been extended 18 ft. 3 ins. since our last report, to prove whether there is any lode standing in this direction, but we have made no discovery here up to date.—M. STEPHENS.

LEEDS COPPER (Aug. 13).—Kent's shaft: The 20-fm. level driving west of shaft has considerably improved, the bed vein producing a larger quantity of copper ore, and having a better appearance; vein 4 ft. wide, producing $2\frac{1}{2}$ tons of 15 per cent. copper ore per fm. No. 2 stope in bottom of this level continues in good bed vein; bed 6 ft. wide, producing 4 tons 15 per cent. copper ore per fm. No. 1 stope in the back of this level is in bed vein 4 ft. wide, producing 3 tons of 15 per cent. ore per fm. No. 2 stope in the back of this level is producing better quality copper ore than we have had for some time past; vein 3 ft. 6 ins. wide, producing 3 tons 20 per cent. ore per fm. The 15-fm. level driving west of this shaft is being pushed on with all speed; bed vein 4 ft. 6 ins. wide, producing $2\frac{1}{2}$ tons 15 per cent. copper ore per fm. No. 1 stope in the back of this level is in bed vein 8 ft. wide, producing 4 tons 15 per cent. copper ore per fm. No. 2 stope in the back of this level is in bed vein 8 ft. wide, and producing 4 tons 15 per cent. copper ore per fm. No. 3 stope in the back of this level is in bed vein 8 ft. wide, producing $4\frac{1}{2}$ tons 15 per cent. copper ore per fm. McGee's shaft: The level driving in this shaft is producing fair quality vein ore, as well as good patches in the bed vein, producing $2\frac{1}{2}$ tons 15 per cent. copper ore per fm. No stoping has been done here for some time. Surface: We shall make a trial of the concentrating plant about the end of the week, when we hope everything will go off as we desire.—T. R. DAVEY.

MINE DE CASTILLON (Aug. 24).—Since last report the various stopes throughout these mines have fully maintained their values, and a good supply of crude ore has been sent to dressing floors, where operations have been carried on without interruption. I am pleased to say the lode in the bottom of St. Barbe level holds good, and if it so continues I hope soon to put on a large staff of miners to stope there, in view of which we are now carrying out the necessary preliminary work. Fair progress is being made in getting together another parcel of silver lead, and we have already 100 tons of blende dressed towards next shipment. All our machinery continues to work well.—J. EDWARDS.

MONTE DEL ORO (Aug. 18).—Fortnightly report.—Taylor's engine shaft: The lode in the 316-ft. level north of this shaft is about 18 ins. wide, and composed principally of hard slate, from which two samples have been obtained, assaying respectively traces and 15 grs. of gold per ton. During the past fortnight 20 $\frac{1}{2}$ ft. were driven, making the total length of the level 74 $\frac{1}{2}$ ft. In the 316-ft. level south of the shaft a sample obtained from a branch of quartz 1 ft. wide yielded no gold, and another taken from 6 ins. or 8 ins. of flookan and soft slate assayed a trace. This level is 67 $\frac{1}{2}$ ft. long, showing an advance of 19 $\frac{1}{2}$ ft. in the two weeks. Capital speed is made in sinking winze No. 12 below the 244-ft. level north of this shaft, as its total depth is now 31 ft., of which 24 ft. have been sunk in the fortnight; the lode is all the width of the winze, $2\frac{1}{2}$ ft. being quartz and the remainder slate and flookan. Two samples were taken, the first giving a result of 1 dwt. 7 grs., and the second 15 grs. of gold per ton. Shaft No. 6: The length of the 244-ft. level north of the shaft is 570 $\frac{1}{2}$ ft., it being extended 5 $\frac{1}{2}$ ft. since the last report. The ventilation in this end is so defective that only very slight progress can be made in driving. At present the lode, composed of quartz and slate, is about a foot wide, and the sample from it assayed 16 grs. of gold per ton. Although, on account of bad air, very little work can be done, an attempt is being made to communicate with winze No. 11 from the rise in the back of the 244-ft. level. Last week, through an increasing quantity of water, the sinking of winze No. 11 below the 186-ft. level north had to be suspended. A sample taken from a lode of quartz $2\frac{1}{2}$ ft. wide in the bottom of the winze gave result of a trace of gold on assay. The total rise from the back of the 186-ft. level north is 35 ft., and at this point operations were discontinued because no more quartz had been met with. From a small flookan a sample was obtained, but it yielded no gold. Low's engine shaft: The 120-ft. level north of this shaft, corresponding with the 186-ft. level north of shaft No. 6, is 65 ft. long, and the lode in the present end is composed of a foot of soft slate and flookan, with stringers of quartz intermixed, a sample from which assayed a trace of gold.—J. ROBERTS.

MYSORE (Aug. 4).—Mining operations for the month ending July 31:—The usual satisfactory progress has been made in the different bargains throughout the mine. The 890 west of Rowse's shaft has been driven 49 ft. 4 ins.; the rock is of a disjointed character, a little easier for driving, and mixed with small veins of quartz and carbonate of lime, and looking promising for the production of gold. The 780 north of Rowse's shaft has been driven 35 ft.;

total distance, 397 ft.; this level has come in contact with the unproductive rock, and for the time has been suspended. We have put the rock-drill to sink a winze in the bottom of this level near the end in a lode 4 ft. wide, and assaying a little over 3 ozs. The 620 south of incline shaft on the west lode has been driven 48 ft.; total distance, 96 ft.; the lode is 6 ins. wide, and assaying 4 dwts. The 550 south of incline shaft on the west lode has been driven 47 ft.; total distance, 142 ft.; the lode is 2 ft. wide, and assaying 2 dwts. Glen's shaft: The 250 north of this shaft has been driven 55 ft. 6 ins.; total distance, 348 ft. 4 ins.; the lode is rather pinched up at present, but appears to be opening out a little again on the east side of the level; I think it will improve again very soon. The 250 east of this shaft has been driven 46 ft. 8 ins.; total distance, 139 ft. 6 ins. We are occasionally meeting with spots and patches of quartz, but so far nothing of value. Tennant's shaft: The 360 north of the shaft has been driven 62 ft. 6 ins.; total distance, 591 ft. 5 ins.; the lode is 9 ins. wide, and estimated to be worth 10 dwts. The 360 south of shaft has been driven 45 ft. 6 ins.; total distance, 88 ft. 6 ins.; the lode is 1 ft. wide, and assaying 4 dwts. The 290 north of shaft has been driven 39 ft. 6 ins.; total distance, 888 ft. 6 ins.; the lode is 1 ft. wide, and yielding quartz of low quality. We have also cross-cutted east of this level 22 ft. 6 ins. without discovering anything, but I still think the main part of the lode is standing a little further in that direction. The 290 south of shaft has been driven 48 ft. 6 ins.; total distance, 515 ft.; the lode is 9 ins. wide, showing traces of gold, but rather disordered by runners of trap-rock. The lode in this end has been very changeable of late, but I have no doubt it will improve again when it gets into a more settled channel of ground. The 235 north of winze north of shaft has been driven 11 ft.; the lode is 2 ft. wide, and estimated to be worth 10 dwts. This level will soon be under the extensive old workings recently discovered in the 180 north of shaft. Schaw's shaft: The quartz in the 450 driving east of shaft is 3 ft. wide, and assaying 5 dwts. 5 grs.; this level has been driven 27 ft. 6 ins. in an easterly direction, but in the last few days the quartz appears to be turning around more to the north. The 450 north of Schaw's has been driven 26 ft.; total distance, 469 ft.; the lode is small and unproductive. The 450 south of shaft has been driven 10 ft. 6 ins.; total distance, 107 ft. 6 ins.; the lode is 1 ft. wide, and assaying 3 dwts. 6 grs. The 320 north of shaft has been driven 8 ft. 9 ins.; total distance, 182 ft. 6 ins.; the lode is small and yielding occasional stones of quartz, but not sufficient to value. The 320 south of shaft has been driven 12 ft.; total distance, 241 ft. 6 ins.; the lode is 9 ins. wide, and assaying 15 grs. Stopes: The lode in stope in back of the 780 north of Rowse's shaft is 4 ft. wide, and estimated to be worth 4 ozs. The lode in stope in back of the 700 north of Rowse's shaft is 2 ft. wide, and assaying 15 dwts. The lode in No. 2 stope in back of this level is 3 ft. wide, and assaying 4 ozs. 16 dwts. The lode in stope in back of the 700 south of Rowse's shaft is 2 ft. wide, and assaying 4 dwts. The lode in No. 2 stope in back of this level south of incline shaft is 2 ft. 6 ins. wide, and assaying 1 oz. 1 dwt. 13 grs. The lode in stope in bottom of this level is 3 ft. wide, and estimated to be worth 1 oz. The lode in stope in back of the 620 north of Rowse's shaft is 1 ft. 6 ins. wide, and estimated to be worth 1 oz. 10 dwts. The lode in No. 2 stope in back of this level is 1 ft. 6 ins. wide, and assaying 3 ozs. 5 dwts. 8 grs. The lode in stope in bottom of the 620 south of shaft is 2 ft. wide, and estimated to be worth 15 dwts. The lode in stope in back of the 550 south of incline shaft on the west lode is 1 ft. 6 ins. wide, and assaying 8 dwts. The lode in stope in bottom of the 550 south of Rowse's shaft is 4 ft. wide, and estimated to be worth 1 oz. The lode in stope in bottom of the 466 north of Taylor's shaft is 3 ft. wide, and assaying 9 dwts. 10 grs. The lode in stope in back of the 400 north of Rowse's is 3 ft. wide, and assaying 1 oz. 11 dwts. 8 grs. The lode in stope in back of the 400 south of Taylor's is 2 ft. wide, and assaying 4 dwts. 7 grs. The lode in stope in bottom of the 400 south of Taylor's is 1 ft. 6 ins. wide, and assaying 3 dwts. 16 grs. The lode in stope in back of the 400 south of Plummer's is 3 ft. wide, and estimated to be worth 5 dwts. The lode in stope in back of the 360 south of Plummer's is 3 ft. wide, and assaying 3 dwts. 6 grs. The lode in stope in back of the 360 south of Taylor's is 2 ft. wide, and assaying 4 dwts. The lode in stope in back of the 296 north of Rowse's is 5 ft. wide, and assaying 7 dwts. 6 grs. The lode in stope in back of the 296 south of Rowse's is 1 ft. 6 ins. wide, and assaying 6 dwts. The lode in stope in back of the 296 north of Plummer's is 2 ft. wide, and assaying 15 dwts. 2 grs. The lode in stope in back of the 296 north of Rowse's is 1 ft. 6 ins. wide, and assaying 7 dwts. 6 grs. The lode in stope in back of the 236 north of Rowse's is 3 ft. wide, assaying 3 dwts. 6 grs. The lode in No. 2 stope in back of this level is 2 ft. wide, and assaying 6 dwts. 15 grs. The lode in stope in back of the 290 north of Tennant's shaft is 3 ft. wide, and assaying 1 oz. 5 dwts. 11 grs. The lode in No. 2 stope in back of this level is 3½ ft. wide, and assaying 2 ozs. 11 dwts. The lode in stope in back of the 180 north of Tennant's shaft is 4 ft. wide, and assaying 1 oz. 0 dwts. 21 grs. The lode in No. 2 stope in back of this level is 3 ft. wide, and assaying 3 ozs. 5 dwts. 8 grs. Sinking: We are making the necessary preparation for the sinking of Rowse's shaft below the 890 level, and hope to start in the course of a few days. The winze in the bottom of the 780 has been sunk 19 ft., in a lode 4 ft. wide, assaying 3 ozs. 0 dwts. 18 grs. The winze in the bottom of the 180 north of Tennant's shaft has been sunk 25 ft.; total distance, 45 ft. We have commenced to drive north from the bottom of the winze towards the old workings in the level above, and as the end advances the lode is improving in size and value. Gilbert's shaft has been sunk 24 ft.; total distance from surface 151 ft. In about another month or so this shaft will be communicated to the 180 level, which will ventilate and greatly facilitate the working of this part of the mine. I regret to say our tailings machinery has been idle a part of the month through scarcity of water for dressing purposes. With a good shower of rain, which we are expecting, these works would go on full time again at once. The milling and all the other operations on the mine have been going on in their usual satisfactory manner. The mill samples: New mill quartz, 2 ozs. 3 dwts.; old mill quartz, 1 oz. 17 dwts. 5 grs.—J. GILBERT.

MYSORE-WYNAAD CONSOLIDATED AND MYSORE WEST.—The mining manager reports by mail for fortnight ending July 28: North shaft: This shaft has been sunk 5 ft. 3 ins., making a total depth of 183 ft. 6 ins. from surface; there is no change in the rock, which is very hard and tough. Very little work has been done in the 173-ft. level. I had to stop these drives temporarily to put in some timber and complete the plat, which is now nearly completed. The cross-cut east has been advanced 4 ft., making a total distance from

shaft of 47 ft. 6 ins., and is now suspended. Drives north and south of the cross-cut on the lode have been commenced, and 5 ft. have been driven north and 7 ft. south. We are on the top of the lode in the hard rock in this level, so that I have not been able to see much of it; it looks very promising in the bottom of the level, and many of the stones broken carry visible gold. Having proved that the lode is there, and going down strong, I shall continue the sinking as quickly as possible to another level, when I hope to find the lode of a payable character. I shall, therefore, for the present continue these drives by hand labour so as not to hinder the sinking, and as soon as the north drive is far enough from the cross-cut I propose to sink a few feet to prove the lode going down. South shaft: This shaft has been sunk 4 ft. 9 ins., making a total depth of 116 ft. from surface, and the bottom is now in very hard rock. Sinking here will have to be suspended in a few days for putting in timber; the shaft will then be safe, and is not likely to require much timbering below. All surface work is going on satisfactorily.

NEW DEVALA-MOYAR.—Mine manager's report for the week ending Aug. 30:—Drive west in the 186-ft. level: 5 ft. driven; total, 30 ft.; lode matter no change. The 186-ft. level east: Hand labour, 3 ft.; total, 5 ft.; lode making, and showing dark-grained pyrites. No. 4 winze: Sunk 3 ft.; total, 13 ft. Mill cleaned-up. Saturday's results, 68½ ozs. bar gold. Re-start this morning.

NEW EBERHARDT.—The mine manager reports under date Aug. 9, as follows:—Eberhardt: I now beg to hand you the number of feet made at the different points of work at Eberhardt for the week ending Aug. 8. Drift south from upraise 2 advanced for the week 4 ft.; total length, 36 ft.; face of drift remains unchanged. We are still in a heavy body of spar and low-grade quartz. Drift north from top of number 2 upraise advanced for the week 4 ft.; total length, 19 ft. This drift as well as the south is in very strong spar carrying bunches of low-grade quartz. Cross-cut east from north drift No. 3 upraise advanced for the week 6 ft.; total length, 25 ft. The face of this drift still continues in very favourable ground; the whole bottom of the drift is still in quartz, and with some few stains in the rock, but as yet of no material value. During the week in this drift we have come upon a brake or open seam, from which comes a very strong current of air. What this seam will lead us to is quite impossible to determine, but I am hoping for the best. Cross-cut west on tunnel advanced for the week 10 ft.; total length, 40 ft. The ground in this drift is becoming more broken and more favourable for ore, but as yet nothing worthy of mention has been met with. Cross-cut west advanced for the week 4 ft.; total length, 23 ft. No change in this driving worthy of mention. Face of drift in hard gray lime, carrying some seams of quartz. Monitor: Total weight of ore extracted and assorted for the two weeks 22 tons; assay value of the same as per mine samples, \$31 per ton. There is no change in the mine worthy of note.

NEW GOLD HILL (Aug. 15).—Ore report: Ore in stock, Aug. 8, 214 tons; ore mined from winze, Aug. 15, 10 tons; ore in stock Aug. 15, 224 tons.—R. EAMES, jun.

NEW HOOVER HILL.—Report to Aug. 11:—Briol's shaft: Driving south at the 130 we are cutting into some quartz, but it is poor. Sinking below the 50-ft. level south of Provost shaft: The small vein of quartz continues about the same as when last reported.

NEW RUSSELL.—Telegram from Mr. Bailey, one of the directors:—"Mill running; 40 stamps quarrying. Big cut: Although the ore is low-grade the mine can be worked to a good profit on account of the abundance of ore and capabilities for cheap working. Have no doubt a great success in a month from this date."

NUNDYDROOG (Aug. 4).—Report of work done for the month of July:—The 520 north: Distance driven 50 ft., by two Italians, with a rock-drill; present length of level, 206 ft.; the lode still maintains its width of 2 ft., and the assay value is 1 oz. 7 dwts. 6 grs. per ton. The 520 south, No. 1 winze: Distance sunk, 40 ft.; total depth, 66 ft.; and 520 south, No. 2 winze: Distance sunk, 41 ft., by one Englishman with two rock-drills; the lode is a very fine one in each of these winzes, being 7 ft. and 5 ft. wide respectively; the value of the quartz by assay is 3 ozs. in the one and 2½ ozs. in the other. The 450 south, stope in bottom: Ground stoped 13 fms.; and 480 south: Distance driven 13 ft., by one Englishman with a rock-drill. The 480 south was suspended after holing to the 480 north; we are now stoping in the back here, the lode being 3 ft. wide, and assaying 2 ozs. 5 dwts. 12 grs. per ton. The 450 north, No. 1 stope south: Ground stoped 15 fms.; and 520 north, stope in back, 2 fms., by one Englishman with a rock-drill. The former stope has been carried right back to the cross-course, and is, therefore, suspended: the lode in the latter is 3 ft. wide, and worth 2 ozs. per ton. The 480 north: Distance driven 10 ft.; and 300 north cross-cut: Driven 31 ft., by two Italians with a rock-drill; they also cut 2 fms. of ground at the same level. We have done this work so as to fix a balance-bob here; the pump rods are now getting very heavy, and another balance-bob is necessary; we hope to have it fixed this week. The work done by the hand labour contractors is as follows:—The 450 north, No. 1 stope north: 33 ft.; lode, 2 ft. 6 ins.; assay, 16 dwts. 6 grs. per ton. The 450 north, intermediate drive: 7 ft.; lode, 1 ft.; assay, 15 dwts. The 450 north, No. 2 stope north: 19 ft.; lode, 2 ft.; assay, 1 oz. 11 dwts. 12 grs. The 450 north, No. 2 stope south: 29 ft.; lode, 3 ft. 6 ins.; assay, 3 ozs. 7 dwts. 12 grs. The 370 north, stope in bottom: 14 ft. 3 ins.; lode, 2 ft.; assay, 1 oz. 15 dwts. 18 grs. The 370 north, stope in back: 16 ft.; lode, 2 ft.; assay, 2 ozs. 3 dwts. 12 grs. The 370 south, stope in back: 30 ft.; lode, 3 ft. wide; assay, 1 oz. 12 dwts. 6 grs. The 300 north, stope in back: 21 ft. 3 ins.; lode, 1 ft. 6 ins.; assay, 1 oz. 19 dwts. Taylor's shaft: Distance sunk, 10 ft. The 600 north driven 13 ft. 6 ins. The 600 north cross-cut east driven 18 ft., by three Italians with a rock-drill; we expect to cut the lode this month. Kennedy's shaft: Sunk 10 ft. 3 ins., making a total depth of 155 ft. 3 ins., by three Italians with a rock-drill; the water here is still very quick, and our progress, in consequence, much retarded. Mill samples: Rough quartz through stonebreaker, 3 ozs. 12 dwts. 18 grs.; smalls, 2 ozs. 15 dwts. 12 grs.—F. W. GREY.

OOREGUM.—Mine report for fortnight ending Aug. 3.—Wallroth's shaft has been sunk 11 ft. 6 ins.; total, 408 ft. from surface; lode, 3 ft. 6 ins. wide; assay value, 5 ozs. 6 dwts. per ton. The 360-ft. level north has been driven 2 ft.; total, 33 ft. 9 ins.; lode, 2 ft. wide; value, 1 oz. 1 dwt. 19 grs. per ton. The 360-ft. level south has been driven 5 ft.; total, 82 ft. 6 ins.; lode, 3 ft. wide; worth 3 ozs. 16 dwts. 5 grs. per ton. The 280-ft. level south has been driven 19 ft. 4 ins.; total, 724 ft. 9 ins.; lode, 4 ft. 9 ins. wide; assaying 4 ozs. 1 dwt.

15 grs. per ton. Last week we encountered a wall of intrusive rock, 18 ins. wide, running across the lode. This has not in any deleterious way affected the lode, which was yesterday 6 ft. 6 ins. wide. No. 1 winze: The 280-ft. level south has been sunk 1 ft. 2 ins.; total depth, 57 ft. 5 ins.; width of lode, 2 ft.; assay value, 4 ozs. 18 dwts. per ton. No. 2 winze: The 280-ft. level south has been sunk 5 ft. 6 ins.; total, 56 ft.; lode, 9 ins. wide; worth 1 oz. 12 dwts. 16 grs. per ton; there is a little improvement here. No. 3 winze: The 280-ft. level south has been sunk 2 ft. 10 ins.; total, 65 ft. 6 ins.; lode, 6 ins. wide; no sample taken. The 215 level north advanced 3 ft. 2 ins.; total, 85 ft. 11 ins.; lode, 1 ft. 6 ins. wide; assaying 2 ozs. 3 dwts. 13 grs. per ton. Low's shaft has been sunk 2 ft.; total depth from surface, 371 ft. 4 ins. The shaftmen have been engaged in cutting cistern plat. Work has been retarded here through men being in hospital. The 350-ft. level south advanced 4 ft. 4 ins.; total, 190 ft.; lode, 6 ins. wide; worth, by assay, 4 dwts. 8 grs. per ton. This is one of the points where we have been trying Bengal labour with machines. Winze: The 350-ft. level south has been sunk 3 ft. 4 ins.; total, 13 ft. 10 ins.; lode, 2 ft. wide; assaying 1 oz. 6 dwts. 2 grs. per ton. The 350-ft. level north advanced 4 ft. 1 in.; total, 86 ft. 7 ins. We intersected the cross-course here, and are driving eastward on the north side of cross-course to intersect lode. Winze 350-ft. level north sunk 5 ft. 2 ins.; total, 19 ft. 8 ins.; lode, 3 ft. wide, assaying 2 ozs. 8 grs. per ton. Winze 270-ft. level north sunk 4 ft. 7 ins.; total, 50 ft. 2 ins.; lode, 1 ft. wide; value, 1 oz. 1 dwt. 19 grs. per ton. Winze 270-ft. level south sunk 5 ft. 8 ins.; total, 56 ft.; lode, 1 ft. 6 ins. wide; assay value, 1 oz. 13 dwts. 18 grs. per ton. The 200-ft. level south from cross-cut east advanced 4 ft. 10 ins.; total, 36 ft.; lode, 6 ins. wide; value, 5 dwts. 10 grs. per ton. Probyn's shaft: 550-ft. level south advanced 18 ft.; total, 40 ft.; lode, 5 ft. wide, assaying 1 oz. 12 dwts. 16 grs. per ton. The 550-ft. level north advanced 15 ft. 6 ins.; total, 29 ft. 6 ins.; lode, 5 ft., assaying 1 oz. 10 dwts. 21 grs. per ton. The men engaged driving these levels during the past month are now cutting tip-plat and cutting down footwall of shaft. On completion thereof the sinking of the shaft will be resumed. No. 1 winze: 450-ft. level south sunk 14 ft. 4 ins.; total depth, 53 ft. 10 ins.; lode, 6 ft. wide; worth 1 oz. 1 dwt. 19 grs. per ton. No. 2 winze: 450-ft. level south sunk 3 ft. 5 ins.; total, 18 ft. 5 ins.; lode, 3 ft. 6 ins. wide, assaying 3 ozs. 3 dwts. 3 grs. per ton. The 450-ft. level south advanced 26 ft. 7 ins.; total, 327 ft. 11 ins.; lode, 1 ft. wide; value, 1 oz. 3 dwts. 22 grs. per ton. We passed through a dyke here about 3 ft. thick. The lode is also narrowing as it approaches the big dyke met with in the levels above. The men who have been driving here are now rising to meet No. 2 winze coming down from 366-ft. level south to open up ventilation. No. 2 winze: 366-ft. level south, sunk 9 ft. 3 ins.; total depth, 50 ft.; lode, 2 ft. 6 ins., assaying 1 oz. 15 dwts. 22 grs. per ton. No. 3 winze: 366 level south sunk 5 ft. 1 in.; total, 10 ft. 7 ins.; lode, 3 ft. 6 ins., worth by assay 2 ozs. 14 dwts. 10 grs. per ton. The 300-ft. level south advanced 2 ft. 11 ins.; total, 299 ft. 3 ins.; lode, 1 ft.; worth 2 ozs. 14 dwts. 10 grs. per ton. This end has been driven by Bengal coolies with machine. No. 2 winze: Bottom 300-ft. level south sunk 4 ft. 10 ins.; total depth, 6 ft. 10 ins.; lode, 1 ft. 6 ins. wide; value, 1 oz. 12 dwts. 16 grs. per ton. Stopes back 280-ft. level, south Wallroth's shaft, 10 fms. of ground have been stoped; average width of lode, 3 ft.; average value, 1 oz. 17 grs. per ton. Stope bottom 215-ft. level south, 4½ fms. cut; lode, 2 ft. wide; assay value, 2 ozs. 8 grs. per ton. Stopes back 215-ft. level south, 2¼ fms. cut; lode, 2 ft. 6 ins. wide, assaying 14 dwts. 3 grs. per ton. Bottom of 215-ft. level south, 7 fms. have been stoped; the lode is 1 ft. 6 ins. wide, and worth by assay 2 ozs. 11 dwts. 3 grs. per ton. Stopes back 215-ft. level north, 4 fms. cut; width of lode, 2 ft.; value, 1 oz. 13 dwts. 4 grs. per ton. Low's shaft: Stopes back 350-ft. level north, 6½ fms. have been cut; lode averaging 1 ft. 6 ins. wide; average value, 1 oz. 18 dwts. 2 grs. per ton. Stope back 270-ft. level south, 1 fm. done; lode, 1 ft. 6 ins. wide; no sample taken. Bottom 200-ft. level south, 9¼ fms. have been stoped; lode, 3 ft. wide, assaying 5 ozs. 8 dwts. 21 grs. per ton. Probyn's shaft: Stope back 450-ft. level north, 5¼ fms. stoped; lode 3 ft. wide, worth 4 ozs. 13 dwts. per ton. Stopes back 450-ft. level south, 6 fms. cut; average width of lode, 2 ft.; worth 1 oz. 8 dwts. 7 grs. per ton. Stopes bottom 300-ft. level south, 13¼ fms. stoped; lode, 3 ft. 6 ins. wide, assaying 2 ozs. 8 dwts. 23 grs. per ton. Stope back 300-ft. level south, 1 fm. cut; lode, 6 ft. wide, value 3 ozs. 15 dwts. 5 grs. per ton. Stopes back 300 north, 4¼ fms.: lode, 7 ft. wide, worth 1 oz. 3 dwts. 28 grs. per ton. Stopes bottom 230 ft. south, 7¼ fms. have been stoped; lode, 2 ft. 6 ins. wide, assaying 3 ozs. 23 grs. per ton. Stope back 230 ft. south, 4½ fms. stoped; lode, 3 ft. wide, assaying 1 oz. 1 dwt. 19 grs. per ton. Stope bottom 166 ft. south, 10¼ fms. cut; lode, 4 ft. wide, worth 1 oz. 17 grs. per ton. It will be seen by the foregoing report that the various points in the mine are on the whole satisfactory. Health: All the Europeans are at work, but we are sorry to say cholera has broken out, and it is of a virulent type. There is a famine throughout a considerable portion of Southern India, induced by the drought. We are anxiously looking for rain, with the hope that it may stay the cholera, which seems just now to permeate the country.

OSCAR (Aug. 21).—Hodgkinson's shaft: We resumed sinking on Monday. The few shots fired show no alteration either in width or value of the lode. In the 300 level north we find some quartz similar to that broken at surface in 1889, and as this quartz appears to be replacing the greenstone, we think we may look forward to an early improvement. In the winze sinking in the 200 north we have about 18 ins. of blue quartz, assaying 4½ dwts. The 200 level north: The men have cross-cutted east about 5 ft., and have struck what appears to be the footwall of the lode. This shows a slight depression has taken place. The cross-cut towards Bluett's lode is in 31 ft. We hope to cut the lode about the end of Sept. Williams' lode: The winze is down 26 ft. The new vein or run of quartz shows a little mineral, and assays 3 dwts. gold to the ton. All the other points remain unaltered.—J. DAW, junr.

PACHUCA (Aug. 1).—In sending my pay-sheet for this week I have little new to report, except that the eastern drift is looking a little more promising, inasmuch the vein contains more quartz and pyrites, and is better formed, with spots of black sulphurets of silver.—F. W. BAWDEN.

PACHUCA (Aug. 8).—I have this week fixed an air machine, a Root's ventilator, and iron pipes from the shaft to the western drift, and shall now be able to drive faster than heretofore. I regret to say the western drift has fallen off in value, and during this week we have had no ore in it. The branch still holds, but it contains no ore. I am, however, of opinion it is merely a temporary change, and will

make ore further on again. It is liable to change at any time. One great thing is the ore branch still holds, although now unproductive. The eastern drift is without change since my last. It has a very promising appearance, but no ore to value. I have crushed 1,800 lbs. of picked ore and have arranged with ore buyers to sample on Monday next. As soon as I do this shall cable you result.—F. W. BAWDEN.

PITTSBURGH CONSOLIDATED (Aug. 9).—Report from the superintendent:—Four mills have been going full time the past week—at least, not quite full time. We have to hang up one for an hour or two to allow the water to pick up during the hottest part of the day.

PORT PHILLIP.—The following advices have been received, dated July 20:—North shaft has reached a depth of 110 ft. below the No. 17 level, and opening timbers put in for No. 18. The well is now being sunk, and will be continued a further depth of 15 ft., which is necessary to hold the coming water from bottom levels. The country has been favourable, and occasionally mixed with quartz veins. No. 17 level: Extended west cross-cut, altogether 342 ft. from shaft, the last 3 fms. through a channel of slate country, more or less intermixed with quartz, one vein 18 ins. thick, both country rock and quartz mineralised, being the first we have seen at this depth. Tributaries are breaking stone of a payable quality. Total for seven weeks, 191 tons 67 ozs. 8 dwts.

RUBY.—Report upon the mines for week ending Aug. 8:—Dunderberg Mine: We have six tributaries at work here. Have discontinued work on the 500 cross-cut for the present. On the 800 upraise we have about 10 ins. of iron and some fair-looking ore through it, and will follow this to see if it does not lead to something better. Lord Byron Mine: We have seven tributaries at work here. The ore in this mine shows a gradual improvement both in size and quality, and the hanging-wall is getting firmer at one side. Bullwhacker: We have four men at work. Am pleased to state that at the present time the ore is of higher grade, and the prospects favourable.

—Telegram received Aug. 25 from Eureka:—"No tribute ore either shipped or smelted; 21 tons ore on company's account shipped and smelted, realising \$990."

SILVER MINES OF LA LUZ.—The directors have pleasure in forwarding the following extracts from Mr. Hilton, the company's manager at the mines, dated La Yesca, July 15:—I enclose herewith blue print of progress profile San Miguel tunnel and plan of old workings, also progress profile San Miguel, to which has been added work from the time I took charge up to July 1. I am taking out ore steadily, and have begun grinding the same at the Hacienda, preparatory to extracting the silver. At the San Miguel work is progressing satisfactorily. Ventilation is far from good, but I expect soon to receive the blower ordered from the States, which will help matters. There is no change to report as to the country rock in the tunnel; we have indications of vein matter every week, and good encouragement of the proximity of the ledge. I am still improving the Hacienda. Yesterday I made a few assays of ore, results of which I enclose herewith. It is my intention to take further samples, giving width of ore bodies, average of same and values, metal streaks, assorted and unassorted ores, and to thoroughly post myself and the company as to what there is in sight. Also I will take large samples from old dumps of San Miguel, have them ground, and try and estimate value of waste ore already extracted.—(Signed) H. A. HILTON. The assays referred to run from 16 ozs. to 161 ozs. of silver to the ton of 2,000 lbs., and Mr. Hilton states that some of them were made from the poorest ore in the mine. Since the receipt of the above letter a cablegram has been received from Mr. Hilton, in which he says:—"I consider the mines very valuable."—S. BANNING, Secretary.

SOUTH-EAST MYSORE (Aug. 4).—I think the lode in the winze is looking a little better, in fact the assays and washings are the best I have seen. I tried a sample yesterday which gave 16 dwts. of gold to the ton. I have just received a note from Mr. Morton saying a sample of the quartz he took from the winze on Saturday last, by his assay, gave 13 dwts. 3 grs. of gold to the ton. This is certainly encouraging.—Capt. SCANTLEBURY.

TASMANIAN SILVER.—Report for week ending July 4: The main shaft has been sunk 4 ft., and timbered. The bottom of the shaft is now 101 ft. below surface, and 36 ft. below the tunnel level. The influx of water in the shaft is gradually increasing, but the pumping engine drains it easily, and is capable of keeping down a much larger quantity of water than I have to deal with at present. The engine-house is in course of construction, and will be completed during the coming week. The junction of the tramway with the Government road at Comstock is effected, and there is now a little plate laying and ballasting to do, and the latter to be taken down from two cuttings to quite finish this work.

WENTWORTH GOLDFIELDS PROPRIETARY (July 19).—The north-west drive, Phoenix Mine, 200-ft. level, was driven 19 ft. on the contact with a small well defined vein of calcite and quartz (Happy-Go-Lucky), showing mineral, assaying from 10 to 15 dwts. per ton of gold. The rise in the Phoenix vein was extended 7½ ft. This vein shows a decided improvement, assays running from 17 to 28 ozs. of gold per ton. The south-east drive, 150-ft. level, also has improved during the week; the vein matter is about 15 ins., with a small stringer of brown ore exceedingly rich in free gold. The shaft in the Big Quartz vein was sunk 8 ft. in the hanging-wall. We are occasionally breaking into the vein (quartz). It shows a heavy percentage of sulphurets, of which I made a concentration test, and got a return of 10 ozs. gold to 1 ton concentrates, and estimated the quartz to contain 5 per cent. sulphurets. From the boldness of the outcrop this vein must furnish a large tonnage, and finding payable concentrating ore in it I consider very important. I am pushing the shaft, and will cross-cut at the depth of 50 ft.—W. H. IRWIN.

HOLLOWAY'S PILLS AND OINTMENT.—Whilst the inhabitants of our great cities suffer from the effects of overcrowding and all its attendant evils, both physical and moral, the more robust and energetic emigrant will in his turn be liable to suffer in his new home from the want of ready skill and the great medical resources of his native land always at command. The best advice a friend can give is for him to take a supply of these well-known remedies as part of his outfit, for by attention to the easily understood and yet ample directions which accompany each box and pot, he will never be at fault when taken ill or under any adverse sanitary conditions of life.

REPORTS OF MEETINGS.

THE ORIENTAL AND SHEBA VALLEY UNITED
GOLD MINING CO., LIMITED.

DIRECTORS, MISLED BY REPORTS, REVEAL AN UNFORTUNATE
STATE OF AFFAIRS, AND ARE SUBJECT TO SHARP CRITICISM.

THE third ordinary general meeting was held at the Cannon Street Hotel yesterday, to receive the report of the directors, and the annual statement of accounts, and to consider, and if thought fit, to pass the subjoined resolutions, and for other business. Should the said resolutions be passed by the required majority they will be submitted for confirmation as special resolutions to an extraordinary general meeting which will be subsequently convened.

RESOLUTIONS.

"1. That the capital of the company be increased to 500,000L. by the creation of 100,000 new shares of 1L. each, to be called preference shares, the holders thereof to have the right to a fixed cumulative preferential dividend at the rate of 20L. per cent. per annum on the amount for the time being paid up thereon, and that such preference shares rank both as regards capital and dividend in priority to the other shares of the company." "2. That the following words be added to article 100 of the articles of association of the company, namely:—'A copy of such balance-sheet and report shall be sent to each shareholder seven days previous to the day appointed for the ordinary general meeting.'" "3. That the following words be struck out of article 116 of the articles of association of the company, namely:—'All dividends unclaimed for three years may be forfeited by the board for the benefit of the company.'"

Mr. H. J. Layton, J.P.,

presided.

Mr. E. PHILLIPS (secretary) read the notice.

ABSENT DIRECTORS.

The CHAIRMAN: In submitting the report and accounts, I have to regret the absence of Alderman Newton, who would have presided had he not been obliged to go to Carlsbad. I have been asked to take his place, and it would have been a much easier task to do so if I had had a dividend to announce, instead of to ask you for an increase of capital. The report explains the necessity for further capital in its second paragraph, and there is nothing in the other clauses which require comment except the last one, where we mention that there are two resolutions which we shall have to propose at the end of the meeting for the purpose of complying with requisitions of the Stock Exchange in order to get a quotation. In the last clause we regret that Mr. Harvey has been obliged to leave us on account of other engagements. (Laughter.) I should like now to explain the position and policy of the board. When we first took his business over we adopted the plan decided on by Kreil's Co., to continue the engagement of Capt. Rowe. He was a mining engineer, stated to be of "some considerable experience." He was strongly recommended by the Ballarat School of Mines, and he had an excellent reputation as a mining engineer. Our experience of Capt. Rowe has not quite tallied with the report we had of him. We then appointed a Mr. Milligan to be the manager, and through representations from him and from others that we should have a large quantity of stuff to crush,

IT WAS DETERMINED TO ERECT BIG BATTERIES,

so as to conduct an extensive business. 50 stamps were erected by Robey and Co., and we ordered another battery of 60 stamps from Fraser and Chalmers. You are also aware we erected a steam tramway to save expenses in carriage, and also a water-race to drive machinery in order to save expense in that direction. All this took a longer time than we anticipated. In connection with the 60-stamp mill it was necessary to build a retaining wall of considerable dimensions, and this work we entrusted to Chester and Gibbs, who sent a man out especially for the erection of the mill and this wall. We were very much disappointed at its collapse, as announced in the telegram we published at the time.

A DISASTER.

We received a cablegram, much to our disappointment, when we were anticipating that everything was going on flourishingly: "New mill has collapsed; retaining wall has fallen; damage roughly estimated at 2,000L., which will cause a delay of a month." This telegram came in Jan., 1891, and the delay was considerably greater. The principle of development we followed was based, like that of ordering the big batteries, on advice we had from many experts who had been on the spot. At a meeting of the Sheba Reef Syndicate, Mr. Bell Davies, a gentleman of the highest reputation, who reported on the property, said, with respect to the crushing they had had of 11 dwts. to the ton, "The question presenting itself is—does 11 dwts. represent the real value of the quartz in the mine, and to that I emphatically say, 'No.'" He estimated there was a large quantity of ore, and if we had sufficient milling power we could increase the crushings by nearly four times over. Following my account of our proceedings, I should say that on the death of Mr. Milligan from fever, Mr. Forbes, who knew all about the property, was appointed general manager. This took place in Apr., 1890, and he confirmed the policy that it was necessary to have increased crushing power.

BOARD LED ON BY GOOD REPORTS.

In the meantime we were constantly receiving good reports. For example, in June, 1890, the manager estimated that with the 50 stamps then running we could crush 100 tons a day, and realise 100 ozs. of free gold. At the first crushing on July, 1890, the mill manager reported: "I anticipate showing a far better result, and do not consider this a fair test. The 190 tons crushed should have yielded 17½ dwts. of free gold." The manager further said: "The return we have had is not satisfactory, and is not a fair representation of what we shall be able to do in the future." In Aug. he reported as to the second crushing: "The result is not good, but I still think we shall do much better in the future." I have other extracts here with

which I will not weary you, but the whole result was that the mine manager and general manager expressed their strong impression that the result of the developments were very encouraging, and "we are certain to have good gold in the future." In spite of all these reports

THE DIRECTORS WERE DISSATISFIED.

The result of the crushing in July, 1890, gave 4 dwts. 14 grs.; Aug., 10; Sept., 5; Oct., 8; Nov., 8½; and Dec., 5½ dwts. In Jan. of this year it was 7 dwts.; Feb., 7; Mar., 7½; Apr., 5½; May, 3½; June, 4½; and July, 3 dwts. I have troubled you with these figures to show you how gradually "the thing" seems to have gone down, and how natural it was we should feel dissatisfied. The total average yield has been 5½ dwts. all the way through.

TOTALS.

We crushed 22,719 tons; realised 6,393 ozs.; total value, 23,000L. The value of the gold has paid the wages in getting it, but left no profit, though, if we had gone on as we did in July and Aug. of last year, we should have done well.

MINE INSPECTED.

One of our directors went out at his own expense to the mine to investigate, taking with him an experienced engineer (Mr. Chalmers), who went carefully through the mine, and concludes his report thus:—"Even if it were necessary to shut down the old mill for want of sufficient payable ore, and it is not, it would be still most unwise to give up a property which has certainly great possibilities. There is no apparent reason why Sheba should be good and this property bad. The difference so far is principally this, that the one had been proved by extensive developments, whilst the other has been hardly proved at all." This has led us to conclude that Capt. Rowe was in error in his development plan, and we confirmed Mr. Lewis in regard to shutting down the mill with a view to further development before crushing again. Mr. Forbes was offered a salary of 1,500L. a year, but wished to take a smaller one, and have a percentage of the profits—which looked like confidence on his part. He has never had any commission as we have not earned any profits. Development works will take four or five months, and we must provide the money.

LOANS OF 40,000L.

As to finances our indebtedness has crept on gradually, and finding our capital was becoming exhausted we arranged for a loan of 15,000L., and then for a further loan of 15,000L. which was extended to 40,000L. We borrowed this money from two of our directors on easy terms, and at a time when it was impossible to raise the amount elsewhere upon anything like them. In Oct. we made an issue of 60,000L. debentures, and gave two of the creditors 50,000L. of them as security for the 40,000L. which they now hold. At the present time

WE OWE 55,000L.,

and have arrived at the time when our creditors will go no further, and when we are obliged to appeal to the shareholders for further capital. Our creditors are not rapacious, but offer if this money be subscribed to give up the debentures and to take about 40,000L. of preference stock, presuming it is necessary, and there are insufficient applications, and that it is generally agreed to by the other shareholders. We offer rather a large rate of interest, and the circumstances demand temptation in this respect. The board, however, propose to allot the new capital to the shareholders, and to guarantee them a *pro rata* proportion if they make application, so that no injustice will be done when all are on an equal footing. The applications will be dealt with *pro rata* on the holdings, and the allotment will not be as in the case of the capital originally subscribed. The directors still have confidence in the mine and its ultimate results, and have kept all their shares. They simply suggest to you what they are prepared to do themselves, that is, to take their *pro rata* shares of the new capital, and only trust they will have your support. It must not be forgotten that the part of the mine now opened is only a small portion of the whole property. The Golden Quarry deep level has not been yet touched or opened. I move the adoption of the report and accounts.

Mr. EDWARD S. MARCUS (director) seconded the motion.

A SHAREHOLDER: Who made the loans to the company?

The CHAIRMAN: Mr. Paddon and Mr. Lewis.

Mr. ATKINSON: Have you expectations of better returns?

Mr. COX: Have you perfect confidence in the present manager?

The CHAIRMAN: We are very dissatisfied with what has been going on at the mine. The present manager is Mr. Bunkell, who has only been appointed this year, and we believe he is a good man. We have lost confidence in Mr. Forbes, who is under notice to leave. The report of Mr. Chalmers leads us to expect better results.

DWTS. & OZS.

Mr. BEYFUS: Originally it was not a matter of dwts. but of ozs. We have come down to dwts. since. It was 10, 15, or 20 ozs.

Mr. GEORGE DIBLEY: I can fully confirm that.

Mr. MARCUS (director): You are confusing assays with returns from the mill.

Mr. BEYFUS: I am doing nothing of the sort, and we have had no explanation of how the ozs. have come down to dwts.

The CHAIRMAN: I am unable to tell you more than I have done.

Mr. BEYFUS: We have actually spent 186,000L. on machinery, and how are we to turn that to account?

The CHAIRMAN: By further developments showing better quartz.

Mr. TALLERMAN: What is the date of Mr. Chalmers' report, and has he expressed any opinion as to the way in which the mine has been opened up?

The CHAIRMAN: The report has been received within two months, and he says the mine has been badly opened up.

WHAT WAS SAID IN JULY, 1890.

Mr. TALLERMAN: At the meeting on July 23 Mr. T. Morgan Harvey presided. The report was issued in July, and at the meeting on July 23 Mr. Morgan Harvey said: "The mine has been thoroughly and efficiently opened up. There is an unlimited quantity of quartz in sight, and there are about 15,000 tons at the battery." He also said: "We have this not only from our own manager's statements, but from independent authorities who have visited the mine. I have

received letters from persons who have visited these properties and all agree that the mines are thoroughly and efficiently opened up.

The CHAIRMAN: I am sure Mr. Harvey would not have uttered a word he did not believe. Our manager was continually sending reports to that effect, which have not been borne out. It was in consequence of our not realising the promises held forth that Mr. Lewis went out with authority from us to get the best opinion he could on the mine. It is on the report he has obtained we recommend the raising of fresh capital and the further development of the mine.

VIEWS IN JULY, 1890, OF MR. PADDON.

Mr. TALLERMAN: The chairman went on to say: "I should like to refer to a letter from Mr. Paddon—I spent five days on the works, and quite appreciated all the difficulties." I now ask you to read what Mr. Chalmers says about the opening up of this mine.

The CHAIRMAN (reading): "As a whole the exploratory work has been very incomplete, and it is not surprising the pay rock discovered is proportionately low in amount." He concludes: "The cause of our not having had better results is want of more efficient development."

Mr. TALLERMAN: Then this is an error on the part of the late chairman to say "the mine is thoroughly and efficiently opened up?" (Cheers.)

Mr. MARCUS (shareholder): I think before raising this money we should select an efficient person to go out and report for us. I move as an amendment, "That the consideration of the resolutions before the meeting be deferred until such time as the property has been examined and reported upon by a competent expert sent out for the purpose."

Mr. SEBAG: I think the last suggestion a wise one, and was astonished not to see the names of the directors on the report. If you wish to raise this large sum we should at least state the names of those who will have the control of it, and we ought to be assured that we shall not be again deceived. The question in my mind as a business man is,

HOW HAS THE GOLD GRADUALLY DECREASED?

Have we been fairly and honestly dealt with, and is the money to be raised simply to pay off the loan, or is it to go to the development of the mine? (Cheers.) Do I understand that the people who advanced the money are willing to take shares?

The CHAIRMAN: I expect the manager has sent the quartz to the mill without selection. We have had the best men we could get to inspect the mine, and with invariably good reports. The development of which I spoke is already going on, and the creditors are willing to give up their security, in which case there will be no debentures covering the property at all. They are willing to subscribe for 40,000l. worth of shares. They will then be in the same position as every one else, and no better.

Mr. COX: How much capital will that leave us?

The CHAIRMAN: We owe 55,000l. at the present time. I had nothing to do with the old company, and having tried to explain the exact position I rely upon you for your support.

The resolution was carried unanimously.

The CHAIRMAN then proceeded to move the first of the special resolutions (as above), stating that it was intended to call up the money—2s. 6d. on application, and 2s. 6d. on allotment, with further calls only to be made at a month's notice. It would be necessary to get the assent of the shareholders in South Africa.

Mr. E. S. MARCUS (director) seconded the motion.

Mr. SEBAG on the one side pointed out the hardship it would be to original shareholders to have a 20 per cent. preference before them, and Mr. GEORGE DIBLEY on the other referred to the equally hard case it would be to those who found this money, if, after all, they should lose it entirely.

Mr. MARCUS again urged that somebody should be sent out from here to inspect the property.

The CHAIRMAN said that such a course would be ruinous, as it would involve five months' delay, and meanwhile they would have to see what their creditors would have to say to such a delay, and he had very little doubt what their opinion would be. He was sure Mr. Marcus had not considered what would be the effect of his suggestion.

Mr. MARCUS: You

PUT A NOOSE ROUND OUR NECKS,

and now say, Give us the money or we wind you up. (Cheers.)

Mr. SEBAG thought the creditors were behaving very handsomely to the company.

The CHAIRMAN said they were going to exchange their debentures for shares.

Mr. TALLERMAN: With a 20 per cent. in front of the original shareholders their interest in this mine is very slight. The mine has, under the "judicious" management of the directors, cost us 450,000l.

CREDITORS AND PROMOTERS.

You must not forget that the gentlemen who are creditors of this company were originally in the position of vendors. We first find them as sellers, then as directors, then as mortgagees or debenture-holders, and now after going through all these changes, they practically say, if you do not agree to give us 20 per cent. for the money we have advanced (first of all damning the company, by offering such interest, in the eyes of the public) you will have to take the consequences. I say the position is not creditable. I also ask—did any of us know there was a mortgage on this property? Is it honourable treatment on the part of the board to explode this mine at our feet, and say, if you do not swallow these resolutions we will take the whole of your property? Notwithstanding the outlay of every shilling we have subscribed we have put you 55,000l. in debt, and we have

PLACED YOU IN A POSITION IN WHICH YOU ARE HELPLESS,

and in which, if you do not let outsiders have a 20 per cent. preference over you, your property is lost. That in a few words is the position we are in to-day. I give the board credit for being honest men, and that they have put this scheme before us in the hurry of the moment rather than as the result of their mature consideration. Now that they see the effect of it I hope they will take a different course. Why not offer a fair rate of interest—say 7½ per cent. for the larger rate will not give them any better security.

The CHAIRMAN: Our creditors do not want the preference shares, and at present they have lent the money at about 4 per cent. They,

however, say "in order to enable you to carry this scheme through we will subscribe the 40,000l. if necessary." It is no condition of theirs that they shall have these shares.

The amendment was put to the meeting and negatived, and the original resolutions, as given above, were carried.

The auditors were re-elected, and the chairman was thanked for the courteous way in which he had presided over a difficult meeting.

CORRESPONDENCE.

We do not hold ourselves responsible for the Opinions or Statements of our Correspondents.]

To the Editor of the MINING WORLD AND ENGINEERING RECORD.

FRONTINO AND BOLIVIA MINES.

SIR,—I beg the favour of your permitting me a few remarks on the letters of Mr. Peter Watson and Mr. A. Hodge in your journal of last week, in reply to a letter of mine on the Frontino and Bolivia meeting. Both of these gentlemen appear to ignore the points at issue. There is no question of management, results, or anything of the kind, but only a simple one of facts.

Mr. Watson's letter merely shows he was correctly reported in stating that "The starting of Silencio was largely due to the initiative of Capt. Hodge."

Now, my contention is that Capt. Hodge had nothing whatever to do with this matter, the proof of which lies in the facts that deep mining at this place was decided, after special consideration, in the early part of 1886, that the necessary works were continuously carried out, and that the first shoot of ore was met with, and profits were being made from it, when Mr. Hodge arrived some two years after. I should not, however, have taken exception to Mr. Watson's statement alone, as it was no doubt made through not knowing the true history of the affair, whilst there were many present who did know it. But Mr. Hodge, not content with accepting praise he was not entitled to, went out of his way to make statements with regard to myself and the Cordoba Mine, which had not the slightest semblance of truth, and to my challenge on this—the pith of the matter at issue—Mr. Hodge does not make the slightest allusion.

I join Mr. Watson most heartily in congratulating the shareholders on the large increase in the yield of the ores both at Silencio and Cordoba, and I am quite willing that Mr. Hodge should have all the credit he thinks is due to him both for this and for the profits derived from it, although it is difficult to understand how he could have personally influenced the grade of the ore, and one is tempted to ask what the profits would have been if the ores had not become so much richer? But this is beside the mark; and I simply reiterate that Mr. Hodge had no connection with the starting of Silencio, and that he had not the slightest foundation or reason for saying I had ever despaired of Cordoba, and that I had papers made out for tributing that mine.—I am, &c.,

SAMUEL GIFFORD.

Ilfracombe,
Aug. 24, 1891.

"BLACK SHEEP" IN MINING COMPANIES! INFORMATION WANTED.

SIR,—A short time ago you were good enough to publish some remarks of mine with reference to the cause of the great fall in prices of mining shares, and I expressed an opinion that this was partly owing to the absence of proper assistance and support from the financial and mining papers, who had left shareholders too much to the mercy of defrauding promoters, brokers, secretaries, &c., of bad companies. Whilst I am ready to endorse the praise of the MINING WORLD, which some of your correspondents expressed, I am most concerned in this, to give you an opportunity to meet a requirement of many mining shareholders (especially those living away from London), and which I know exists, viz., to ferret out information, and investigate the position of some mining companies which are to the shareholders as perfectly dead, for they can get no information whatever about them. For the benefit of all shareholders I ask you to publish this letter and all information which you may be able to obtain of the three companies (my contribution to the "black list") which I give you below, and if you will actually send one of your staff to the offices to make inquiries I am sure that you will create a very beneficial precedent, which will have a salutary effect if it becomes known that the MINING WORLD is going to "show them up."

La Trinidad, Limited.—Mr. F. W. Pixley, 24, Moorgate Street, E.C., appointed official liquidator about Aug., 1889. No report from him of any kind.

United States Placers.—Committee of investigation appointed 1890, of which Mr. Hy. Naidley was chairman, Mr. Reginald Merivale, W. Lakeman, J. Paul and Ernce Rennie members. Report that Mr. Naidley had died, and no information since Dec., 1890.

Tarryall Creek Gold Company, Limited.—Offices, Lombard House, George Yard, Lombard Street, E.C. E. A. Stevenson, secretary. Last published board of directors, Alexander Brogden, 9, Victoria Chambers, S.W., Right Hon. Cavendish Bentinck, 3, Grafton Street, W., and John S. Kennedy, 1, South Eaton Place, S.W. Report issued Sept., 1889, asking for 5,000l. debentures, also remarking "of course the difficulty is only transitory," but no information whatever since. You published a telegram, some time last year, supposed to be from Tarryall Creek, saying that 5,000 ozs. had been cleaned up, but this has neither been confirmed nor denied by the secretary or directors. Hoping you will be able to make these investigations.—I am, &c.,

STILL A DISGUSTED SHAREHOLDER.

CHAMP D'OR (FRENCH).—The following cablegram has been received with the results of the July crushings:—"Worked 22 days. Crushed 540 tons; yielding 618 ozs."

NEW PRIMROSE.—The company announce receipt of dividend warrants in the company, which are payable at par, and free of income-tax, at the Standard Bank of South Africa, London, or any of its branches.

NOTICE TO READERS.

Replies to Annual Subscribers will be sent by wire or letter, as
may be necessary.

Gold.—Yes. There is still a liability, and possibly a call will soon be made.

Constance, J.R.—They should be sold even at a sacrifice.

Jack.—Nos. 2, 4, and 5 are first-rate investments. Nos. 1 and 3 good speculations.

M.K.—Do not sell your Gravel Gold shares just now. It is only a question of a very little while to wait. The others you name may come into favour at any moment.

Critic.—A dividend has not been declared lately. The last one was paid in May.

H.C.B.—As a lock-up they appear cheap.

R. Pope.—Yes. You buy the right of applying for the new shares. Ask your broker to get the matter put through for you at once.

Cinders.—You have done well. Now secure the profit shown on those recently bought.

L. W. Reilly.—Sell and cut your loss. We fear a lower price will shortly be seen.

Buttercup.—Average the cost by purchasing a few more. If possible, include Mosmans when buying.

S. Bacter.—The firm named is of the highest standing.

Disheartened.—It has not altered the state of the mine, and the delay is not great. Hold by all means.

Rocks.—A few "rubbish" priced shares would not be amiss, but even in these a little care is required.

Headlong.—The concern has a very poor chance, and we advise you to sell.

Impatient Holder.—It may yet turn out well. Give them a little more time.

T. Worger.—The returns are not up to the mark, but we are of opinion that ere long they will improve. The mine is being thoroughly developed. As regards your holding, we should advise you to wait a little before selling.

Frame.—Have nothing whatever to do with the shares.

Colonist.—A brighter prospect is before them. Now is the time to buy a few whilst they are so low.

Senec. (Newcastle-on-Tyne).—Send your name and full address, as we wish to give you the information you desire fully by post.

THE MANCHESTER AND LIVERPOOL DISTRICT BANKING
COMPANY, LIMITED.

THE STANDARD BANK OF SOUTH AFRICA, LIMITED.

The Company undertakes the following business:—

The skilled investment in South African Mining, Land, or other securities for European investors.

Professional and confidential reporting upon companies, mines, mineral properties, lands, and generally advising European shareholders and others in South African ventures.

To act as agents on behalf of principals interested in South African investments, and for the protection of their interests, and where desired, to register shares in such undertakings, and to issue certificates in exchange for same, thereby enabling European holders to co-operate for their mutual protection.

Financing or advancing moneys to corporations, companies, syndicates, or persons in South Africa.

The receiving of money on deposit.

The purchase and sale of properties, and all classes of South African securities or interests.

A Mining Circular containing special information will be posted weekly from the South African Office to all subscribers.

A SPECIAL CABLE CODE FOR PROMPT AND ECONOMICAL COMMUNICATION BETWEEN THE SOUTH AFRICAN AND LONDON OFFICES.

Further information can be obtained at the Head Office of the Company.

The "MINING WORLD" is not the property of a Mining Speculator nor under the control of any clique.

ZAMBESI.

ALTHOUGH the public have lately heard but little of the progress of affairs in the Zambesi, it must not be imagined that nothing has been done. Prospectors have been busily at work, the main direction of whose efforts has, of course, been the goldfields, so as to test the truth of the reports of mineral wealth in Mashonaland. The results on the whole are satisfactory, and have demonstrated the existence of five well defined goldfields, upon which numerous claims are already being located. The first of these goldfields is the Upper Umfuli section, 70 miles south-west of Fort Salisbury, upon which by the end of June some 100 claims had been located, and where the prospects are said to be good. The second of these goldfields is the Hartly, about 50 miles from Fort Salisbury. This section is very large, and many claims have been located. The third is the Lo Magondi field, about 30 miles to the north of Hartly Hills, where not much prospecting has yet been done, though claims have been located. The fourth field is the Mazoe, which was highly spoken of before the expedition was formed which is now exploring the country under the direction of the British South Africa Co. This field was known to contain gold, and was the first that was visited by the prospectors. Over 2,000 claims have been located, and a correspondent of the *Cape Times* states that "many of them have proved to be good." No. 5 embraces the Kaiser Wilhelm fields, which can scarcely be said to be touched. These fields are about 150 miles to the north-east of Fort Salisbury, and steps have been taken for the systematic development of the whole of them by the appointment of mining commissioners for the issue of certificates, the registration of claims, and the routine work of the company. All the minor details are settled by the commissioner in each district, and important matters are referred to the head of the Gold Office at Fort Salisbury, directly under the administration of Mr. Colquhoun. Scarcity of tools has hitherto prevented active work, but this has arisen from no fault of the organisers of the expedition. They were supplied in adequate quantity, but it was found difficult to convey them into the interior, and most of them had to be left temporarily behind owing to the rivers being flooded. Fever has been prevalent, and supplies have been scarce. When the roads are open big supplies will be poured into the interior, and there will be a sufficiency to enable the explorers to face

the next wet season. It was supposed that the big buck that swarmed about the place would have afforded ample game, but they have disappeared, and it is hoped they will be followed by the Tsetse fly, whose bite is fatal to horses, donkeys and oxen, and by no means agreeable to Europeans. Funds have not been at hand to buy supplies from the natives, who have as yet acquired insufficient confidence in the white man to give them to him on credit. Road making is going on, and buildings are being put up, and even hotels improvised. Relations with the natives are satisfactory, who, when they have quarrels among themselves, bring them before the white man for his decision and adjustment. The general conclusion is that the Zambesi is a magnificent country, but one in which for the present the adventurer must be content to rough it. The climate is good, and circumstances are favourable to the rapid development of the country to which it is expected there will shortly be a big rush.

A PECULIAR CONCERN—GUIANA GOLDFIELDS, LIMITED.

It is no part of our business to discourage mining enterprises that appear to offer even reasonable prospects of success to the public, but in this category we cannot place the Guiana Goldfields, Limited, nor can we commend for appropriation any sort of interest in the Mines Exploration Syndicate with which it is largely mixed up. A meeting of the Guiana Goldfields, Limited, was held on Wednesday, at which statements of a very extravagant character were made, and things of a very extraordinary kind were done. The statements made were probably with a view to dispose of the shares to which reference was made, and the things done were evidently the result of bad organisation, or want of thought. If the statements made were true to even a limited extent, then there can be no need for working capital, as the mines will provide it themselves, but if not true, then we can quite understand the desire of the Guiana Goldfields, Limited, to blossom into a publicity from which it has delicately shrunk in the past. The Guiana Goldfields, Limited, was, in fact, registered more than two years ago, but Wednesday last, as far as we have been able to trace from our own pages, or in official works of reference, was the first occasion on which a meeting was held, and even at this the apology made was that there were no accounts to present. The "shareholders" at the meeting asked no questions on this most crucial point, but sat smiling and smirking at each other, and giving to the disinterested beholder of the scene the impression that they were so many dummies who had come in with free passes to make a house for the performance of a screaming farce. Considering that this was a company holding a meeting after an existence of two years, with no accounts to present, the election of an auditor under such circumstances seemed unnecessary, but in any case it was a little indelicate to nominate this officer from the directors' side of the table. The finishing touch to the ludicrous side of the whole affair was put by the secretary, who actually proposed the re-election of the directors, to whom he, of course, owes his own official life.

It is curious that not one of the original directors of Guiana Goldfields, Limited, now figures on the new board. Almost equally strange is it to find Mr. William Sowerby, for whom we have always had the highest respect, figuring as its chairman. We trust he has taken pains to ascertain from independent sources the accuracy of the statements he made in his opening speech and in the "statement by the board" which followed it. We trust also he has thoroughly probed the relations subsisting between this company and a concern styled the Mines Exploration Syndicate, which dates from the same address, and which has taken the share department of Guiana Goldfields, Limited, under its special care. This syndicate is very anxious about Guiana Goldfields shares—that is, anxious to *sell*, not to *buy* them—and is issuing circulars broadcast in which it says, "an investment is strongly advisable." Of these shares the supply appears to be almost as "inexhaustible" as that of the alluvial, for the vendors, the said Mines Exploration Syndicate, *vide* the statement in their own circular, appear to have received the "purchase-money" in paper, though they would doubtless have preferred cash if there had been anyone to pay it down. In this connection we should like to know on what terms this Syndicate has agreed to relieve the company from all anxiety as to working capital? It never occurred to the "independent shareholders" at the meeting to ask a question of this kind. Why should not accounts be laid before the shareholders, and the appeal be made to them? To what number of *bona fide* shareholders—that is, shareholders who have paid cash for their holdings and are not mixed up with syndicates—could such an appeal be made? As for the statement that "the shares do not stand at their true value on the market"—the simple truth is that there has never been any market for them. This is the statement that will be made by every broker on the market. An attempt to "make a market" will, no doubt, be made upon the strength of the meeting last Wednesday, and it is against responding to any such effort by interested persons that we wish to caution the public in time. Let them watch the game, but by no means join the players. The whole affair looks uncommonly like not so much an attempt to

develop the Guiana Goldfields as to "exploit" the British investor, for the benefit of those who have "a few shares" to sell.

COLOMBIAN HYDRAULIC.

THE achievements of this company during the past four or five years, as set forth by Mr. Pechey (the chairman) at the meeting on Thursday last, have certainly been of a remarkable nature. We have on more than one occasion referred to the satisfactory position of the company, and the opinions we have expressed as to the shares for an investment have been more than confirmed by subsequent events. The company has, during the last four-and-a-half years made profits amounting to no less than 74,000*l.*, out of which the shareholders have received 69,000*l.* in dividends, or 20 per cent. per annum. The shares of the company have before now been compared to consols, and while the comparison may hold good with regard to the regularity with which the dividend warrants are issued it certainly does not as regards the amounts that are paid. Considering the low ebb to which the company had once fallen, we think both directors and shareholders are to be congratulated on the success that has now been attained.

PRODUCTION OF GOLD AND SILVER IN THE UNITED KINGDOM.

THE mines producing gold quartz at the present time in the Principality of Wales are the following:—Clogau, at Bontddu; Moel Ispri, at Llanelltydd; and the Morgan, at Dolgelly. The Clogau Mine only produced 4 tons of quartz last year, from which it obtained 2 ozs. of gold; the Moel Ispri, 16 tons, from which it obtained 3 ozs.; and the Morgan, 555 tons, from which it obtained 201 ozs.—the total value of the entire production being 675*l.* This is a sad state of affairs after all the flourishes which heralded the commencement of this industry, and particularly in view of the production of the previous year, which was 6,226 tons, producing 3,890 ozs., of the value of 10,746*l.* In regard to silver, the quantity obtainable from lead ore produced from mines in the United Kingdom and the Isle of Man in 1890 amounted to 291,724 ozs., of the value of 58,040*l.* The following table, prepared from the annual reports of the Deputy Master of the Royal Mint, shows the prices of standard silver on the London market since 1868:—

Year.	Average Price per oz.	Year.	Average Price per oz.	Year.	Average Price per oz.
1868	d. 60½	1876	d. 53	1884	d. 50½
1869	60½	1877	54½	1885	48½
1870	60½	1878	52½	1886	46½
1871	60½	1879	51½	1887	44½
1872	60½	1880	52½	1888	42½
1873	59½	1881	51½	1889	42½
1874	58½	1882	51½	1890	47½
1875	56½	1883	50½		

MAID OF ERIN MINES.

THE shareholders in the Maid of Erin Mines, Limited, have every reason to be satisfied with the nature of their investment. At the statutory meeting of the company, held on Thursday, the directors were able to announce a dividend of 1*s.* a share for the first three months' working, leaving a balance of nearly 12,000*l.* to be carried forward. The shareholders were, no doubt, as surprised at this result as anyone, but it seems from the chairman's remarks that there are still greater surprises in store for these happy individuals. Extensive developments are taking place, and the future, the chairman said, looks even brighter than the past. The meeting was adjourned to Sept. 15 to hear the views of Mr. Graham (one of the advisory board), who is on his way to this country. It is expected that this gentleman will have some interesting information to impart to the shareholders.

ARGENTINE MINES.

WE sincerely trust there is no proposal on the part of the directors of any of the Argentine Gold Cos. to throw these properties away. If there is any such proposal, our next wish is that the shareholders may reject it. Any attempt to part with these properties now would simply imply a deplorable sacrifice, whereas, by holding them intact, better days may come for Argentine Gold Mines, and the shareholders may recover much, if not all, of the money they have put into them. We believe we are approximately correct in saying that about 20,000*l.* worth of gold has been taken from them under circumstances of all but unexampled difficulty, and with management, to use a mild expression, of an indifferent kind. Now, under better auspices, and with the experience gained from past failures, an effort made at some future time might be attended with much happier results. In view of this, and in sight also of the patent fact that the present is about the worst

possible time to sell anything to which the word "Argentine" is attached, one may reasonably hope that directors will not rush hurriedly into a course for which, if adopted, they may one day receive, as they will deserve, not merely the reproaches, but the anathemas of their shareholders.

RE-CONSTRUCTION OF RUSSELL MINES.

THE directors of the Russell Mines Co., Limited, are to be congratulated on the success of the re-construction. The special resolutions, authorising the re-construction, were confirmed on Tuesday at a meeting representing 76,000 shares out of 100,000. It is only natural, therefore, to assume that the holders of these 76,000 shares at least are ready to come into the new company. We wish the company every success.

A DOLEFUL TALE.

IT was a story of disaster the chairman of the Oriental and Sheba Valley United Gold Mining Co., Limited, had to tell the shareholders yesterday. The capital was 400,000*l.*, all of which has gone save what is represented by a property which so far has put to the blush all the brilliant predictions made regarding it. So also has a first loan of 15,000*l.*; so also has a second loan of 15,000*l.*; so also has a third loan of 10,000*l.*; and so also has 15,000*l.*, in which sum the company is at the present moment also indebted. The total amount lost, or unrepresented, save by the properties (whatever they may be worth), and an extravagant outlay on machinery, is well on towards half a million sterling. Before the shareholders were aware of it 60,000*l.* of the debenture issue was made by the board, and though the two directors who made the loans had accepted the major portions of those debentures as security are now willing to take shares at 20 per cent. preference in lieu in common with the other shareholders, it is impossible for the latter to forget that these gentlemen were mixed up in the sale of the property to the company. The story as a whole is one of a melancholy kind, and for the complete details we must refer our readers to our full report of the proceedings. It seems very hard for shareholders to put more money into a concern in which so much has already been lost, but one scarcely cares to undertake the responsibility of advising them not to do so, for possibly under something like decent management some of that loss may be regained.

AFFAIRS IN SOUTH AFRICA.

[From our Own Correspondent.]

Kimberley, Aug. 3, 1891.

THE PRINCE ALBERT GOLDFIELDS.

AS I briefly intimated in my last, there has been considerable excitement all over the colony touching what are now known as the Prince Albert Goldfields, which have recently been proclaimed by the Governor as a public field. Reports from thence are very conflicting, and, therefore, I think it best to send you extracts from the reports of Mr. Thomas Bain, the Government Geological Surveyor, and Mr. H. M. Oakley, the Acting Mining Inspector at Millwood, which reports are very voluminous and exhaustive. Mr. Bain, after stating that on his first visit he was accompanied by Mr. Oakley, whom he left at Spreeuwfontein, the centre of operations, continues:—"On my return, a fortnight afterwards, I was pleased at his success. His finds in the bottom layers of drift sand and crevices of the Waterfall River amounted to 3 ozs. 12 dwts. 17 grs. of alluvial gold, including four nuggets varying from 2 dwts. to 1 oz. 15 dwts. In a trial which I made while there with three men I found 7 dwts 7 grs. in about three hours. In Mr. Oakley's trial of quartz, taken from the numerous reefs of that locality, he was not successful, except in the case of a leader of ferruginous quartz, intermixed with marled cubes of brown iron pyrites and quartz crystals, extremely rich in coarse visible gold, of which specimens have been submitted for inspection to the Government. The leader was only a few feet in length, and about 9 ins. in depth, and was soon worked out. In this case it is evident that the origin of the gold was in the pyrites, for in some of the cubes, partly decomposed, coarse pieces of gold may be seen to be embedded; and as the brown pyrites is very abundant in the yellow belts of sandstone interlaminated in the blue Karoo shale, it may prove a good guide for prospectors to go by in searching for rich leaders. Though Mr. Oakley was unsuccessful in his inspection of the quartz reefs, which was of a very cursory nature, it must not be taken for granted that they are devoid of gold, for in a journey from Spreeuwfontein to Beaufort West, over 40 miles of Karoo, I traversed at least 25 or 30 reefs of quartz, varying from 3 ins. to 2 ft. in thickness, identical with those of Spreeuwfontein. In these reefs I picked up five samples of surface quartz random specimens, testing them by means of crushing and panning, and found a very fair show of gold in three out of the five specimens. Taking that as a fair criterion, it may be reasonably expected that the alluvial of that section of country may be as rich as, if not richer than, the Spreeuwfontein diggings, and that gold will be found over an extensive area in the Karoo. From an intimate knowledge of the

Saurian or Dicynodon beds of the colony, the lower portion of which apparently constitutes the Prince Albert Goldfields, they will be found to extend from Spreeuwfontein in a westerly direction, at an average width of about 15 miles over a tract of country lying between the Bok Berg and Fraserberg Road to Calvinia, and thence in a northerly direction towards Bushmansland, a distance of 260 miles, and eastwards between Blyn Berg and Salt River's Vley, through Somerset, Bedford and Fort Beaufort, on towards Kaffraria, a distance of 280 miles, making a total of 8,100 square miles." A glance at the map will show the enormous extent of country this report covers. The following is an extract from Mr. Oakley's report:—"The day after my arrival at Klein Waterfall, which is a portion of the farm Spreeuwfontein, I visited the spot on which Mr. Du Plessis first declared to have found gold. The working is a shallow excavation in a small dry gully. I also witnessed a sluicing of about half a cubic yard of the *débris* taken from the bottom of the working, which produced a few grains of gold, apparently alluvial. Upon the receipt of tools I set to work and tested several of the leaders by panning the crushed quartz, but in no instance was colour observed. I next tried the deposit in the creeks, consisting of disintegrated shale, but owing to its loose nature and freeness from clay, I did not anticipate any better result, and in this opinion I was confirmed. Being satisfied, however, that gold existed, I turned my attention to the crevices of the bed-rock or shoals in the creeks, and in a distance of about 5 miles scarcely a blank pan was observed. In order to ascertain whether gold existed in the crevices in payable quantities, I decided to work deeper into them, and for this purpose two crevices were selected at random at a distance of about 2 miles apart. Owing to the very friable nature of the shale in which the crevices are formed, no difficulty was experienced in opening them, the bed-rock being easily prized out in conveniently sized blocks without the aid of explosives. The two crevices thus treated yielded in one and a half days, with three men, about 3 ozs. of gold, including a nugget weighing 1 oz. 15 dwts. These crevices, I may state, were not nearly worked out, only sufficient being done to test their value. An attempt was made to prospect the dry river beds of the adjoining farm, Rietfontein, which I consider has more to recommend it than either Klein Waterfall or Spreeuwfontein, but the absence of water and difficulty of transport rendered any practical work, until after rain, impossible." Since these reports were published a number of people have flocked to the new goldfields, and one man has found two pounds weight of alluvial, the result of a week's work. Several syndicates have been formed in various parts of the colony sending men to prospect and work claims, and the result of their labours is anxiously looked for.

ANTIOQUIA (FRONTINO) CO., LIMITED.

PROFIT OF 137*l.*

THE directors have received advices from Mr. J. H. White, dated July 4, and from Messrs. Restrepo, dated July 13. The statement for the month of June is as follows:—264 tons produced 209 ozs.; average, 14½ dwts.; estimated value of gold, 610*l.*; cost at the mines, Medellin, and in London, 472*l.* 1*s.* 3*d.*; estimated profit, 137*l.* 18*s.* 9*d.* During the month sums amounting to 38*l.* 7*s.* 8*d.*, included in the above statement of cost, were expended in Colombia on capital account.—J. J. TRURAN, Secretary.

FRONTINO AND BOLIVIA GOLD MINING CO., LIMITED.

PROFIT OF 1,070*l.* FOR JUNE.

THE directors have received advices from the mines dated June 23 and July 7; also a letter from Messrs. Restrepo, dated July 13. The statement for the month of June is as follows:—1,259 tons of ore produced—bar gold, 1,611 ozs.; tributary gold produced—bar gold, 968 ozs.; total bar gold, 2,579 ozs.; also 3,443 lbs. of sulphurets, valued at 535*l.* 12*s.* Estimated value of the gold and sulphurets, 6,310*l.* 0*s.* 9*d.*; cost at the mines, Medellin, and in London, and paid for gold bought of tributary, 5,239*l.* 6*s.* 8*d.*; estimated excess of returns, 1,070*l.* 14*s.* 1*d.*—J. J. TRURAN, Secretary.

THE NEW CONSOLIDATED MINING CO., LIMITED.

DIRECTORS ISSUE A FULL REPORT, AND FORESHADOW A POLICY.

THE directors, in their third report, enumerate the properties held by the company, and the present position in which they are found. The gist of the whole document, however, lies in the foreshadowing of the directorial policy, as embodied in the following paragraph:—

"The proprietary are reminded that the charges for caretakers and rent continue on the properties in Corsica, that taxes have still annually to be paid to the American Government on the South Aurora properties. Such charges, with the London expenses, amount in round numbers to 1,000*l.* per annum, while the company's mines for want of capital remain unworked; a state of affairs your directors deplore, and advise the proprietary to discontinue. They therefore again intend, at an early date, to submit to you separate proposals for the working of each property, which they venture to hope the shareholders will cordially and substantially support." We trust that when these proposals are matured the shareholders will support them. Meanwhile they will await with interest the statements to be made at the meeting called for Monday week, though the present document leaves nothing to be desired on the score of fulness of detail.

REPORTS OF MEETINGS.

COLOMBIAN HYDRAULIC MINING CO., LIMITED.

£69,000 RETURNED TO THE SHAREHOLDERS IN FOUR AND A HALF YEARS.

A MEETING of this company was held at Winchester House on Thursday.

Mr. J. T. P. Pechey

(chairman of the company) presided.

Mr. SYDNEY A. COBBETT (secretary) read the notice of meeting.

The CHAIRMAN: Gentlemen, I have to move the adoption of the report and accounts. We have a very small attendance here to-day, and I suppose that is partly due to the fact that there seems to be a general hydraulic arrangement outside. (Laughter.) Or possibly it is that the shareholders may be in the same frame of mind as a friend of mine who holds many shares in this company, and whom I met on the way:—I said, "I hope you are coming to the Colombian Hydraulic meeting," but he said, "If there were

ANY CHANCE OF PITCHING INTO YOU

I would come, but I can really see nothing whatever to find fault with, and, therefore, I am going to stop away." (Laughter.) There is very little for me to say to you beyond what is told you in the report which we ask you to adopt. I think we must all agree that, looking at the circumstances under which we have been working during the past year, we have every reason to be satisfied with its financial results. You know, of course, we have been working under somewhat disadvantageous circumstances. The pressure, which used to be something like 350 ft., has been reduced by the gradual rise of the sluices to 150 ft. That, as you know, is being remedied as fast as we can, and during the year, Mr. Oakes tells us in his report, he has been obliged to run about four months in that part of the mine known as Clarke's banks—a large deposit of gravel lying on one side of the mine, which consists of poorer gravel than the gravel at the head of the mine which we have been in the habit of washing. I may remark in passing that, although Clarke's banks have given us but small profits during the year, there can be no doubt they form

A VERY VALUABLE RESERVE,

in case of our being unable at any future time to work at the head of the mine; because you must remember this, that although the profit has been very small, there has been a large amount of work going on over the entire mine during the time these runs were being made. There can be no question that if all our efforts had to be concentrated on Clarke's banks we should have reduced the cost to about one-third of the present amount, and realised very satisfactory profits. But, gentlemen, I hope we shall not come to that. Now, if you refer to the accounts you will see we have received during the past year 6,305 ozs. of gold, as against 6,980 ozs. in the previous year, and

THE PROFIT HAS BEEN 14,137L.,

as against 16,633L. last year. Mr. Oakes comments on this, and tells us that if he had been able to run at the head of the mine the whole of the season the returns would have been larger than ever before, so I think we may look upon the profit as a very satisfactory one, considering the conditions under which it has been made. You will notice that the cost at the mine for every item has been reduced during the past year—European management, native pay, stores and charges, and so on,

ALL SHOW A REDUCTION IN THE COST.

The solitary exception is a small amount in timber and blocks, and a sum of 350L. in sundry expenses, due to the fact that we have been re-registering all the titles conveying the property to the company, so that I do not think that extra amount is excessive, or has been thrown away. There is one matter I should like to mention, which has been suggested once or twice at these meetings, that the cables as sent out on the postcards are somewhat misleading, because they are made out without reference to the rate of exchange prevailing in Colombia. We have been rather hard to impress on that point. It has been so pleasing year after year to meet you and tell you the profit has been 5,000L. or 6,000L. above what was shown on the postcards, and that it was due to the high rate of exchange. (Cheers.) It has been urged that perhaps it would be better in the future that the cost should be taken at the current rate of exchange prevailing in Colombia at the end of the month when the costs and returns are made up, and so with your permission we propose in future to send out the postcards with the costs charged at the current rate of exchange. This year there is a profit of 5,000L. or 6,000L. more on the difference between the costs of cables on the other side and the costs as made up in these accounts here—that is to say, we have an extra profit of 5,000L. or 6,000L. In future the result will be that the profit will be larger, as shown by the postcards, and the profit and loss account will more or less harmonise with them. You will notice that the actual cost during the year, taking out the purchased gold, has been 8,492L., as against 9,609L. Of course, as you know, we have done all we can to get the costs reduced, and have written to that effect to Mr. Oakes. You know what he has written to us about this matter from time to time, and I am quite sure he is quite as alive as any of us can be to the necessity of keeping the cost as low as possible. Our future depends upon a very simple matter—getting the ditch and pipe-line into order, and so working the mine with increased pressure. I wish I could tell you the pipe-line was on the point of completion, but the fact of the matter is that things do move very slowly in that slowest of all countries where everybody says "to-morrow," instead of "to-day," and there has been a great delay in getting these pipes up from the

coast to the mine. Mr. Oakes writes that they are arriving in dribbles, and as fast as they do arrive he is putting them together. He will not commit himself to an exact date as to when the pipe-line will be finished, and the fresh pressure brought on. I am sure it will be very satisfactory for us to see what he writes confirming all he told us last year as to the prospect when once this pipe-line is completed. Last year he said "Whatever the result may be of washing at Clarke's banks, and the ridge at the back of them, we can always feel certain that a prosperous career lies before us at the head of the mine as soon as the new ditch is ready and the increased pressure brought on. He now says:—"For want of this pressure we have had to turn for more than a third of the year into Clarke's banks, banks which, when previously worked, 17 years ago, could barely pay working expenses, and though they have this year given very reasonable profits there can be no doubt that the gravel is very poor. From this it is evident that as soon as we have added the 130 ft. to our pressure, and are able to return permanently to the head of the mine, the results will be as good as ever, if not better. We have before us all the ridge carrying the ditch, which the Spaniards were not able to touch because it carried their water supply. Therefore I consider the future prospects of Malpaso are very bright, but we must not look for immediate improvement, because the new pipe line must be laid before we can wash with advantage at the head of the mine. At all events, we are nearing the goal that lies before us. A year ago I remember saying that I thought the year would be on a par with the year before that through which we had then passed, and I told you we expected small returns at its commencement, which would be made up by larger ones at its close. This year has been better to us than my fears, for instead of getting 8,000L. or 9,000L., we have made 14,000L., and have been keeping up the dividends. We have

GIVEN YOU FOUR DIVIDENDS OF 1s. EACH,

and since these accounts were made up we have paid another dividend. Now, if I may venture to prophesy, I would say that the next few months are not going to show large results. Mr. Oakes will be working more or less on Clarke's banks, and it will take him three months to get the new pipe-line ready, so that we must look to the latter half of the financial year to recoup us for any small returns we may have in the first six months. We have gone on for six years without a loss during any one month, but sometimes without very much profit. We must look to the latter half of the coming financial year to repay us for the small returns that may possibly be made in the next three or four months. Mr. Cobbett has here four beautiful photographs which Mr. Oakes has sent for the purpose of showing the new pipe-line, and the work now being carried on. We have shown good photographs from year to year, but none of them will give such a clear idea as the four (very large ones) which Mr. Oakes has now sent over, and which Mr. Cobbett will be pleased to show you at the conclusion of the meeting. Mr. Oakes has gone fully into all details, and we have endeavoured to epitomise the history of the mine in his report. They say

THE NATION IS A HAPPY ONE THAT HAS NO HISTORY,

and I think we may number ourselves amongst the mines of that description, for we have no special history during the past year. I can only say that, believing as I do in Mr. Oakes, and as you do, we know that from year to year everything he has prophesied in connection with this company has come perfectly true; and believing in him, as I do, I look forward to the future for a far more prosperous career than we have had in the past. (Cheers.) I have the pleasure to move "That the directors' report and statement of accounts to May 31 last, as circulated amongst the shareholders, be and the same are hereby received and adopted," and I will ask my old friend, Mr. Cobbett, to second the resolution.

Mr. ALFRED COBBETT (director), in seconding the motion, said: The chairman has so fully explained to you, and so pertinently stated the expectations of the board in regard to the coming year, that there is only left for me the duty of seconding the motion, and of expressing in a word the confidence I feel in the mine.

A SHAREHOLDER: May I ask if the pipes have all arrived in the country?

The CHAIRMAN: They are all on the coast, though not yet at the mine.

VOICE OF EXPERIENCE.

Mr. THOMAS THOMPSON, chairman of the Mining Exchange, who was heartily received, said: I should like to ask a question with regard to our property, and before doing so would wish to make one or two remarks with reference to the company. Certain observations fell from the chairman which very much struck me. They were in general terms:—That we are not to expect very great returns during the next three or four months, but that probably we may have considerable returns during the latter portion of the year, and consequently the returns of the whole year will be up to what we have had in days gone by. In relation to that I would like to say that I remember clearly what our chairman told us two years ago (I had not the pleasure of attending the last meeting), that though our returns might fluctuate from month to month, yet that from year's end to year's end we should find they would be practically the same. (Hear, hear.) To continue, I think I may say that the value of a mining share depends to a very large extent upon its stability, or rather upon the durability, of the mines themselves, and upon this subject it may be interesting to many of the shareholders to learn that the other day I met a gentleman who has recently come from Colombia—a gentleman of great reputation, and, therefore, who speaks with considerable responsibility, although a responsibility not directly in connection with this company. I think I may say that his advice was entirely disinterested, and he tells me that though we might have vicissitudes in regard to our monthly profits, yet he thought there was a sufficiency of such gravel as we have been working for the last five or six years practically in sight to

LAST FOR GENERATIONS TO COME.

(Cheers.) Now, gentlemen, I stand here as a stock and share dealer, having introduced a great many of my friends and clients into this

company, and if the chairman can give me a satisfactory reply to the question I am about to ask, I need hardly say that I shall have great hope and confidence in introducing many more, and I am in hope also that our shares will see a much higher price than that which they command at the present moment. I would ask the chairman whether what I am told is really the fact, that though our profits may slightly vary from time to time, yet, so far as human foresight can go, there is a sufficiency of gravel in sight to last us for many years to come.

THE POINT OF MY INQUIRY IS THIS—

that many who have held shares in American mines, some of them paying 20 or 30 per cent. upon their market prices, and which have come to grief, do not see but that Colombian Hydraulic, which, by the way, is a South American mine, may be no better than the others; but if the chairman can give a satisfactory reply to my query, we shall see that Colombian Hydraulic shares are really an investment, and as such, and paying the dividends they do, they ought to command a much better price in the market. It appears to me a matter of so much importance that we should see our shares at the price at which they are really entitled to stand, that I trust you will forgive me for having taken up so much of your time in calling attention to this subject. (Cheers.)

The CHAIRMAN: We went closely into this question of the gravel in front of us two years ago with Mr. Oakes when he first asked us to sanction the expenditure on the new pipe-line. We felt it was a large expenditure we were about to incur, and that it was a vital question as to whether it would pay us to undertake it, and that it must depend to a great extent on the richness of the gravel that lay before us. Well, we had most distinct assurances from Mr. Oakes that so far as he could see there was work enough immediately in front of and around him to last for something like 20 years, though I do not wish Mr. Thompson to understand that I pledge myself to "generations." (To Mr. Cobbett): Did you not look and measure at the time the length of gravel that is before us?

The SECRETARY: Yes, and it exceeded a mile.

Mr. C. O. ROGERS: It is 3 miles.

The CHAIRMAN: It is 3 miles to Pavas, and that would "last for generations." (Cheers and laughter.) We are not to expect that the gravel is all the same. We may find poor spots and rich spots, but I must confess I do not doubt myself that for many years to come we are going to keep the average profits up to those of the last few years, and possibly we shall find them to be better.

The report was unanimously adopted.

Mr. C. O. ROGERS, in proposing the re-election of the chairman and Mr. Hopkinson, said: I am sure our worthy chairman will, without doubt, be re-elected, for his services to this company are well known, and Mr. Hopkinson has been connected with us from the initiation of the company.

REMINISCENCES.

Mr. THOMAS THOMPSON: I second that resolution, and should like to do so because of the many recollections I have in connection with this company. I remember that it was started a good many years ago, and passed through at the beginning of its career a good many vicissitudes. I think I may say it is entirely due to the practical knowledge of hydraulic mining displayed by our chairman, and the stolid way in which he and his colleagues have worked together, that we are in the position we are to-day. (Cheers.) When one goes to meetings one often hears cavilling about directors' fees and minor points of that kind, but all I should like to say on this subject is that I know of no gentlemen who have done more for the money they have earned, and no men who have deserved their emoluments more than in the case of our executive. (Cheers.)

The motion was seconded and carried.

Mr. ARTHUR MEEKING proposed the re-election of the auditor, Mr. L. H. Evans.

Mr. ALFRED SAUNDERS seconded the motion, which was carried unanimously.

Mr. SANKEY: I hope you will allow me to move a vote of thanks to Mr. Oakes and the staff at the mine, because I am sure it will give them great satisfaction to have the acknowledgments of this meeting of their services. In these times unless capital and labour go closely hand in hand an industry cannot prosper. I think that here capital and labour do go closely hand in hand.

I HAVE SEEN WHEN ON THE MINE

how well the staff do their duty, sometimes in trying circumstances, and I shall consequently have great pleasure in proposing that a vote of thanks be given to Mr. Oakes, the superintendent, and the staff.

The CHAIRMAN: I am sure we shall all second that. We owe a great deal to Mr. Oakes, and I feel we could not have had a better superintendent.

Carried unanimously.

THANKS TO THE BOARD.

Mr. THOMAS THOMPSON: There remains only one duty to perform, and that is to offer a hearty vote of thanks to the chairman and directors for their conduct of our business during the past year. I made some remarks just now with regard to the chairman and his colleagues, whom we re-elected, but think I cannot compliment them in much stronger terms now than I did then; but I remember in times gone by, when we passed through most terrible misfortunes, that if it had not been for the indomitable perseverance of our directors, and the fact of their putting their hands into their own pockets when none of us would do so, we should not be here to-day, for the purpose of receiving such accounts as those which have been presented to us. I beg to propose a vote of thanks to the chairman and directors for the way in which they have managed our company, not only during the past year but in previous years also.

The motion was seconded and carried unanimously.

The CHAIRMAN: I thank you on behalf of my colleagues and myself for this vote of confidence which you have been so kind as to offer us. I am sure it is with great pleasure we meet you year after year with this record of success. I look back upon the time, now a good many years ago, when I first heard of these gravel deposits in California. I had recently come from California, where I had worked similar deposits myself. I remember saying to Mr. Welton, "We ought to introduce hydraulic mining into Colombia." We sent out a man from California to this mine, and he did not turn out as well

as we expected; affairs were muddled for several years; and, as Mr. Thompson said, we did get into low water, and remained in it for a long time, but I always had a belief that this concern would eventually pay. Now, in this company's property we have nothing that is phenomenal, but still we have

A GOOD, STEADY 20 PER CENT. CONCERN.

Just before I left my office I was adding up the total gross profits of the last four and a half years, and they have come to 74,000. We paid off all our debentures some years ago, and we have had enough out of the balance to return to you something like 69,000. in dividends, which I do not think is very bad business. (Cheers.)

At the close of the meeting most of the shareholders remained behind to examine the interesting photographs to which the chairman had referred in the course of his speech.

MAID OF ERIN SILVER MINES, LIMITED.

A DIVIDEND OF 1s. A SHARE IS DECLARED ON THE FIRST THREE MONTHS' WORKING, CARRYING FORWARD NEARLY £12,000.

THE statutory meeting of this company was held at the Offices in Suffolk House, Cannon Street, on Thursday.

Mr. Archibald Buchan-Hepburn (chairman of the company) presided.

Mr. CHAS. SHILSON (secretary) read the notice of meeting.

The CHAIRMAN: Gentlemen, you are aware that this is a statutory meeting, at which, as a rule, there is no business to be done, and, as a rule also, it is the case that there is very little to say beyond holding out hopes for the future. On this occasion, however, I am thankful to say that the board are in a position not only to do that, but to give very strong evidence of the success of the mine in the months that have elapsed since they first took over the property. As you are aware, the company was

FORMED TO TAKE OVER THE SHARE CAPITAL

of the Henriett and Maid Consolidated Co. That has been completed. The transfers are now in Denver, being finally registered. I may as well give you a statement of what the property has done up to the present. The total gross yield for the three months has been 20,836 tons, of estimated value of \$466,000, or 96,000. giving an average per ton of \$22, or 4. 12s. 4d. per ton. The dividend which has been declared of 1s. will take up 28,750. and leave a balance of 11,868. to carry forward, which is a statement not usually made at a statutory meeting. (Cheers.) The letters that have come from the mine all point to great success in the future. The manager writes to say that a body of lead ore was struck in the Adams' lease which promises very well, and, again, on June 27 the manager writes that in the sulphide stopes, to which we look very much for future returns from the mine, the new developments show thick bodies of high grade ore to an extent not yet determined. The Adams' shaft has been sunk to second level, and communicated with the third level of the Maid of Erin Mine, giving us much greater facilities for a larger output when it becomes necessary, and on the second level in the Maid of Erin, which is, of course, very important to us, as being absolutely the property of the company, they have opened up a very large body of sulphides—also a new one; so that really, as far as we can judge, everything has been satisfactory hitherto, without any drawback whatever. As has been the case hitherto, any extra expenses that have occurred on account of capital have been defrayed out of revenue, and all outlay has been deducted from the month's profit before those profits have been calculated. At the same time the board feel that a reserve fund should be gradually collected in order to put the mine upon a thoroughly satisfactory basis, and it is their intention to do so as soon as they can. I would like also to mention that the relations between us and Mr. Moffatt and the other two gentlemen who are on the advisory board of this company have been most satisfactory. They have done all they can to assist us, and, needless to say, we have done all we can to meet their views, feeling they are in possession of far more knowledge in regard to the property than we can be, and, consequently, we are always ready to bow to any suggestions from Mr. Moffatt. As regards the ore extracted up to the present moment,

ABOUT 260 TONS ARE TAKEN OUT DAILY,

and the contracts for the sale cover about 140 tons of carbonate and 120 tons of sulphide. Some contracts run on to the end of the year, and others expire this month, but the manager informs us that there will be no difficulty in renewing those contracts on satisfactory terms. Since this meeting was called a telegram has come from Mr. Graham, one of the advisory board, to say that he is coming over here, and he was anxious to have the meeting postponed to Sept. 15. It is too late to do that, but it is proposed (as no doubt he will have much interesting matter to communicate) to adjourn this meeting to a date previous to the four months which expire on Sept. 16: so that the adjourned meeting will take place on Sept. 15. A telegram also arrived at the same time from the mine as follows:—

"Mine looks splendid; new developments east and west, have increased possibilities to a great extent. Present output not over-taxing mines."

In the prospectus there was a lease mentioned as Adams, which those who wished to pick holes in that document drew attention to forcibly, saying that this portion of the property would only last two years during the term of the lease, but the directors, though in possession of information at that time, were not justified in publishing it, or, in fact, saying anything about it. That information was to the effect that there was every possibility the lease would be renewed on its termination. We now learn from the telegram: "Have promise that the Adams' Mine lease will be renewed." That is in the telegram, and it is most satisfactory, because developments of great importance are going on there in the exploration shaft which, I think, will almost double the value of the property in the future. Part of the business of this meeting is to announce the

DECLARATION OF A DIVIDEND OF 1s. PER SHARE

on the capital of the company, absorbing 28,750., after which we carry forward 11,868.

A SHAREHOLDER: To what date is this dividend declared?
The CHAIRMAN: From May 1, and it is simply an interim dividend to the end of July, and is for three months.

A SHAREHOLDER: Would it not be advisable to close this meeting and call a fresh one, as Mr. Graham may not be here in time?

The CHAIRMAN: He says distinctly he will be here by the 15th. The dividend will be payable on Sept. 1. I now move the adjournment of the statutory meeting to Sept. 15.

Mr. J. BEDFORD FOSTER (director) seconded the motion, which was carried unanimously.

Mr. EVANS: Is the information you have from the mines based on information you have received by letters or on a visit you have paid to the mines yourselves?

The CHAIRMAN: None of us have been there except Mr. Dawson.

The SHAREHOLDER: Local impressions are often more valuable than written reports. I understand that Mr. Dawson and Mr. Slaughter (the solicitor) have both been there, and perhaps they will give us their views.

VIEWS OF ONE WHO HAS SEEN THE MINES.

Mr. F. GROOMBRIDGE DAWSON: If I had had the slightest idea that I should have been called upon to convey my impressions to you to-day, I should have taken steps to collect my thoughts for the purposes of brevity and clearness. It is correct to say that I have visited the mine, but that was before the formation of the company, and I do not know how far any words of mine will impress the gentlemen present. I may say I am managing director of the London and Amsterdam General Investment Co., that first of all took this business in hand, having recognised that there was genuine merit in it, but before doing anything with it I went out

PERSONALLY INSPECTED THE PROPERTY AND BUSINESS,

and looked into it most thoroughly. I was greatly impressed with the methodical way in which everything was conducted there. I looked through the books and saw that every information given was, so far as I could judge, correct; and then proceeded to have "the thing" thoroughly examined. Those employed were the firm of Barrow, Wade, Guthrie and Co., and Mr. Hooper, of the firm of Bewick, Moreing and Hooper, of San Francisco, and Bewick and Moreing, of London. Mr. Hooper spent over three weeks on the property, and subjected it to a most exhaustive examination, the results of which appeared in the prospectus. I can only say that I am more than gratified to find that the weekly returns we have had from the mines more than confirm what we were told. I think the result which has been cabled for the three months ending the last of July, showing a net profit of \$197,000, equal, at an exchange of \$4.85, to 40,618½, is a result of which

WE MAY JUSTLY FEEL PROUD.

It is very rarely indeed that at a statutory meeting it is possible for a board to be in the position we are to-day—able to declare a dividend of 1s. a share and carry forward close upon 12,000½. as the result of the first three months, more particularly when the first month's working was interfered with by the taking over of the property and the settlement of a great many minor details. I can only add that since the last day of July the returns have gone ahead, and from the assurances we have, backed by this telegram this morning, showing that there are valuable and extensive new developments taking place, the

FUTURE LOOKS EVEN BRIGHTER THAN THE PAST.

A SHAREHOLDER: I came here prepared to ask several questions, but I will defer them until the arrival of Mr. Graham. I am not antagonistic to your property—quite the contrary, but before I take (along with my friends) a further interest in it I want to know a little more about it. Up to the present moment, myself and my friends are more than satisfied, but I should like to address my questions to a man who is evidently an expert, and of these questions I will give the secretary due notice.

"ONLY A LAWYER."

Mr. SLAUGHTER: I am only in the unfortunate position of being a lawyer, and so the profits of this company concern you most. My interest on your behalf was to see that your titles were in proper order, and that your legal business was conducted by the best lawyers in New York. From my experience there I selected Mr. Beaman, of the firm of Evarts, Choate and Beaman, who stand *par excellence* first for capability and honesty, and the latter quality is equally if not more important than the latter. I did not go to see the mine, but what I did was to examine, with Mr. Beaman, the titles to the property, and to see they were in proper order, subsequently sending a report to the board in London on the subject.

A SHAREHOLDER: Is there any question about the title?
Mr. SLAUGHTER: Mr. Beaman tells me there is not. Our solicitors employed gentlemen in Denver also, who have given them most satisfactory assurances, and the whole matter has been gone into in a business-like way, just as if, had it been an English company, I hope I should have gone into it here.

THANKS.

A SHAREHOLDER: I propose a vote of thanks to the chairman and his co-directors, who, as far as I can see, have taken the most satisfactory steps to bring about the success of this company. I think you have also done wisely to arrange for the calling of a meeting of shareholders when Mr. Graham arrives.

The motion was seconded and carried unanimously, and with the brief response of the chairman, the proceedings closed.

THE RUSSELL MINES CO., LIMITED.

SUCCESS OF THE RE-CONSTRUCTION SCHEME ASSURED.

AN extraordinary general meeting of the shareholders was held at the Offices of the company, 2, Drapers' Gardens, on Tuesday, at which over 76,000 shares out of a total of 100,000 were represented, either in person or by proxy.

Mr. Thomas Stephens (chairman of the company) presided.

The SECRETARY (Mr. Edward Ashmead) having read the notice convening the meeting, the following special resolutions, passed at an extraordinary general meeting held on Aug. 10, were, on the motion of the CHAIRMAN, seconded by Mr. THOMAS HAMILTON, confirmed:—

1. "That it is desirable to re-construct the company, and that with a view thereto the company be wound up voluntarily, and that Mr. Edward Ashmead, of 2, Drapers' Gardens, E.C., be and he is hereby appointed liquidator for the purpose of such winding-up."
2. "That the said liquidator be and he is hereby authorised to consent to the registration of a new company, to be named the Russell Mines, Limited, with a memorandum and articles of association, which have already been prepared with the privity and approval of the directors of this company."
3. "That the draft agreement submitted to this meeting, and expressed to be made between this company and its liquidator of the one part, and the Russell Mines, Limited, of the other part, be and the same is hereby approved, and that the said liquidator be and he is hereby authorised, pursuant to section 161 of the Companies Act, 1862, to enter into an agreement with such new company (when incorporated) in the terms of the said draft, and to carry the same into effect with such (if any) modifications as he thinks expedient."

A vote of thanks to the chairman closed the meeting.

THE GUIANA GOLDFIELDS, LIMITED.

A COMPANY WHOSE ANTECEDENTS ARE LITTLE KNOWN, BUT WHOSE PROPERTY IS GREATLY EXTOLLED, WITH A POSSIBLE EYE TO THE SHARE MARKET—INVESTORS SHOULD WAIT AND WATCH.

AN ordinary general meeting of this company was held at Winchester House, Old Broad Street, on Wednesday, "to receive the directors' report, and to transact the ordinary business of the company."

Mr. William Sowerby, M.I.C.E.

(chairman of the company), presided.

Mr. EDWD. BLINKHORN (secretary) read the notice of meeting.

A ROSEATE VIEW OF THE POSITION.

The CHAIRMAN: Gentlemen, this is the first time the present board has had an opportunity of meeting the shareholders, as the management of the company's affairs has been in their hands for only four months. A very exhaustive report has been laid before you, showing that a thorough exploration of the property has been made, and that reefs of exceptional richness have been opened out. As is usual with companies entering on a comparatively unexplored field, great troubles have been met with and, I am happy to say, overcome, and thanks to the untiring energy of our engineer, Mr. W. Greville Wears, large tracts of land have been cleared, substantial dwellings erected, and a healthy mining camp formed. We trust you will endorse the strict policy of economy, which has been followed. No milling machinery has been sent to the property, as your directors felt the necessity of having a sufficient quantity of ore on the surface to pay for the whole of the machinery required, and leave a substantial surplus, before sinking the large sum required for that purpose. We have now ready for treatment about 7,000 tons of first-class ore, which we are informed will yield from 2 to 4 ozs. to the ton, and taking it at the lower figure, it will give us a sum sufficient to pay over 20 per cent. on the issued capital. I would next call your attention to the inexhaustible supply of alluvial, which is giving such excellent returns, although being worked on a small scale. The return for the first two weeks of August, 13,240½ of gold from 750 tons, is exceedingly pleasant news for the board to communicate to you. Having called your attention to these few points, I must ask your indulgence, gentlemen, on account of a severe cold, and with your permission, I will call upon the secretary to read the address of your board.

STATEMENT BY THE BOARD.

The SECRETARY then read the following report:—You will have been able from the report to gather something as to the present position of the company's affairs, but it will hardly, perhaps, have conveyed to your minds the anxious work which has devolved upon all concerned in bringing matters to the point at which we now stand. No practical purpose would be served by indulging in recrimination with reference to the organisation and home management of the company; whatever the failings in those respects may have been, the developments effected during that time had, at least, the important result of proving that we have a mine, the value of which in the future, with proper management, is undoubted. Our acknowledgments are, however, due to those from whom the present directors took over the management of the company's business, and we fully recognise the spirit in which the previous directors assisted in a complete re-organisation by retiring when the proper moment arrived to make way for the new board. We meet you, then, to-day with the reins firmly in hand, ready, as we fully trust and believe, to go forward on a successful career.

FINANCES.

We regret that at this, our first annual general meeting, we are unable to lay before you any statement of accounts for the financial year ended Feb. 1 last. We cannot do so, for the simple reason that we, *i.e.*, the present administration, took over the business of the company exactly at the end of the financial year, and we could not obtain from our predecessors any accounts whatever, home or local, detailed or otherwise, upon which accounts could be based. We received the account books perfectly blank; yet the company had been in operation in London and French Guiana since Mar., 1890, and it was evident that to have effected the developments which were reported to us by independent authorities at the time we took over the enterprise, a considerable sum must have been spent. What we have been able to ascertain of the expenditure of the company up to Mar. 31 last is as follows:—That towards the preliminary and formation of the company the sum of 500½ was spent. Then we have general expenses—printing, stationary, telegrams, postage, engineers' fees, office expenses, petty cash, &c. Upon the local development of the mine, however, about 4,000½ had been spent.

Transfer and local registration expenses were paid. The alluvial deposits were thoroughly prospected, the development of the quartz reef commenced, habitations for manager and staff were constructed, boats were purchased for transport of our supplies from the coast to the mines, agency expenses and mining dues also paid. The total expenditure together being about 7,500*l*. Our expenditure since Mar. 31 will, of course, appear in our accounts for the current year. The original property acquired by the company comprised about 6,000 acres — we have since acquired about 18,750 acres — and the consideration paid for these various properties is 102,500*l*., which was payable partly in cash and part in shares, or entirely in shares at the option of the directors. The various vendors, however, unanimously preferred payment entirely in shares, and in the case of the Mines Exploration Syndicate (a concern whose principal members are some well known Continental financiers), they have, on certain terms and conditions, agreed to relieve the company of any anxiety as to working capital for the near future, and, further, to find us all machinery, &c., we may require. This evidences great confidence in the future of the mines, but I must also point out to you that unless such a proposal had been made to us we should shortly have been obliged to come to a standstill from want of funds, for the reason that, although we have unissued shares in reserve, we are not allowed to issue them at a discount, and, unfortunately, for the present our shares do not stand at their true value in the market. Moreover, we who have had the means of information, and have assured ourselves of the *bonâ-fides* of the properties, and are convinced that their progress must entitle the shares of the company to a high value, were unwilling to sacrifice them at the present low price.

PRESENT OPERATIONS.

At the end of last year the company's engineer was obliged to return home, on account of his health, and the mines were left in charge of the agents at Cayenne, who appointed a native gentleman to manage the property. Very little work was done between Dec. and Apl., when we took over the administration of the company. We then made arrangements with the Mines Exploration Syndicate for the re-starting of operations at the mines, through their agents in French Guiana. A proper manager was locally appointed, and with 12 men operations were commenced on our account in May. Attention has principally been given to the alluvial, it being capable of yielding profitable returns on the outlay. The results have been cabled to us from time to time, and are remarkable to our mine. The number of men was increased, and a few quartz miners also employed, and the work on the reef proceeded with. Altogether, the results of operations have been most successful, and the profits on the alluvial have paid all the local expenses of the company since Apl. The agents have now re-engaged the services of Mr. Joseph Dick (who left the mines at the same time as the engineer) as manager, and have decided to increase the number of men so as to increase the returns. Mr. Dick arrived at the mines on July 20, and by the French mail we received from him yesterday a report, under date July 31, which we consider very encouraging. We are shortly sending out a general manager, who will conduct the quartz operations. Mr. Dick will attend to the alluvial department. To conclude our remarks upon the financial position of the company, I need only say that the working capital we require is guaranteed; our mines are making profits enough to assist in defraying development expenses, and we, therefore, have no necessity to sacrifice and scatter our shares over the market at any ridiculous low price. We have altogether issued about 122,000 shares, and our present financial arrangements may necessitate the issue at some future time of 25,000 further shares, but we have every reason to expect to attain a dividend-paying position before having issued more than 150,000 shares. At the present time we are happy to say that we have no liabilities that cannot be met, and we consider our financial prospects thoroughly satisfactory.

DEVELOPMENTS.

As you may have seen, the developments on our main reef were commenced and carried on for a long time by Mr. W. Greville Wears (who I believe is present, but in too feeble health to address you), and we are much indebted otherwise to this gentleman for a good deal of advice and information which has enabled us to achieve the results we have. Mr. Wears is an engineer of some distinction, who seems to have faithfully served some of the leading firms in this city and the Continent connected with mining, and if to-day we are in touch and communication with financiers and firms of great influence who are prepared in the event of necessity to come to our assistance, it is due to their confidence in his recommendations. The reef is of a highly promising appearance, and assays of the ore gave an average considerably over 2 ozs. to the ton. The ore body is from 4 to 6 ft. wide, and is of great strength and solidity. There are several thousand tons of ore broken and ready for crushing. Those who desire may examine the specimens in the room recently received; it will be noticed that the ore carries a quantity of visible gold. These specimens will assay hundreds of ounces to the ton, and must not be taken as in any way average samples; they are interesting as indicating the rich character of the quartz. We have, in addition to the original property, acquired several others in the neighbourhood of "Terre Promise," containing, as the report very truthfully puts it, practically unlimited quantities of alluvial gravel. The area covered by our properties comprises about 25,000 acres, and the opinion of experts estimate that the average yield of the gravel is worth 40*l*. per acre. We have, therefore, a value approaching, if not exceeding, one million pounds sterling. It is proposed to erect crushing machinery to treat about 3½ tons of ore per day, or working 20 days monthly, 720 tons. In the gravel concessions works will be established for treating 200 tons per day, and the combined operations, it is anticipated, will produce to us a profit of 74,000*l*. per annum. It may be asked—but how can you hope to properly work so large a property? We do not, but are influenced in their acquisition by our views of the future. The directors consider that everything points to the certainty that in the future, and not distant future either, the Guianas will be numbered amongst the largest gold producing countries in the world. The eminent French explorer, Coudreau, has recently returned from the interior of the country in French Guiana with most important and conclusive evidence of its richness in this respect, and much attention is being given to the subject in Paris. Another consideration which has influenced us in the acquisition of

these properties beyond our requirements is the fact that the country is densely wooded, much of the timber is most valuable, and should prove a fruitful source of income to the company, while adding to rather than diminishing its value for gold operations should we in the future dispose of portions of our properties. Samples of the woods are in the room, the one well known as "greenheart," the other as "ballata," specially suitable for building purposes.

MEANS OF COMMUNICATION.

I come now to a most important point, viz., the means of communication, because without easy and cheap communication in such a country the most valuable mine becomes in reality worthless. Our position in that respect is, I believe, everything that could be desired. The River Kourou runs not only up to but through our properties, placing us in easy water communication with the coast, and providing us also in the cheapest manner with the means of carrying on our quartz mining and washing operations. Too much stress cannot be laid upon this question of cheap and easy communication; it goes, as I have intimated, to the very root of the question of success or failure. We have abundant natural facilities and means for the erection of all necessary buildings, timbering our mine, providing fuel, &c., and in addition to these advantages there is the important element of cheap labour in our favour. The climate on the coast line, it cannot be denied, is anything but healthy, but as you get inland the land becomes hilly and the climate more healthy, and at the distance of 50 miles from the coast where our properties lie the conditions of life are, for a tropical climate, reasonably good. In conclusion, we do not believe that any observations that we may have made will sufficiently convey to your minds the valuable nature of your properties, and, guided and assisted as we have been by expert opinions, we have every justification for anticipating the results which we have led you to expect. We are doing all that we can to forward this object. All we ask is your patience and we believe you will find, to quote the opinion of one of the experts who has examined our mines, that this economical and systematic exploration will assuredly lead to a complete and profitable success.

A DIRECTOR CRIES "DITTO."

Mr. WARNER: Gentlemen, I beg to second the adoption of the report. With the island of Trinidad, the most southerly of the British West Indies, I am thoroughly acquainted, and although I have never been to Cayenne, which is a couple of days' sail from Trinidad, I have visited Demerara and part of the coast of South America. On the question of communications and transport, the maps and charts of the coast issued by the Admiralty show that the depth of water on the bar of the Kourou River at lowest is 13 ft., and at highest 23. This is of the very greatest importance, as it means that there is not the slightest difficulty for a large schooner fully laden to cross the bar at all states of the tide, and to proceed to Kourou. From this village to the mines the distance by river is 50 miles, and as it is navigable for steam launches and barges, the great question of cheap communication is solved. This water-way means that the cost of transport of supplies and machinery from Cayenne to the mines should not exceed 10*s*. to 15*s*. a ton. One of the leading gold mining engineers of world-wide repute, for many years manager of the celebrated El Callao Mine, remarked: "A question in connection with gold mining, of almost equal importance to the amount of gold per ton of quartz, is the cost of transport. When we come to consider that transport to the gold mines of Venezuela cost from 25*l*. to 50*l*. a ton, I think that we are to be congratulated for having secured a property possessing the great advantages that the Guiana Goldfields do. There can be but little doubt that the timber on the property would alone be a source of revenue, as balata, greenheart, and other valuable woods are found in that part of the world. Samples of the above mentioned wood are on the table. The former, as you are perhaps aware, is most suitable for railway sleepers, for which there is a large demand in Trinidad, British Guiana, and Barbados, and that too at a price which should give the company a good profit. Greenheart is used for fender piles and in other marine work, and commands a high price in the West Indies, it being the only wood that will withstand the attack of the *torredonealis*. In addition to the above mentioned there should be a large amount of wood that would be suitable for furniture making, ornamental and building purposes. Wood for fuel for steam launches, &c., can be obtained in abundance. It would, I think, be advisable to send out a steam saw-mill when mining operations on a large scale are commenced. I feel assured that we have secured in the Guiana Goldfields, properties which are destined to have a brilliant future.

IN WHOSE HANDS WERE THEY?

Mr. G. L. BOKENHAN: There is a serious matter about this matter of accounts. When we think of the hands in which this company was placed before, we must not be surprised at the state of them at all. It is fortunate for the shareholders that the vendors managed in proper time to get the concern out of such hands. The financial year commenced on Mar. 1, and I notice that our secretary is an incorporated accountant, so that there is no doubt now that we shall have our accounts kept in proper order. Can you arrange to hold half-yearly meetings? and we should also like to have fortnightly reports from the mines if it be possible. Will the directors consider these matters?

The CHAIRMAN: The directors will be glad to have half-yearly meetings, and they will be able to issue fortnightly reports. The report was unanimously adopted.

THE SECRETARY MOVES THE RE-ELECTION OF HIS BOARD!

The SECRETARY moved the re-election of the directors retiring—Mr. William Sowerby, Mr. John W. Taylor, Mr. Raymond Warner, and Mr. T. H. A. Tromp. Mr. Thompson is unable to offer himself for re-election, owing to other engagements.

Mr. TURNER seconded the motion, which was carried unanimously.

WAS NOTICE GIVEN OF THIS MOTION?

Mr. NICHOLSON proposed the election of Major Creagh as a director—"a man of unquestionable character and ability, by whose presence the board will be greatly strengthened."

Mr. HAMILTON seconded the motion, which was carried.

SOLICITOR PROPOSES THE AUDITOR'S RE-ELECTION.

The re-election of the auditor, Mr. Ernest H. Collins, at a remuneration of 25 guineas, was proposed from the board's side of the table.

Mr. WARNER seconded the motion, which was carried.

Mr. NICHOLSON proposed a vote of thanks to the directors, whose labours, he said, must have been great. The vendors are anxious to take the purchase-money in shares, and the directors will have to wait for their fees until the enterprise is a success. I am glad to see that the legal business is in such experienced hands as those of Messrs. Powell and Burt, and the auditor is a gentleman of first-class standing. (Hear, hear.) We cannot do better than give a hearty vote of thanks to the directors.

Mr. GOWER seconded the motion, which was carried.

A PARTING BLESSING FROM THE CHAIRMAN.

The CHAIRMAN: I can only say that we have given the matter our unremitting attention during the time we have been directors. Meeting after meeting has been held, and every subject has been fully considered. With regard to the value of the property which belongs to this company, I can speak from some experience as an engineer, and as having been acquainted with many goldfields in different parts of the world, and considering the vast extent of the property as indicated by the explorations, I can assure the shareholders that I know of no country in the world where such promises are held out by any gold mines with which I am acquainted.

THE GIE APPANTOO GOLD MINING CO., LIMITED.

SHAREHOLDERS AUTHORISE THE DIRECTORS TO BORROW £10,000—A RICH PROPERTY WITH A SMALL CAPITAL.

AN extraordinary general meeting of the Gie Appantoo Gold Mining Co., Limited, was held at the Offices of the company, 28, Threadneedle Street, E.C., on Thursday, Aug. 27, for the purpose of considering, and, if thought fit, passing the following resolution:—

"That the directors be and they are hereby authorised to borrow, for the purposes of the company, any sum or sums not exceeding in the aggregate 10,000l. in addition to the sum of 30,000l. already authorised to be borrowed by the 53rd article of association, and by the resolution of the company passed Dec. 19, 1890."

Mr. Samuel Cawston

(chairman of the company) presided.

Mr. HENRY D. RISBEE (secretary) read the notice convening the meeting.

THE HISTORY OF THE PROPERTY.

The CHAIRMAN: Gentlemen, I rise to propose the resolution which has been read to you. Our business this afternoon is not likely to detain us long, though it is very important for our mine. We have actually borrowed the amount of money we are entitled to do by the articles of association, and, therefore, we find it necessary to take powers to borrow 10,000l. more. For the information of those of you who do not know much about the property, I may say that the Gie Appantoo Gold Mining Co. was started in the year 1887, and has been working since. Last year we bought another property adjoining it, called Prestea. Both these properties are situated about 100 miles up the River Ancobra. We have now a capital of 110,000l., which is divided as follows:—We have 80,000l. share capital issued; besides this we have debentures issued 15,950l., and other small loans 13,970l., making a total of outstanding liabilities of 29,920l. Our object this afternoon is to take further powers to make this amount of nearly 30,000l. into 40,000l. We have been spending money, and, unfortunately, during the past year we have not had sufficient gold sent over to meet our expenses. Our expenses at the present time are about 1,800l. a month, and the amount of gold we received last month was 335 ozs., and the previous month 362 ozs. That result is produced from 12 or 13 stamps, which we have in working order. The Gie Appantoo Mine has been closed for some months, and sinking operations are being carried on. The prospects of the sinking, however, are favourable.

THE LATEST NEWS FROM THE MINES.

I also have a letter here from our underground manager, Mr. W. S. Haig, who has just arrived at the mine. Mr. Haig was, for seven years, mineral surveyor in the employ of the New Zealand Government. In this letter he says:—

"Suffice it to say, I am agreeably disappointed, both in the climate and in the mine, and believe the latter to be the making of a very rich mine. It is one of the best lodes I have ever seen. The Prestea Mine is the only one crushing. The stone looks well, but better grinding appliances are wanted. I feel sure a great deal of gold is lost."

The chairman explained that machinery had been sent out to remedy these defects. He then read the following extracts from a letter addressed to Messrs. Fraser and Chalmers, from an amalgamator recommended to the company by that firm:—

"It is now twelve months since I came out here at your instigation. I managed to beat the record at the Prestea Mine, where I went first. I was then removed to the Gie Appantoo Mine, where I did well until the rock ran poor. I have since then been back at Prestea, where we have done particularly well (considering the very old mill and appliances), June month's return being

361 OZS. FOR 15 DAYS,

the largest return yet. This month, if our machinery holds good, our returns (as the mill is in better order than it ever has been) should show much better. Your 30-head mill is now, I am glad to say, with the exception of a very few parts, up at our landing stage (about a mile from the mine), and we are hoping to see the erection proceed, when, with the rich lode we have here (at least four years stoping ground being now in sight) this company should make its name and money." The chairman concluded his remarks by moving the resolution as above.

In answer to a question,

The CHAIRMAN said: There are 24 stamps at Prestea which were taken over from the old company, and until the machinery which has been taken by the new manager arrives to replace the defective

parts, only 12 to 18 stamps can be worked; but we are informed that when this is done the whole of the 24 stamps will be in first-rate order. The Gie Appantoo 20 stamps have been stopped on account of sinking another hundred feet. It is expected they will be re-started the end of Sept. Nearly the whole of the new 30-stamp mill, purchased from Messrs. Fraser and Chalmers, is within a mile of the mine. It is anticipated to have the whole 74 stamps in working order early next year.

Mr. E. T. MCCARTHY, in seconding the resolution, said: The first thing we had to do when we took the property was to convince others that we had a mine, that is, to convince those who had not seen the mine that it really did exist. When I went out there I found we had got a powerful and

MOST MAGNIFICENT REEF,

one of the best reefs I have ever seen. This has been my opinion all along, and it is confirmed to-day by Mr. Haig's letter. After being convinced of that we went to work little by little, and gradually built the thing up. The whole difficulty has been in the management of the concern. We are now all fully convinced we have got a very good reef, and the more we open it the better it becomes. What little mill returns we get confirm that opinion. We are not only convinced of the mine, however, but we have got for the first time a very good staff together, and I have not the least doubt now that if they continue to work well, as they seem to have started, we shall shortly have good returns.

A REEF 4 MILES LONG.

The reef is about 4 miles long, and has never been less than 6 ft. wide, and is easy to work. The deeper we go the better it seems to get.

A SHAREHOLDER said there was no question as to the value of these properties. Five or six years ago some ore had been sent home from the Prestea property, which had been treated in Swansea, with a result which astonished everybody.

The motion was then put to the meeting, and carried unanimously.

A SHAREHOLDER said they did not get much information in the newspapers. The general public knew nothing about the company.

The CHAIRMAN: We have not had anything particular to say about it up to the present.

A SHAREHOLDER suggested they should publish regular monthly crushings.

The CHAIRMAN said now that a new manager had been appointed they would no doubt receive news from the mine more regularly.

The proceedings closed with the usual vote of thanks to the chairman.

WHEAL UNY.

THE MINE GREATLY IMPROVED IN ITS LOWEST LEVELS—PROSPECTS OF INCREASED RETURNS—LIABILITIES CLEARED OFF.

A QUARTERLY MEETING of this company was held at the Office in Gracechurch Buildings, yesterday.

Mr. Arthur Strauss

presided.

Mr. G. J. NICHOLS read the notice of meeting and also the minutes of the previous one.

Capt. WHITE read his report.

AGENTS' REPORT.

Since our last general meeting on May 8, the sinking of Hind's engine shaft has been very little; now down 4 fms. below the 244-fm. level. In the last few feet sinking we found the lode getting poor, and until satisfied with the cross-cut in the 244 south we suspended sinking. Now, when ready, we shall sink on the south part of lode, which we feel sure to be the main part of it. Fearing the elvan we met with about 5 fms. below the 230 had split the lode, we started a cross-cut south at the 244, about 5 fms. west of shaft. In 3 fms. driving we cut the lode, and have since cut into it 17 ft., and opened out east and west 5 fms. The lode yet seen is of a very healthy character, and has every appearance of continuing; worth for width cut into 40l. per fm. Lode still to the south of us. We intend cutting further south in a few days. The 230 end west driving by six men at 7l. 10s. per fm., although poor at present, should be driven with full speed to reach the run of tin ground now working on at the 203, and has turned out well in the levels above, when reached will give us a good section of stoping ground over 20 fms. of back, now producing stamping work. The 230 end east is driven by four men, at 5l. 10s. per fm. This is getting very near in line with the 203. If productive ground is met with here we have also good height for stoping. The 203 east is driving by four men, at 6l. 10s. per fm.; worth for tin 13l. per fm. The 203 end west by six men, at 9l. per fm.; worth for tin 18l. per fm. Here we are opening out fair stoping ground. No. 1 stope in back of 203 west by six men, at 5s. per ton; worth 15l. per fm. No. 2 stope in back of 203 west by 10 men, at 6s. per ton; worth 18l. per fm. We have 27 tribute pitches at work, tributes varying from 11s. to 13s. 4d. in the £; standard for tin, 50l. Our tribute department has not turned out as well in the past quarter as we anticipated. Our returns for the quarter would have shown a little increase but for the failing of a scarf in the main rod at 130 on Monday, and the severe weather we have had, and our tin floors are so exposed it has somewhat interfered with the cleaning of our tin, which will come on for another quarter. Should the lode continue at the 244, which we have every confidence in, and the 203 east and west, we shall increase our returns in the coming quarter. On Monday morning last a scarf in our main rod at the 130 failed, for which we had four new plates on the ground; instead of patching the old ones we put in the new and made it secure. The engine is now working well, and all the machinery on the mine.—J. WHITE, D. H. WILLIAMS.

VIEWS OF THE AGENT.

Capt. WHITE in supplementing his report said: The lode in the 244 is fully worth 40l. per fm.—a statement I wish to be inserted in the report. The last sample we had on Monday showed equally as good as any we have yet had. The western end in fact, is showing better stones of tin than we have yet seen. The face of the cross-cut is still equally good for tin, but at present we do not know the width

of the lode. In Wheal Basset they had at the 193 (which is about the depth of our 244), a lode from 6 to 8 fms. wide, and one of the tributaries who cut that lode in Wheal Basset is working in Wheal Uny to-day, and I asked him after he had seen the new lode, what his opinion of it was. He said: "It is exactly the same sort of stuff as we had in the 193 in Wheal Basset." (Hear, hear.)

Mr. WAGSTAFF: Is this the Basset lode?

Capt. WHITE: Yes; the great flat lode, but I think what we shall find in cross-cutting further south is the junction of North Buller lode coming in on our flat lode, and helping to make this tin. We suspended the cross-cut to open out east and west, so as to tell you a little about the lode-to-day. In a few days we shall re-start the cross-cut, and every day as we proceed news will be sent to the office. We have seen the lode 17 ft., and the last sample from the south looked very well, and it is streaming with water.

AVERAGE OF THE PRODUCE.

The CHAIRMAN: How many pounds to the ton?

Capt. WHITE: The whole average would be about 50 lbs.

The CHAIRMAN: What is the average of the entire mine?

Capt. WHITE: About 36 lbs. per ton.

The CHAIRMAN: When do you expect to commence stoping?

Capt. WHITE: We shall have to do certain work first, and then we propose to sink the shaft as soon as possible, and carry it down in the lode. We do not expect to commence sinking for some weeks, but we shall do that and stope as soon as possible.

The CHAIRMAN: Is there tin in the roof where you are driving?

Capt. WHITE: Yes; the reason we are not stoping is because we have not sufficient room for the men. You find remarks made about miners, especially in rich mines having too many men on small patches of lode. Now, we must have fair space for the men to work, and as soon as we have this we shall employ additional stoping power.

Mr. HODGKINSON: When you drove the cross-cut, did you strike on the top of a bunch of tin, or was the tin above you?

Capt. WHITE: The tin was above us. I think the discovery referred to in my report a grand one, and Capt. Hamley, who knows the mine, says he has not seen anything like it in Uny before. He was there privately inspecting for certain persons, to whom, he tells me, he has given a most favourable report. Looking at the 203 east and west and the bottom of the mine

I THINK THE PROSPECTS ARE VERY FAIR.

We can put more men in the 203 west when stoping ground is sufficiently laid open.

Mr. WAGSTAFF: How is the pitwork?

Capt. WHITE: The weakest point failed last Monday, and was rectified as stated in the report. I questioned the pitman last week, who said he knows nothing in the mine that is weak now. I should remark that the frames and bubbles are very much exposed to the weather and limit our returns of tin. Now that the mine is opening up better we shall endeavour to cover them in as we go on.

HUMANITY.

The CHAIRMAN: I think, in the interests of the workpeople, and even in those of the mine, they should be covered in. (Cheers.) What will be the probable cost?

Capt. WHITE: About 200%, but the money would not be required in a month or even in a quarter. I remember discussing this matter with Mr. Strauss when he was on the ground, and he said "If the committee object to incurring this expenditure I will pay for it myself." (Cheers.)

ACCOUNTS.

The CHAIRMAN: The accounts are before you, and comparing them with the previous ones presented on Apl. 11, you will find that the labour costs and merchants' bills are about the same. The quantity of tin sold is $1\frac{1}{2}$ tons less than it was the previous six weeks. The loss made during the six weeks has been 3 460Z. 1s. 5d., which, together with the balance carried forward from last time, makes a total of 5,376Z. 11s. The committee have been very zealous in trying to get in the arrears of call, and to a certain extent have been successful. The arrears, which on Apl. 11 were 2,626Z. have now been reduced (after adding the last call made) to 1,776Z., and we believe that the great bulk of these arrears are perfectly good and recoverable. We wrote off 1,175Z. for such calls as in the opinion of the committee could not be recovered, and I hope next time we shall be able to put a better statement before you. Capt. White has told you that the mine is now in a fair way to improve, and therefore it is reasonable to suppose that the next account will be a much better one than this. (Cheers.)

In reply to questions, Capt. WHITE stated that they sampled the last quarter 52 tons 15 cwt. 2 qrs. 1 lb. There was a large quantity of tin on the floors which would come into the next accounts. They had had fearful weather in Cornwall for the last eight days, and the influenza was very prevalent.

The CHAIRMAN proposed "That the accounts be allowed and passed, printed and circulated amongst the shareholders, together with the agents' report and proceedings of this meeting."

Mr. HODGKINSON seconded the motion, which was carried unanimously.

LIABILITIES FACED BY SHAREHOLDERS.

The CHAIRMAN: During the last six or 12 months the committee have striven to make the accounts as clear as possible, and to see that there are no liabilities of which the shareholders are unaware, and that the mine pays its way as it goes on, which they think the right principle to act upon. The loss is exceptionally heavy this time, partly through the reduced quantity of tin produced; partly through a certain amount of loss, which was carried forward from last account, and partly through the 1,175Z. written off to suspense account. We have 9,457 shares out of our original 12,000, and the committee propose a call of 10s. per share, payable to the Consolidated Bank of Cornwall on or before Sept. 28, with the usual discount. That will produce about 4,600Z., which would still leave a balance of 776Z. to be carried to the debit of the account.

Mr. WAGSTAFF, in mitigation of the call, pointed to the forfeited shares as an asset.

A SHAREHOLDER remarked that purchasers might come in after the meeting, particularly when the accounts were closely paid up.

Mr. ROBERTS coincided with the view of clearing off all debts, and the CHAIRMAN added that he did not like to be connected with any mine which did not pay its way as it went on. He sincerely hoped as a large shareholder they had a good future before them.

The motion was carried unanimously.

REPENTANT RELINQUISHERS.

The CHAIRMAN: The committee have received from two shareholders, who have relinquished their shares, an application that they might be restored—they paying the whole of the calls in arrears. The committee in the exercise of their discretion, had agreed to reinstate them, and now asked for power to deal with forfeited and relinquished shares.

Mr. CRICK proposed, Mr. WAGSTAFF seconded, and it was carried unanimously, "That the committee be given power, as regards restoration, to deal with relinquished and forfeited shares on any terms they think right."

It was arranged that the next meeting should be held in London, and the shareholders desired that their expressions of sympathy should be conveyed to Mr. Parry, the secretary, who is unfortunately ill, and also their wishes for his speedy and quick recovery.

The meeting did not break up until Mr. Strauss had been cordially thanked for presiding.

TIPPERARY GOLD MINING CO., LIMITED.

THE COMPANY WILL BIDE ITS TIME.

A MEETING of this company was held on Tuesday at the Offices, Nos. 3 and 5, Queen Street, Cheapside.

Mr. Samuel Jennings

presided.

The SECRETARY read the notice of meeting.

GLENROCK SHAREHOLDERS MISS A CHANCE.

The CHAIRMAN: Gentlemen, we have called this meeting, because the law compels us to do so within four months of the date of registration of the company. I have very little to say, except that the invitation which was issued to the shareholders of the Glenrock Co. to subscribe the necessary capital (a very small amount, as a minimum of 4,000Z. only was wanted) was not responded to so readily as we had hoped. This is not to be wondered at, considering the state of affairs we have had on the mining market during the last six months, but the efforts which the board of the Glenrock Co. made to render a real service to their shareholders apparently were not appreciated, and as a consequence the directors determined to return all deposits paid for shares to the applicants. Consequently, the only shareholders at the present moment are the signatories to the articles of association, and we are here—five out of seven. It is very desirable that this company should continue to maintain its organisation, because it still remains possible that better times are at hand, and that this, the next door neighbour to the Premier Mine of New Zealand, may yet come our way again. If better times do come we shall be then ready at a moment's notice to take the property up without having all the trouble and expense of forming a new company. At any rate it gives us at least 12 months within which to wait on what may happen. I still hope that we may find ourselves the happy owners of this very good property. If we are, then our policy to-day will have been justified. There is no necessity for any resolution. We have simply to register the number of shareholders at Somerset House, and the business is done.

Mr. PEARSON said there was one resolution he wished to propose, and that was a cordial vote of thanks to the chairman.

Mr. OWEN seconded the motion, and the meeting dispersed.

THE CANTABRIAN COPPER MINES, LIMITED.

REPORT OF MR. F. FOWLER, C.E.

Aug. 26.—As I informed you in a previous circular, Mr. Francis Fowler, M. Inst. C.E., the company's consulting engineer, was proceeding to Spain to examine and report as to the present position, future prospects, and working of the company's mines there. He has recently returned after making his inspection, and below I beg to hand you his report, which I trust you will consider satisfactory.—S. BANNING, Secretary.

Aug. 7.—I have the honour to report to you the result of my visit to your mines, from which I have just returned. On the surface I found considerable improvement since my last visit. The old engine had been taken down, and in its place a very fine 40 h.p. engine has been erected, with new boilers, 8-in. pumping gear and hoisting apparatus, &c., complete. This is enclosed in a good substantial stone building, which has also since been erected. The pumping and hoisting apparatus at the Hastings' engine shaft is in excellent working order, and although the engine had only started pumping on June 29 last, and my visit was on July 29, the shaft was clear of water which enabled me to descend to the bottom of the same and examine the workings. Not only were they accessible, but the result of working this powerful engine was, much to my surprise, exhibited in the drainage of the Constantia shaft also, which I attribute to this cause, a matter of great importance, as at all my former visits the water was actually overrunning this shaft at surface, preventing any exploration of the workings, and from all accounts on the spot, and my examination of the waste materials, there is good reason to expect very favourable discoveries on these workings being cleared, which has hitherto been impracticable. Besides these improvements, the workshops have been re-modelled and repaired, and the large stone dwelling house for officials, which was formerly in a wretched condition, has been made a comfortable residence, and well furnished for your employees. When I formerly visited the property, with much difficulty I was enabled to reach the bottom of the main engine shaft. There was then a good show of mineral, but on this occasion the waste having been in a great measure extracted and the water out, I was enabled to make a thorough exploration, and I was well pleased with the result. The lode is evidently a true fissure vein, within well defined walls, about 3 ft. in width, containing several veins of fine copper ore, in all now showing fully 6 ins. in width of, I should estimate, 25 per cent. ore, and from the development already made I

have every confidence that this show will much improve in depth. At the present moment we may fairly consider the mine to have reached its turning point, and will more than pay its expenses from this time, and in a few months make good returns to the shareholders. By working two shifts and driving on the bottom level I expect a production of $1\frac{1}{2}$ tons to the fm., the same in sinking on the winze, and practically the same from the stopes; calculating on driving 4 fms. a month on each will give 18 tons per month, and say 2 tons from the various upper levels, in all 20 tons, with a value of 25 per cent. copper. This estimate can only be increased by the main shaft being first straightened and sunk an additional 25 metres below the present bottom. This, with the ladder ways and the cross-cut, will in all take some four months to complete, when the estimated output should be largely increased. The shaft is now down 25 metres below adit and 160 ft. from surface. Your engine is powerful enough to enable you to sink the shaft to a depth of from 450 ft. to 500 ft. After going carefully through all the workings both above and below, I directed your manager to at once proceed to extract the ore from the drifts at bottom level, sinking a winze upon the same, and to employ his energies more particularly in profitable work whilst exploring the ground, also to at once clear out the Constantia shafts and workings with a view to settling the question regarding this promising ground, which I hope will be finished in a month or six weeks' time, and there is good reason for expecting a profitable show of ore being then exposed, which will much add to the mines' capabilities, and on the whole we may fairly look forward to the time being now near for the redemption of the expectations held out in the former reports.—F. FOWLER, M. Inst. C.E.

THE NEW GUSTON CO., LIMITED.

A PROPERTY BOUGHT.

ELNORA CLAIM.—The directors have pleasure in stating that they have just purchased for the sum of \$40,000 the Elnora Patented Mining Claim, adjoining and parallel to the Guston claim on the west side. Mr. Harvey considers this a most important and valuable acquisition, both for its mineral prospects and surface value.—B. MCNEILL, Secretary.

YANKEE GIRL SILVER MINES, LIMITED.

A SATISFACTORY EXPLANATION.

A CABLE has been received from Mr. Harvey to the following effect:—"To Aug. 15 shipped 250 tons; estimated value, 2,066l. The reason for not shipping more high-grade ore is that the Robinson shaft is being repaired; repairs have also had to be made to the timbers in the principal stopes Yankee Girl. It will take to the end of Aug. month before the necessary works can be effected.—B. MCNEILL, Secretary.

AMERICAN BELLE MINES, LIMITED.

PROGRESS REPORT.

CAPT. HARVEY reports as follows:—National Belle Mine.—No. 2 level—North ore body—Winze: The winze referred to in my last as being sunk 12 ft. from the drift driven west 28 ft. has been deepened 4 ft. through decomposed ore. Near the top of this winze, in preparing to put in timbers, the men discovered a cavern in the ore body, 40 ft. long by 20 ft. wide and 10 ft. high. At this zone there is evidently a transition from hard to a soft or decomposed ore. No. 3 level—North ore body.—I am not yet satisfied that we have the heart of the ore body, or have determined its size. To the present the ore discovered is of a decomposed nature in the various prospects drifts, excepting the drift 117 ft. from shaft station. The latter ore is a continuation in depth, but a change from iron to galena has occurred in the body of iron pyrites seen in No. 2 level. I consider it necessary to continue sinking the winze from No. 2 level, it being of material assistance to us in our work at No. 3 level. Silver Bell Mine.—No. 1 drift or adit level—South drift—No. 1 stope: Length of stope, 80 ft. North portion of stope, height over back of level, for 40 ft. in length, 12 ft. South part of stope for 40 ft. long, height 7 ft. Width of ore 3 ft. in the north portion of stope for 8 ft. in length. South portion of stope, width of ore 4 ft. for 12 ft. in length; value from 20 to 60 ozs. silver per ton. No. 6 level—South-east drift: Operations have not been resumed at this point. No. 7 level—No. 1 stope: Height of stope, 54 ft.; length, 83 ft. Width of ore in the north-west portion of stope 7 ft. for 20 ft. in length. South-east portion of stope, width of ore 8 ft. for 18 ft. in length. Value of ore from 20 to 70 ozs. silver per ton. No. 8 level—South drift: Operations have not yet been resumed here. South drift—No. 1 stope: Height of stope, 34 ft.; length, 26 ft.; width of ore, 4 ft. for 12 ft. in length; value, from 18 to 45 ozs. silver per ton. South drift—No. 2 stope: In consequence of not being able to keep this point clear of ore and waste, operations have had to be suspended *pro tem*. There are about 70 tons of ore broken ready for hoisting when opportunity offers. Shaft: Shaft sunk since July 24, 14 ft.; total depth below point for No. 10 station, 10 ft. Having experienced a great amount of trouble with the pumps I have decided not to make the sump any deeper, but at once to commence preparing for putting in the cage-road. Surface: Ore house grading: We have nearly completed grading for new ore house. Ore house railway track: The grading for ore house track is completed. The railway people are now putting down ties and rails. New ore house: We have three carpenters framing timbers for new ore house.—B. MCNEILL, Secretary.

PRINCE OF WALES (Aug. 26).—At the 180-fm. level the men are driving—both east and west—by the side of the lode, which we purpose taking down as soon as convenient, and ascertain its size and value. In the 166 west we are also driving by the lode, which, as far as can be seen, looks well. When last taken down was worth 16l. per fm. In the cross-cut south at the 166 there is no change to notice since last reported.—S. ROBERTS, J. PROWSE.

THE CHIAPAS MINING CO., LIMITED.

CHANGES IN THE MANAGEMENT LEAD TO A MORE VIGOROUS PROSECUTION OF THE MINE.

I AM directed to place before you the following information regarding the affairs of the company, and the progress which has been made at the mine since the directors' last report of Dec. 19, 1890. As you have already been informed, the offices of the company have been changed from 10, St. Helen's Place to those of Messrs. R. J. and Wm. Frecheville, 33, Broad Street Avenue, which change involved a change of secretary also. At the latter address the business of the company has been conducted since July 1. Mr. A. C. Boyd, of Dukinfield, has resigned his seat on the board owing to the distance of his place of residence from London, and the vacancy caused by his retirement has been filled by Mr. Wm. Frecheville, the engineer who originally examined and reported on the property, and on whose report the property was bought. The office in Mexico City has been closed, and the mine has been made the head office of the company in Mexico. Mr. J. G. Jebb, one of the managing directors in Mexico, having returned to England, has resigned his post. Saw mill: A saw mill engine and boiler purchased from Messrs. Fraser and Chalmers, have been erected near the mine, and have been at work for some little time, and the timber for the concentrating mill was, at the date of the last letters, being cut out and framed. Crushing and concentrating mill: This mill, which together with rock-drilling plant was also purchased from Messrs. Fraser and Chalmers, has an estimated capacity of treating about 75 tons of ore per day, producing about 7 tons of concentrates or cleaned ore, of an estimated value of about 50l. per ton. The mill is now arriving on the mine, and Messrs. Fraser and Chalmers' millwright is engaged in erecting it, and expects to have it at work in Oct. Concentrates are expected to arrive in England in about six or seven months from now. Transportation has been greatly improved. A concession for a railway from the head of navigation to the mine, with some advantages in rebate of duties, &c., has been granted by the Government of Mexico to Don Octavio Maldonado, as agent for this company, and this concession has now been transferred to the company free of consideration or payment. Ore: The amount of development work which has been done fully bears out the report of the very large amount of ore available on the surface, and its high value. In the last report of the superintendent 1,748 tons of ore were stated to be broken ready for the mill, and that hand concentration tests on this gave a value of about 6 per cent. of concentrates, containing about 10 ozs. of gold, 53 ozs. of silver, and 30 per cent. copper per ton. In breaking this ore $8\frac{1}{2}$ tons of comparatively clean ore had been picked out, which averaged on assay $7\frac{1}{2}$ ozs. of gold, 61 ozs. silver, and 33.4 per cent. of copper per ton. This will be shipped to England without going through the mill. An account is given by the manager, showing that the cost of breaking, sorting, and piling 916 tons of this ore, including the cost of dynamite, amounted to 4s. 9d. per ton. The remaining 832 tons of ore were broken on contract at the rate of \$2.50 (Mexican) per cubic metre, equal to about 4s. 1d. per ton. According to these figures, the original estimate of 1l. per ton for cost of mining, milling, and management, appears to have been an ample one. Financial position: As before mentioned, the machinery has been paid for. The steamer has also been paid for. The cash capital still available amounts to about 10,000l. The board have had under consideration, for some time past, what steps should be taken in the event of further working capital being required, and have come to the conclusion that the best way to meet requirements, should more money be needed before shipments of ore are received, will be by the issue of debentures.—H. A. HEDLEY, Secretary.

A report from the manager follows, describing the underground workings to date.

MINING IN VICTORIA.

THE amount of gold produced throughout the colony during the quarter ended Mar. 31, 1891, was estimated at 134,364 ozs. 2 dwts. 3 grs. which shows a decrease of 18,452 ozs. 14 dwts. 8 grs. compared with the returns for the previous quarter. This is by no means indicative of what the yield for the ensuing year may be, as the output for the last quarter of each year is almost without exception the highest of any of the other quarters. Quartz mining contributed 90,149 ozs. 10 dwts. 18 grs., whilst 44,214 ozs. 11 dwts. 9 grs. was obtained from alluvial. In the several mining districts the following yields were recorded:—Ballarat, 47,651 ozs. 15 dwts. 22 grs.; Sandhurst, 29,680 ozs. 13 dwts. 23 grs.; Maryborough, 14,616 ozs. 4 dwts. 18 grs.; Beechworth, 14,032 ozs. 14 dwts. 10 grs.; Castlemaine, 12,185 ozs. 13 dwts. 9 grs.; Gippsland, 11,699 ozs. 6 dwts. 12 grs.; Ararat, 4,497 ozs. 13 dwts. 5 grs. Statement No. 1 shows the yields of gold in each division, distinguishing between quartz and alluvial. At the Melbourne branch of the Royal Mint during the quarter 147,560 ozs. 1 dwt. of Victorian gold was received, consisting of 119,791 ozs. 9 dwts. of gold bullion and 27,768 ozs. 12 dwts. of rough gold. From the colony during the quarter 26,075 ozs. 5 dwts. of gold were exported. In addition to this, gold specie to the value of 586,328l. was exported during the same period.

Information has been received respecting the crushing of 174,549 tons 10 cwt. of quartz during the quarter, which yielded 79,840 ozs. 2 dwts. 15 grs. of gold, being at the rate of 9 dwts. 3 grs. per ton. The highest average (namely, 18 dwts. 3 grs.) was obtained in the Gippsland district, whilst at Ararat the average was 6 dwts. 22 grs., which was the smallest. The quantity of quartz crushed in each district was as follows:—Ballarat, 67,331 tons; Sandhurst, 62,635 tons; Castlemaine, 16,701 tons; Beechworth, 7,221 tons; Ararat, 7,214 tons; Gippsland, 6,991 tons; and Maryborough, 6,456 tons. From quartz tailings and mullock 253 ozs. of gold were obtained after a treatment of 4,519 tons, whilst 3,527 ozs. 15 dwts. 7 grs. were produced from 1,195 tons 19 cwt. of pyrites and blanketings operated upon.

August 25, 1891.

ROBEY & CO., Globe Works, LINCOLN.

ROBEY & CO.'S IMPROVED STONE BREAKER AND ORE CRUSHER.

ROBNEY & CO.'S STONE BREAKER AND ORE CRUSHER, for crushing Ores, Quartz, Road Metal, Railway Ballast, Cement, Phosphates, Coke, Coal, &c.

The above illustrates the most simple form of Stone Breaker made, and has no equal for easy transport over bad roads or mountainous countries. Steel has been largely employed, and in the place of the usual heavy Cast-iron Frame, a neat and much stronger Frame of rolled steel is used, with a saving of some tons in weight. The great depth of the side gives it increased stiffness, and the materials of which the machine is constructed ensure great rigidity and thorough adaptability for heavy work.

The parts are few and simple, and thoroughly accessible for oiling, adjusting, and cleaning, and the liability to breakage is reduced to a minimum.

The jaws are easily renewed, and are made of our own special mixture and treatment, rendering the face well suited for quartz. These jaws can be adjusted while the machine is running so as to reduce the material to any desired size, and are adapted for either cubing or crushing.

ROBEY & CO., Globe Works, LINCOLN.

Manager—Mr. A. LANGRIDGE.

AUGUST 26, 1891.

ALSO—

LONDON (WEST END): 226, PICCADILLY, W. (IMMEDIATELY OPPOSITE THE LONDON PAVILION).

Telegrams: "GREGARIOUS, LONDON."

Manager—Mr. GEORGE WILLIAMS.

BRIGHTON: CENTRAL CHAMBERS, THE QUADRANT.

HASTINGS: QUEEN'S CHAMBERS (ADJOINING THE QUEEN'S HOTEL).

Telegrams: "GREGORY, HASTINGS."

Manager—Mr. H. O. SCANTLEBURY.

LEEDS, HULL, FOLKESTONE: Where we are shortly opening up.

DEAR SIR,—We refer to our circular, dated 11th inst., which dealt with the market occurrences of the preceding fortnight, and offered recommendations to be acted upon in the course of the account now terminating.

The events of the period have proved so confirmatory of our confident and oft-repeated advice in regard to the securities dealt with that we gave the circular more than usual publicity through the medium of the daily and weekly financial press.

Not unnaturally, it has brought us a large accession of business at our Head office and branches, as above, and we desire to impress at this opening point that the favouring influences enumerated by us, so far from being exhausted, are only in the earliest stage, and the daily advance will be important throughout the next few months.

Copies of the circular and of preceding issues are still obtainable on application.

THE MONEY MARKET,

Under the influence of restored confidence in the value of securities generally, there have been more frequent transactions in bullion than for some time past. The principal demands upon the Bank have been on German account, but these have been fairly counterbalanced by arrivals from other sources, and the last return, published on 21st instant, showed a further improvement to 45½ per cent. in the reserve as compared with liabilities.

The very considerable business which has been proceeding in the purchase of favourite stocks by investors, will doubtless create a demand for money and a corresponding stiffening of rates; yet, to all appearance, the effect will be only temporary, and will not in any way interfere with the 2½ per cent. minimum.

THE STOCK MARKETS

Have been the scene of unusual animation in nearly every department, the movements being all in an upward direction. The activity, although commencing earlier than generally expected, was the natural outcome of the pent-up determination of investors and speculators to be interested on the "first blush" of an assured boom being exhibited. For weeks past, notwithstanding every possible element being in favour of the movement, there was a show of diffidence amongst influential operators in taking the initiative. What we have predicted for many weeks, adducing facts and figures in support of our argument, has now commenced and will rapidly develop.

A perusal of our fortnightly circulars from and including April 26, but particularly those of July 14 and 30 and August 11, will be satisfactory to the reader, showing what has been placed within reach of means of even the most modest character and amount. The recent appreciation in values, although important, is but fractional in comparison to what may be looked for in the next few weeks.

HOME RAILWAYS

Have answered our expressed anticipations to the letter. Our late recommendations, including the "Heavies," compare as follows, viz.:

	Making-up, August 11.	Making-up, August 26.	Advance.
MIDLAND	152½	159	6½
NORTH-WESTERN	174½	177½	3
NORTH-EASTERN	154½	158½	4
GREAT WESTERN	161½	165	3½

Our old friends, East Londons, seem destined to make an early and important upward move, about which we shall advise clients specially in due course.

AMERICAN RAILROADS

On this presently all-engrossing topic we confirm every word conveyed to—we had almost said "drummed" into—our readers by confident prediction and reasoning contained in our circulars since, and including, April 26, but particularly those of the 14th and 30th ult., and 11th inst. While, as therein stated, every stock in the list is good for a much greater advance, we have only space here to make comparison of our later dated selections, which have throughout answered the interests of our friends.

	Making-up, Aug. 11.	Making-up, Aug. 26.	Advance.
NORTHERN PACIFIC	62½	72	9½
MILWAUKEE	65	70	5
LOUISVILLE	70	76	6
ATCHISON INCOME BONDS	50½	58½	8
NEW YORK CENTRAL	101½	106	4½
DENVER AND RIO GRANDE	14½	16½	2
ONTARIO	15½	18½	3
NORFOLK AND WESTERN	48	53½	5½

Many timid operators apparently think the boom exhausted, so far from which it is only really commencing. In order to fortify the timid ones, we here afford the prices of 1890 compared with those of date.

	Highest 1890.	Now.	Decline.
ATCHISON INCOME BONDS	73½	58½	15
CENTRAL PACIFIC	38½	32½	6
MILWAUKEE	81½	70	11½
DENVER ORDINARY	22½	16½	6
DO. PREF.	63½	47	16½
ILLINOIS CENTRAL ORD.	124	100	24
LOUISVILLE	95½	76	19½
ERIE	30½	23½	6½
DO. PREF.	71	59	12
ONTARIO	23½	18½	5
NORFOLK PREF.	68½	53½	15
NORTHERN PACIFIC PREF.	88½	72	16½
OHIO AND MISSISSIPPI	28½	21½	7
PENNSYLVANIA	58½	54	4½

	Highest 1890.	Now.	Decline.
READING	25	16½	8½
UNION PACIFIC	70½	38½	32
WABASH	18½	13	5½
DO. PREF.	37	26½	10½

The most astute American railroad presidents and principal operators have been, and several of them still are in Europe, satisfying themselves upon every feature which can possibly have an unfavourable tendency. Upon the main point they are all agreed, and that is the immense prosperity which Americans will derive from present unprecedented crops and trading while Europe remains in such a needy condition for grain. They point, one and all, to American securities reaching and maintaining a higher standard of price than at any previous period of the history of the country.

The American money market promises the greatest buoyancy during the remainder of the year, and we can only, therefore, again confirm all the previous arguments upon the strength of the position for stocks, and recommend their instant purchase.

CANADIAN PACIFICS

Again show improvement on a continuance of the increased traffic so long reported, say,

	11th inst.	Now.	Advance.
83½	86½	2½	

And MOVING STEADILY, on the way to par.

GRAND TRUNK STOCKS,

Of which we likewise had occasion to speak favourably, compare as follows viz.:

	11th inst.	Now.	Advance.
FIRST PREF.	64½	66½	2
SECOND DO.	43½	45½	2
THIRD DO.	23½	24½	1

The immense grain crop to be moved, and opening of the St. Clair tunnel, will benefit these stocks sympathetically with Americans, and we recommend purchase of all the preferences for a substantial further advance.

MEXICAN RAILWAY (VERA CRUZ)

Have carried over at the two dates thus:

	11th inst.	26th inst.	Advance.
FIRST PREF.	106	109	3
SECOND DO.	56½	59	2½
ORDINARY	32½	34½	2

At the opening on Saturday last the market was afforded one of the not unusual surprises in these stocks, the quotations being:

	First Pref.	Second Pref.	Ordinary.
112-113	62-63	37-37½	

This was attributed to the reported suspension of traffic on the Inter-oceanic Line.

We continue to impress upon clients to buy the Vera Cruz Stocks upon any serious decline, and the present moment is, therefore, favourable. Copies of the pamphlet indicated on 11th inst. are still available to applicants.

MINING AND LAND SHARES.

We referred to the improving prospect for Transvaal Securities, and the excellent yield from the gold crushings of July.

For an advance we recommend

SILATI RIVER. DE BEERS.
OCEANA. GOLDFIELDS OF SOUTH AFRICA.

FOREIGN AND MISCELLANEOUS STOCKS.

The Chilean civil war now approaching a certain termination, we recommend attention to be accorded the list of South American Government and railway stocks, which any moment may be good to acquire for an important advance. A list of those to which we give preference is compiled, and copies may be had on application.

Upon every Stock which we recommend we have carefully compiled "Reasons Why," and our aim is to afford such information in its entirety to all inquirers.

We continue to direct constant attention to every class of investment or speculative business, including Options, which are becoming a favourite medium. Cover in protection of clients' operations may be deposited either in the form of cash or any marketable security.

The fullest information cheerfully and promptly given in response to all inquiries.

GEORGE GREGORY AND CO.

P.S.—Write for our work, entitled "Hints to Speculators" (136 pages), giving a mass of information, and teeming with reliable, honest, and straightforward advice. It also contains the highest and lowest prices of all stocks, together with dividends paid for the past 10 years. Issued gratis and post free.

£5 COMMANDS £500 STOCK AT 1 PER CENT. COVER.

£10	"	£1,000	"	1	"	"
£20	"	£2,000	"	1	"	"
£50	"	£5,000	"	1	"	"

THE COMING GOLD BOOM IN PERU.

The following appeared in the "Weekly Bulletin" (No. 592) of Saturday. Owned and edited by KENNETH FFARINGTON BELLAIRS.

Offices: 23, Birch Lane, E.C.

TELEGRAPHIC ADDRESS:—"BELLAIRS, LONDON."

On sale everywhere. Price One Penny, or free by post, 6s. 6d. per annum.

MACATE MINING COMPANY, LIMITED. (PERU.)

ON Wednesday night—late—we sent out a private circular advising the purchase of shares in this property, then quoted at about 8s. to 9s., and are glad to notice that a large business on the Stock Exchange at improving prices has since been done in them. We are now able to print Mr. Collingwood Kitto's report on the property—written up to date—and will also give our reasons for our recommendation.

We will add the capital of the Company is £160,000 in fully-paid shares of £1—£80,000 in ordinary shares and £80,000 in deferred, the latter being entirely held in Peru.

Everybody has heard of the wealth of Peru when the country was governed by the Incas, the last of whom was so treacherously and shamefully done to death by Pizarro and his conquering armies. An article we give elsewhere in these columns tells the tale clearly enough, but suffice it to say that up till now Europe has scarcely had a hand in the deal. Now Peru (as a mineral country, at any rate) is to be opened up, and as a commencement the task has been undertaken by the Macate Mining Company, Limited. This company, or, perhaps, we should call it "syndicate," has any amount of capital at its back, and knows quite well what it intends to do.

Mr. Kitto's report is clear enough, and we need only emphasise one fact he mentions, viz., that a cablegram received a few days ago states that a new discovery has been made which gives

FOUR OUNCES GOLD

to the ton, whilst all that the directors have calculated upon is 1 oz.!

Also, we may add that it has been found from actual work that the mine can be "run," and is now being "run," for less than £300 per month!! So that it is easy enough to calculate what will happen. We will figure, however, at the 1 oz., but do not forget that the last assay "has given, by small crushings and washing trials, four." (Vide cablegram, which also says that No. 4 level is now giving 1½ ozs.)

The 10-stamp mill, which will begin to run in a fortnight—shall we say a month?—ought to crush 600 or 700 tons per month, but we will say 500 tons, per annum 6,000

Worth, at £3 15s. per oz. £22,500

We know the expenses (from what the actual cost per month for the last four months has shown) will be about £3,600, but say 5,500

£17,000

Which, at par, would pay

10 per cent. on the preferred,
10 per cent. on the deferred.

And the balance to be equally divided between each class of shares.

Those of our readers who purchased the shares on receipt of our circular can figure out for themselves what interest they will get at the prices they paid. So can those who now buy. (We should say the quotations on Saturday will be, perhaps, 8-3, and probably 7-5 on Monday.)

Now, all this is pretty enough, but it is a mere bagatelle to what has to follow, viz.:-

The moment it is deemed expedient a

FRESH BATTERY OF 10 STAMPS, WHICH WILL LATER BE INCREASED TO 40, will be put up, the cost of which will be simply trifling, as the railway takes the machinery from the seaport to the mine, all except 30 miles, which is done by mules. (We should say a 10-stamp battery could be put down to-day on the spot within a month for £2,000—*tout compris*.) The existing machinery has been put up under the superintendence of Frazer and Chalmers, and is capable of working 40 stamps.

Have we said enough to show our readers what may happen? Let the dead bury its dead, and Johannesburg slowly recover itself. We cannot afford to wait for Johannesburg. Ere long we shall be hard at work again there; but for the moment our views are in a different groove, and we intend to plump for

PERU.

and the Macate Mine at that.

We might add these shares can be carried over as easily as any other share.

MR. KITTO'S REPORT.

Bedford Villa, Marlboro' Road,
Gunnersbury, August 30, 1891.

GENTLEMEN,—I have much pleasure in placing before you a review of the progress made at your mines in Peru during the short time the company has been in active operation. I do so with all the more pleasure, because some 18 months before the property came into your possession, I formed a favourable opinion of it, although very little work had been done on it at the time.

In order to show more clearly what you have done, I must make a slight reference to the property as I saw it.

I traced the lode along the surface by a succession of outcrops for a distance of 2,200 ft. I took a large number of samples, which averaged 12 dwts. 7 grs. of free gold per ton of ore. This, in most countries, is considered fairly satisfactory, but in Peru it is considered rather low grade. The only work done on the property at the time I was there was two small tunnels, which had been driven a short distance into the hill. The lode in the end of each tunnel was strong, regular, and well defined. I carefully broke a fair average sample of about 20 cwt. from the end of each tunnel, from which I obtained 1 oz. 19 dwts. 4 grs. of free gold per ton, and 2 ozs. 12 dwts. 4 grs. of free gold per ton respectively. These samples were afterwards assayed—as a check—with a similar result, by Mr. B. Kitto, of St. Swithin's Lane. In order to further test the ore on a comparatively large scale, Mr. Torrance, your present manager, had several tons broken, and carried about 10 or 12 miles on the backs of mules, where it was crushed in a native mill, and produced 2 ozs. of free gold per ton of ore. In the face of such evidence, there could be no question as to the value of the lode, and I at once set about ascertaining the best means of turning it to profitable account.

At the foot of the mountain, about 5,000 ft. below the formation, runs the River Santos, broad and rapid—an immense volume of water at all seasons of the year. A preliminary survey showed me a favourable spot near the river for the erection of stamps, and as the configuration of the mountain is favourable for the construction of a wire ropeway, the ore can be transported from the mine to the stamps at a minimum cost.

I am pleased to say all my recommendations are being carried as expeditiously as possible.

WORK ACCOMPLISHED.—In the first place your manager, Mr. Torrance, constructed a mountain road from Mirador to the mines, for the purpose of getting up the machinery and materials. He then constructed the necessary houses for workmen and officers, as well as workshops, assay office, &c. He also visited the United States, and purchased of Frazer and Chalmers a first-class battery of stamps, as well as a wire tramway complete, all of which were duly landed in Peru. The stamps were at once taken to the mines, and they are now so far advanced towards completion that they could be set to work in a few days.

Before all the wire tramway could be got up to the mines, there was a slight accident to the railway, which caused a little delay. The latest information states that the difficulty has been got over; consequently, barring accidents, the stamps and ropeway should be in full swing in about a month. It seems a great deal of work to have got over in such a short time, and reflects credit on the administration.

MINING OPERATIONS.—It is highly gratifying to find that, while the road and watercourses have been constructed, houses built, and machinery erected, the development of the mines has not been neglected.

No less than five permanent discharge-tunnels have been kept going the whole time.

No. 8 TUNNEL.—A reference to the plan will show that this tunnel has been driven into the lode for a distance of 150 ft., the lode throughout producing from 1 oz. of free gold to 1½ ozs. of free gold per ton of ore.

No. 2 TUNNEL.—The plan shows that this tunnel has been driven into the lode for a distance of 280 ft., the lode throughout producing fully 1½ ozs. of free gold per ton of ore.

No. 1 TUNNEL.—According to the plan, this tunnel has been driven into the lode for a distance of 245 ft., the lode producing about 1½ ozs. of free gold per ton of ore.

No. 4 TUNNEL.—This tunnel has been driven into the lode for a distance of 300 ft., yielding from 1½ ozs. of free gold per ton up to as much as 3 ozs. of free gold per ton. The lode in this tunnel has been beautifully regular throughout, and if there was no other payable point in the location, it would be sufficient to place it amongst the best paying gold mines of Peru.

The Lowest Tunnel has not been driven far into the lode, but this will be pushed on with vigour after the stamps have been running for a week or two, and have cleared off some of the accumulated heap of ore. In the meantime a cable has just been received from the mines, stating that in this direction they have a well-defined lode, giving 4 ozs. of free gold per ton of ore.

When I point out to you the fact that the tunnels diverge as they enter the lode, and that in no case has the ore fallen below 1 oz. per ton, you will agree with me that the permanent character of the lode, and the even tenor of the ore, is established almost beyond a doubt.

In carefully studying Mr. Torrance's plan, and taking the No. 4 tunnel as a base, he has cut out in reserve blocks, east of the said tunnel, about £16,000 worth of reserve ore, and this he is adding to daily.

In the meantime, should the lode referred to in his late cable continue, the reserve of ore west of No. 4 tunnel will be fully twice that amount.

I have no hesitation in saying it is a true fissure vein, that the ore is unusually rich, and should net fully 50 per cent., and that in a short time you should be receiving regular remittances of gold.

Yours faithfully,

To the Directors of the Macate Gold Mining Co.,
11, Old Broad Street.

THOS. C. KITTO.

I may add that before long I hope to see these £1 Shares "split" into five Shares of £1 each, and these will probably be worth par. The closing price to-night (Tuesday) is 14s. 6d. to 15s. 6d., but I would advise purchasers not to exactly limit their brokers. There is no knowing what Macate Shares may go to.

All orders sent to me for Macate (Peru) Shares must be accompanied by cheques at rate of 10s. per Share, and the balance can be adjusted on receipt of contract.

Almost the hourly quotations for the Shares can be nightly read in the *Special Standard*. The business doing in the Shares is enormous.

ADDRESS.—"KENNETH FFARINGTON BELLAIRS, 23, Birch Lane, E.C." Telegrams: "BELLAIRS, London." I do business of every description—non-speculative—at net prices, unless by special contracts. Will advise as to investments or things generally of every nature or description. Have had a quarter of a century's experience on Stock Exchange matters. Clients wanting reply telegrams should prepay, when they are likely to save considerable time.

TELEGRAPHIC ADDRESS—

QUINLAND—LONDON.

MINING MARKET.

CITY, FRIDAY EVENING.

A BUSY WEEK—UNSEEN INFLUENCES—THE MEETINGS— GOLDEN FEATHER, GATE AND OTHER COMPANIES— COURSE OF BUSINESS.

THE condition of the Mining Market does not justify the employment of the word "boom" in describing it, but it certainly warrants that of "revival." Any one who contrasts the state of things now with what it was three weeks ago is astounded that so great a change could have taken place under apparently such unpropitious circumstances. We have repeatedly dwelt upon the sensitive character of the Mining Market, and, therefore, the present movement has not surprised us. This sensitiveness is shown by the fact that when London is supposed to be listening to the music of the sad sea waves, and not to the babbling voices of Mammon, and when brokers are not to be found at their offices or clients in the neighbourhood of their cheque books, mining shares have not only advanced considerably but have maintained that advance. "The wind bloweth whither it listeth," and the unseen influences that operate upon these things may be relegated to the theosophistic studies of Mrs. Besant and the other disciples of the departed yet pen-wielding Madame Blavatsky. We have here to deal with facts, not with mystic speculations, and the facts just now are all in favour of better prices.

The influence of the American market has again been felt upon that of mining. There is a sympathy between them which amounts to a union of hearts, and ours shall not be the profane pen to write the *decree nisi* of divorce. In discussing these questions we have three great facts to remember. First of all, that here, alas! the crops, owing to the disastrous rains of the past three weeks, have been seriously diminished in value and quantity; that the Russian crops also have failed, and that those of the United States are good, almost beyond former comparison. Now a large quantity of European money must go to America, and there will be a booming time there. The reflex action will be felt here, and as we have said, when American Securities are high mining shares are never inactive. The reader may work this out for himself if he be

so minded, but the problem and its solution need only be the result of a little reflection.

The meetings of the week have not been numerous, but at least three of them have been important—we refer to Gympie Golden Crown, Ottos Kopje and Chiapas. In the case of Gympie Golden Crown, the chairman appears to have visited the property at his own expense, and even to have carried integrity to its extreme point by paying for the specimens he took from the mine. There is not much hope of the old ground, which, however, is paying the expenses of working, but there is a great deal of hope in regard to the new ground, which promises to give exceedingly good returns. Gympie Golden Crown shares look cheap at present prices. The full position of Ottos Kopje is set forth in our leading columns, but suffice it here to state that the meeting caused the shares to be in great demand, and prices are higher, with every prospect of improvement. Chiapas, unless we are very much mistaken, will one of these days be a dividend-paying concern. The problem here to be solved is, not to get down to a certain level in order that some problematical lode may be struck, for the company has to deal with practically an open quarry, but how to reduce the cost of transport and to secure a better class of labour. Both difficulties are in a fair way of being surmounted, and, as we have said, Chiapas ere long is likely to be a market mine. We cannot speak so definitely with regard to Lixa, the meeting of which company did not appear to produce a very good impression upon those who attended it. The directors are about to issue debentures, but we cannot advise the shareholders to take them up. They know their loss in connection with this affair, and, perhaps, it will be as well to be content with it. The feature at New Morgan was the refusal of the shareholders to accept a 1½d. dividend. We applaud their decision, for to make a distribution of this kind is reducing matters to the level of a broad farce. We cannot compliment the directors of Retiro Honduras Co. on the hole-and-corner meeting they held last Monday. Their first step was not to invite the Press, and their second, to send a statement of their own preparing, to which the shareholders can attach what importance they choose. For our own part we attach very little. When "official" reports of this description are sent, their value, in our experience, is about *nil*.

Leaving the general and coming to the particular we have first of all to refer to the Indian Market, which has been on the upward move without a single exception. The returns for the last month are incomplete at the time of going to press, but so far as they have reached us they may be considered good. It must be remembered that Ooregum has been suffering from an attack of cholera, and to this the fall from 2,903 ozs. for July to 2,708 ozs. for Aug. must be attributed. Nundydroog is better—2,220 ozs. for Aug., against 2,044 ozs. for July. Balaghat return is also slightly better. Goldfields of Mysore, Mysore Reefs, Mysore Gold, Nine Reefs, as well as the companies whose crushings are referred to above, have all been dealt in at better prices, and the market closes firm. In the General Foreign market the chief feature has been the fluctuations in Yankee Girl shares, as regards which we gave some explanations last week. We are assured in well-informed quarters that there is nothing wrong with the mine, and that the future will reveal this. The shares of the sister company, American Belle, have been slightly better, and there has been a good business in Elkhorn, Kapanga, Montana, St. John del Rey, La Luz, and Frontino, the latter being stimulated by the interim dividend of 6d. per share just declared by the directors.

In regard to Golden Feather and Golden Gate, those who are behind the scenes, and have a precise knowledge of what Col. McLaughlin is doing in the bed of the Feather River, say that within 10 days from now—let us say a fortnight, for sad experience always teaches us to elongate estimates—these companies will, as the Scotch say, "make a spoon or spoil a horn." We may say that the river bed has now been fairly drained, and that from the properties on either side large quantities of gold have been taken. Can it then have been reserved for these companies lying immediately between them to be destitute of the precious metal? Common sense says "no;" but in a short time now we shall be wiser. These shares are a very interesting speculation at the present time, and

so also in their way are Colombian Hydraulics and Gravel Gold, and, as we pointed out last week, Colon shares should not be neglected.

Queensland Mines have again been extremely active, though best prices have not been maintained. For a wonder there has actually been a 6d. rise in Mount Morgan Extended. Australian Broken Hills are weaker than when we last wrote, and Mosmans have not maintained the full rise chronicled a week ago.

Copper shares with the exception of Rio Tinto are all up.

Coming to what is called the "Kaffir circus" in which the horsemanship has been anything but good of late—shares this week for the most part show a rise. Shebas have been largely dealt in, and if the public really understood the position of this concern they would be dealt in much more largely still. It is about the best managed and most reliable company in South Africa. We had no hesitation in recommending its shares when they were much lower than they are now, and we have no hesitation in recommending them at present prices. We also hear Crown Reef highly spoken of, and Pigg's Peak referred to as a company that cannot be judiciously neglected by the mining dealer. All African shares are up with one or two exceptions. The Diamond Land and Gold sections are all firmer, and altogether the position is more hopeful than it has been for some weeks past. At the same time the public should remember that the rises we chronicle this week are rises upon a series of falls. A new mine has come into great favour this week in consequence of the satisfactory meeting it held. We refer to Ottos Kopje, the full particulars of which will be found in our leader column, as well as in our *verbatim* report of the meeting.

In the Home section there has been good business at better prices in Wheal Grenville, where rapid and most encouraging progress is being made in the eastern section of the mine. As a rule, however, shares are down again, though not to any marked extent. Discussion is proceeding in Cornwall (provoked by our article on the treatment of outside capital by Cornishmen) as to the means by which the mines of the county can be worked in a manner that will make them attractive to the general public. We hope the decision in favour of reform has not come too late.

The South Darren shaft is being sunk a distance of 12 fms. to ascertain if a rich run of ore found below the bottom (142-fm.) level has gone down. The shaft is now 11½ ft. below the 142, and the lode has just been broken down, showing a value of 2 tons lead ore (say 24l.) per fm. When previously seen in the shaft the lode was worth 15 cwt.

Sonth Phoenix Mine seems to be rapidly developing into a valuable property. The returns are already over 500% per month, and these come from a comparatively shallow depth for the first part, namely, the 30-fm. level on Wheal Prosper lode, both east and west. The shaft for working on this lode is down to the 40-fm. level, which is now being driven both east and west to intersect the lodes which are proving so valuable in the upper levels. Amongst young mines this appears to be one of the most promising. It is well equipped with machinery.

Roman Gravels is about to re-construct once more with a basis of liability of 5s., and it is proposed to acquire East Roman Gravels Sett, respecting which, as well as the old mine, important reports have been written by Capt. Waters and Capt. Paull.

The outlook for next week is decidedly encouraging, and our readers may expect with certainty a very large amount of business.

KAFFIRS.

There has been a very brisk business in this class, and in nearly every case a rise has taken place. Although prices have not left off at best the position is more reassuring than it was a week ago.

Business.—A rise is shown in Pigg's Peak Ordinary and Preference ¼; Sheba, ½; City and Suburban, ½; Crown Reef, ¼; Johannesburg Waterworks, ½; Jubilee, ½; Langlaagte, ½; Langlaagte Block B, 1s. 6d.; Main Reef, 1s.; May Consolidated, 1s.; Robinsons, ½; Salisbury, New, 6d.; Simmer and Jack, ¾; Stanhope, ½; Wemmer, ¼; and Witwatersrandt (Knight's), 6d.

The only falls being Durban-Roodepoort, ¼; Moss Rose, 6d.; and Nabob, ¼.

AFRICAN LANDS.

There has been more business in these shares than for some time past, and although good rises have taken place in several cases prices do not leave off at best.

Oceana and Exploring led the way with a rise of 15s. each, and many others have risen in a lesser degree.

Business.—A rise is shown in Bechuanaland of ¾; British South Africa Chartered, ½; Exploring, ¾; Goldfields of South Africa, ½; Moodies, 6d.; Oceana, ¾; South African Gold Trust, 1½; Southern Land, 1s. 6d.; Transvaal Estates, 2s.; Transvaal Gold, 6d.; Transvaal Lands, 1s. 6d.; and Zoutpansberg, 6d. The only fall is in London and Orange Free State of ½.

DIAMONDS.

De Beers and New Jagersfontein have occupied the chief attention of dealers in this market during the week, other shares being

very little dealt in. De Beers at one time showed a rise of 13s. 9d. per share, but do not leave off at their best.

Business.—A rise is shown in De Beers of $\frac{1}{8}$; New Jagersfontein, $\frac{1}{4}$; whilst a fall is noted in Bultfontein Consolidated of 1s.

AUSTRALIANS.

There has been a good market for this class, and many shares of the low-priced description have changed hands at ever increasing prices. Such mines as Bonnie Dundee, Cumberland, Day Dawn Block, Day Dawn P.C., Gympie Great Eastern, Mosman, and New Queen appear to be a good purchase at present low prices.

Business.—A rise is shown in Mount Morgan Extended of 6d.; but the falls are in Australian Broken Hills of 1s. 6d.; Bonnie Dundee, 3d.; and Mosman, 1s. Others remain unchanged.

INDIANS.

More animation has been manifest in this class, and some strong buying has taken place in Nundydroog, Ooregum and Balaghat-Mysore. Nine Reefs, Mysore, Mysore Goldfields, Balaghat and Nundydroogs have all advanced in price, and the market leaves off firm.

Business.—A rise is shown in Balaghat of 1s.; Goldfields of Mysore, 1s. 6d.; Mysore Gold, $\frac{1}{8}$; Mysore Reefs (New), 1s. 3d.; Mysore West, 3d.; Nundydroog, 2s.; Nine Reefs, 1s. 6d.; Ooregum, Ordinary and Preference, $\frac{1}{8}$; and South East Mysore "Pref.," 3d. There is no fall to record.

COPPERS.

There has been but very little business in these shares, the chief change being a rise in Masons and Copiapo.

Business.—A rise is shown in Copiapo, $\frac{3}{8}$; Libiola, $\frac{1}{8}$; and Mason and Barry, $\frac{1}{4}$; whilst the only fall is Rio Tinto of $\frac{1}{8}$.

GENERAL FOREIGN SHARES.

Considerable activity has characterised low-priced shares, the chief dealings being in American Belle, Callao Bis, Colombian Hydraulic, Don Pedro, Gravel Gold, Kapanga, New Eberhardt, Parker Gold, Ordinary and Preference, New Russell Gold, Tesoro, and Yankee Girl. In the case of Yankee Girls prices have varied from 20s. 6d. to 16s. 6d.

Business.—A rise is shown in American Belle of 6d.; Balkis, 3d.; Barretts, 3d.; Elkhorn, 1s.; Frontino, 6d.; Golden Leaf, 3d.; Kapanga, 1s. 3d.; New Russell, 3d.; Palmarejo, 3d.; Parker "Preference," 3d.; Pestarena, 3d.; Silver Mines of La Luz, 6d.; Spitzkop, 6d.; St. John del Rey, 6d.; Transvaal Gold, 3d.; and Yankee Girl, 1s. A fall is noted in Colombian Hydraulic of 1s.; El Callao of $\frac{1}{4}$; Golden Feather, 1s. 6d.; Golden Gate, $\frac{1}{8}$; New California, 6d.; and Pinos Altos, 6d.

The following list shows the principal changes which have taken place:—

LATEST FROM THE MINES.

INDIAN MINES.

BALAGHAT MYSORE.—A telegram, dated Sept. 3, gives last month's return of gold as follows:—"207 tons of quartz produced 505 ozs. of gold."

NUNDYDROOG.—A telegram, dated Sept. 2, gives last month's return of gold as follows:—"1,085 tons produced 2,160 ozs. of gold, also 60 ozs. were obtained from tailings; total, 2,220 ozs."

OOREGUM.—A telegram from the mine, dated Sept. 3, gives last month's return of gold as follows:—"1,186 tons of quartz produced 2,708 ozs. of gold."

COLONIAL MINES.

AITCHEE'S LUCK.—Advices from the Colonial solicitors state that the property has been duly transferred to the company.

BLUE SPUR AND GABRIEL'S GULLY.—Cablegram: "Aug. yield, 439 ozs."

BRITISH BROKEN HILL PROPRIETARY.—The yield from the furnace at the mine during the week ending Thursday, the 3rd inst., was 540 tons of ore treated, including 209 tons of iron ore, yielding 103 tons of lead, containing 3,780 ozs. silver.

BROKEN HILL PROPRIETARY.—A cable states that during the week ending 3rd inst. there were 4,500 tons of ore treated, yielding 495 tons of lead, containing 180,000 ozs. silver. The cable also states that the shares are 9 $\frac{1}{2}$ 17s.

DAY DAWN BLOCK AND WYNDHAM.—A cable from the general manager at Charters Towers gives the result of the crushing for the fortnight ending 29th ult.:—"Tons crushed, 710; yield of gold, 802 ozs.; approximate value, 2,765 $\frac{1}{2}$ l.; fortnight's expenses, 1,230 $\frac{1}{2}$ l."

DAY DAWN P.C.—A cable from the manager at Charters Towers gives the result of this company's crushing for the fortnight ending Aug. 29, viz.:—"1,050 tons, 1,428 ozs.; shipped per Jelunga." (Estimated value, 4,998 $\frac{1}{2}$ l.)

KAPANGA.—Telegram from the manager:—"Have crushed 85 tons; yield, 30 ozs. of gold. Have struck gold in driving on Kapanga lode; not payable yet."

MIDAS.—Cable from the mine:—"Yield for week ending Aug. 29, 33 ozs."

MOUNT LEYSHON.—A cablegram from the manager at Charters Towers gives the fortnightly crushing:—"1,120 tons crushed, 385 ozs. gold; 30-stamps mill ran 288 hours; now running 40 stamps."

MOUNT MORGAN.—Messrs. Laughland, Mackay and Baker have received the following telegram:—"We pay 25,000 $\frac{1}{2}$ l. on Wednesday, being a dividend of 6d. per share (free of dividend tax) for the month of Aug."

MOUNT ZEEHAN.—The following telegram has been received, dated Hobart, Sept. 3:—"Argent (No. 4 lode) mostly good second-class ore."

QUEENSLAND SMELTING.—The following cable has been received from the manager in Queensland, Mr. E. A. Weinberg:—"Have shipped bullion amounting to 4,500 $\frac{1}{2}$ l. per s.s. Jelunga."

FOREIGN MINES.

CASTILLON PYRENEES.—The company has sold 50 tons silver-lead ore at 9 $\frac{1}{2}$ l. 1s. 6d. per ton, f.o.b. Bordeaux, to Messrs. Walkers Parker and Co., Limited, Bagillt.

DICKENS CUSTER.—The company announce that six bars of bullion (Nos. 43 to 48), from the crushings during the early part of Aug., were received on the 25th ult., and have been sold by Messrs. Pixley and Abell, realising 1,036 $\frac{1}{2}$ l. 12s. 6d. Two more bars arrived on the 31st ult., and have been sent to Messrs. Pixley and Abell to sell for the company. The company announce the further receipt of two bars of bullion (Nos. 51 and 52), which have been sent to Messrs. Pixley and Abell to sell for the company. Cable from Mr. A. H. Axford, the managing director at the mines: "Have shipped bullion amounting to 3,400 $\frac{1}{2}$ l. for the month of Aug. Expenses, cash, 1,480 $\frac{1}{2}$ l. Milling and mining supplies, 830 $\frac{1}{2}$ l."

ELKHORN.—Cable from the mine:—"Bullion produced for week ending Aug. 29, \$9,360."

EMMA.—Cablegram received on 2nd inst. from Salt Lake City:—"13 tons of concentrates sold at \$103 per ton."

FRONTINO AND BOLIVIA.—The directors have declared an interim dividend of 6d. per share, free of income-tax, payable on

the 14th inst. The transfer books will be closed from the 3rd to the 14th inst.

MAID OF ERIN SILVER.—Cable from the mines :—"Gross yield for the week ending Aug. 29, 1,618 tons; estimated value, \$33,000."

PESTARENA.—Return for Aug. was as follows :—Pestarena Mine : 444 tons treated, yielding 417 ozs. 10 dwts. 16 grs., equal to 18 dwts. 18½ grs. per ton. Val Toppa : 71 tons; 45 ozs. 10 dwts. 16 grs., equal to 12 dwts. 21 grs. per ton; total, 463 ozs. 1 dwt. 8 grs. from 515 tons, averaging 17 dwts. 23 grs. per ton.

RETIRO (HONDURAS).—Telegram received Aug. 31 :—"Return, 25 tons last week, 28 ozs."

RIO TINTO.—The company publish the numbers of their 5 per cent. mortgage bonds (1880) drawn for payment at par on the 1st prox.

SAN LUIS.—Cablegram from the manager :—"Bullion shipped, Aug. 18, 810½."

HOME MINES.

HEXWORTHY.—The company notifies that the first parcel of tin, about 15 tons, was sold on Tuesday, realising the high price of 60½. 10s. per ton.

TICKETING FOR TIN ORES.

A tin ticketing took place at Redruth on Tuesday last, when 296½ tons were offered, with the following results :—

VALUE OF ORES SOLD FROM EACH MINE.					Value.				
Tons. Cwts.			Per ton.			£ s. d.			£ s. d.

AND ALL PARTICULARS OF FOREIGN AND HOME MINES

SEE PAGES 346 AND 347.

AFRICA.

LATEST FROM THE GOLD AND DIAMOND MINES.

SHEBA.—Cable from the general manager :—"Driving west No. 5 level, rich quartz has been struck."

NIGEL.—Information from the head office states that the new mill will start about the middle of Sept.

NEW PRIMROSE.—Cable :—"Aug. crushing, 2,475 ozs. from 4,560 tons. 50 stamps running 28 days."

FERREIRA.—Cable from Johannesburg, Sept. 3 :—"Crushings for last month (Aug.), 5,030 tons, yielding 3,225 ozs."

SIMMER AND JACK.—Cable :—"Quartz crushed during month, 7,332 tons; obtained 3,333 ozs. gold during month."

SHEBA.—Cable from the general manager :—"Yield for the month of Aug., 2,900 tons; 3,600 ozs. Level No. 6 : Good ore is still being found."

MAY CONSOLIDATED.—Cable message : "The yield of gold during the past month (Aug.) was 2,400 ozs. from 6,200 tons. Mill running 29 days."

ROBINSON.—Cable from Johannesburg :—"40 stamps at work 29 days crushed 4,851 tons of ore, yielded in smelted gold 5,529 ozs.; from tailings, 1,578 ozs."

JUBILEE.—Cable received from the head office in Pietermaritzburg to-day :—"Result of last month's crushing is 426 ozs. of gold; will not pay a dividend."

NORTH-EASTERN BULTFONTEIN.—A telegraphic advice announces for week ending 29th inst. 14,000 loads washed; 1,150 carats of diamonds; increase of blue ground on floors, 10,000 loads.

TRANSVAAL GOLD EXPLORATION.—Telegram from the general manager :—"Mined during Aug. 600 tons, crushed 725 tons mixed ore (22 days double shifts); yield 420 ozs., pans 360 ozs.; total for month, 780 ozs. Mines expenditure for 11 months current financial year, 18,240½."

NEW CHIMES.—Extract from a letter received from the secretary in Johannesburg by to-day's mail :—"Number of tons, 652; amalgam obtained 1,356 ozs.; gold smelted, 514 ozs. 10 dwts.;

amount of concentrates, 5, 6 tons.; average assay of concentrates, 12 ozs. per ton.

FORBES REEF.—July report : Main reef : Winze in bottom of cross-cut to west reef sunk 32 ft., having now a total depth of 62 ft. Cross-cut north-west from No. 2 winze east driven 34 ft. Ruby reef : Winze sunk 6 ft. 6 ins., having a total depth of 20 ft. Cross-cut from bottom of same driven 19 ft.

VIRGINIA (TRANSVAAL).—Cable :—"Government ratified water-right; stopes, 15 dwts." A turbine of the most approved construction is now being shipped, and with the abundant supply of water the Komatee affords, the cost of mining and milling is estimated not to exceed 5 dwts. of gold per ton of ore crushed.

HORO CONCESSION EXPLORATION.—The company notifies that in view of the mill result cabled from the property on the 26th ult., the company dispatched the following message :—"The return we have just received unsatisfactory; what explanation can Leyson give?"—to which the following reply has been received :—"Ore crushed from the surface covering reef, too good discard; also copper plates set; crushing is likely to improve."

NOTRE DAME DES VICTOIRES (TRANSVAAL).—Wolverand Klerksdorp : The board instruct me to inform you that the shaft which Mr. Alford advised being sunk on the Wolverand property has now been carried down to the maximum depth of 80 ft., but no payable reef has been met with. The shaft recommended by Mr. Walker for the purpose of intersecting the Elandslaagte reefs is now being proceeded with, and, as far as can be ascertained, results of a more hopeful nature may be expected, the indications, so far, being of a favourable character. The company have now recovered possession of the property, having obtained the removal of the interdict placed upon it by Mr. Suckling, the late manager at the mine. A further and more thorough prospecting of the property than has hitherto taken place is now being effected.—C. PARK.

TRANSVAAL GOLD EXPLORATION AND LAND.—The following particulars are from general manager's advices dated Aug. 3 :—Mining—Ophir Hill—Theta vein : Ore extracted, 10 tons; assay value, 4 ozs. 6 dwts. per ton, and 15 tons; assay value, 2 ozs. 1 dwt. per ton. Browne Hill—Nu vein : Ore extracted at Nos. 1,211, 1,220, and 1,261, 50 tons; assay value, 2 ozs. 2 dwts. per ton, and at No. 1,209, 35 tons; assay value, 5 ozs. 6 dwts. per ton. A good deal of exploratory work was being done around Theta and Nu. Prospecting : In all the drives at Edin Hill there was a small stratum of ore about 1 ft. thick, and of a good grade, which, it was hoped would prove continuous. Ore extracted during month at Edin Hill, 20 tons; average assay, 4 ozs. 18 dwts. per ton. At Glinister's, 10 tons of ore; assay value, 2 ozs. 1 dwt. per ton were obtained from a small deposit which was being proved. Mill : The battery and pans had run all week, and the monthly clean-up was in progress. Transport of ore still continued.

CERRO DE PASCO.—The following advices have been received from the mine, dated Barberton, Aug. 1 :—Block F extension : South-east cross-cut has been driven 53 ft.; making total distance, 315 ft. This cross-cut still continues in hard sandstone. At 275 ft. from entrance we cut a quartz reef, 2 ft. wide, which carries gold. At 282 ft. we cut a quartz reef, 4 ft. wide, also carrying gold. On July 9 we commenced driving south on 10 ft. reef, which has been driven 53 ft.; quartz extracted, 106 tons. Reef still continues as good as when first cut. We had two European miners and 26 natives engaged on this work. Main shaft : We have eight natives continually employed drawing water at this shaft. Block 12 : North-east cross-cut has been driven 50 ft.; making total distance, 153 ft. We have one European and 10 natives engaged in this cross-cut. East end drive has been driven 42 ft.; making total distance, 127 ft. At this point we commenced cross-cutting east and west in search of the reef. East cross-cut has been driven 9 ft. West cross-cut has been driven 4 ft. We have one European miner and 10 natives engaged on this work.

BALKIS CONSOLIDATED (Aug. 5).—The manager reports as follows : Great Western workings : Owing to scarcity of Kafirs the 75 ft. west has been idle during the week. I have stopped both the cross-cuts north and south at this level and propose to continue the drive west on the course of the main reef in hopes of getting into a more promising formation, as mentioned in my last week's letter, and of finding that the lode makes again after passing through the disturbed ground in which the end now is. It is not unlikely that at that point we may find the lode is better. In the 36-ft. works on south branches we have not found anything fresh of importance, and I have started a rise up in the back of our first level. We have found the old pillar which was reputed to be very rich and to have been left to support the old shaft, but I am much disappointed in the quality of the stone, which so far is not worth more than 4 dwts. to 5 dwts. gold per ton. It is evident that the best stone here was all found near the surface, and that the reefs depreciate in value at once on entering the blue slate formation, to which I have previously referred, and I think it very probable that below this slate good stone will again be found. Prospecting north of main reef : The reefs in the two shafts referred to in my last letter both continue promising, and from one of them during the week several stones with visible gold have been broken. This is a compact and strong looking east and west course, and we have traced and opened on the back for a considerable length. I have started a new shaft on it, and have a body of quartz 14 ins. wide, worth 5 to 6 dwts. of gold per ton by the pan, picked samples having shown fully an ounce of gold per ton in the pan. I firmly believe that we shall eventually find some very payable stone in this part of the property, and am pushing on investigations as fast as the limited amount of native labour available will allow. Prospecting east of No. 2 reef : During the week we have found some loose stones showing visible gold in good quantity, but have not up to the present met with any reef from which they are likely to have come; no doubt we shall be successful in doing so shortly, and I am using every effort with that end in view. The finding of these stones goes to strengthen the surmise in my last letter, that there must be a rich reef somewhere hereabouts, and is very encouraging. Altogether, I think that our prospects of getting payable stone very shortly are very good, and I trust that they may be fully borne out.

SALT UNION, LIMITED.—The deliveries during July, 1891, were, approximately, 141,000 tons, against 156,000 in July, 1890.

REPORTS OF MEETINGS.

THE RETIRO (HONDURAS) GOLD MINING CO., LIMITED.

THIS REPORT IS FURNISHED BY THE DIRECTORS, AND WE CAN NOT BE RESPONSIBLE FOR ITS ACCURACY, MUCH LESS ITS FULNESS—PRESS NOT INVITED TO ATTEND.

THE half-yearly meeting of the shareholders was held on Monday at the Offices, 73, Lombard Street,

Mr. Thomas S. Richardson

presided.

The CHAIRMAN, in opening the proceedings, stated that the meeting was called in consequence of a wish expressed by the leading proprietors at the last annual meeting, and the only thing for him to do was to give the meeting an account of what had been done since then, and what the manager had communicated to the board. He did not think he could do better than read *in extenso* two very important letters that had been received, and he would be very happy, after the shareholders had heard them, to listen to any remarks on the subject.

LETTERS.

"July 4.—Having now fairly tested the gold here, and having ascertained the cost of getting the quartz out, I feel that the time has arrived for making a definite plan and laying it before the board. I find that the so-called free gold is not free at all, and in all cases contains sulphurets of a refractory character, increasing in proportion as the reef goes down, and I regard the freedom on the surface as mere oxidation and decomposition from atmospheric causes. We have large quantities of low-grade ore (1 oz. and 1½ ozs.) in the Cavanah, and the vein shows fully 4½ ft. wide, but in the upper drive the quartz is utterly broken up and intermingled with barren stuff, and has to be sorted. . . . The question for the board to look in the face is the cost, and I cannot, I am sorry to say, estimate deep sinkings under say \$5,000, which if proven would necessitate a further cost, carriage included, of \$10,000. These are outside figures, and mean doing things on a very large scale; but both the experimental \$5,000 and probably consequent \$10,000 are more than justified by the appearance of the veins, and their exact similarity to the neighbouring mine, where the success has been proven of the course suggested. There is another matter which calls for the attention of the board. Formerly there was an army of so-called 'Prospectors' employed, these were paid wages and expenses, but not in any way by results; as a natural consequence most of them never did a hand's turn, and others found out matters which they kept to themselves. I have had overtures from time to time from sundry of these men to show me this and that for a payment; others have kept their discoveries to themselves in the hope that the company might become bankrupt and the concession lapse, when they contemplated denouncing their discoveries on their own account. Amongst this latter class were several natives, who, born here, know every inch of the ground and have, searching for cattle, been into the remotest corners. These asked preposterous figures for any intelligence, but as soon as the mill began to work and an appearance of permanence appeared, their price has come down, and now I find several only too anxious to show reefs on payment by results.

"July 13.—I have crushed 30 tons of Louis Morel Mine, and got 19 ozs. from it. It, like all the rest, contains sulphurets. I am now on the lower drive Cavanah Mine. The mules not having got back from Truxillo, I am not able to get at the Little Helen ore, but will take a trial crushing of it very shortly; but from what I find in all the others I expect that it will prove refractory. It is superfluous to say I am saving my tailings, which undoubtedly contain valuable sulphurets, which I cannot at present deal with."

The CHAIRMAN, after reading the letters, then went on to say that the manager wished to enter upon important works for deep sinking, and he would like to hear what the shareholders had to say on the subject.

Mr. HODDING said that he had listened with interest to the manager's letters, but that he wished to observe that whereas this gentleman in his communications to both the Government and the directors had stated there were many thousand tons of ore in sight, worth 2½ ozs. to the ton, yet, when he commenced crushing, the shareholders did not reap the benefit of half of what he stated was the value. They consequently

APPEARED TO BE ON THE HORNS OF A DILEMMA,

and either the manager was too sanguine as to the value of the ore in sight or there was some lack of vigilance in not securing a greater proportion of its value. It will be noticed that in the letters just read to the meeting the manager talks of having a large quantity of low-grade ore, averaging about 1½ oz. to the ton, and this is about the average yield now obtained from the quartz all round. He felt sure that it would be to the interest of the shareholders if the board were to push forward the work more vigorously, working the mill both night and day, and quadrupling the quantity of stone put through the mill monthly, and recommending extreme vigilance on the part of the manager to see that none of their rich gold ore was lost in transit from the mine to the mill.

Mr. J. W. HUGHES endorsed what the last speaker had said, and pointed out that as a rule in new companies there was some difficulty in finding gold, but in this case there seemed to be plenty of gold, but the shareholders did not fully reap the benefit of it. He was in favour of a vigorous policy, but deprecated any extensive sinking of shafts as long as the mine could be opened by adit work.

THE CHAIRMAN TAKES THE VIEWS OF TWO SHAREHOLDERS TO BE THOSE OF THE "MEETING."

The CHAIRMAN, in reply, said that he was glad to have the views of the meeting, which should have the attention of the board. He had received that day a cable from the mine advising the weekly output as 25 tons, producing 28 ozs. of gold. Instructions had been sent out to proceed with the other five stamps as rapidly as possible, and instructions would be cabled out to the manager to keep the works going night and day.

The usual vote of thanks to the chairman was proposed and seconded, and the proceedings terminated.

GOLD ORES REDUCTION CO., LIMITED.

A COMMITTEE APPOINTED AT THE REQUEST OF THE DIRECTORS TO AID THEM IN THEIR FUTURE POLICY.

A SPECIAL MEETING of this company was held at Winchester House, on Thursday.

Mr. H. T. Walker

(chairman of the company) presided.

STRANGE CONDUCT OF AN OFFICIAL.

The CHAIRMAN: Gentlemen, I have first to mention the inability of the directors to present you with a report and a properly audited balance-sheet. I can give you the substance of what their report would be, but in regard to the accounts, owing to the neglect of the secretary—I can use no other words, Mr. Milne—the accounts have not been made up, and for some two months past we have been hard at work trying to put them in proper order. The auditor found them in such a condition that he is unable to give his certificate. I will now refer to the report that was issued some time since, which stated that a contract had been entered into with the Russian Mineral Explorations Co., which is in exactly the same position now as it was then. The next contract with the Russell Gold Co. has not been carried out, and requires explanation. The Spanish and Portuguese contract remains in the same condition, and the Transvaal contract was not carried through, the parties agreeing to take it having forfeited the deposit of 500%. In Oct. last a contract was entered into between the

NEW RUSSELL GOLD CO.

and this company for the purpose of using the process at their mine. The contract having been signed, Prof. Hutchinson who, I believe, was the inventor or patentee of that process, was selected by the board to proceed to the Russell Mine to put it in operation. Up to about the middle of Mar. the directors were unable to get any satisfactory reports from him, and about the end of June it was necessary to recall him. That is the outline for the present position. Prof. Hutchinson went to Russell to erect a furnace to treat 500 tons per week, but that furnace was not erected, and, so far as I can learn, is not erected now, nor has that gentleman vindicated his process in one iota so far as New Russell is concerned. On his return it was arranged to send out Mr. Bailey, the chairman, but he has not been at New Russell Mine sufficiently long to make a proper report to the directors, and hence we are not able to say why Prof. Hutchinson has not carried out his work. Since Mr. Bailey has been there he has sent one or two telegrams, and the last certainly leads one to hope and believe that the success of the Gold Ores Reduction Co. will be obtained under the management of the New Russell manager and Mr. Bailey. But you can quite understand it will take some time to put matters in order, because Mr. Bailey found them in such a state that nothing could really be done with the furnace. The directors feel it imperative that

THE SHAREHOLDERS SHOULD APPOINT A COMMITTEE

to assist them, consisting of three or five, so as to decide what is the proper course to be pursued in the future, as well as to report to you.

A SHAREHOLDER: When may we expect the accounts?

The CHAIRMAN: So soon as the committee have gone into matters. The directors have no information to keep from you, and would like Mr. Payne, the auditor, to explain matters.

CONFIDENCE IN THE CHAIRMAN.

A SHAREHOLDER: I never for the moment imagined that you did have any thing to conceal. (Cheers.)

Mr. PAYNE (the auditor): The accounts were placed in my hand, and after checking the details, which were all in order, I called for the vouchers, of which a certain number were given. Those I passed as being in order. A great number of accounts have been paid by cheques of the board, some of them to considerable amounts. On referring to the board's minute-book, I found no resolutions of the board sanctioning those payments, and the consequence was I declined to pass them. (Hear, hear.) A considerable number of accounts are entirely unvouched, and there are also several items in them the subject of journal entries, which look to me (without making any accusations) like what we call "regulating entries," done for the purpose of disposing of the balance. A public accountant of any reputation does not accept such figures. (Cheers.) I, therefore,

DECLINED TO PASS THE ACCOUNTS,

and reported verbally to the board on Aug. 25 to that effect, furnishing them at the same time with the schedule setting out all the items in question under their separate headings, and the board have called upon the secretary to supply vouchers, and, if possible, justify the payments of those large sums which were disbursed without their sanction. Up to the present moment I have not received information that that has been done. The accounts, therefore, remain uncertified, and until that information is furnished and those vouchers are produced they will remain uncertified. (Cheers.) I shall be happy to place myself at the disposal of the committee.

After some discussion the following resolution was passed unanimously: "That Messrs. Tounce (235 shares), Mr. McEwan (100 shares), Mr. Crawford (8,870 shares), Mr. Poupard (94 shares), and Mr. Wayland (1,000 shares) be appointed a committee to act with Mr. Payne in preparing accounts for the shareholders, and in submitting to them a report on the general position of the company."

A vote of thanks to Mr. Walker for presiding closed the meeting.

RUBY (Aug. 15).—Dunderberg: We have five tributaries at work here. In the 80-ft. upraise we have followed a pipe of low-grade ore, which has been nearly large enough to work in, a distance of 25 ft., and I trust this will lead to some ore good enough to ship, as we are in the vicinity of some old chambers from which good ore has been extracted. Lord Byron: We have seven tributaries at work here, two of whom have a very nice showing of ore. The ore in this mine still continues about the same as in my last report, and we have now about 20 tons ready to ship. Bullwhacker: We have four men at work here extracting the usual amount of ore.—A. FRASER.

—Telegram from Eureka:—"47 tons tribute ore shipped and smelted, producing to company \$279."

BRITISH MINING INTELLIGENCE.

CWMYSTWYTH (Sept. 2).—Agent's report: There are strings of blende in the end of the 15 west, but no material change since last report. The 30-fm. level east on the new lode is being extended at a satisfactory rate. The level has been cleared of deads, and the lode taken down, which shows a further improvement to 2½ tons of blende per fm. The end west on branch of new lode is in easy ground, but yielding little ore. The two stopes in the back of the 3 east and west of winze will yield respectively 2 tons of blende per fm., and the stope on the same lode in the back of the 15 east is more kindly; yield 1½ tons of blende per fm., and spots of lead ore. The stope on the back of the 15 west on the Comet lode is unaltered at ½ ton of lead and 1½ ton of blende per fm., and the stope on the same lode in the back of the 30 will yield ½ ton of lead and 1½ ton of blende per fm. Surface operations are in regular work, and water supply ample.

DEVON GREAT CONSOLS (Sept. 3).—Watson's engine shaft: In the 172-fm. level west the lode is 2½ ft. wide, and is producing a little copper and mundic ores, and is looking more promising. In the 160-fm. level east the lode is large, 5 ft. wide, and will turn out 2 tons of copper and mundic ores per fm. In the 160-fm. level west the lode is 4 ft. wide, and is yielding some saving work of mundic and copper ores. The stopes throughout the mines are looking well.—W. CLEMO.

DEVON UNITED (Sept. 3).—Willesford's shaft: In the 144-fm. level east the lode is 2 ft. wide, containing a little mundic. In the 144-fm. level west the lode is 2½ ft. wide, yielding a little copper and mundic ores. The winze in the bottom of the 132-fm. level west is for the present suspended, and the men are put to stope in the bottom of the 132-fm. level east and west of the winze, where the lode will produce 2 tons of copper and mundic ores per fm. The lode in the stope in the back of the 132-fm. level west is yielding 2 tons of copper and 1 ton of arsenical mundic per fm.—W. CLEMO.

DRAKEWALLS (Sept. 2).—The engine shaft has been sunk during the past month 2 fms. 1 ft. 6 ins., making a total depth of 11 fms. 3 ft. below the 160-fm. level. Progress has been impeded in the past week owing to the heavy rain, and so much water finding its way to the bottom of the mine. The shaftmen have not been able to work for two days, but I am pleased to say the water is again in fork, and the men working the shaft. In the 160-fm. level east we are cutting into the lode on the north side of the drivage for 5 fms. long to ascertain its size and value, and so far as seen it will produce 6 tons mundic per fm., and some very rich stones of tin. There is a large portion of the lode still standing on the north side yet to be proved. In the 160 driving west the part of the lode carried (4½ ft. wide), is composed of capel, quartz, peach, and a little mundic, 2 tons per fm., and a little tin; 3 fms. 1 ft. 7 ins. has been driven in the past month. The 147-fm. level east has been driven in the past month 2 fms. 3 ft. 2 ins. The lode here has been rather disordered by three or four small cross-courses; it appears, however, to be getting more settled, and the lode shows a little mundic and a little tin. No. 1 stope in the back of the 160 west is producing 10 tons of mundic per fm., and saving work for tin. The stope in the bottom of the 147 east is yielding 9 tons mundic per fm., and No. 3 stope 8 tons mundic per fm., and saving work for tin. The stope in the bottom of the 147 east is yielding 15 tons mundic per fm., and saving tin work; and the stope in the back of the 132 west of the cross-course is yielding 2 tons of copper ore, and 4 tons mundic per fm. We have finished cleaning out the arsenic soot-to-day, which we estimate roughly will weigh over 70 tons. We are busy preparing a parcel of tin for sale. The machinery throughout the mine is in fairly good order and works well.—H. RODDA.

EAST GRASSINGTON (Sept. 2).—Report from the mine manager:—Hammond shaft: The 47 west has been advanced during the past month 16 ft., and stoped 7 fms., giving 9 fms. 4 ft. of ground removed here during the past month; the ore-bearing part of the lode is 9 ins. wide, carrying lime spar and gossan well charged with lead ore, and with every appearance of opening out into payable ore ground. Present end is within 5½ fms. of being parallel with the old underlay shaft. Stope in back of level in a vein 2 ft. wide yields 15 cwt. of lead ore per fm. No. 3 sump: The western end is advanced 14 ft., in a vein 2 ft. wide, chiefly composed of limespar, sulphate of barytes, and lead ore; worth 20 cwt. per fm. The eastern end is advanced 9 ft., in a very pretty ore lode, yielding 20 cwt. of lead ore per fm., and promising for a further improvement as we approach the branch lode coming in obliquely on the south side. Stope in intermediate level in easy ground; yields 8 cwt. of lead ore per fm. Harris main engine shaft: This shaft has been deepened 16 ft. 6 ins. during the past month, and is now down 60 ft. below the 47. The progress attained here is highly satisfactory, notwithstanding the drawbacks caused by the hard and tough character of the country rock, and the continuous wet weather, coupled with several heavy feeders of water met with in sinking, have proved exceedingly troublesome of late. The lode in the 47 east of 4th level is 2 ft. wide, well mixed with good patches of lead ore. Two stopes worth respectively 12 and 20 cwt. of lead ore per fm. In the 37 east the lode is 10 ins. wide, producing saving work for dressing. Surface: Dressing and smelting operations pushed forward with energy. Pumping and hoisting engines in good order and working smoothly.

KINGSIDE (Sept. 2).—Agent's report:—The portion of the lode carried in driving the 44-fm. level west of cross-cut north of Taylor's shaft will now produce from 12 cwt. to 14 cwt. of lead ore per fm. In the same level going east of cross-cut the lode is of a promising character, and worth 15 cwt. to 18 cwt. of ore per fm. At the 11-fm. level east of Taylor's shaft we have intersected the branch which is being worked upon in stope over the 22-fm. level, and some good stones of lead ore have been broken therefrom, but it is not yet sufficiently proved to enable us to give its value. In the stope over the 22-fm. level north of rise this branch will yield from 12 cwt. to 14 cwt. of lead ore per fm. The Pengueilan north lode in stope over the 22-fm. level east of rise is producing 12 cwt. of ore per fm. In the stope over the 11-fm. level east of Taylor's shaft the Pengueilan north lode yields ½ ton of ore per fm. The stope over the deep adit level 28 fms. west of Taylor's shaft on same lode is suspended for the present, and the men are now engaged clearing ground for turbine, air-compressor, &c.

LEADHILLS (Sept. 1).—Brown's vein: Five men are set to drive the 145-fm. level, now 167 fms. north of Jeffrey's shaft, at 120s. per fm.; vein above 4 ft. wide; mainly spar, mixed with ore, worth 30 cwt. per fm. Five to stope above the 145 north of Jeffrey's shaft

at 37s. 6d. per fm.; worth 15 cwt. of ore per fm. Four to stope above the 145 south of Wilson's shaft at 35s. per fm.; worth 40 cwt. of ore per fm. Four to stope above the 145 north of Wilson's shaft at 40s. per fm.; worth 35 cwt. of ore per fm. Four to No. 1 stope above the 130 north of Jeffrey's shaft at 45s. per fm.; worth 25 cwt. of ore per fm. Five to No. 2 stope at 45s. per fm.; worth 35 cwt. of ore per fm. Five to rise above the 130 north of Jeffrey's shaft at 90s. per fm.; worth 15 cwt. of ore per fm. Four to stope above the 130 south of Wilson's shaft at 42s. 6d. per fm.; worth 25 cwt. of ore per fm. Five to drive the 115-fm. level, now 49 fms. 4 ft. north of Jeffrey's shaft, at 115s. per fm.; vein above 4 ft. wide, of promising character, charged with spar and ore; worth 30 cwt. per fm. Five to stope above the 115 north of Jeffrey's shaft at 47s. 6d. per fm.; worth 20 cwt. of ore per fm. Three to drive the 100-fm. level, now 23 fms. 5 ft. 3 ins. north of Jeffrey's shaft, at 105s. per fm.; promising vein above 4 ft. wide, nicely mixed with spar and ore; worth 5 cwt. per fm. Two to stope below the 100 south of Wilson's shaft, at 47s. 6d. per fm.; worth 20 cwt. of ore per fm. Two to rise above the 85 north of Jeffrey's shaft, at 100s. per fm.; worth 5 cwt. of ore per fm. Eight to drive the 70-fm. level, now 86 fms. 5 ft. 3 ins. south of Wilson's shaft, at 100s. per fm.; vein 4 ft. wide, showing a rib of kindly spar, mixed with spots of ore. Four to No. 1 stope above the 35 south of Flat Rod shaft, at 30s. per fm.; worth 65 cwt. of ore per fm. Twelve to No. 2 stope, at 40s. per fm.; worth 50 cwt. of ore per fm. Sarrowcole vein: Five to drive Gripp's adit, now 23 fms. 4 ft. 6 ins. north of George's Roust vein, at 105s. per fm.; promising vein, 3 ft. wide, mixed with spar and ore; worth 10 cwt. per fm.—T. NEWBIGGING.

NEW MINERA.—Report for two weeks ending Aug. 23:—The 275-yd. level—No. 2 rise and stope: Lode 6 ft. wide; worth 2 tons blende and 1 ton lead ore per fm. The stopes east and west of No. 1 rise are in good ground; one worth 6 tons blende and 1½ tons lead ore per fm., and the other worth 4 tons blende per fm. Winze No. 3 has been commenced under rise No. 2, and is down 9 yds.; worth 1 ton blende per fm. The 295-yd. level—Driving west: The lode is disturbed, and has fallen off in value. Driving east: Lode 9 ft. wide; worth 6 tons blende and 1 ton lead ore per fm. The 315-yd. level: Driving 5 ft. wide; worth 4 tons blende per fm. Dressing: The new crushing mill is nearly finished. The weather has been bad for some weeks, and much retarded outdoor work. Since operations were commenced in Feb. this year 603 tons blende and 201 tons lead ore have been treated and sold.

PRINCE OF WALES (Sept. 2).—In the 180-fm. level, both east and west, the men have now commenced taking down the lode which we hope to find productive of good results. In the 166 west we have also commenced blasting down the lode, which as far as can be seen looks well, but there is not enough done yet to see any change in it. When last down was worth 16½ per fm. There is no change in the cross-cut south except a little increase of water.—S. ROBERTS, J. PROUSE.

ROMAN GRAVELS (Sept. 3).—The 155-fm. level north of main shaft is now driven 18 fms. 1 ft.; the lode in forebreast is 2 ft. wide, and is to-day worth 1 ton per fm. for lead and blende. The 155 south-east on Caunter lode is driven 18 fms. 3 ft. The lode here, which is still in two divisions, is worth 15 cwt. per fm. for blende. The 140 south is driven 14 fms. 4½ ft. from No. 1 winze. The lode in forebreast is 3 ft. wide, but we are unable to value it to-day. The winze in the 140 north is now 2 fms. 1 ft. deep. The lode is 3 ft. wide, and is worth 1½ tons per fm. for lead ore, and contains stones of blende. The three stopes in back of the 140 north are together worth 3½ tons of lead ore per fm. The 140-fm. level on Caunter lode, south-east of main shaft, is now driven 14 fms. 5½ ft. The lode here is 4½ ft. wide, and is worth 1½ tons of lead ore per fm., and also contains good stones of blende. The stope in back of this level is worth 3½ tons of lead ore and blende per fm. The lode at the 125-fm. level, south of main shaft, is split into three parts, and we value it to-day at 1½ tons per fm. for lead ore and blende. The winze in this level going down to the 140 south is now 8 ft. deep, but is still sinking in the country rock. The two stopes in back of this level, north of Lewis winze, are together worth 2 tons lead ore per fm. The three stopes in back of the 110-fm. level, south of Watkin's winze, south of main shaft, are together worth 4 tons lead ore per fm. A stope in back of this level, south of shaft, is worth 1½ tons lead ore per fm. The three stopes in back of the 80 south of Jones' winze, south of main shaft, are together worth 5 tons for lead ore and blende per fm., and the two stopes on east lode, north of main shaft, are together worth 2½ tons lead ore per fm. The 50 tons lead ore sold to-day realised 420½., and we shall send out samples of 20 tons of blende on Thursday next.—A. WATERS.

SOUTH CONDURROW (Sept. 2).—The stopes in the back of the 40 east of engine shaft are looking much as usual. The stope in the back of the 50 is worth 9½ per fm. The stope in the back of the 60 east is worth 12½ per fm. The stope in the back of the 123 east of Marshall's shaft is worth 15½ per fm. The stope in the bottom of this level is worth 15½ per fm. We are making good progress in driving the 138 cross-cut north.—W. RICH, W. THOMAS.

SOUTH DARREN (Sept. 3).—The shaft is 71 ft. 6 ins. under the 142 level. Since I reported last (worth 15 cwt. of silver-lead ore per fm.) none of the lode has been broken down except one blast, which was put in the western end to-day, and that shows a very much better lode, worth 2 tons of silver-lead ore per fm. Some of the best stones of lead were sent up to-day we have had for some time. The winze in the 130 west continues worth 17 cwt. of silver-lead ore per fm. Two men are stripping the lode in the 142 end west. We think there is a branch of ore there which is not yet cut into. The 15 tons of silver-lead ore, sold on the 28th ult., realised 177½. 7s. 6d.—J. MITCHELL.

VAN (Sept. 3).—In the cross-cut towards the south lode at the 150-fm. level there is no change in the ground since last report; the end is being pushed forward by rock-drill and six men as fast as possible. The lode in the two stopes over the 150-fm. level continues to yield 15 cwt. of lead ore per fm. The lode in the stope over the 135-fm. level (on the south lode) is worth 25 cwt. of lead ore per fm. The lode in the stope over the 105-fm. level, west of Seaham's shaft, is producing 18 cwt. of lead ore per fm. At the 120-fm. level east the cross-cut north in the forebreast has, at 2½ fms., intersected the foot-wall of the vein: and the country rock having been reached here we shall now resume the driving eastward in the middle portion of the lode as previously, which contains spots of lead, with a mixture of blende. The cross-cut south behind this end has, at 7 fms. from the

level, penetrated through the lode to the hanging-wall and country rock. We have, therefore, now proved this point and removed men to No. 2 stope over the 135-fm. level on the south lode, where they are extending the stope by driving in the eastern end of it, to prove the lode in that direction, and to obtain stuff to fill up the place previously stoped away, so as to reach the roof of the stope again where the lode is to be seen, worth 1 ton of lead ore per fm. The 150-fm. level east of Seaham's winze has been driven 5½ fms. on the south part of the lode, which for the width of the level 5 ft. is in the present fore-breast full of blende. This end is of the most promising character, and if the blende were lead it would be a very rich vein. Six men with a rock-drill are pushing on this very important point. The stope over the 90-fm. level, east of Seaham's shaft, produces 15 cwt. of lead ore per fm. Dressing of ore is going on favourably with a small number of hands.—J. PAULL.

WEARDALE.—Report for week ending Aug. 29.—Ore dressed for week, 61 tons; ore, slag and fume smelted for week, 132 tons; producing 66 tons of pig lead.

WHEAL CREBOR (Sept. 1).—Very good progress has been made in driving the 156 east during the past week. The lode is keeping its regular course. The part carried in the end is worth about 3 tons of mundic per fm. The lode in the stope in the bottom of the 144 east of winze is worth 2 tons of copper ore and 4 tons of mundic per fm. The lode in the stope in the back of the 132 west of cross-cut is yielding 3 tons of copper ore and 4 tons of mundic per fm. The lode in the 132 end driving west is worth 3 tons of mundic per fm. Our tribute pitches are yielding the usual quantity of copper and mundic ores. Owing to much rain, the weighing of the mundic has been delayed, but we hope to have it all done, and particulars of weight, &c., will be forwarded in a day or two.—P. D. HOLMAN.

WHEAL UNY (Sept. 2).—The 244 end east is unaltered since last report. The 244 west is still improving, and looks better to day than anything yet seen at this point. The stuff from western end mixed with eastern end greatly increased the produce by to-day's assays. All other points equal to last report. Full report next week.—J. WHITE.

FOREIGN MINING INTELLIGENCE.

AUSTRALIAN BROKEN HILL CONSOLS.—The mining manager reports by mail for the fortnight ending July 23:—Engine shaft: The 280-ft. level west driven 4 ft.; total, 428 ft. Rock-drills were used here a part of the fortnight. Tenders are now being called for to continue this level a further distance of 100 ft. Rise on rich vein: A small quantity of rich ore has been stoped here, and is accounted for in the output. Intermediate level, westward from the rise, now being re-started, and arrangements being made to start a similar level eastwards. Both of these levels will be worked with rock-drills. Incline shaft on rich shoot sunk 16 ft.; total, 122 ft. The lode here has continued to improve daily, and as the intrusion has been lessening, we have been expecting almost hourly to come upon a good body of rich ore, fahlerz having shown itself freely in the calcespar. Just at time of writing we have come upon a small leader, containing native silver and fahlerz in more solid form. Output consists of 2 tons of rich ores, containing 6,366 ozs. of silver. Medium grade ore from other parts of the mine not yet cleaned up. Block 97, north shaft, sunk 26 ft.; total, 179 ft. Water, which has been coming in for several days through the lode, has at last increased to such an extent as to stop further sinking. The lode here has proved itself silver-bearing throughout.

BONNIE DUNDEE.—Mine manager's report for fortnight ending July 4:—Have continued stoping from the back of No. 7 south-west level. In the stope east of winze we have had an average of about 1 ft. of stone, mixed through from 5 ft. to 9 ft. of formation, and there is about the same amount of stone in the face of stope at present. In the stope west of winze there are from 6 ins. to 8 ins. of reef going up on the hanging wall. At the commencement of the fortnight I started six men stoping both east and west of winze from No. 7 south-west level. So far the stone is running in leaders through the formation which we have opened up to about 9 ft. high, with stone still underfoot. We shall continue opening the ground up until we get under the stone. The stone shows a little gold, and should crush fairly well. On Monday, the 29th ult., I started two men to drive a cross-cut from the level to intersect the footwall 114 ft. from the shaft. They have driven 6 ft. for four and a-half days. I hope to cut the footwall during the next fortnight. During the fortnight a crushing of 83 tons of stone was cleaned up at the company's mill for a yield of 88 ozs. 7 dwts. of smelted gold. The small quantity owing to most of the men being engaged in dead work, viz., No. 8 level and the winze. However, now this work is completed I hope to be able to turn out sufficient stone for some time to give a fair profit. Have raised about 40 tons of stone for 10½ days. The men having had one day and a-half holiday, owing to the annual show and races. Stone in hopper, 44 tons; water about as usual. All machinery in good order.

BRATSBERG.—Report for week ending Aug. 22:—Hoffnung Mine: At No. 2 adit level the lode is worth ¾ ton per fathom; No. 1 rise in the back 1 ton per fathom, and No. 2 rise ¾ ton per fathom. No. 3 adit level remains the same, as also the rise in the back. No. 4 level is yielding only saving stuff, although carrying a very strong and well defined lode. At Murchison's the trial level is still producing 1 ton per fm. Johannes Mine: The different points of exploration here are practically the same as when last reported on. Surface work and remarks: Bad weather for land carriage still continues, but, nevertheless, we hope to be ready in time for the Mary Owens, which vessel will load the fourth cargo.—J. D. HOLMAN.

BRATSBERG SMELTING AND REFINING WORKS.—Report for week ending Aug. 22.—Last week was very unsatisfactory as regards the smelting works, as, owing to exceedingly heavy floods, the canal has been rendered impassable for the time being, and our barges loaded with limestone have been lying down at Ulefos waiting to get up. Nothing was done during the week, but we expect the barges got up to Baudakslid last night, so we started smelting this morning. Everything is progressing satisfactorily at the electro-depositing works. We availed ourselves of the stoppage at the smelting works to do some necessary work outside, viz., the improvement of the road from Omlid Vand, so that clay could be transported at all times of the year, and the construction of a stone floor outside the works for the reception of the matte, &c., and prevention of waste.—T. F. SMITH.

BRITISH BROKEN HILL PROPRIETARY.—Mining manager's report for week ending July 22.—No. 1 shaft—50-ft. level: The south drive has been lengthened 22 ft. this week, mostly through country rock, the lead ore having gone out on the eastern side of the drive; the total length is now 286 ft., and the work has been stopped for the present. The north drive has been extended 19 ft. by the new 'contractors, making its total length now 123 ft., with no change in the ironstone face. 2nd level: The cross-cut eastward off the main south drive has been put in 7 ft. through galena, and is now 18 ft. long. Good work has been done on the new section. No. 2 shaft: The winze in the north stope has been sunk 13 ft., and is now down 38 ft. below the sill floor. During the week we have passed through decomposing sulphides mixed with cubical galena and carbonate crystals, and this has now been cut out by solid sulphide ore coming in from the west. No. 5 shaft: This shaft has had 5 ft. added to its depth, making a total of 89 ft. from the second sill. A trial shaft is being sunk on a vein of iron ore between No. 5 and No. 2 shafts, and this has now reached a depth of 15 ft. Two men are at work prospecting this vein between the trial shaft and No. 5.

CUMBERLAND.—Report for June:—No. 7 level north: In my last report I stated we had small hopes of finding anything payable in this level. During the month the nature of the ground changed to such an extent that I discontinued driving; the total length is now 221 ft. No. 7 level south: Since my last report the numerous leaders therein mentioned have given out, so I discontinued driving in this direction also. Total length is now 70 ft. No. 2 shaft: The contractors started in full swing on the 6th inst.; at present there is nothing new to report, appearances are still very favourable. The work will be completed about the end of October next.—A. GALLAGHER.

—NOTE.—It will be remembered that the date of the cablegram, stating that 15 ft. had been sunk in the shaft, and that there was a great improvement daily, is about four weeks later than the above report.

DAY DAWN BLOCK AND WYNDHAM.—Mine manager's report for fortnight ending July 4:—No. 2 underlie shaft: This shaft has been sunk a further depth of 8 ft., making total depth from the surface 1,436 ft.; the shaft has also been timbered, and a new plat put down. The 902-ft. level west: The contractors have driven this level a further distance of 27 ft.; total distance from the cross-cut, 67 ft.; the reef is 5 ft. in thickness, of fair quality. A leading stope will be commenced during the coming fortnight. The 805-ft. level west: The reef in the stopes is looking fairly well; it will average 5 ft. in thickness. The winze has been sunk a further depth of 15 ft., making total depth 51 ft. The contractors have surrendered their contract for sinking, and it is being sunk on day work again. The reef maintains its size and quality. The 630-ft. level west: The stopes above this level are yielding fair quality stone, the average thickness being 2½ ft. The winze has been sunk 25 ft.; it is being sunk over the reef in formation. The 500-ft. level west: This drive has been further extended 9 ft., making total distance from the shaft 142 ft. A cross-cut has been started, and driven 8 ft. in a southerly direction. The present end is in diorite formation.

DAY DAWN P.C.—Report for fortnight ending July 18:—The output of quartz is 973 trucks. Sent to Excelsior mill 1,086 tons. No. 13 level has been extended a further distance of 14 ft., making a total distance of 70 ft. from the shaft; the formation is 10 ft. wide, carrying 3 ft. of stone on the hanging-wall and 1 ft. on the footwall, of fair quality stone. I have started a stope over the back of this level on 2 ft. of stone, of fair quality. No. 12 level has been extended a further distance of 12 ft., making a total distance of 385 ft. from the underlie. There are 10 ft. of stone in the face of this level, a little intermixed with leaders of mullock, which I am unable to separate. The leading stope over this level is carrying 5 ft. of very good stone. In the No. 2 stope we have 6 ft. of good quality stone, and about 10 ft. of soft formation, which makes the progress here very slow. In the No. 1 stope there are 3 ft. of stone, of fair quality. In the No. 1 stope going west from the No. 2 winze we have 6 ft. of stone, of good quality. No. 11 level: The leading stope over the hanging-wall drive is carrying 3 ft. of stone, of good quality. The leading stope over the footwall drive is carrying 1 ft. of stone, of medium quality. In the No. 6 stope we have 6 ft. of stone. In the Nos. 4 and 5 stopes the stone will average 3 ft. I have started to stope back towards the shaft from the No. 3 winze on 8 ft. of heavy mineral stone. The stone in the Nos. 1 and 2 stopes will average 4 ft. thick, all of which is of good quality. The No. 5 winze on the footwall drive has been sunk a further depth of 11 ft., making a total depth of 52 ft.; this winze is passing through a very hard diorite formation, carry 2 ft. of heavy mineral stone, of good quality. No. 10 level hanging-wall drive: The stone in the stope going west from the No. 1 winze is about 1 ft. 6 ins. thick, of medium quality. In the stope going east we have 1 ft. of stone, of good quality. The 240-ft. level going east has been extended a further distance of 12 ft., making a total distance of 108 ft. from the shaft. We have about 4 ft. of a soft diorite formation, but carrying no stone. The number of trucks of quartz hauled from each level is as follows: No. 13 level, 28 trucks; No. 12 level, 328 trucks; Nos. 10 and 11 levels, 515 trucks; No. 2 shaft, stopes under No. 5 west, 60 trucks; No. 2 shaft, stopes over No. 5 west, 42 trucks; total, 973 trucks. No. 2 Underlie shaft: The No. 5 east level has been extended a further distance of 17 ft. with one rock-drill, making a total distance of 447 ft. from the shaft. The formation here is very small, measuring only a few inches and without any sign of quartz; the country rock is very hard red granite. No. 5 level west: The stope under this level is carrying 2 ft. 6 ins. of stone, of fair quality. In the No. 1 stope over the back of No. 5 west level the stone cut completely out. I have taken the men from here and put them to work at No. 3 shaft. In the No. 2 stope under the No. 2 winze we have 1 ft. of stone of medium quality. No. 4 level west has been extended a further distance of 3 ft., making a total distance of 432 ft. I have taken the men out of this level and started a cross-cut at a point 420 ft. from the shaft to cut the hanging-wall, which has been driven 18 ft. through a soft diorite formation carrying several small bunches of poor quality stone. There is no sign of a hanging-wall as yet. No. 3 Straight shaft: The work in connection with the poppet legs, brace and mullock tips, the latter of which requires no less than six hawsers, 20 ft. apart, to carry the mullock clear of our railway line, is being proceeded with as fast as circumstances will allow. I have pumped the water out of the main shaft to a depth of 84 ft. I have also baled the water out of the pump shaft, which is 54 ft. deep, and timbered up 25 ft. This

shaft requires to be sunk about 20 ft. deeper before we will be able to take up the water from the main shaft. Lease No. 1,280: The water has been pumped down 89 ft. lower, making the total distance below the No. 2 drive 139 ft. Have also been repairing the shaft and putting in ladders and other necessary work. —T. LESTER.

DON PEDRO.—Mr. Touzeau, writing under date July 31, says:—The mine: At the risk of repetition, I may mention that at the time of my departure a very awkward but necessary piece of work had to be undertaken before serious operations for sinking Gordon's shaft could be undertaken. The engine end of the shaft had to be excavated for about 4 fms. above the 40-fm. cross-cut so as to enlarge the shaft to its full width down to that horizon. Extra heavy timbers would have to be used about this part on account of the new plunger being placed there, and also because the shaft would pass below the 40-fm. cross-cut, and so have to carry the extra weight of one excavation on top of the other. The jack-head lift had to be thrown over from its position in the whim end of the shaft to that which the new plunger will eventually occupy in the engine end. The tramroad had to be carried down to its full width (double instead of single line) and other detail work completed. This stage reached, the work of sinking the shaft below the 40-fm. level could be commenced. I find, on examination, that the works enumerated have been done, and that in addition the shaft has been sunk below the 40-fm. level to the depth given in the mine report herewith, and I think it but right to say that the manner in which the work has been executed, and the progress made, reflect very high credit upon Capt. Jeffery. The hard nature of the ground in Gordon's shaft, while rendering the rate of progress comparatively slow, is a subject for congratulation, for it renders the shaft secure in a position where it would otherwise be unsafe, and its maintenance hereafter will be proportionately reduced. The 50-fm. cross-cut: Speedy drirage here was not to be expected, if alone for the reason that the sinking of the shaft keeps the mule whim almost fully employed, but the splendid result obtained—82 ft. driven in lode and the end now showing no falling off in quality—dwarfs any other consideration. Decided changes have taken place in the character of the lodes passed through, and at the present time we are entering upon another change, but these alterations have not been from rich to poor, for high-grade ore has ruled throughout—simply they go to show, so far as present workings extend, that we are in a great junction of lodes, hitherto distinctly separated, that in size they are larger, and in quality richer than is recorded of them in the higher levels. The advice given in Brazil to "have patience" is generally an excuse for the giver's idleness, but to use it in reference to extracting the mineral now known to exist at Maquine, it simply means wait until the necessary work can just be accomplished. Surface works: A large amount of surface work has been done and is in hand, connected with the new adit and lobby through the Sugar Loaf mountain (so called). Without a proper plan it is difficult to make clear to you the exact nature of these works, but they involve the construction of a temporary tram-road for the purpose of removing the excavated material from the former to a point where the storm water shall not wash it into our pipe line, and in the latter case the driving of a tunnel to carry the same water clear of the proposed site of the new reduction department. In both cases the work is well advanced. The completion of these works on surface will liberate the men engaged upon them, and they will then be employed in preparing sites for the new machinery, &c.

—(July 31).—Maquine Mine.—Monthly report: Operations throughout the month have been carried on very satisfactorily both in mine and at surface. Gordon's shaft: This has been sunk 6 ft. in a very hard sandstone. Progress has been slow in consequence of the shaft being now under the old P. P. incline, which necessitates great care being taken, and renders blasting dangerous; therefore, the ground has to be excavated by pick and wedges. New drirage: This has been driven for the month 2 fms. 4 ft.; total distance driven, 6 fms. 2 ft., leaving 8 ft. more to excavate before rise towards Gordon's shaft. The ground is of a very hard nature, and stands open without timbers; also the drirage is letting the water out very freely, and we expect, as we approach the line of shaft, less water will be met with in sinking. The 50-fm. cross-cut: For the last 9 ft. the ground has become very soft in back, and been a little troublesome for excavating; notwithstanding this, the lode will compensate for the trouble. The last cut which was taken out contained richer samples than have been taken out hitherto since lode was first cut. Driven for the month 1 fm. 4 ft.; total distance driven through lode 82 ft. The last set of back laths, and also the present, are penetrating through a different quality of jacotinga, which, by appearance, is, so far as I know, similar to the No. 5 shoot of lode (Canoa), although this still remains to be proved as we advance east. New lobby: Early in the month this drirage was started to be driven through the Sugar Loaf mountain to take the heavy storm water clear of the new reduction department. The total drirage to be driven 57 fms.; driven for the month, 83 ft. New adit: Excavations were commenced on the first of the month, since then 73 ft. have been excavated, also a new tram-road is in hand for the removal of new adit stuff. 333 ft. of excavation for tramway has been made, also 251 ft. of rails been laid. This new tram will be completed in a few days, and the removal of stuff from the new adit will be commenced. Running work: Six sets of timber have been put in throughout Gordon's shaft in place of old. A new lift of pumps have been fixed in bottom of Gordon's shaft to enable sinking to be carried on until the new level is communicated with the shaft. Explorations: In the north mountain of Maquine we have a level driving north; samples taken from branches met with show work for washhouse. Our intention is to continue this further north, where we believe better results will be met with.

EAST BROKEN HILL CONSOLS.—The mining manager reports for fortnight ending July 23.—Main engine shaft sunk 20 ft.; total, 58 ft. Surface work: Building in of boiler completed. Engines expected in a few days. Permanent brace well in hand. South engine shaft: Sunk 16 ft.; total, 108½ ft. Water continues to make in steady quantity from the south end of shaft.

FLAGSTAFF (Aug. 22).—Respecting your letter of the 8th inst. referring to the shipping of the ore, I am sending it down as fast as possible. There are now something over 200 tons at Sandy sent down since Professor Vincent left, and we are still shipping from 12 to 15 tons per day. As regards the machinery, I think we will have it in running order about the last week in Sept. The building is well ahead, and all the machinery is down from the old plant. Main

sixth level. This is now in 190 ft.; the rock is still very hard in breast. The ore above sixth is holding out, and all first-class. It is still going north-east, and the wall is hard and smooth. Main seventh level is now in 137 ft. I have struck another big body of iron, which is now 4 ft. wide and 6 ft. high, but it will not pay to save as yet. The ore in the rise is turning out some very good ore; the most of it is second-class. Number of tons taken out the past week ten—eight first-class, and two second-class.—A. L. SWOPE.

GARFIELD (Aug. 15).—The following work has been done at the mine:—Western mine 180-ft. level: The north-east drift was extended 12 ft., making a total of 207 ft. After driving 12 ft. in the hard ground we had in this drift, I decided to discontinue it, and begin to drift at a more favourable point. All indications of ore, were cut out by this hard bar of rock that came in. Drift running east has been driven 18 ft. The face of this drift looks favourable, having porphyry and talc, with a small seam of quartz running through it.

HARRIETVILLE.—Superintendent's report for the fortnight ending July 24.—I beg to submit the following report for the fortnight ending the 24th inst.:—Tunnel J: The lode in north drive, Guerdon line, is 2 ft. 6 ins. wide, 1 ft. on hanging-wall side carrying payable gold, the remaining 18 ins. on footwall side is not good enough to save; extended 19 ft.; four men; total, 170 ft. The south rise on Guerdon line: The lode is 5 ft. wide, 3 ft. on hanging-wall good stone, 2 ft. on footwall poor, but showing traces of gold sufficient to save for crushing. We have extended length of rise 4 ft. south, making total length along the line of lode 12 ft.; also erected pass for quartz and fixed windlass for the convenience of winding timber up the rise; risen, 5 ft.; four men; total, 20 ft. J tunnel, Mons Meg line: No. 1 rise, 100 ft. north of main cross-cut, opened a drive on north side of rise 60 ft. from main level. The lode is 1 ft. wide, carrying payable gold; extended 20 ft.; four men. No. 2 rise, 500 ft. north from main cross-cut: The lode is 3 ft. wide, showing traces of gold, but not payable. Here we have suspended work since the 16th inst., and put the men in the stopes to keep up the quartz supply; extended 8 ft.; four men; total, 155 ft. The lode in south drive of winze is 3 ft. wide, and very mullocky, being intermixed with sandstone, which is indicative of being near the south end of the lode, and consequently poor. I am of the opinion that this accounts for this month's yield being under the average, as a large portion of the crushing has come from the south end of the shoot; the drive is extended 17 ft.; six men; total, 85 ft. The 100-ft. level north of main cross-cut: Lode 2 ft. wide, showing traces of gold, but not payable. I have cross-cut into footwall close to face 5 ft., but found nothing defined; the formation is irregular quartz veins, sandstone and slate, showing traces of gold, but not in sufficient quantities to pay; drive extended 2 ft.; total, 192 ft.; cross-cut 5 ft.; two men. North drive, tunnel K: The lode is 3 ft. wide, with traces of gold, but not payable; extended 16 ft.; four men; eight days; total, 396 ft. Tunnel K: Cross-cut to Guerdon line, by Rielly and party (contractors), is extended 16 ft. from starting point. Tiddledee Mine: Drive south of tunnel D towards Mons Meg, extended 24 ft.; total 1,200 ft.; the lode is small and poor. Drive south-east of tunnel D on old Tiddledee lode, extended 9 ft.; total, 131 ft.; the lode is small and poor, but there are indications of improvement. Drives north and south of shaft below tunnel D, recently communicated on new shoot, extended 7 ft. and 19 ft. respectively; the lode in each end is 2 ft. wide and carries a little gold. Drive south of tunnel B, towards new shoot, has been extended 36 ft.; total 405 ft. I have passed through veins of quartz carrying gold. Rise on shoot of stone at B tunnel, risen 14 ft.; total 28 ft.; the lode is 6 ft. wide, and payable the whole width. The stopes are without change. Stope north of shaft on new shoot, lode is 2 ft. wide and payable. Stopes on Money King: Lode 3 ft. wide, also payable. The mine throughout is in good working order and safely timbered. Machinery: All machinery is working satisfactorily.

MOSMAN.—Mine manager's report for fortnight ending July 13.—North Australian Mine: Work in this mine is proceeding as usual. There is nothing fresh to report. The stone being raised is of good quality, though the quantity is not large. Since last report 50 tons of quartz have been raised. Total in paddock, 65 tons. The quality, I think, is quite equal to that last crushed. Last North Australian stone crushed, 221 tons, 698 ozs., equal to 3 ozs. 2 dwts. per ton. Wyndham Mine: The shaft has been sunk 10 ft. during fortnight; total depth from surface 846 ft. The rock being passed through is very hard just now, rendering progress slow. No reef has yet been met with, but I feel certain it is underneath and must be cut as the shaft gets deeper. (Cablegram, Aug. 21.—"Have struck quartz 2 ft. thick in Wyndham shaft, with specks of visible free gold.") The 550-ft. level south: This level has been driven 10 ft. during fortnight; total from shaft, 133 ft. The reef looks better than it did, showing more mineral, though possibly no more gold. It is 1 ft. thick at present. The various stopes on the reef are turning out a little more stone just now, owing to the reef being larger than usual. The quality, however, is about the same, although the heavy mineral would lead one to think it ought to yield better. I am of opinion that we are working the Rainbow reef in this part of the mine and not the Eastward Ho reef. Stone raised: 95 tons was raised during past fortnight; estimated total, 435 tons. About 450 tons have been carted to the mill, and there are still a few tons to come. Machinery: The winding-plant in course of erection at the Wyndham shaft is nearly completed, and I hope it will be working during this fortnight. The crushing mill is running on stone from the Wyndham shaft, and when this has been finished some public stone will go through.

MYSORE HARNHALLI.—Resident director's report on the working at the mines dated Aug. 11.—No work has been possible at shaft No. 2 during the last fortnight. The 12-in. lift did not draw its quantity of water, and the whole lift had to be removed, which was a very difficult and risky operation. It was found that the door piece was leaking, and this having been remedied the lift was lowered, and work will now be resumed. In middle field the quartz referred to in last report has been driven on north and south, and several tons brought to the surface; it is apparently of poor quality, for pan washing gives a very few colours of gold, it may improve as we drive on it, and may thicken out. At present it is so much mixed with country rock that we cannot say whether it is a lode or not. We are much impeded by water, but I believe it is getting less.

MYSORE REEFS (Aug. 11).—Fortnightly report:—Harvey's shaft: The 520-ft. level north has been extended 16 ft. 6 ins., now 90 ft. 6 ins. from shaft. The lode is 4 ft. wide, 2 ft. of which is quartz, assaying 5 dwts. of gold to the ton. Cross-cut west at the 520-ft. level has

been advanced 9 ft., now 56 ft. from level. The rock is very hard and sterile; this was suspended a week since, and the men put to drive the 520 south. The 520-ft. level south: This has been extended 9 ft. in one week, now 20 ft. from cross-cut. The lode is 1 ft. wide, and assaying 2 dwts. of gold to the ton. Winze below the 460-ft. level north: A week since we resumed the sinking of this winze by hand labour, since which 1 ft. 6 ins. have been sunk, making a depth of 24 ft. below the level. The lode is of greater width than the winze, and assaying 4 dwts. of gold to the ton. The 400-ft. level south has been advanced 13 ft. 3 ins., now 163 ft. 3 ins. from shaft. The lode is 4 ft. 6 ins. wide, composed chiefly of very hard quartz, and assaying 3 dwts. of gold to the ton. The 400-ft. level north has been extended 14 ft. 8 ins., making a distance of 223 ft. 1 in. from shaft. The rock is very hard, shows a few stringers of quartz.—M. SCANTLEBURY.

MYSORE-WYNAAD CONSOLIDATED AND MYSORE WEST.
—The mining manager reports by mail for fortnight ending Aug. 11:
—North shaft: This shaft has been sunk 4 ft. 9 ins., making a total depth of 188 ft. 3 ins. from surface; the rock is hard and dry in the bottom. The 173-ft. level: The plat has now been completed, and the men are now cutting an opening to start a cross-cut west from it; as soon as it is in far enough to allow a bar to be fixed I shall drive this with a rock-drill. The driving north of cross-cut has been advanced 4 ft.; total, 9 ft.; the lode in the end is now very small, and making a turn to the west. Driving south on the second lode, an advance of 11 ft. 6 ins. has been made; this lode looks stronger than the other, but has not as yet carried so much gold. I have made the following assays, which represent the value of the lode at these points, but I hope they will greatly improve a little deeper:—Sample No. 1, 173 level north, 10 dwts.; sample No. 2, 173 level north, 6 dwts.; sample No. 3, 173 level north, 5 dwts.; sample No. 4, 173 level south, 2½ dwts. South shaft: This shaft was sunk up to the 31st ult. 2 ft. 6 ins., making a total depth of 118 ft. 6 ins. from surface. The shaft is now being timbered, and the pumps will then be put in. I hope to get this work done and the pumping engine running by the end of this month. The erecting of the air-compressor is now practically finished, and we only await some steam and air connecting pipes from Madras to start it. All work is going on satisfactorily.

NEW CALIFORNIA.—Mine report for first half of Aug.—The 2,000-ft. level, west of shaft, main drift, in 921 ft.: The past two weeks' developments about the 2,000, main drift, west, have brought to light some very remarkable facts regarding the workings and relative position of the lode and porphyry-dyke about this point. The 2,000-ft. level, rise west of shaft, up 60 ft.: The rise going up to connect with the intermediate drift has followed the lode in its crossing of the dyke, and come into a fine lode, 5 ft. wide, and of rich appearance, samples of which are just up. The intermediate drift has the porphyry on its footwall yet, and is considerably south of the rise. Connection between these two workings will be made by holing through the intervening dyke. This condition of things accounts for the stream of water which the 2,000 end (main drift) was letting out at time of last reporting. We are cross-cutting to the main lode from the end of the drift through the dyke, which is from 15 to 20 ft. wide about these workings. The 1,800-ft. level, west of shaft: These slopes are yielding from 6 to 7 tons of milling ore per fm. The 1,500-ft. level, west of shaft, south vein at cross-cut: These workings are yielding from 200 to 300 tons of ore per month, and the grade of the ore has improved in the last week; the lode continues 2 ft. wide. The 1,500-ft. level, west of shaft, prospecting work, west of Hidden Treasure shaft: Cross-cutting through the dyke where the lode appears disturbed at this level, and a little beyond the Hidden Treasure shaft we have come across a vein 3½ ft. wide, carrying 6 ins. of smelting ore. We are now pushing further developments, and this discovery is likely to be of no small importance.—F. RICKARD.

NEW DEVALA-MOYAR.—Mine manager's report for week ending Aug. 6: Drive west in the 186-ft. level, 6 ft. driven; total, 36 ft. Drive east in the 186-ft. level, hand labour, 3 ft. driven; total, 8 ft. No. 4 winze, 116-ft. level, sunk 3 ft. 6 ins.; total, 16 ft. 6 ins. No alteration to report. Mill running as usual.

NEW EBERHARDT (Aug. 15).—The mine manager reports:—North drift, No. 2 upraise, advanced for the week 3 ft.; total length, 22 ft.; drift still very hard. Cross-cut east from north drift, No. 3 upraise, advanced for the week 9 ft.; total length, 34 ft.; this drift continues in broken ground, with bunches of quartz, but not any ore as yet. Cross-cut west on tunnel level advanced for the week, 13 ft.; total length, 53 ft.; the ground in this drift has changed very much since my last letter to you; some of it is quite soft and good-looking ground, showing that we are getting very near the winze. Beecher cross-cut east advanced for the week 5 ft.; total length, 25 ft.; the rock in this drift has become very hard, the wall of the brake continues quite regular. The face of drift in hard spar and lime. Cross-cut west advanced for the week 4 ft.; total length, 27 ft. The ground is of the same character, but very hard.

NEW HOOVER HILL.—Report to Aug. 20:—Briol's shaft: I have found a small streak of ore running into the west side at the 230 south of shaft. By putting in a few blasts we have found a bunch of ore showing gold in the rock. As to its size, I am unable to say as yet. There is no change to note in the drift going south at the 130. The vein of ore is very small below the 50-ft. level south of Provost shaft.

SOUTH-EAST MYSORE (Aug. 11).—Fortnightly report: Since my last the winze below the 500-ft. level north has been sunk 11 ft. 6 ins., which now makes a depth of 37 ft. 6 ins. below the level; the lode continues to present a most promising appearance, being 4 ft. wide, and showing good walls, 2 ft. of it is solid quartz. The last three samples assayed respectively 16 dwts., 13 dwts. 3 grs., and 12 dwts., which I think you will consider is encouraging. During the past week the increase of water necessitated replacing the small donkey pump by a more powerful one. We shall now, I trust, go on without interruption.—M. SCANTLEBURY.

WENTWORTH GOLDFIELDS PROPRIETARY (July 26).—The north-east drive was driven 15 ft., following the line of contact. We are also making a rise in the Crinoline vein from this level, and it shows patches of good ore. The north-west drive, Phoenix Mine, 200-ft. level, was extended 19 ft., the Happy-Go-Lucky vein continuing in the face of the drive. The rise in the Phoenix vein was advanced 8 ft.; the ore streak continues to look well, assays 136 ozs. of gold per ton. We have resumed work in the stopes on Phoenix vein No. 2, some arsenical pyrites and free gold showing in the vein. The south-east drive, 150-ft. level, shows no change; pro-

gress for the week, 10 ft.; the rich streak of ore is still in the face of the drive. The shaft on the Big Quartz vein was sunk 8 ft. since my last report, with no change to report, having not broken into the quartz. The timber is arriving, and the work of re-timbering the Reform shaft is being pushed ahead as rapidly as possible. The south-east drive, 150-ft. level, Shamrock Mine, is in good vein matter, some pieces of which are rich, assaying 172 ozs. of gold per ton. We have ordered a new 16 by 18 air-compressor to be placed at the Reform shaft. This will enable us to use the rock-drills generally throughout the mines, but until the compressor is in place and the work of re-timbering the Reform shaft finished, progress will be somewhat slow. We intend doing most of the work along the contact from the Reform shaft.—W. H. IRWIN.

—Cablegram from Mr. W. H. Irwin (permanent manager):—
"During the week the progress has been 80 ft. In the Shamrock shaft, 200-ft. level, the cross-cut is in 200 ft. The south drift gives indications of improvement. Good progress is being made in Reform shaft. The air-compressor is in course of erection. Phoenix shaft, 200 ft.-level, continues the same."

CORRESPONDENCE.

We do not hold ourselves responsible for the Opinions or Statements of our Correspondents.]

To the Editor of the MINING WORLD AND ENGINEERING RECORD.

GUIANA GOLDFIELDS, LIMITED.

SIR,—In the report of this meeting I observe mention is made of the mismanagement of a former board, respecting which mismanagement I should like a little information. I also see that a Mr. Greville Wears is mentioned in connection with the property, and shall be glad to know if he is the same individual who has been mixed up in Venezuelan mines—the Yuruari, if I mistake not. I should not have written, but I saw in the *Star* a day or two ago some very disquieting statements which ought to be answered by those concerned before much more is done. I should also like to know how Mr. Sowerby became connected with the property, and whether he is as proud now of that connection as he was at the meeting a week or so ago. Until this information is forthcoming I shall incline to your opinion that Guiana Goldfields, Limited, is an attempt to exploit the British investor rather than to develop a mine. By the bye, was it not an opportune cable they published?—I am, &c.,

SCEPTICUS.

London, Sept. 2.

SIR,—I think the remarks you made in your last issue *re* this concern very appropriate. In that issue you were blamed by "Still a Disgusted Shareholder" with not always protecting the investor from doubtful enterprises; but in the case of the Guiana Goldfields, Limited—very "limited" I hope they will be—you have done it fully. If any of your readers walk into the parlour of this spider they will deserve the fly's fate.—I am, &c.,

NOT THE FLY.

LIXA CO.

SIR,—I should like to ask if the Mr. Knowles, who presided at the meeting of this company on Monday or Tuesday last, is a member of the firm that was mixed up in the sale of the concern to the company. I have no interest in the concern save indirectly. A friend of mine has a few shares, and I think I have acted rightly in advising him *not* to take up any of the debentures. Were the board changed, or re-modelled, I should give the contrary advice.—I am, &c.,

Sept. 3.

SILEX.

THE NEW MORGAN DIVIDEND.

SIR,—The directors of this company evidently had a generous fit, which is not likely to occur again in a hurry, when they offered the shareholders the magnificent dividend of 1½d. per share, which, however, was proudly refused. The strange part of the thing is how the chairman managed to work it out to 18 per cent. per annum. Perhaps some of your readers can enlighten me on this intricate calculation, for if it should prove correct I am a much richer man than I expected.—I am, &c.,

ENQUIRER.

MAMMOTH GOLD MINES, LIMITED.

From the *Arizona Daily Citizen*, of July 25, 1891.

THE Mammoth Mine was located by Frank Schultz in 1881, bought by a Michigan Co. in 1884, and developed under the management of George N. Fletcher, who, I believe, is still a stockholder. Sometime during 1885 Capt. Johnston assumed the general management of the property, which has since proven signally successful, handsome dividends having been declared from time to time. Judge G. H. Barnhart was a pioneer in the development of the mine, and during all of the captain's administration he has rendered faithful and efficient service in the prosecution of the enterprise as the assayer and accountant. The judge is now regarded as a permanent fixture of Pinal county, having filed a homestead on a piece of Uncle Sam's domain, skirting the smiling and fruitful San Pedro valley, assumed the cares and responsibilities of family life, and secured such an overwhelming majority of the votes of his fellow citizens for justice of the piece, that his native modesty forbade his declining of the honours and emoluments of the office. The company, incorporated as the Mammoth Gold Mines, Limited, with chief office in London, secured possession of the mine in 1889, shortly after which the 30-stamp mill was increased to its present size of 50 stamps. From every indication a very bright future awaits the Mammoth mining district, and there ought to-day to be more than a hundred men at work for every one employed at present. It is confidently asserted that most of the claims mentioned and others I could have named, prospect as well as did the Mammoth at the beginning. The only difficulty is to get men of capital to venture, if so reasonably sure a scheme may properly be called a venture. Of one thing I am sure: The prospects which may be shown here are worthy of more than a passing notice by those in quest of mining property.

House, Old Broad Street, London, E.C.

NOTICE TO READERS.

Replies to Annual Subscribers will be sent by wire or letter, as
 may be necessary.

Barrett.—There is every prospect of an improvement in both Mysore West and
 Mosman. Certainly hold.

Tickler.—They will, we think, have a further fall.

W. J. D. R.—Keep them, as we feel confident a better price will be seen.

College.—The report is better than those previously received, and under the
 circumstances we advise you not to sell.

Old Gold.—You could not sell them just now. Things are, however, looking up
 in the district, and at any moment inquiry might spring up, which will, of
 course, give you a chance of selling.

Leicester Sub.—A recovery is likely. Do not sell.

Conservative.—Although they have fallen, we advise you to buy to average.
 The mine is, if anything, looking better.

Dollar.—Yes. The fall has taken place, and we think they will go lower.

Kingfisher.—The risk is very small, and we think you should do as you suggest.

Troubled Reader.—We do not advise it. Your money would be lost we feel sure.

Korniloff.—Unsaleable.

Expectation.—Cannot recommend them even at the low price quoted.

Unfortunate Holder.—Sell.

Writer.—They are certainly worth holding for a considerable rise.

M. B. (Riddlesdown).—You could not do better than invest a few pounds in all
 those named.

Occasional Speculator.—We were in error. The shares are 17s. 6d. paid, and
 the alteration has been made. Thanks.

SOUTH AFRICAN TRUST AND FINANCE COMPANY, LIMITED.
SUBSCRIBED CAPITAL, £255,000.

BOARD.

B. B. TRENCH, Esq., Chairman.

BANKERS.

THE LONDON AND SOUTH WESTERN BANK,
 LIMITED, LONDON.
 THE MANCHESTER AND LIVERPOOL DISTRICT BANKING
 COMPANY, LIMITED.
 THE STANDARD BANK OF SOUTH AFRICA, LIMITED.

The Company undertakes the following business:—
 The skilled investment in South African Mining, Land, or other
 securities for European investors.

Professional and confidential reporting upon companies, mines,
 mineral properties, lands, and generally advising European share-
 holders and others in South African ventures.

To act as agents on behalf of principals interested in South
 African investments, and for the protection of their interests, and
 where desired, to register shares in such undertakings, and to issue
 certificates in exchange for same, thereby enabling European holders
 to co-operate for their mutual protection.

Financing or advancing moneys to corporations, companies, syndi-
 cates, or persons in South Africa.

The receiving of money on deposit.

The purchase and sale of properties, and all classes of South
 African securities or interests.

A Mining Circular containing special information will be posted
 weekly from the South African Office to all subscribers.

A SPECIAL CABLE CODE FOR PROMPT AND ECONOMICAL COMMUNI-
 CATION BETWEEN THE SOUTH AFRICAN AND LONDON OFFICES.

Further information can be obtained at the Head Office of the
 Company.

The Mining World.

LONDON: SATURDAY, SEPT. 5, 1891.

 Speculator nor under the control of any clique.*

QUEENSLAND MINES.

IF the advance which has recently been taking place in Queensland
 mining shares has taken our readers by surprise, they can scarcely
 blame us for the fact. Over and over again, even when the Queens-
 land gold industry was at its lowest ebb, we ventured to predict that
 the period of trial and tribulation would be successfully passed
 through, and that thereafter a brighter day would dawn upon those
 who had had patience enough to wait for the fulfilment of their hopes.
 In the light of subsequent events, it is not to be disputed that the
 purchase considerations given for many of the properties sold in the
 two years from August, 1886, onwards were excessive; but there is
 no use in crying over spilled milk. We have to deal with things as
 we find them, and in that view, it seems to us that prices are still
 unduly depreciated, though, as the following table shows, they have
 risen considerably in the past month or so:—

Company.	Price.		Price.		Rise.
	End July.		This week.		
	s. d.		s. d.		s. d.
Bonnie Dundee ...	1 3	...	2 9	...	1 6
Day Dawn Block ...	7 3	...	9 3	...	2 0
Day Dawn P.C. ...	8 6	...	11 3	...	2 9
Gympie Great Eastern...	7 3	...	8 9	...	1 6
Mosman ...	1 9	...	7 0	...	5 3
New Queen ...	6 3	...	7 9	...	1 6

To the people who are accustomed to operate in such stocks as
 Brighton "A," Mexican Rails, Grand Trunks, or De Beers, gains such
 as those shown in the above table are scouted as utterly insignificant;
 but to a good many of the "bulls" of the securities just mentioned,
 it would have been, as the American humourist said, money in their
 pocket if they had never been born. And, after all, advances
 ranging from 20 to about 300 per cent. are not to be met
 with often in the stock markets. Quite recently the Day
 Dawn Block Co. has re-entered the dividend list, which already
 included its neighbour, Day Dawn P.C., New Queen, and Mount
 Leyshon. The Mosman Co. lately announced that quartz 2 ft. thick
 had been struck in Wyndham shaft, with specks of free gold visible,
 and the latest reports from Bonnie Dundee, Cumberland, and New
 Livingstone, give the assurance that those properties are being

vigorously developed, and that good results will be obtained from them; while the Gympie Great Eastern is believed to have years of profitable work ahead. It is also encouraging to observe what highly satisfactory returns are being made by some of the locally constituted companies, such as Sunburst, to which we referred more particularly a fortnight ago, Mill's Day Dawn, and Brilliant, to say nothing of Mount Morgan. All the indications appear to us to point to a great future for the Queensland gold mining industry, and we confidently expect to see much better prices than those now ruling. Let us look for a moment at the recent results from two of the dividend-paying mines, the Day Dawn Block and Wyndham, and the Day Dawn P.C. In the following table we give particulars of the last six fortnightly returns of the Day Dawn Block Co.:-

Fortnight ended	Tons.	Ozs.	Value. £	Expenses. £
June 20 ...	650	673	2,320	1,000
July 4 ...	700	870	3,000	1,100
" 18 ...	700	723	2,495	1,100
Aug. 1 ...	730	902	3,110	1,200
" 15 ...	625	718	2,475	1,150
" 29 ...	710	802	2,765	1,230

This shows that in the three months the profit at the mine has amounted to 9,375 $\frac{1}{2}$ l., or at the rate of 37,500 $\frac{1}{2}$ l. a year. If from the latter sum we deduct 7,500 $\frac{1}{2}$ l. for expenditure on capital account and for the London expenses, there would still remain a balance sufficient to pay 6 per cent. on the capital, or over 12 per cent. on the present price of the shares. Of course, it is highly probable that nothing like 7,500 $\frac{1}{2}$ l. will go in the directions we have indicated, and it is, on the other hand, fair to assume that the returns will continue to improve. In the following table we re-produce the last five fortnightly returns from the Day Dawn P.C. Co.:-

Fortnight ended.	Tons.	Ozs.	Value. £
June 20 ...	1,086	1,066	3,624
July 4 ...	1,120	1,137	3,865
" 18 ...	1,100	1,035	3,519
Aug. 1 ...	1,090	1,270	4,445
" 15 ...	1,080	1,193	4,175
" 29 ...	1,050	1,428	4,998

The Day Dawn P.C. Co. does not estimate the fortnightly expenses, so that we have no means of ascertaining what rate of profit is being earned; but there is every reason to assume that the company is earning well over 10 per cent., and that purchasers of the shares at the present price stand to make fully 20 per cent. on their investment.

MR. BELLAIRS AND PERU.

CONSIDERABLE business has been done in the shares of a concern called the Macate Mining Co., Limited, which Mr. Kenneth Ffarington Bellairs has taken under his financial wing. Market success has certainly justified the recommendations he has made, for advancing from almost no price at all Macates have changed hands on the Rialto this week in thousands at ever rising prices. The capital of the company is 160,000 $\frac{1}{2}$ l. in fully-paid 1 $\frac{1}{2}$ l. shares, the one-half in ordinary and the other half in deferred shares. It is the former class that is being dealt in—the latter being held in Peru where Macate property is located.

In a sort of manifesto, by way of justifying his recommendation, Mr. Bellairs, who is nothing if not historical, gives his readers a sketch of Peruvian history which he proves to have been, in its want of smoothness, not unlike the course of true love. He is down on Pizarro and his conquering forces for their treacherous treatment of the Incas, but somewhat inconsistently regrets that "Europe so far has not a hand in the deal." It will not be his fault if Europe has not a hand in the Macate deal. Peru is to be opened up, and Mr. Bellairs leads with Macate Mining Co., Limited. Macate is to be a sort of pioneer syndicate, and great will be the profits of those who join the army which Mr. Bellairs will lead. Instead of conducting his followers through the country with fire and sword, he proposes that the weapons of their warfare shall be the pick and shovel, for Peru as a mineral country is to be opened up. This is the theory of Mr. Bellairs, and there is no man breathing who, once he has conceived a project, is more determined in action or more persistent in effort. He bases all he says (except that which emanates from his own exuberant fancy) on the report of Mr. Thomas Collingwood Kitto, which is certainly not deficient in either fulness or promise. That gentleman speaks of a discovery giving 4 ozs. to the ton, and of course with less than half this yield, even in a comparatively unopened country like Peru, great profits would arise if large quantities of ore were treated. Mr. Kitto says this is possible, and Mr. Bellairs triumphantly exclaims, "those who purchased shares on the receipt of our circular can figure out for themselves what interest they will get at the prices they paid," and he adds, "so can those who now buy." Still "it is a mere bagatelle" compared with what is to follow, for returns can be increased as additional stamps are put up. Mr. Bellairs is not overshooting the mark if the report of Mr. Kitto be correct. As to this we cannot and do not pledge ourselves, but we repeat it is very categoric, and evades no point upon which the intending investor can desire information.

It is always refreshing to read the burning thoughts that Mr. Bellairs (who never economises in the matter of ink) lets fall from his pen. In fact they always remind us of the breezes he used to send us from the "Gossamer." He is sure to be original—originally original, if we may use the expression—but we may hazard the advice that he should stick to his text, for it is a far cry from Peru to Johannesburg. In a sort of Peruvian ecstasy he exclaims, "Let the dead bury their dead, and let Johannesburg slowly recover itself." It is easier said than done, for if Johannesburg be dead how can it, like a modern Lazarus, shake off its grave clothes? On this point Mr. Bellairs is silent, but he truly adds, "We cannot afford to wait for Johannesburg"; he therefore leaves Johannesburg to work out its own resurrection while he "plumps" for Peru. But no matter how far our author may be led away by the exuberance of his imagination or the dictates of his fancy, he always comes back to business, and so as an anti-climax we read "Macate shares can be carried over as easily as any other share." Thus far Mr. Bellairs has had the Macate audience all to himself, but "like some graceful actor," he at last leaves the stage, whereupon, from the O. P. side, there enters Mr. Thomas Collingwood Kitto with report in hand. This is re-produced *in extenso*, and concludes with the words.

"I have no hesitation in saying it is a true fissure vein, that the ore is unusually rich, and should net fully 50 per cent., and that in a short time you should be receiving regular remittances of gold."

Exit Mr. Kitto and re-enter Mr. Bellairs with the prediction that Macate profits should enable dividends of cent. per cent. to be declared. Whether right or wrong in this he is certainly accurate in stating that there has been an enormous business in the shares, and at ever advancing prices. If Mr. Bellairs should at last have struck oil in Peru we shall be delighted, not only for the profits it will bring to himself and his followers, but for the eloquent articles that will bubble from his pen. He must not, however, be too hard on poor Pizarro, who, after all, in opening up Peru, would probably have preferred the methods of Mr. Bellairs if he had only known them.

IN QUEST OF INFORMATION.

IN deference to the wish of our correspondent, "Still a Disgusted Shareholder," we have, to use his own expression, "ferretted out" information with respect to the various companies as to which (*vide* his letter) no news has been forthcoming. We are bound to say there has been no difficulty in obtaining the information, except in the case of the United States Placers, in regard to which our enquiries are not yet finished, and as to which we may be able to give some further tidings in our next issue.

First of all, we waited upon the liquidator of La Trinidad, Mr. F. W. Pixley, of 24, Moorgate Street, who received us courteously and answered in the fullest manner every question that was put to him. So that the shareholders may better understand how the final catastrophe was brought about, let us recapitulate. They may remember, about two years ago La Trinidad, Limited, was in want of money. At that time nothing appeared better than the prospects of the mine, and the shareholders in general meeting, as well as by circular, were urged in the strongest and most emphatic manner by Mr. Stewart Pixley, their chairman, to come to the aid of the concern, or "a most valuable property would be lost." We would like very much to reproduce the address Mr. Pixley delivered on that occasion, but cannot spare space for the purpose. At the same time our files are at the disposal of any *bona-fide* shareholder who wishes to come to our offices to refer to them. Up to that time the directors themselves had advanced to the company upwards of 25,000 $\frac{1}{2}$ l., and certainly set an example to the shareholders for which a parallel may be searched in the records of most public companies in vain. The shareholders were told that the directors having done all that was possible by way of management and by way of loan, it was their duty to come forward or otherwise "a most valuable property would be lost." The shareholders did not come forward, and the predicted event happened, namely, a most valuable property was, so far as they were concerned, totally lost. The advances of the board had paid off the instalments of the Alsua mortgage as they became due, but funds not being forthcoming to meet the remaining payments the Alsua family foreclosed, and rumour has it that they are now working the mine at a substantial profit. The assets of the company were insufficient to meet even the solicitors' costs, much less to divide anything amongst the shareholders. To what then is this loss of La Trinidad Mine to be attributed. We are bound to say it is due to the inaction of the shareholders, who, if they had had faith in the property to the extent of the proverbial grain of mustard seed, would to-day, without doubt, have been in the receipt of handsome dividends, and had the joy of seeing their shares at a substantial premium.

Tarryall Creek Gold Co., Limited, was the next concern with respect to which our correspondent desired that information should be "ferretted out." This company has not now its offices at Lombard House, but at No. 33, King Street, Cheapside, on the fourth floor of which it is economically and sufficiently located. Mr. Brogden, J.P., one of the directors, and Mr. Wetherell, the secretary, received our representative with every courtesy, and betrayed the greatest desire to give him all possible information. In

this case we are bound to say the directors are to blame for not having communicated with their shareholders since May 23, 1890, which is the date of their last circular, but it appears they are now waiting for the report of their manager and his accounts, in order therefrom to prepare their own report and balance-sheet, preparatory to calling a meeting of shareholders, at which full information will be given. The circular of May 23, 1890, set forth the desire of the directors to raise 3,000*l.* by an issue of 10 per cent. debentures. This issue appears to have been taken up so that the works have been carried on since. The same communication also gave extracts from a letter from the mine written by the manager, Mr. Fortune, dated Apl. 2, 1890, in which it was said, "The coming season (1890) will be a good one, and if your company does not lose heart a success will certainly be made." 1,500*l.*, it was said, would pay the debts, start work, and guarantee success for the coming season. The last season, however, produced no tangible results, principally on account of the very bad weather that set in early in the year. The works are on the alluvial system, and cannot be carried on in time of frost. We are now assured by Mr. Brogden that the company is working at a profit. Shareholders, under these circumstances, may be content to wait a little longer until a general meeting is called, which, it is to be hoped, the directors will convene at the earliest possible moment.

THE MINING REVIVAL.

WHEN matters began to get brisker in the Mining Market a few weeks ago, there were not wanting disinterested critics who foretold that the revival would be a mere flash in the pan, and that there would follow in its wake a renewed period of inactivity and gloom. We held other views, and expressed them freely, and we are quite content to leave the judgment between the pessimists and ourselves to the records of prices a month ago and now. The improvement has been most conspicuous in the Mysore group of Indian shares and in the Queensland issues, to which more particular reference is made elsewhere. But there has also been a marked upward movement in such shares as Colombian Hydraulic, Tolima "A," Gravel Gold, Don Pedro, Almada and Tirito, Dickens Custer, American Belle, Yankee Girl, Palmarejo, Montana, Copiapo, and Libiola, amongst copper shares, and Sheba, Transvaal Gold, and Ottos Kopjes, amongst South Africans. That Indian shares generally are good for a further rise we do not doubt for a minute, and with the dividend-paying trio we look for a substantial advance in Balaghat-Mysore, Champion Reef, Goldfields of Mysore, and Mysore Reefs. The progress shown by the Colar industry is in every respect satisfactory. The more the workings are extended laterally and in depth the better are the results obtained, and it is worthy of note that the leading shares are so firmly held that it is very much easier to give buying orders than to get them fulfilled. Nor do we think that the difficulty is likely to become less manifest as time rolls on. And we are equally impressed with the belief that the general run of the so-called "rubbish" shares are destined to find increasing favour. There are many men who, though they do not speculate largely, are quite ready to put by a few pounds in cheap mining shares if there is general activity in the Mining Market. In the worst result they know that they will not be serious losers, while they hope that fortune's wheel may turn in their favour, as it has done in so many instances recently. Of course, prudence and discrimination are necessary in such operations, as they are in every variety of dealing upon the Stock Exchange. In regard to Randt gold shares, our view is that, with very rare exceptions, they had better be given a wide berth. That the district contains many rich properties we do not doubt; but our information from Johannesburg shows us that all the evil results of fraudulent and incompetent management have by no means been disclosed. To a very large extent the industry is dominated by a few unscrupulous adventurers, and they will reign supreme until some means are devised and enforced for the representation of the interests of absent shareholders. And, what about De Beers shares? Well, they have hardened up a bit, but they are still quoted at less than half the price at which they stood a year ago, when we dealt at length with the position and prospects of the undertaking. De Beers shares are seldom good to "bear," because they are largely held by strong people who have the means of controlling the market, more or less, at their pleasure. But for all that, it seems to us that, from the investment point of view, these shares are even now greatly over-priced in the market. In short, there are many better chances of securing substantial profits away from the "kaffir circus" than in it, and we would especially point to such shares as Dickens Custer—the company's monthly profits continuing to expand at a satisfactory rate—Almada and Tirito, La Plata, Flagstaff, California, and Elkhorn, as affording excellent opportunities to small capitalists.

OTTOS KOPJE.

A LOW-PRICED DIAMOND SHARE.

THE meeting of Ottos Kopje Diamond Mining Co., Limited, should not escape the careful perusal and reflection of investors on the look out for a low-priced share, with large possibilities before it. It is hazardous to employ the language of certainty with regard to the

future of any mining company, because in doing so one is very much in the position of the clergy—dealing with the unknown, and, to a large extent, the unrevealed. But in regard to Ottos Kopje there are certain things that are known, and, according to the mathematical rule, you may always safely proceed from the known to the unknown. Now, what is known about Ottos Kopje is this: that it is a diamond mine in the best part of the Kimberley district; that the past development of the property, defective as it was, proved it to be a genuine diamond mine, for 1,000 carats were sold in this market at 30*s.* each; that it has a layer of yellow ground, which is rich in precious stones, and a layer of blue ground, at a deeper horizon, which is richer still; that it has 30,000*l.* working capital; and that it has as its manager Mr. James Lisle, late of the De Beers Mine, who has relinquished his position there as manager of the Kimberley Mine in order that he may direct Ottos Kopje's development. We might proceed further, and show that when shareholders here have lost heart and hope, those who knew it on the spot have—to use the language of the chairman of Tuesday's meeting—"stuck to it through thick and thin;" and that Mr. O'Leary, who was connected with the old company and is also temporary manager of this one, holds 50,000 of the shares, whilst Mr. James Lisle has also bought the company's stock to a large amount. Now, if all these facts are useless as guides to English investors, and if they bring no reassurance to their minds, then we frankly own we know not the evidence by which they can be convinced that much beyond present prices Ottos Kopje shares (1*l.* each, 19*s.* paid) on the market would be considered as uncommonly cheap.

To assure himself further of the *bona fides* of the whole affair the chairman went to the spot, and was unable to resist the accumulated testimony that poured in upon him as to the value of Ottos Kopje mine. "People in Kimberley," he said, "believe in the mine," and in addition to this direct evidence he threw numerous side lights upon the position of affairs, which reassured the shareholders, as evidenced alike by their unanimity of feeling and their cheers. It is no news to those who have watched the progress of Ottos Kopje that the re-construction, now so successfully concluded, turned upon the favourable report which Mr. James Lisle wrote as the result of his examination, and it was partly to secure his services that Mr. Stobbs performed the pilgrimage to South Africa. He succeeded, and led Mr. Lisle back with him—chained to a sort of triumphal joint-stock car. He produced his "captive" at Tuesday's meeting, which was mainly convened to hear his views of the past, and probable future, of Ottos Kopje. Mr. Lisle, in the interesting address which we reproduce *verbatim*, found that the former management directed its attention to the poorest parts of the mine, but for some two months Mr. O'Leary has been carrying out the new method of working, of which Mr. Lisle is the author, and of which a little later on he will be the responsible director. He is convinced that not only is the blue ground valuable, but also the yellow above it, and the diamonds from the latter can be at once brought to market. Mr. Lisle plainly stated:—

"I became so thoroughly satisfied with the value of the company's property, that on an offer being made to me by your directors that I should give up my permanent engagement with the De Beers Co., as manager of their Kimberley Mine, and take charge of your property, I finally agreed to do so, and have entered into an agreement for two years, as you have already been advised by the board."

But though this gentleman could not avoid condemning the plan of campaign followed by the late management, he frankly owned that it had proved the property to be diamondiferous, and, as Mr. Gradgrind would say, "this is a great fact." It is equally a fact that the claims number 827, and that 500 acres are available for depositing purposes. The concern is also wholly untrammelled by the diamond monopoly, and can, therefore, deal with its output as seemeth it best. Under all these circumstances, and particularly with the assurance from all mouths that the mine is a proved one—if Ottos Kopje shares are not cheap at present prices, we fail to understand how they can be described. Our readers may, however, be left to draw their own inferences from the foregoing facts, and will probably, at no distant day, thank us for having drawn their pointed attention to them.

POOR LIXA.

WHEN Mr. Frederick Knowles, at the Lixa meeting this week, spoke of an "absorbed profit," what did he mean? Either Lixa made a profit or it did not. We judge it did not, or the directors would not be sending round the hat for debentures. We cannot congratulate these gentlemen on their management of the company's affairs. The chairman said the board found out "by correspondence" the dreadful state of affairs in regard to the smelting, but do they need to be reminded that the property is near Oporto and within a few days' sail from this country? Instead of sending some practical man to inquire into the condition of things, they allowed matters to drift, and learnt it by correspondence. The chairman said, "It may occur to you to ask how you did not find out this before?" Of course it did, and they also wondered why this gentleman delayed the visit he at last made to the property until all the mischief was done. Shareholders should expect little from such direction, in which case they will not be disappointed. What the board most wants is new blood of a practical and

businesslike kind. They would have done well to accept the suggestion to appoint Mr. Shaw, even though it appears he was the partner of Mr. Cudell in the sale of the concern to the late Col. McMurdo, who sold it to Messrs. Knowles and Co., who sold it to the company. It is a sort of "House that Jack built," with intermediate profits thrown in by way of variation.

GYMPIE GOLDEN CROWN.

THE position of Gympie Golden Crown as elucidated by Mr. Samuel de Lissa, the chairman, in his speech at Tuesday's meeting—the speech itself being based on a personal and (so far as the company is concerned) unpaid for visit to the mines—may be said to have distinctly improved within the last 12 months. It is gratifying, in the first place, to know that the mine is properly managed. A good many mining companies in London would give much to know that. The old ground is about paying the expenses of the mine, but the new ground has a most promising appearance, and is highly thought of by neighbouring claim owners. Mr. De Lissa gave an interesting explanation of the difference between the conglomerate and the slate break formation, and the inference he drew from the present appearances of the ground were favourable to the latter, in which the precious metal is usually found to occur. We refer in a special article to the revived interest in Queensland mines, and think that investors, whilst considering the concerns in which they may advantageously take an interest, will make a great mistake if they omit Gympie Golden Crown from their calculations.

CHIAPAS.

APART from the important fact that by a modification of the agreement with the vendors, Mr. Pontifex and his colleagues have saved the shareholders 40,000*l.* on the purchase-money, the meeting on Thursday was extremely useful as showing the exact position of the company. It does not seem to possess a mine in the ordinary sense of the term, so much as an open quarry. As the chairman put it "an amount of mining has been done by nature which it would have taken many years to do by art." He also described this as "one of the most extraordinarily rich and extensive deposits of its kind in the world." All the management has to do is to overcome the twin difficulties of transport and indifferent labour. In regard to the former, a "trail" is being laid, which will answer temporarily until a road or a railway can be constructed, and in regard to the latter, by the process of selection, matters are gradually righting themselves. We attach great importance to the encouraging observations of Mr. Frecheville, who has long been known to us as a mining engineer of the first order, and whose statements may be received with perfect assurance. Our full report of the meeting will repay the time its perusal may take. It will repay the shareholders, for it puts them *au courant* with the gratifying situation of the company at the present time, and it will repay the general reader, for it may lead him to think that his interest may be served by joining a concern of so much promise.

THE UNIVERSAL WOOD CARVING MACHINE CO., LIMITED.

THE patent which this company has acquired has been described by a class paper as "one of the cleverest and at the same time simplest machines introduced into the wood working world." The machine, like so many others of great utility, hails from the United States, where the cost of labour has led to the introduction of all sorts of labour saving appliances. In America it enjoys a high reputation, and in London it is fast making it—in fact, has already made it, in the eyes of all those who, during the last few days, have witnessed the interesting trials of the patent going on in Lombard Street, under the direction of the Commercial Contract Corporation. This corporation is transferring the whole of the patents to an English company, with a capital of 80,000*l.*, in as many 1*l.* shares, the payments on which are required only in easy instalments.

The first thing which impresses the visitor in observing the machine is its simplicity of construction; its ease in operation and the excellent character of the work it turns out. As we saw it, the whole machine was controlled by a boy, who had simply to steady the cutting needle, or control it as it revolved itself over the face of the block. The machine can be adapted to numerous sizes, and we were informed that any piece of carving, not exceeding 28 ins. wide by 7 ins. thick and 4 ft. long, can be reproduced by the machines without the slightest injury to the original carving, and the operation can be continued almost without limit. It is proposed that the company shall establish a factory in England for the production of the machines, which are already in use by some of the firms in London, and notably by Mr. Lebus, the cabinet maker of Tabernacle Street, Finsbury. This gentleman gives an astonishing table showing the approximate cost of machine carved panels as compared with handicraft from actual results of the working of the machines in his factories. These figures are as 10*s.* by the machine to 4*l.* by hand labour; 1*s.* 3*d.* to 30*s.*; 4*d.* to 2*s.* 6*d.*, and so on. The business of the company will be directed by a responsible board. They will commence their labours with the advantage of important orders, which the vendor has received, and the benefit of which he will hand over to the company. This, it is said, will enable the company to commence at once upon a profitable basis. The sale of 100 machines only will pay 15 per cent. upon the issued capital, and the demand is likely to increase. It is also

expected that there will be a revenue from the sale of foreign patents. The price fixed by the vendor is 65,000*l.*, payable 25,000*l.* in cash and the balance in shares, or cash, at the option of the directors. The machine is certainly ingenious, and its application ought to be successful.

LISBON-BERLYN.

THE directors of the Lisbon-Berlyn Co. have issued to their shareholders, in the shape of a report, copious extracts from letters received from Mr. J. C. Wylie, the manager, showing the progress of the works at Lisbon-Berlyn and at Frankfort. These extracts are arranged under separate headings dealing with the different parts of the property. Under the heading, "General works at Frankfort," Mr. Wylie, under date of Apl. 25 last, says:—"I find that for the turbine, instead of 80 ft. fall, as I expected, I can get 120 ft. fall, which will mean a good deal to us, as a smaller quantity of water will give us all the power we require. The length of the race for supplying the turbine will be from 1,400 to 1,500 yds. The present supply of water which we can lift by means of this race is more than sufficient for our purpose." On May 3 he wrote:—"I have been busy finishing the levels for the water race for tables, &c., and find that we can intercept the water from both the little waterfalls for this purpose, and bring it to a point 40 ft. to 50 ft. above the proposed level of mortar boxes. I find we shall be able to lower the trucks to battery site by means of an inclined tramway, worked by a drum, the full trucks pulling up the empties." On May 9 he estimated in a letter that the construction of the reservoir wall would cost 840*l.*, and the cubic capacity of the reservoir would be from 6,000,000 to 8,000,000 gallons. The next letter of importance is dated June 28, and states that transport had been almost stopped, four waggons of machinery having been seven weeks on the road from Johannesburg. At this date 6,000 ft. of the race to battery had been levelled, and 600 ft. of the channel dug. On July 20 he wrote that the new road would be finished that day, and that the turbine race was finished with the exception of fluming. As regards Bevet's reef on May 31, Mr. Wylie wrote, "I have started the main drive in Bevet's reef, which looks splendid. It is now in 30 ft. The assay value at outcrop is 18 dwts., at 10 ft. from face 1 oz. 1 dwt. 12 grs. The other assays are not completed yet; but I will send you weekly reports as we go on. The next few letters contain assays from this part of the property varying from 10 dwts. to 3 ozs. 3 dwts. On July 27 he wrote "the reef in main drive is increasing in width." Mr. Wylie, in a letter to Mr. Thomas Rickard, the consulting mining engineer, said:—"I am inclined to put our yearly output higher than you estimate it. I think we should do 600 tons per week for 50 weeks in the year." As regards the general work at Lisbon and Berlyn, Mr. Wylie principally dwells on the transport of the machinery and the drainage of the Great Pool, which, according to the last letter (July 20), was said to be progressing as rapidly as possible.

THE MONEY MARKET.

CITY, FRIDAY EVENING.

UNDER the influence of the continued withdrawals of gold for Germany and Egypt, and the adverse movement in the New York Exchange, threatening an early export hence of gold to meet payments for securities and grain, the discount market looked up, and bankers being disinclined to act, brokers could not discount so freely; hence quotations advanced to 2½, ½ per cent. for the usual three months' bills, although most business was in American and other short dated paper. The price at which the Treasury Bills (all three months') were taken on Monday last first indicated the direction, and some idea that, if not this week at any rate later, the Bank rate would be raised, assisted the movement. However, since no alteration was made in the official rate, and coincident with a falling off in the demand for Germany, there has been a recovery in the New York Exchange, the Market has ruled easier—at least for the moment. There is a disposition to think that the import of grain from America for Europe will not materially affect us here; it however, cannot be questioned that if not affected by Continental requirements, our own home harvest must prove very much poorer than usual, and that in default of the United States owing us money the balance will be taken in gold, which must more or less affect this market. The Austro-Hungarian Bank has raised its rate from 3 to 4 per cent., and the return of the Bank of England shows a decrease in the reserve of 396,000*l.* to 16,718,000*l.* or 45½ per cent. of the liabilities.

The Stock markets have been active again, and despite occasional heavy realisations prices have made headway, though there are, of course, exceptions. It should be observed that the markets are now too well supported to expect any serious reaction unless either the political situation and monetary position should become acute. The Funds were dull throughout, and the unsettled weather, bad traffics, and fears of dear money have depressed English Railways. The Caledonian dividend, at the rate of 4 per cent. against 5 per cent., was better than expected, and this fact temporarily sustained prices, but otherwise rails have reacted daily, and stock was offered. American Railroads remain the *pièce de résistance*, and, literally, speculation this week has assumed colossal dimensions. The great B. P. have made their *entrée* into the market at last, and our Continental neighbours have also had a hand in the gamble, so that the excitement has been intense, and the buying often of a first-class order. On balance there is a further substantial gain in the aggregate, but there are some few stocks that show an actual fall, and in that respect Union Pacific have been a very weak spot. The "bucket" shops, we understand, are doing much better now, and at one particular establishment, which, to do it justice, bears a high reputation, the gambling on the "nod," as it were, in American Railroads is simply enormous. Canadian lines are steady, Argentine strong, and Mexican (Vera Cruz) flat. The dethronement of Balma-ceda of Chili has had a stimulating influence in South American

Bonds, and Chilian have recovered about 10. Costa Rica, Venezuela, and even Uruguay are all perceptibly better, and Argentine and Brazilian likewise were well supported. Internationals appear firmer, and thus far the Dardanelles question has not impressed the Continental bourses. Miscellaneous, Breweries, Nitrates, Banks and Trusts mark gains. Anglo Cable Stocks were erratic.

A sum of 44,000*l.* in sovereigns was received from Oporto to-day by the Bank of England. Discount rates continue to react, and three months' bills have been sometimes discounted at 2½, ¼ per cent. To-day's acceptances were also down to 2 or 2½. Money remained at ¼ and ½, the latter figure covering loans for a week or until the next Stock Exchange settlement. Bar Silver declined to 45*d.*, and Mexican Dollars to 43½*d.*

The Stock Markets have ruled irregular to-day and business generally quiet, although the tone was fairly good at the close, except for Foreign Securities which left off weak, especially for Argentine issues, which further relapsed on some selling of Cédulas late in the afternoon, the premium on gold having advanced to 301 per cent. The Funds were firm and closed ¼ better at 95, ½*x**d.* for cash, while for account, they remained at the same quotation. French Rentes Egyptian, Italian, Hungarian and Russian have improved, but Portuguese and Greek and Turkish were flatter. Argentine Stocks fell ½ to 1 per cent., with about ½ in both the National and Provincial Cédulas. Uruguay also fell ½ to 1 per cent., together with Chilian and other Central and South American Stocks, except Costa Rica A and B, which rose 2 per cent. Home Rails were firmer, apart from a fall of 1 in South Western Preference and North Stafford, and ¾ in Sheffield "A," the latter due to the issue of 1,500,000*l.* New Four per Cent. Preference Stock. North Western was also lower, but Midland, on the contrary, rose ¼, being in demand. The Southern Deferred Stocks advanced ½, and some others ¼ to ½. American Stocks were less excited, opening flat. They fluctuated, but finally closed at their best, although mostly ¼ to ¾ lower. Union Pacific, however, recovered 1½, and Canadian Pacific rose ½ on American buying. Grand Trunk Stocks also rose ½ to 1 per cent., but Mexican issues were flat. Nitrate Railway Shares have risen nearly 1*l.* per share, and Banks were firmer.

Annexed are the final quotations to-day:—Consols Account, 95, 95½*x**d.*; Egyptian Preference, 91½, 91½; Egyptian Unified, 96½, 96½; French Four-and-a-Half per Cents, 104½, 104½; Hungarian, 82½, 88½; Italian, 89½, 89½; Mexican, 87½, 88; Peru Five per Cents, 9½, 10½; Peru Six per Cents, 27½, 28½; Russian 1889, 97, 97½; Portuguese, 37½, 37½; Spanish, 71½, 71½; Turkish 1871, 95½, 95½; Turkish Defence, 91½, 92½; Caledonian Railway, 114½, 114½; Great Eastern, 89½, 89½; Great Western, 161½, 161½*x**d.*; Brighton "A," 146½, 146½; North Western, 173, 173½*x**d.*; Metropolitan, 84½, 84½; Metropolitan District, 29½, 29½; Midland, 158½, 158½; North British, 38½, 39; North Eastern, 155½, 155½; South Eastern "A," 84½, 84½; Mexican Ordinary, 34½, 35½; Grand Trunk, 10½, 10½; Grand Trunk First Preference, 69½, 69½; Grand Trunk Second, 48½, 48½; Grand Trunk Third, 25½, 26½; Canadian Pacific, 89½, 90; Denver Preference, 48½, 49; Erie, 26½, 26½; Milwaukee, 72½, 73½; Lake Shore, 119½, 119½; Louisville, 80½, 80½; Atlantic First, 35½, 36; Ontario, 18½, 19½; Ohio, 22½, 23; Norfolk and Western, 55½, 55½; Reading, 17½, 17½; Reading Bonds, 83, 84; Union Pacific, 42½, 42½; Wabash Preference, 28, 28½; Ottoman Bank, 12½, 12½; Anglo-Telegraph, 17½, 17½; National Telephone, 4½, 4½; Hudson's Bay, 15½, 15½; Suez Canal, 111½, 112½; Guinness, 318, 320*x**d.*; Allsopp's Ordinary, 24, 26; Bryant and May, 13½, 14; Eastmans, 4½, 4½; Elmore's Copper, &c., 4, 4½.

THE EXPLORING CO., LIMITED.

EXPLORING DIRECTORS ASCERTAIN THE WELCOME NEWS THAT THE CHARTERED CO.'S FINANCIAL POSITION IS SOUND, THE MASHONALAND GOLD PROSPECTS BRIGHT.

THE EXPLORING CO., LIMITED, of 19, St. Swithin's Lane, has issued the following important circular to its shareholders, dated Aug. 31:—In view of the large stake that this company holds in the British South Africa Co., your directors have thought it their duty to address a letter to the board of the Chartered Co. in order to obtain some explicit information in respect of the financial position of that company, as well as some verification of the reports of large gold discoveries in Mashonaland. My board have the pleasure of informing you that in reply they have received the following satisfactory statement from the Chartered Co.:—"The accounts of this company, to Mar. 31 last, show a balance sufficient in the opinion of the board to continue the development of the company's territories for the next two years, before the expiration of which it is anticipated we shall be in receipt of a substantial revenue," and the letter further states that there is no intention on the part of the Chartered Co. of making a fresh issue of capital. My board have also been informed by the board of the Chartered Co. that the reports received from South Africa undoubtedly show that large gold discoveries have been made, and that they have every confidence in the accuracy of these reports, also that Mr. Rhodes has recently started from Cape Town to Mashonaland, and the board of the Chartered Co. look for full details in time for their shareholders' meeting which will be held before the close of the year. Owing to the phenomenal rainfall in the country during the early part of this year, communications have been greatly retarded, and until quite recently no information of a reliable nature has reached England, but everything now points to a large and rapid development of the gold industry. From information received at this office, my board are able to inform you that in addition to their large holding in Chartered shares, 200 claims have already been registered in the name of the Exploring Co., and their second expedition is now in the country for the purpose of marking out and purchasing further claims. There are at present six goldfields declared, on which up to June 10 over 6,000 claims had been registered, while large numbers of prospectors and mining engineers are now flocking into the country. A considerable township is now growing round Fort Salisbury. Many neat huts and cottages of a mixed native and European architecture are already built. Butcher shops are opened, and two hotels are in course of construction, one of which is being built of stone, with room for 50 beds. Six different companies or syndicates have already machinery in or *en route* for Mashonaland, and my board hope that at no distant date they will be able to give you the results of crushings. Large supplies of stores have been accumulated in the country to meet the

contingency of another exceptionally wet season. Communication with the east coast is being rapidly pushed forward—the Portuguese, since the signing of the treaty, affording every facility for the transit of men and material. My board have every reason to expect that by the summer of next year Mashonaland will be connected by railway with the east coast.—A. J. MACPHAIL, Secretary.

COMMERCIAL NOTES.

METALS.

COPPER has been quiet and easier. G.M.B. warrants sold from 52*l.* 12*s.* 6*d.* to 52*l.* 2*s.* 6*d.* cash, and 53*l.* 5*s.* to 52*l.* 13*s.* 9*d.* three months. For carrying three months 11*s.* 3*d.* per ton has been paid. To-day's prices are 52*l.* 5*s.* cash, and 52*l.* 15*s.* three months. The month's statistics are unfavourable. Supplies to England and France during August were 9,353 tons. Delivery, 8,306 tons. Visible supply Sept. 1, 58,829 tons against 57,782 tons Aug. 1. The Chili Charters are estimated at 1,500 tons. We quote English tough, 54*l.* 10*s.* to 56*l.*; best selected, 56*l.* to 57*l.* 10*s.*; strong sheets, 65*l.* to 66*l.*; India sheets, 60*l.* 10*s.* to 61*l.*; yellow metal, 5½*d.* to 6*d.*; ore, 9*s.* 9*d.* to 10*s.* 9*d.*

TIN has been quiet. Straits declined from 92*l.* 2*s.* 6*d.* to 91*l.* 7*s.* 6*d.* cash, improving to 91*l.* 12*s.* 6*d.*, and closing yesterday at 91*l.* 10*s.* cash. To-day's prices are 91*l.* 15*s.* cash, and 92*l.* three months' sellers; three months prompt has ruled 5*s.* to 7*s.* 6*d.* over spot. Arrivals during Aug. were 1,452 tons; landings, 929 tons; delivery, 2,103 tons, of which 838 tons were to America; delivery in Holland, 835 tons; stock, 2,754 tons, against 3,442 tons on Aug. 1. The Straits shipments are given by Powell's cable as England, 1,280; America, 880; and Continent, 630 tons. Messrs. Strauss and Co. give them as England, 1,800 tons; America, 1,050 tons; and Continent, 700 tons. English ingots, 94*l.* 10*s.* to 95*l.* Spot Australian has been very scarce, and commanded 35*s.* to 40*s.* premium over Straits. A parcel to arrive sold at 92*l.* Australian shipments for Aug.: To London, 325 tons, America, 100 tons. The Dutch market has been steady. Banca and Billiton quoted 155.

TIN PLATES are more active. We quote ordinary coke, 13*s.* 3*d.* to 13*s.* 6*d.* Liverpool.

SPELTER steady. We quote ordinary brands 23*l.* 12*s.* 6*d.* to 23*l.* 15*s.* ex ship here.

SHEET ZINC.—150 tons sold in public sale yesterday at 26*l.* nett at works.

LEAD slightly dearer. We quote soft Spanish 12*l.* 5*s.*; soft English, 12*l.* 7*s.* 6*d.* to 12*l.* 10*s.*; L. B., China pigs, 12*l.* 15*s.*; sheets, 13*l.* 5*s.* export, 13*l.* 10*s.* home trade.

QUICKSILVER dull. Rothschild still quotes 7*l.* 10*s.*; seconds about 7*l.* 8*s.* to 7*l.* 8*s.* 6*d.*

ANTIMONY dull. Hallett still quotes 42*l.* for shipment to America; ordinary brands and delivery, 40*l.* to 41*l.*

HEXWORTHY TIN MINE.

THE fact that the Hexworthy Mining Co. offered tin for the first time at Tuesday's ticketing, and that their parcel realised the highest price fetched for the day, will naturally occasion inquiries in reference to the Hexworthy Mine. For the information of our readers we may, therefore, state that the mine is one which, according to reliable report, is likely to come to the front before long. It is situated on Dartmoor, about 7 miles from Princetown, and is worked by a company formed a year or two ago by Messrs. John Taylor and Sons, of London, whose connection with it is an ample guarantee for the *bona fide* character of the undertaking. Two lodes are at present being operated upon—Low's and Taylor's—named respectively after the chairman and manager of the company. Low's lode has been developed by the sinking of the shaft, which has now reached a depth of 24 fms. from surface. An adit level has been driven for some 70 fms., and for the greater part of that distance a payable lode has been opened up. The vein appears to improve in richness in depth, and at the bottom of the shaft it is now estimated to be worth 80*l.* a fm. An important discovery has been made in Taylor's shaft on the other lode during the last few days. Not much is known about it yet, but there are indications that the discovery is one of considerable value. The company sold their first parcel of tin at the ticketing on Tuesday. They offered 15 tons, and it fetched the high price of 60*l.* 10*s.* per ton—2*l.* 15*s.* per ton more than West Kitty parcel, which has hitherto commanded the highest figure. This is a very encouraging fact for the shareholders, and we are glad to know there is every prospect of regular returns being made, and of substantial dividends being paid. As stated, Messrs. John Taylor and Sons are the managers. The secretary is Mr. John Garland—a gentleman well known in connection with Messrs. Taylor's firm—and the purser is Mr. Edward Mogridge.—*West Briton.*

REPORTS OF MEETINGS.

NEW MORGAN GOLD MINING CO., LIMITED.

RESULT OF FOUR MONTHS WORK AT THE MINE—DIRECTORS PROPOSE A DIVIDEND OF 1½d. PER SHARE, WHICH SHAREHOLDERS REFUSE TO TAKE—GOOD PROSPECTS HELD OUT.

THE second ordinary general meeting of the New Morgan Gold Mining Co., Limited, was held at the City Terminus Hotel, on Monday last, for the transaction of the ordinary business of the company.

The Hon. George T. Kenyon, M.P.

(chairman of the company), presided.

The SECRETARY having read the notice convening the meeting,

The CHAIRMAN said: Gentlemen, it is my pleasant duty to say a few words to you upon this, which is the first annual report and statement of accounts since the new company was established. The meeting held upon Oct. 1, 1890, was purely a formal meeting, the new mine having not then got into working order.

THE LIQUIDATION OF THE OLD COMPANY.

Some delay, naturally, took place in the formation of the company taking over the business of the old Morgan Mining Co., but in regard to that, perhaps I ought not to say too much myself, for as I was the liquidator of the old company I was unable to sit upon the board of the new company until that liquidation was finally disposed of. The liquidation was somewhat troublesome, and occupied a considerable amount of time, but, thanks to the assistance rendered by our friend, Mr. Barr (the secretary of the new company), the difficulties were satisfactorily got over, and I do not think there is anything now that requires any further information from me. At the same time, as regards matters connected with the old company, I shall be very happy to answer any questions that shareholders may think fit to ask upon them. You must remember this, that if the liquidation has been somewhat long, and if, in consequence, the working of the new mine has been to a certain extent delayed, the possessions of the new company have been somewhat extended, because we have now a mine of very much larger extent, and of very much greater value than was possessed by the old company. Our new company is now in possession of land of an area of a mile and a half in length by about half a mile in breadth, or about

THREE TIMES THE PROPERTY ORIGINALLY OWNED BY THE MORGAN CO.

It is being gradually opened out, and there is a reasonable prospect that upon this new property, which we have acquired in conjunction with the old property, which we also acquired, the operations will be such as to warrant the payment of very fair dividends in times to come upon your investment. While upon the point of the liquidation, I may tell you the liabilities and all the costs have now been ascertained up to May 30, and they have been charged to capital account. With regard to the operations of the new company, it will have been seen by a study of the sheets given you from time to time that though the old company ceased to exist on June 1 of last year, and the new company came into existence at the same time, it was not able to do any new work, so far as acquiring stuff for the payment of dividends, until the month of Feb. of this year. From Oct. to Feb. we were engaged in carrying out a certain amount of work in order to put the machinery, which was on the property of the old company, in thorough order. Since Feb. the company may be said to have been fairly started, and during that time you will have noticed that the returns have been of a very satisfactory character. They prove the existence of a large body of gold there ready to be treated by the machinery we have placed there. The amount and value from time to time you will see does not greatly vary, which will be considered a good sign, because it will show we are not attempting to deceive you as to the value of the mine, but that we are working it

FAIRLY, SQUARELY, AND ABOVE BOARD,

and only taking what is considered to be right and proper out of the lodes, and not attempting to spend more on development of a profitable part of the mine to the loss of any other part of the mine. As far as I am aware, and I can speak for my co-directors also in this matter, the operations have been conducted as fairly and honourably as they possibly could have been done. That being so the result of the four months working leaves us in this position—after meeting all our liabilities we have nearly 1,100l. for distribution, and the directors are prepared to recommend a dividend of 1½d. per share, which practically means a dividend for the year upon the fully-paid capital of about 6 per cent. But, inasmuch as the mine has only been working about four months, it is in reality equal to about 18 per cent. However, it is sufficient for us to know that during the four months, in which the mine has been doing fair work we are in the happy position of being able to recommend this dividend, which, I think, you must consider to be fairly satisfactory. You must remember that at present the development of the mine is in its infancy. When you look at this plan (exhibiting it), and see the very large amount of property that has not been touched, you will feel with us that we have a reserve of land which at some future time—possibly not distant—may be utilised for the development of further mines, or for the development of our own mine itself. Your position, therefore, may be said to be a thoroughly good and sound one, financially. That, at any rate, is the case, in my humble opinion.

TRIBUTE TO THE MANAGER.

This result is greatly due to the very admirable manner in which the operations have been conducted by your manager at the mine. It is not the place, perhaps, at a general meeting to butter up the performances of any one man; but I can honestly say that the result has been achieved, and that your thanks, in consequence, are very largely due to the excellent work that has been done by your manager, Mr. Williams, upon the spot. He has thrown his heart into the work, and done it with an amount of zest and judgment which, I think, would commend itself to any of you who would take the trouble to

visit the mine, and see for yourselves the work that has been done there. We cannot help feeling, in consequence of the comparatively small amount realised in the shape of dividend, and the fact of the mine only being in working order for four months, that he has been somewhat inadequately paid for his work. We have, therefore, taken it upon ourselves to offer him a small honorarium. It is no more than he is entitled to, and I hope the shareholders will feel that in doing this the directors have not in any way gone beyond their powers, but have endeavoured to meet what they thought would be the wish of the shareholders. I need not go any further into the details of the mine. Mr. Gotto and Mr. Foster retire to-day. Mr. Foster, in consequence of ill-health, does not offer himself for re-election, but Mr. Gotto offers himself for re-election, and I can only say he is a very valuable member of the board. The chairman concluded by moving the adoption of the report and accounts to May 30 last.

Mr. EDWARD GOTTO (director) seconded the motion.

QUESTIONS.

Mr. MURPHY called attention to the amount paid to the directors in proportion to the amount available for dividend. He thought it was a mistake to pay this dividend at all, and if the directors could see their way to meet the shareholders in the matter of fees they would consider it a generous action.

The CHAIRMAN said the directors had done a great deal of work, and he thought they were fairly entitled to the amount paid. He felt he could make these remarks, as he had not been able to join the new company until the old one was finally wound up, and, therefore, he personally had not received any fees.

Mr. HALL said, according to the articles of association, the amount to be received by the directors, until such time as the company made 40 per cent., was 650l. per annum, but as the accounts were from Oct. to May, the directors had received for that six months just the amount they were entitled to for 12 months.

The CHAIRMAN explained that the company was incorporated on June 2, and, therefore, the directors were fully entitled to the amount paid.

VIEWS OF THE VENDOR.

Mr. PRITCHARD MORGAN: I have before me the balance-sheet to May 30, and I find 124,330 shares have been placed by the new company, and the company has received 2s. a share, amounting to 12,433l. The sales of gold and silver amount to 6,723l. 4s. 9d.; premiums as shown by this company, 220l. 6s. 3d.; calls paid in advance, 10l. 6s.; interest and discounts, 92l. 12s. 1d.; transfer fees, 29l. 19s. 6d.; and rent of barracks, 39l. 17s. 3d., amounting in all to 19,519l. 5s. 10d. The calls in arrear appear to be 118l. 17s.; the cash in bank is 1,060l. 10s. 7d.; the assets of the old company amount to 1,500l.; so that the new company has had nearly 20,000l. We have in the bank a very insignificant sum in comparison to that. What was the actual cost of the re-construction of the company? The accounts do not show it. The accounts are made up in a manner which is most unjust to your manager. It appears in development and dead work. It should appear, and we ought to know it, and I, for one, should like to know it very much, because I am in the position of having been vendor to this company. It has been my greatest desire, from the very commencement, that the Morgan Mine should be, and it ought to be, a very valuable property. Since you have been in the fortunate position of having Mr. Williams at your property, he has shown by his accounts sent to the directors, and which are not sent to the shareholders with any undue haste, that his milling costs him only 2s. a ton, and his mining costs him 3s. 6d. or 4s. a ton. Since Mr. Williams has been there he has crushed 8,952 tons of quartz. Roughly speaking,

1l. A TON IS THE VALUE OF THE ORE.

Being an old mining man, I do not hesitate to say that that should pay handsomely in any country, and more particularly should it pay in England, where Mr. Williams has shown it can be treated at 2s. a ton. I complain bitterly of the conduct of the directors in having got rid of a sum of 20,000l., and having only a few thousands in the bank, when the mine has earned a profit of 10s. or 11s. a ton of ore. What do we want with a 1½d. dividend when we should leave in the bank a mere nothing? We should presently have a call, in all probability, of 1s.? What I want the directors to do, and what I have always wanted them to do, is to endeavour to form subsidiary companies. We have an enormous acreage of land, somewhere about 10 or 12 miles of lodes, but we have only got crushing power for about 100 tons a day.

THE DIRECTORS' REPLY.

Mr. H. GEORGE SMALLMAN (director) said Mr. Morgan had evidently forgotten that the old company transferred to the new company not only the assets of the company and the right to a certain portion of land, but it also transferred the liabilities of the old company, and if he wanted to find where the money had gone he would find it had gone there. His quotation from the accounts was not quite correct. Mr. Morgan had said that 9,000 tons of ore had been crushed. He supposed he got his information from the printed document he (the speaker) held in his hand, but it would only have been fair of Mr. Morgan to have explained that this printed statement was up to Aug. 15, but they were dealing to-day with the accounts to May 30. Mr. Morgan had said they ought to make a profit of 10s. a ton. They did not make so much as that, but he did not think he had very much to grumble at. However, the accounts had been prepared, and had been audited by the auditors of the company, and the directors were prepared to stand by them. They, as directors, had had an enormous amount of trouble. He did not think the directors were receiving too much. Personally, his share of the fees did not pay him for the trouble entailed. His holding was about one-fortieth of the whole company. They were working the mine in

THE BEST INTERESTS OF THE COMPANY.

They took the greatest trouble to obtain a manager of vast experience to advise and assist them, and they were working on the lines laid down by him, with which they were perfectly satisfied, and he thought when they next met together they would all be satisfied. There had been great difficulties in connection with the new company. They had considerable difficulty in getting the new lands transferred to the company, and he was bound to say Mr. Morgan rendered them every possible assistance. There were a lot of outstanding claims for machinery, and the mills were not quite completed. It took about eight months to get into order. Since then they had

got to work, and the result of the four months had been satisfactory. The motion was then put to the meeting, and carried unanimously. The CHAIRMAN: I will now propose, "That a dividend of 1½d. per share be paid."

Mr. GOTTO seconded the motion.

QUESTIONS FOR THE MANAGER.

Mr. MORGAN: I should like to ask the manager one or two questions. I quite agree with what Mr. Smallman has said with regard to the crushings being up to date, but I see you have crushed nearly 9,000 tons of ore since you have been there, and practically that ore has been worth 1½d. a ton—is that so?

Mr. WILLIAMS: The average has been 5 dwts. 20 grs.

Mr. MORGAN: I see by your accounts that the crushing has cost 2s. a ton—that is the average I presume?

Mr. WILLIAMS: That is the average cost of crushing up to date.

Mr. MORGAN: And the cost of mining about 4s.

Mr. WILLIAMS: The average is 4s.

Mr. MORGAN: That would leave a profit of something over 10s. a ton.

Mr. WILLIAMS: About 11s. a ton at the mine, but that does not allow for the administration expenses of the mine.

Mr. MORGAN: Well, now, you know the bounds of the property.

Mr. WILLIAMS: I ought to know it. (Laughter.)

Mr. MORGAN: Is it a fact that you have in that property practically a small goldfield?

Mr. WILLIAMS: The property is large enough. We have about 840 acres.

Mr. MORGAN: There are several parallel lodes, are there not?

Mr. WILLIAMS: Yes; that has all been explained.

Mr. MORGAN: Is it your opinion that the property should be cut up, or is it possible to work the whole of the property with your present machinery or under one management?

Mr. WILLIAMS: The directors are considering that point. It is hardly in my province to say, but, from a mining point of view, I certainly think some operations ought to be going on in other parts of the property.

Mr. MORGAN: Is the mill capacity sufficient?

Mr. WILLIAMS: No.

Mr. MORGAN: Would it, in your opinion, be advisable for the directors to undertake the development of the Moel Gwynfyndd Mountain, unless they were prepared to put up another 40 head of stamps?

Mr. WILLIAMS: I think the best plan would be to do something towards realising the prospects before putting up a mill.

The CHAIRMAN explained that the directors had just decided, at a very early date, to have a meeting at the mine to discuss the point which Mr. Morgan had raised.

Mr. MORGAN said he felt it his duty to suggest to the shareholders that

THIS DIVIDEND BE NOT PAID.

This 1½d. would do very little good to anybody. He had got a very large number of shares himself, and therefore he was sacrificing as much as anybody. He had elicited from the manager that they had a very large area of ground, and the directors had informed them that they intended holding a meeting at Dolgelly. He (the speaker) would be very sorry indeed if they came to grief—going over, as it were, the last hurdle. He moved, as an amendment, "That the dividend be not paid, but that it be put to an account for the further development of the property."

Mr. WESTON seconded the amendment.

The CHAIRMAN: This is purely a matter for the shareholders. Speaking for myself, my opinion is that as the dividend has been fairly earned it should be paid, but if the shareholders wish it to be otherwise we are quite willing.

The amendment was then put to the meeting, and carried, on a show of hands, by two.

Mr. SMALLMAN then proposed the re-election of Mr. Gotto.

Mr. MORGAN seconded the motion, which was carried unanimously.

The auditors were also re-elected.

SPECIAL MEETING.

The meeting was then made special for the purpose of passing the following resolutions, which, on being put to the meeting, were carried unanimously:—

1. "That the articles of association of the company be altered in the manner mentioned in the following articles, that is, to say—
2. That article 6 be and the same is hereby altered by striking out from the end of such article the words "But for the purposes of dividend it shall always be assumed that every share which from time to time shall be issued is fully paid-up, whether the same is in fact fully paid-up or not."
3. That article 7 be and the same is hereby altered by striking out the words ("having regard to the assumption mentioned in the last clause hereof").
4. That article 10 be and the same is hereby struck out, and the following regulation substituted therefore—"The funds of the company shall not be expended in the purchase of or lent upon the security of its own shares."
5. That article 88 be and the same is hereby altered by adding at the end thereof the words following, namely—"Provided always that the A shares shall be entitled to the same proportion of dividend as the B shares, notwithstanding that the A shares for the time being may not be fully paid-up.""

THANKS TO THE CHAIRMAN.

Mr. MORGAN, in proposing a vote of thanks to the chairman and manager, said, although he had felt it his duty to criticise the policy of the board, he had no doubt they had done their best. They had had great difficulties, and difficulties which could not possibly have been overcome without the greatest care and attention. He impressed upon them, however, the desirability of forming subsidiary companies to work other parts of the property.

The CHAIRMAN, in replying, said they hoped by this time next year to be in a position to declare a satisfactory dividend. He quite admitted there was a great deal to be said from Mr. Morgan's point of view, and in future they would be very pleased of any hints that that gentleman might give.

At the close of the meeting the shareholders were invited to inspect a specimen of quartz from the recent discovery in the Big lode, which showed visible gold.

THE GYMPIE GOLDEN CROWN MINING CO., LIMITED.

THE CHAIRMAN VISITS THE MINE, AND GIVES A PROMISING ACCOUNT OF THE NEW GROUND—THE SLATE AND CONGLOMERATE FORMATIONS OF GYMPIE.

The ordinary general meeting was held at Winchester House, on Tuesday, for the transaction of the ordinary business of the company.

Mr. Samuel De Lissa

(chairman of the company) presided.

Mr. B. PEYTON WARD (secretary) read the notice of meeting.

MR. DE LISSA'S VISIT TO THE MINE.

The CHAIRMAN: Gentlemen, in moving the adoption of the report and accounts I would state that this meeting has been left a little later than usual, because I was away in Australia, and while there had the opportunity of visiting your mine at Gympie, and only got back at the end of last week. My co-directors thought it would be much more important that I should address you, because you can well understand that when one has been on the field and seen the property, along with the formation of the reefs, and of the field generally, and what are its capabilities, one gets the "hang" of matters in such a way that one can better answer questions which shareholders are likely to put. I do not, however, know that I can add much to the report my co-directors have issued, being the report I wrote to them from Brisbane a few days after I had seen the property. It is a long way from Brisbane to Gympie, but I determined to go up and have a thorough look at the property, and am very glad I went. My mind has been opened very much as to our prospects, and I have been able to satisfy myself that nothing has been wanting on the part of the management. Everything has been done with judiciousness and economy, or, otherwise, we might have been at work much longer than we have been on the poor ground of the old mine instead of securing new ground. I want to call attention to the fact that the new ground is very promising, and is quite a virgin claim. It is thought so much of in those parts, that the No. 1 North Phoenix, the claim that adjoins us in Gympie, took up a large claim next to ours. The owners of No. 1 North Phoenix think so highly of this part of the field, that they have put up an extensive plant. In fact, they have done so, both for development and ore treating purposes, and are virtually, as you will see by the report, proving the deep ground for us. We are confining ourselves to the shallower levels which are named in my report. Mr. Argo, the manager of the No. 1 North Phoenix, than whom I do not think there is a better mine manager in existence, seems perfectly positive that these reefs will develop into a very fine property, and that we shall have in the new ground

A REVIVAL OF THE BEST DAYS OF MINING IN GYMPIE.

(Cheers.) When I was there we had comparatively only begun. They had reached a depth of 210 ft., and by putting out cross-cuts had attacked the reef, which was 1 ft. wide, and they were opening along it north and south. Our manager, Mr. Ramage, expressed the confident opinion that the reefs would widen, and since then we have had a telegram to that effect with respect to the Peter and Paul reef:—

"In Peter and Paul reef the vein is fully 2 ft. wide, carrying gold. The country is all that can be desired; trial crushing in a week's time."

That is very satisfactory, and I am pleased to see on my arrival home that Mr. Ramage's predictions have been fulfilled. That was received on Aug. 29. I may explain the reasons for the words, "the country is all that can be desired." Gympie consists of alternate layers of conglomerate, which has been acted on by fire, and slate, and whenever the reefs are in this conglomerate there is no gold in them. For example, we have a reef 3 ft. wide in conglomerate, but there is no gold in it. However, directly slate breaks occur you find gold. While in Gympie some stone from the 240-ft. level was taken out of the old claim, and when the slate came in the appearance of the quartz was such as you see from the specimens on the table, and I dare venture to say such samples have rarely been exhibited. No. 1 contains (it was a small piece of quartz) 2 ozs. 2 dwts.; No. 2, 1 oz. 10 dwts., and No. 3, 14 dwts. In the No. 1 North Phoenix it is as much as 50 ft. wide in the conglomerate, and hardly carries 1 or 2 dwts. of gold. But whenever the slate comes there is a total change, and I, myself, saw a piece of quartz, not bigger than a brick, containing 100 ozs. When Mr. Ramage says "the country is all that can be desired," he means that he is

GETTING INTO SLATE COUNTRY.

When we get into that country, then our mine should become rich in gold. Once when we were in conglomerate country, and, therefore, did not get gold, we sank 600 ft. in that sort of country without result. Gympie is exceedingly patchy. A reef is wonderfully rich or very poor, and what we have to hope for is a good slate break, when the results may be astonishing. I can predict nothing; but I venture so far as to say that the prospect is extremely hopeful. Indeed, I may go further and say it is remarkably good, and that view is endorsed by a telegram stating that this reef has widened out, and also shows gold.

MR. DE LISSA TAKES SPECIMENS.

I would like to mention, as a personal matter, that Mr. Ferguson and Mr. Atkinson, the local directors, presented me with these specimens. When accepting them they gave me the certificate of the assay by which the assayer had weighed and ascertained the amount of gold, and also the receipt from the secretary showing that the money had been paid into the bank to the company's credit. In dealing with specimens of the company's gold, I did not feel inclined to accept them unless they gave me this document, which I have pleasure in laying on the table. The gold contents were 4 ozs. 6 dwts. I have pleasure in exhibiting these specimens, because they show

how rich the stone is when it gets into the slate. I had a look over our old ground. As I have said, No. 1 North Phoenix is next to us, and it is easier from their workings to get into ours, and by that means I gained access to our mines and examined what was to be seen. I became convinced that all that vast body of stone which we left in the eastern levels is not worth working. Mr. Argo showed that similar stone did not pay for working in his property, although they had a reef 40 ft. wide, and he is sure Mr. Ramage exercised a wise discretion in leaving this part of the ground alone, of which at one time we had great hopes. I do not expect a good deal out of the old ground, but I am

CERTAINLY VERY HOPEFUL IN REGARD TO THE NEW.

As I have said, it is virgin ground, all the levels are intact, and in the old ground the upper levels were worked out before we purchased the claims. The plan you have with the report is very clear and I cannot elaborate it. I have told you that the management is all that can be desired, and do not want to say anything further except this, that from outside, and totally independent sources in Gympie, I learnt that we are well served. A better manager than Mr. Ramage does not exist, and he has always the advice to fall back upon of Mr. Atkinson and Mr. Ferguson, who also understand the practical part of mining. He has also his neighbour, Mr. Argo, who works at No. 1 North Phoenix, and they get on very well together. They assist each other and save a great deal of labour and expense.

ACCOUNTS.

Turning to the balance-sheet, I do not think there is much I need call your attention to as regards the accounts. You see directors' fees to the amount of 900*l.* are carried to a suspense account. These are fees we have not drawn, and if you turn to the revenue account ending Apl. 30, you will see, as far as the mining and general expenditure is concerned, it cost us 3,611*l.*, while the gold was of the value of 3,701*l.*, that is to say, it about paid its way. That is all we have been able to do. We have had only the remnants of the old mine to work, and the new mine was not in a sufficiently advanced stage to aid the returns. The working of the mill cost 2,533*l.*, and crushing for other companies produced 3,103*l.*, so that we have crushed all our own stuff without cost, and have earned 600*l.* besides. 7*s.* 6*d.* per ton is the rate at which we crushed for other companies, and there is eager competition for the work, but at this low rate besides doing the whole of our own mill work for nothing, this profit has been made, and it is quite as much as could be expected. The London expenditure is the same. Directors' fees are all debited, and, as I have said, some of them are carried to suspense account. A little money has been earned by interest (109*l.*), which is not as much as formerly, because our capital has been going. You know what it takes to open a new mine, and it has cost us a great deal to equip this one properly, to provide it with winding plant, timber, &c. It has also three shafts—a main shaft, a western shaft and an eastern shaft, with all the various etes., and these items have considerably eaten into our capital, but I hope now, after the receipt of this telegram, that we shall begin to reap the reward and get some of our gold back. There is nothing more I can say on the subject, but shall be happy to answer any questions, and to give to any shareholder, either here or at my office, what information he desires. I spent a few days on the spot looking into everything, and think I have mastered all the details. I have great pleasure in moving the adoption of the report and accounts. (Cheers.)

The report was carried unanimously.

DIRECTORS AND AUDITORS RE-ELECTED.

The CHAIRMAN moved the re-election of Mr. Sinclair Macleay.

Mr. CLIPPERTON: I have much pleasure in seconding that motion. Mr. Macleay and I meet at the offices every day, and if there is anything to be done we can do it as we form a quorum. A more conscientious or a better director for the work of a company like this never existed than Mr. Macleay.

A SHAREHOLDER proposed, it was seconded, and carried unanimously, that Messrs. Monkhouse, Goddard and Co., the auditors, be re-elected at a remuneration of 25 guineas per annum.

NO CHARGE TO SHAREHOLDERS FOR CHAIRMAN'S VISIT.

The CHAIRMAN: My visit to Gympie did not cost the company a single farthing. (Cheers.)

A SHAREHOLDER: I have great pleasure in proposing a vote of thanks to the chairman for the interest he has taken in the company, and for his visit to the property. I hope the words we have heard from him will greatly encourage us, and that the next time we meet we shall find that his views have been realised.

Mr. HANKEY seconded the motion, and it was carried unanimously.

The CHAIRMAN: If there is one thing which rewards one who has the direction of a company more than another it is to know that the shareholders are satisfied with his labours. I may say that since I have presided at this board we have always been a happy family. It is not our fault that the company has not been a greater success for everything we could do to promote that end has been done. I am very much obliged to you for the kind expressions of opinion you have made use of towards us. (Cheers.)

LATEST REPORT.

The following is the most recent report from Mr. Thomas Ramage (the manager) for fortnight ending July 16:—I have to report that driving and stoping on the March reef at the 105-ft. level are being continued. The north drive is advanced a total distance of 110 ft., and the south drive 60 ft.; both drives are being carried on in good slate country. The reef averages about 1 ft. in thickness, and from the appearance of the reef on the break you would expect to get rich stone, but with the exception of one small patch, the stone has been very poor. On the Crown reef stoping has been re-commenced on a block of ground above the 240-ft. level, at a point 200 ft. north of the shaft, to give it a further trial. We are only crushing during daytime with five head of stamps: 15 head are engaged on public stone. Lease 777 Two Mile: At the main shaft the drive north on the Peter and Paul reef is advanced a total distance of 130 ft.; there is no change in the reef to report. At the eastern shaft the south drive is advanced a total distance of 56 ft. from top of rise. The reef has made a small break to the west, but has taken its proper course

again, and continues about 18 ins. in thickness. We are not breaking down any reef here until the two drives are connected, which should be completed in about six weeks, then all stone and mullock can be hauled through main shaft. The north drive has been carried in a further distance of 16 ft.

OTTOS KOPJE DIAMOND MINES, LIMITED.

MR. LISLE, LATE OF THE DE BEERS MINE, GIVES AN ENCOURAGING ACCOUNT OF THE PROPERTY—BOTH HE AND THE LOCAL DIRECTOR GIVE PRACTICAL PROOFS OF THEIR ESTIMATE OF ITS VALUE—BRIGHT OUTLOOK FOR THE SHAREHOLDERS.

A SPECIAL MEETING of the shareholders was held at the City Terminus Hotel, on Tuesday, "to receive a verbal statement from Mr. James Lisle (late of De Beers Mines), the newly appointed manager of this company, who has just arrived from Kimberley."

There was a crowded attendance of shareholders.

Mr. Francis Stobbs

(chairman of the company) presided.

Mr. THOMAS C. WALTON (secretary) read the notice of meeting.

THE CHAIRMAN'S VISIT TO THE MINE.

The CHAIRMAN: Ladies and gentlemen, I believe it was in my absence that the statutory meeting was held, and it was promised that on my return a meeting would be held, but on reaching home, and having engaged the services of Mr. Lisle when on the spot, it was considered better simply to send out a report from myself, and hold the meeting at a later date, after Mr. Lisle's arrival, when it was considered by the board that a statement on the prospects of the mine from a man of experience such as he is would be much more satisfactory than anything that could come from me even, although I had but recently seen the mine. This report has already been issued to the shareholders. Mr. Lisle arrived in the meantime, and consented, at the request of the board, to attend a meeting so as to give his impressions of what he thought of the property to the shareholders before he left to take charge of it. With regard to Ottos Kopje, I may state that I have had considerable experience in mines in this country, but very little so far as diamond mines are concerned; but still, from the experience I had obtained in England, I was enabled to make such enquiries when in Kimberley as to reassure me in every way, and, at any rate, to have my opinion supported by that of other people who are really interested, and who withal are experienced diamond miners.

PEOPLE IN KIMBERLEY BELIEVE IN THE MINE.

I suppose the whole of the shareholders existing when the company was re-constructed were pretty well aware of the history of the mine up to that point, and when I tell you that the people who are interested mainly in the property and its conduct in Kimberley have stuck to it through thick and thin, and have backed their opinion in the same way that we all have done here, it shows there is some belief in its future in the colony. Since my return home the local director, Mr. O'Leary, who was at the head of the old company, has materially strengthened my opinion from the fact that he has acquired a large block of shares by purchase. He now holds, or has an interest in,

SOMETHING APPROACHING 50,000 SHARES,

and when asked, at the request of some of my friends a fortnight ago, whether he was selling, he replied that he was "not a seller at all." My belief in the mine is just a shade stronger from my inspection of it than it was after reading the private reports that Mr. Lisle gave me before we started this re-construction scheme. Both the board and I considered that as the re-construction of the company had depended in a very large degree upon the reports given by Mr. Lisle, if we could secure his co-operation by withdrawing him from the De Beers Co., and get him to take charge of the Ottos Kopje Mine, it would be to us a very strong guarantee that the mine was worth what we had put into it, and one of the particular objects of my journey to Kimberley was, if possible, to

SECURE THE SERVICES OF MR. LISLE.

I may tell you that for many years I have known Mr. Lisle personally. His standing as a mining engineer in the north of England is second to none. (Cheers.) He had there the charge of a very large colliery concern, and his duties were not confined to the practical and technical working of the mine, but he also had to manage its financial business, and under his direction a concern that had practically not done a good deal for its owners before his advent resulted in very substantial returns. He left his previous employers with a very large amount of regret on their part, and I may tell you the same thing happened when he left the De Beers mine at Kimberley. I have seen a letter from the general manager which expresses not only his own regret at Mr. Lisle leaving the company, but that of the directors likewise. I have now the pleasure of introducing Mr. Lisle, who will tell you what he thinks about the mine.

MR. LISLE EXPRESSES REASSURING VIEWS.

Mr. JAMES LISLE (who was heartily applauded on rising) said: In the beginning of last year, at the request of your present chairman, Mr. Stobbs, who had been for some years a personal friend of mine in the North of England, I made an examination of the Ottos Kopje Mine, and from what I then saw I was able to advise Mr. Stobbs that the mine was undoubtedly a diamond mine, and that there was a fair quantity of diamonds over the portion of the mine which had been worked, but in my judgment it had been worked in the poorest ground. Subsequent examinations of the Ottos Kopje so confirmed my favourable opinion that I at once purchased a considerable holding of shares in the company

MR. LISLE EXAMINES THE MINE.

At the time of my examination, in the early part of last year, I found that a large sum of money had been expended on the mine in sinking and constructing a shaft down to 800 ft., and making a series of drives, but on the completion of this work it was found necessary, in order to work the mine properly, to have a second shaft; in fact, the new mining legislation of the colony, bringing it very nearly into accord with the English mining laws, allowed only 30 men to work in a mine with one shaft. Therefore, after full investigation, I determined and advised that the proper way to develop the mine was to open it up at the end of the property furthest away from the present shaft, and since your company took possession—two months ago—of the property, clear of all charges and indebtedness, I advised Mr. O'Leary, your local director, to immediately proceed with the work in the manner indicated.

HE LEAVES DE BEERS TO BECOME OTTOS KOPJE'S MANAGER.

Deep trenching was made on the undeveloped part of the property, which proved the existence of the yellow ground there, and in April last an open working was commenced to expose and work the yellow ground. The tests of surface ground above the yellow, taken out in the work of opening up so far as we have gone, have shown the sure indications of diamonds, and I became so thoroughly satisfied with the value of the company's property, that on an offer being made to me by your directors that I should give up my permanent engagement with the De Beers Co., as manager of their Kimberley Mine, and take charge of your property, I finally agreed to do so, and have entered into an agreement for two years, as you have already been advised by the board. As to the future of the company's property, I am, therefore, giving you the benefit of my experience gained as manager of the Kimberley Mine; the fact that I have given up my position in the De Beers Co. to take the responsibility of developing your property; and, further, I have backed my opinion with my own money by lately increasing my holding in your company's shares, which I intend to keep. I consider that the mine has been sufficiently tested by the work done by the old company to prove it a diamond mine, and, therefore, my plan, which the board have accepted, is to proceed to develop the property in a thorough and comprehensive manner by the large open working at the south end of the mine, which I have before referred to, and from which, as we go down, tunnels will be driven right across the mine and into the existing shaft, and so open up the whole property.

PLAN OF CAMPAIGN.

Having done this, we shall be able to select and wash the richest portion of the mine as is done by the other companies on the diamond fields. I may mention here that your property represents 827 claims, and the whole mine is your own property, as well as 500 acres around the mine, for use as depositing floors and other purposes. When I left Kimberley on July 27 the work of opening the mine had progressed satisfactorily. The ground I found was very much the same character as that of the Kimberley Mine, of which I was then manager, which position I have retained until I retired a month ago to take charge of your property. An aerial tramway, with washing gear, had been erected, and was in working order ready for washing the yellow ground, which I anticipate will be reached during next month. From the washings of the yellow ground in the north end of the mine, which I consider is the poorest part, the yellow ground will prove sufficiently remunerative to pay all the expenses of the mine until the blue ground is reached, which will be done after the 80 ft. of yellow ground is worked out.

ABSURD VALUE OF THE SHARES.

Since I have been in England many shareholders have asked me what I consider the value of their investments in the shares of the company—my answer has been that the present price of the shares, viz., about 3s., is absurd, which places the market value of your whole concern at only 75,000l., to represent which the company has an undoubtedly most valuable property, machinery and plant, free of all encumbrance, and upwards of 30,000l. to develop it. I can only assure the shareholders that so far as I am concerned, the working capital will be most carefully and judiciously expended, and that nothing will be wanting on my part to make Ottos Kopje what I firmly believe it will be, a very successful dividend-paying diamond mine. (Cheers.)

The CHAIRMAN: If any shareholders have questions to put either to Mr. Lisle or the board, as to anything in the past or anything that probably may take place in the future, we shall be very pleased to answer them. With regard to the work Mr. Lisle has mentioned as having been done since he advised the board as to what he thought was the proper way to develop the mine, I may say that the thanks of the board are largely due to Mr. O'Leary, the chairman of the late company, who is now our local director in Kimberley. He has, at great sacrifice to himself, taken charge of the operations during Mr. Lisle's absence from Kimberley, and has drawn a very modest living amount out of the coffers of the company for his services during the time he is from home. It only gives to me, as it must to you, another proof that when a man of Mr. O'Leary's experience (who was a large shareholder in the Kimberley Mine as well as in the original De Beers Mine) puts his money down and locks up his time so as to develop the property—I say it must be a satisfaction to the shareholders to find that such a man really believes in the property, and I think they will admit that the very fact of his giving up important engagements as he must have done to take charge of the mines for practically six months, until Mr. Lisle gets out there again, shows his confidence, more especially when I say that as the work goes on he is so satisfied with it himself that he has purchased on the Kimberley market

A BLOCK OF NEARLY 10,000 SHARES.

If there are any questions to ask, I repeat, I shall be glad to answer them. I really wish you would ask them, because it will show an interest in the mine which the directors will thankfully appreciate. We have nothing to conceal. We are all here as shareholders, and have put our money down, and it would show a strong interest on the part of those shareholders who have nothing to do with the management if they would ask questions, and show their interest in that way.

SHAREHOLDERS ASK QUESTIONS.

Mr. LAMB: May I ask Mr. Lisle how long it will be before we get to the blue ground?

Mr. LISLE: It is difficult to say to a month or two when you can get through 80 ft. of yellow ground. A great deal depends upon its richness. The richer it is the more reluctant we shall be to leave it. Sometimes parts of yellow ground prove almost as rich as the blue ground, but perhaps, with fair working, in 10 or 12 months, we might get the blue ground out on the floors to pulverise. The blue ground, unlike the yellow ground, requires to be pulverised. It has to be laid out on floors, and lie for six to nine months before it can be washed, but the yellow ground can be washed directly it comes out of the mine. An endeavour will be made to get blue ground out as soon as possible, to allow it time to pulverise before the yellow ground is exhausted.

Mr. CONST: Did you say it requires nine months to be laid on the ground?

Mr. LISLE: From six to nine months.

Mr. CONST: I am an old diamond digger, and have always done it in seven days.

Mr. LISLE: The Kimberley Mine, which is the richest diamond mine ever discovered, has followed that plan.

Mr. CONST: I was in the North Block Mine.

Mr. LISLE: It has been proved to be the most profitable to let the blue lie for six months on the floors. De Beers Mine finds it most profitable to let it lie nine months, and now the intention is to get as much ground out as possible so as to allow the blue from both mines to lie 12 months on the floors. (Cheers.) It takes less labour, and you know, as an old diamond miner, that the less labour you put into it, and the better pulverised it is, the less loss of diamonds occurs. (Hear, hear.)

Mr. CONST: Do you throw water on it to pulverise it?

Mr. LISLE: Yes.

The CHAIRMAN: I want to remove an impression which, perhaps, the question and answer may have raised in some people's minds. It is

NOT NECESSARY TO WAIT UNTIL WE GET TO THE BLUE FOR DIAMONDS.

The washing of the yellow ground, we estimate, will produce sufficient diamonds to meet the expenses of the mine, but if the yellow ground proves rich, we will go on washing it so as to open a large area before we begin to take the blue out. I may mention to the shareholders, what is not generally known, that the operations of the old company have proved the Ottos Kopje to be a diamond mine, and I had distinct evidence, from at least a dozen men in Kimberley while I was there, that in all the development operations pursued by the old company, there never was a time when they washed the ground without finding some diamonds. The local directors, who were established here to represent the old company during the year 1890, received from the mine over 1,000 carats of diamonds, which were sold on the market here, and the average price realised in London was over 30s. per carat, so that we have something to go upon beyond mere statements. In the name of my co-directors, I am much obliged to you for your attendance here, and I declare the meeting closed.

THANKS.

Mr. WILLIAMS: I think we ought to express our thanks to the chairman for his visit to the mine, and to Mr. Lisle for the report he has given us to-day.

Mr. LAMB seconded the motion, which was carried by acclamation, and the meeting closed.

THE CHIAPAS MINING CO., LIMITED.

A MEETING TO ALTER ARTICLES IS ALSO UTILISED BY MR. PONTIFEX TO GIVE THE SHAREHOLDERS A FULL ACCOUNT OF THE REMARKABLE RICHNESS OF THEIR MINE—VIEWS OF MR. FRECHEVILLE, WHO HAS EXAMINED IT.

AN extraordinary general meeting was held at Winchester House, on Thursday, for the purpose of transacting the business set forth in the circular sent to the shareholders, and explained in the chairman's opening speech.

Mr. Edmund A. Pontifex

(chairman of the company) presided.

Mr. H. A. HEDLEY (secretary) read the notice of meeting.

The CHAIRMAN: Gentlemen, at the ordinary general meeting, which was held at the end of last year, I stated it would be necessary to ask you to attend an extraordinary general meeting for the purpose of modifying the articles of association, so as to conform to the amended contract which we have made with the Messrs. Maldonado and Sons, by which we have

SAVED 40,000l. IN THE AGREED PURCHASE PRICE

of the mine. Those alterations were duly drafted by Messrs. Maldonado and Sons' solicitors and agreed to by ours. They were sent out for approval, but, I suppose from some irregularity in the post, they miscarried. At all events they have not arrived there, and it was only when Don Octavio Maldonado arrived in England on a visit, for the purpose of consulting us on several points relating to the interests of the company, that we were able to obtain the formal assent of the vendors to the draft modifications which had been raised by our respective solicitors. There has, therefore, been considerable delay, and we were obliged to call you together at a much later date than we expected. We are glad now to have the pleasure of seeing you, not only for the special purposes of the meeting, but because it will enable us to give you some account of the present condition and prospects of the mine at an earlier date than if we had deferred meeting you until the ordinary general meeting, which we hope to hold towards the end of Dec. It perhaps will be more convenient for us that we should finish the special business for which we are called before we take up

the discussion as to the prospects of the mine. When we went into this question of the modifications of the articles another matter requiring modification arose—that is, that we should have the power of creating

SHARE WARRANTS PAYABLE TO BEARER

as well as the ordinary certificates. That suggestion was made by Don Octavio Maldonado, who has been in negotiation with some influential French buyers who are anxious to obtain an interest in this company; but in France, as you probably are aware, they are unwilling to hold, as a rule, shares in companies which have not the power of issuing share warrants payable to bearer, and, therefore, in compliance with the request of Don Octavio and the interests of the company generally, we have now to ask you to confer upon us the power to issue these share warrants to bearer. The first section of the amendments we propose to you, as detailed to you in the circular which has just been read by the secretary, deals entirely with our powers as to the issue of share warrants. They are the ordinary powers and couched in the ordinary form, and, therefore, I do not think you will require from me any detailed explanation. If you are of opinion that share warrants should be created, you probably also may be of opinion that the mode of creating them should be as is here suggested. The other modifications in the articles are, as stated, with regard almost exclusively to this modification of contract. In the original articles the original contract was scheduled. That contract still holds, so far as it is not modified by the subsequent arrangement. The subsequent arrangement which does modify it consists of one or more supplementary contracts, which are comprised under the terms used in these articles, of the "Chiapas Mines purchase arrangement," and almost all the alterations that are now suggested are merely formal, adopting the words "Chiapas Mines purchase arrangement" instead of the words used in the articles which refer to the contract scheduled therein. The second clause, however, does deal with one small modification other than that I have mentioned, in which it makes Messrs. Maldonado and Sons the sole commercial agents, instead of as they were called in the articles, the "special agents," which expression nobody knows the meaning of. We, therefore, suggested that they should be called the sole commercial agents so that their powers should have a limit and their services be confined to those commercial matters in which we require the aid of an agent, and not be extended to matters in which, possibly, it might hereafter become difficult to control them. Article 4 deals with alterations of the title of the agreement. Article No. 5 alters to some extent powers that the former article gave. Originally the number of directors was limited to five, unless otherwise resolved by the general meeting of the shareholders. Messrs. Maldonado and Sons saw that that notification is inconsistent with the terms of the agreement, that if we were to indefinitely increase the number of the directors we should to that extent limit their power and authority conferred under the agreement to one or more nominees on the board, and, therefore, that power of altering the number of directors they thought ought to be taken from us. I did not see any objection to it, and we were bound, as a matter of equity, almost to do it, because it would be inconsistent with the agreement if we were to alter the number of directors on the board as to modify their voting power. Article 66 is altered for the same reason as that of the Chiapas Mines purchase arrangement referred to instead of the agreement in the articles. Article 68 for the same reason alters the title, and article 79 also, whilst the powers in article 87 are also altered to carry out the arrangement. You will, therefore, gentlemen, see that in all essential particulars the alterations are merely formal, and are absolutely required in order to carry into effect the arrangement come to in the interests of the shareholders, by which the purchase price was reduced to the extent I have named. I now move "That the resolutions altering the articles, as read by the secretary, be passed."

Mr. SKELTON: I second the motion.

The CHAIRMAN explained a misapprehension under which Mr. White (a shareholder) laboured, that share warrants to bearer meant that the ordinary holders of certificates should not be present to vote at meetings in the same way as under the original arrangements. He explained that the three days' notice and the depositing of share warrants were usually required in these cases, and, personally, he felt disposed to quarrel with the minimum, and to say that the time should be extended.

Mr. WHITE: Holders of certificates will be admitted in the ordinary way to meetings.

The CHAIRMAN: Yes; it does not affect them in the least. As to the number of directors, we should never propose to have less than three, but power is taken in case of death or sudden resignation, the numbers already being limited. In order to have all our acts valid we may, by a small number of directors, make them so. We do not, however, propose to have so few as two.

The resolution was carried unanimously.

POSITION AT THE MINE.

The CHAIRMAN: There will be a confirmatory meeting, of which you will have due notice. Coming now to the affairs of the company which more closely interest you than the mere formal business, I wish to say a few words with regard to the progress we have made at the mines since our last general meeting, and the prospects of prosperity which we see before us in the future. You are aware that owing to the difficulties of transport, which are very great in that country, it was inevitable that a long time must elapse before we could get our machinery on to the mine, and before we could have everything ready when it got there. So great were the difficulties from that cause, that our superintendent devoted himself almost exclusively for a long time to preparing the way for machinery, building the flume for the carrying of the water, levelling the sites for the erection of the buildings, and generally putting things in a state of organisation, which would enable him to put up machinery when it arrived, and have everything ready for immediate working. He did not think it necessary to do any very large amount of mining work, because, as you are aware, nature has already done so much of it that it is hardly needful for us to do it artificially. The stream which has been running through this deposit for countless ages has gradually eaten its way into a deep bed through the middle of the deposit, which exposes on each side

SUCH AN ENORMOUS AREA OF STOPING GROUND

that, practically, an amount of mining has been done by nature, which

it would have taken many years to do by art. Therefore, Mr. Stockdale, our superintendent, did not think it necessary to begin to raise any quantity of ore until he got the machinery at the mines. But we, who have had something to do with mining, are aware, from experience, how very often the promises of a mine are not fulfilled when you come to work it, and, therefore, we requested him (although we had every confidence in his statements) to raise some ore, so that he might absolutely demonstrate, beyond a peradventure, that the mine was of the quality and richness we had always supposed.

WE HAVE ON OUR BOARD MR. WILLIAM FRECHEVILLE,

who is an eminently competent authority on mining matters, who has been there, who has seen the mine, examined it most carefully, and spent a considerable time on the spot. Now, he endorses the statements that are made in the prospectus, and his report you have had before you. Still, we wished to have actual demonstrations, so to speak, that the quality and quantity of ore were as stated, and we have requested Mr. Stockdale to commence mining, even though it should be an inconvenience in having to pile it up pending the erection of the concentrating mill. The result, so far, is that up to the end of June he had raised 1,750 tons of ore, of which he had picked out by hand $8\frac{1}{2}$ tons, in a condition fit for transport. Where transport is so extensive as there, only the very rich ore can possibly be sent away at a profit. Fortunately, ours is so rich that we shall have no difficulty upon that score. Of these $8\frac{1}{2}$ tons of hand-picked ore, careful assays have been made, resulting in their showing 33 per cent. of copper, 61 ozs. of silver, and $7\frac{1}{2}$ ozs. of gold per ton. The remaining ore (the crude ore, so to say) assays in its rough state from 17 dwts. to 2 ozs. of gold, 8 to 16 ozs. of silver, and 5 to 10 per cent. of copper. Experiments, carefully made upon an enlarged scale, have demonstrated that this ore can be concentrated about one-fourteenth of its bulk, and those concentrates will yield 10 ozs. of gold, 53 ozs. of silver, and 38 per cent. of copper. Thus we have proved by an experiment, on a considerable scale, that the stuff exists in abundant quantities. I will subsequently ask Mr. Frecheville to give you his ideas. We have a considerable block of ore in the office, which is a most interesting sample, as it shows how permeated all through the rock the copper is. We may take it, therefore, for granted that we have at our mines one of the most extraordinarily rich and

EXTENSIVE DEPOSITS OF ITS KIND IN THE WORLD.

I think I may fairly use those words. (Cheers.) All we have to do is to overcome the twin difficulties of transport and labour. Labour is scanty and bad, and we are in a part of Mexico where mining has not hitherto been carried on. The Aztecs were our last predecessors, in very ancient times indeed, and it appears that much of the gold that was found in Mexico at the time Cortez first invaded it came from the district in which we are now working, and there is every probability that rich gold lodes, apart from copper lodes, may, and will be, found upon our property. At the same time, although the minerals appear to exist in large quantities, there is no organised labour system whatever, and we have to import it from considerable distances, and what we have hitherto had has not been of a very satisfactory kind. As time progresses we shall weed out the bad and retain the good. I believe the time is now approaching rapidly when we shall be able to form such a staff of labourers as will enable us to treat quantities of ore commensurate with our expectations. In regard to the erection of machinery, we were prepared for a considerable amount of delay, but the delays that have existed, and the difficulties discovered in bringing that machinery up, have even been greater than we looked for, so that the saw mill was only got to work three or four months ago, and the concentrating mill is only now on its way up. You will understand that all the heavy pieces that are too weighty to be carried on mules' backs have to be carried up by Indians, and the difficulty of bringing anything like heavy machinery over a country without roads, and where its contour is such as to make transport difficult for small weights, and almost insuperable for heavy ones. We have

A TELEGRAM, DATED AUG. 19,

in which Mr. Stockdale says:—

"Mill ready Oct., and trail three weeks."

The "trail" is the road we are making by which for the time we hope to obviate the necessity of building a railway. At our last annual general meeting I told you the route of a railroad was being surveyed, and that before long we should probably have something to say to you with regard to the erection of a tramway. It appears, however, that the contour is so difficult that the estimate for even a narrow gauge for a 30-mile railway is 100,000*l.* in one case, and 70,000*l.* in another case, and probably the higher estimate is the more likely of the two. This made it, in the present state of financial affairs generally, almost hopeless to attempt, at the present time, and therefore we decided that if it were in any way practicable we should build a trail for mules so that we might bring a considerable quantity of ore home, and demonstrate the actual value of the mine, which would facilitate the railway operations later on. Therefore we are going to content ourselves with this mule track. It may be within the means to build a railway over the flat portion of the country from the river upwards for 12 miles, where it is swampy, and subject to floods and inundations. This, indeed, will be absolutely necessary, if we are to carry goods during the rainy season; but during the summer months the road is practicable. It is almost impossible in the rainy season, however, for mules to get along, for I understand they sink to their bellies in mud—(laughter)—and to overcome the difficulties of transport, the question resolves itself into what profit can we make in treating this ore. We have had now a considerable experience both in raising and sampling it, and can form a very safe estimate in regard to the profit to be derived. Mr. Frecheville, when he made that very conservative estimate of his which has been before you, took the cost of treating the ore, mining, milling and management at 1*l.* per ton. We take it at that, though I believe the experience we have had shows we can do it for less—something like 5*s.* or 6*s.* (Cheers.) It, therefore, follows that if the ore be anything like the 1,300 tons proved to be that we have already raised, and we have reason to believe it will be better and not worse. The estimated cost of profit will be to this effect: We have made a contract with a mule contractor to carry our ore from the mines to the head of the navigation for \$40 a ton, subject to a reduction, when the trail is in good working order, to \$30;

but in the conservative spirit mentioned we may take the cost at \$40, which will be 6*l*. 10*s*. By the company's steamers, and from Ermita in the river to the port of embarkation at Frontera, 30*s*. Then to the outside of the bar it will be 12*s*. 8*d*., and the freight to Swansea by the Ward line (for which we have an offer), will be 2*l*. 10*s*. Add to this other 14*l*., or equal to 24*l*. 2*s*. 8*d*. Now, the concentrates, with the amount of gold, silver, and copper I have just mentioned—the average value for the hand-picked ore and concentrates is 50*l*. per ton at Swansea or Liverpool. Deducting the cost of working (24*l*. 2*s*. 8*d*.), that will leave a profit of 25*l*. 17*s*. 4*d*. per ton. The mill is adapted to deal with 75 tons of crude ore a day, which will yield 7 tons of concentrates, but taking it at 5 tons that will make a profit of over 40,000*l*. per annum, or, taking the returns at 7 tons per day,

OVER 56,000*l*. PER ANNUM.

(Cheers.) Therefore, in any case, I think we may see before us a very safe and remunerative return for the capital we have invested. The mill we have put up is capable of dealing with 75 tons of crude ore a day, but we have not reckoned that that is to be our limit. Unquestionably, as time goes on and the mines improve, we can raise larger quantities, for we can prove beyond a doubt that those quantities exist. The formation is such that you can almost see it. You can see it in such a way that any miner, however safely he may estimate, would allow that the quantity we can arrive at is very much larger than we have put down. I think that the difficulties we have had to overcome, and still have to overcome, are very great indeed, but yet that the prospect before us is both bright and good, and if you will but have a little patience we shall soon be able to show you practical results. I think we may expect that in Jan. we shall be having concentrates over here, and when we have once matters fully organised, the quantities will come forward regularly, and we should by the end of next year be able to give you a fair dividend. I do not think I can give you further information as to the mine. I can congratulate you in having in Messrs. Maldonado and Sons efficient and zealous colleagues in the management. Don Paniflo Maldonado, who resides within 50 miles of the mine, goes there constantly and exercises a most minute supervision over everything connected with the expenditure, and, perhaps, I should say he is too anxious to save money rather than not, for, of course, in these things you have to be rather wise in your savings, and not to be too cheapskaping. The practical mining work is in the hands of Mr. Stockdale, the superintendent, but Mr. Maldonado is very energetic and useful in dealing with Mexicans. We have a great advantage in having a Mexican to deal with Mexicans. Mexicans are inclined to do the best they can for themselves, and require very careful dealing with, and, I was almost going to say, severe management. With regard to our finances, we mentioned in our circular that we had that matter under consideration, for the capital raised was not expected to last for quite so long a time without any ore coming forward, and so we found that we must provide for contingencies, and, therefore, were running rather short of capital.

FINANCES.

We have about 10,000*l*. available, and had it in view to ask you to subscribe to debentures forthwith, but the representatives of the vendor have agreed to advance 6,000*l*. to the company, when and as it is wanted, so that we think, and believe, that that 6,000*l*. will carry us over the inconvenient time which has to elapse between now and when the ore will be coming forward to England in Jan. We think it most likely that we shall not have to ask you for any debentures at all, but if we do so I have no doubt the appeal will be responded to, because the prospects of the company are so good that it is almost like lending the money to the Bank of England. (Cheers.)

VIEWS OF AN EXPERT WHO HAS SEEN THE MINE.

Mr. WILLIAM FRECHEVILLE, who was asked to give his views, said: When I saw you two years ago, gentlemen, after coming back from the mine, I told you what an enormous deposit of ore there is. Of its kind, I believe it to be quite phenomenal. On the two banks of the creek there are enormous exposures of copper ore containing gold and silver in unusually rich proportions. The great feature of the mine is the altogether unusual quantity of ore you can see on the surface, without doing any kind of mining work. You see it in a cliff along the banks of the creek, then the flat over which the reef runs is covered with gravel in which you cannot see any bedrock, and then on the opposite banks of the creek you see the same ore appearing again. I measured it carefully and conservatively, and found there was

BETWEEN 40,000 AND 50,000 TONS OF ORE THERE.

The value of this ore ran very regularly. The gold and silver contents averaged close on 9 ozs. of gold and 60 ozs. of silver. When speaking of the concentrates I mean that the ore after being crushed would yield about 7 per cent. of copper, ore which would contain the gold and silver that I speak of—8 ozs. of gold and 50 or 60 ozs. of silver. Seeing an enormous quantity of gold bearing ore on the surface leads one to expect that there will be still greater quantities underground that we cannot see. There is every probability that it is so, and that a great feature of the enterprise is that, having once proved that you can handle this ore you may increase the plant and crushing capacity until you make quite enormous returns. In going over the ground some spots gave very high assays, and I see that Mr. Stockdale is getting out quite a considerable quantity, which gives concentrates that go up to over 20 ozs. of gold, and it is quite on the cards that we may get out large quantities of ore of this kind. As to the transport, the idea, as the chairman has told you, is to get a practical mule trail, so that communications can be opened, and a steady stream of concentrates may be brought over here. After having opened it, of course, we must go on improving it. I will conclude by offering to answer any questions shareholders may wish to put. (Cheers.)

IMPORTANT QUESTIONS.

Sir FRANCIS DENISTON: Where is the heavy machinery? Has it passed the most difficult part of the road?

The CHAIRMAN: The larger part must of course be close at hand because Mr. Stockdale telegraphed on Aug. 19:—

"Mill ready in Oct. and the trail in three weeks."

They must, therefore, have a large proportion of the machinery either

absolutely at the mine or close at hand. A good deal has been deposited at Ermita until the trail is completed when the expense of carriage will be less. As the trail will be ready in three weeks the machinery can soon be carried up with greater ease.

Sir F. DENISTON: How long does the concession for the railway last?

The CHAIRMAN: 99 years; but we must show that we are intending to push it on.

Sir F. DENISTON: From where do we get the mules?

The CHAIRMAN: There are none in the district, and we have had to get them from the interior of Mexico at great expense.

A RECENT VISITOR.

Mr. J. G. JEBB: If I can give any information about the property I shall be glad, as I have been there since Mr. Frecheville's visit, and have spent two and a half months on the ground.

A SHAREHOLDER: You have, no doubt, the quantities of ore existing?

Mr. JEBB: I do not think there can be any possible doubt about it. The cliff stands from 130 to 140 ft. high, largely overhanging. The whole of that is ore, as far as we have explored, and much of it we have not explored. The second time I was there we put up scaffolding as far as we could get it, and put in 20 blasts in ground that was a good deal above what was formerly explored, and we found it good in every place, with one exception. On the very crest of the hill there is a good deal of jungle, but there are points of ore in the line formation showing all through, sticking out and passing on to the other side. There is every probability that ore can be found beyond anything seen at present. I have a letter from Mr. Cornish after leaving the company's service, in which he says, speaking of the upper tunnel, that Mr. Stockdale has now driven the tunnel 11 metres, and it has passed the point where he estimated the ore showed 200,000 tons. They were still in ore, but there was a little spar in the breast. If that tunnel is pushed on, as there is ore further on, it will probably strike it again after going through this barren bar. There is, however, a great deal more there than you, Mr. Chairman, have liked to mention. The mining will be almost nothing, but a single shot will knock down about 250 tons. You have heavy rains and scarcity of labour to contend with, but I believe there is enough ore at present laid open to pay you the whole of your capital back, independent of what there may be found in the future.

The CHAIRMAN read a letter expressing the regret of Mr. Hale, a director, that, owing to family bereavement, he had been unable to be present. He continued to feel the same confidence as heretofore in the mine.

Mr. SCHOFIELD proposed a cordial vote of thanks to the chairman, which was carried by acclamation.

The CHAIRMAN, in returning thanks, said: I think we now see our way to overcoming our chief difficulties, and I believe we shall be able to congratulate you before long on the dividend-paying position of the company. (Cheers.)

LIXA MINING CO.

A DOLEFUL TALE BY THE CHAIRMAN ENDS IN A DEBENTURE APPEAL TO THE SHAREHOLDERS—AN "ABSORBED" PROFIT.

A GENERAL MEETING was held on Monday, at Winchester House, Old Broad Street, E.C.

Mr. Frederick Knowles

presided.

Mr. J. FOSTER (the secretary) read the notice convening the meeting.

CHAIRMAN AWAY.

The CHAIRMAN: I regret very much that for the second time in succession our chairman, Mr. Bright, is unable, through illness, to attend here and address you. Under the item of capital in the balance-sheet you see 73,047*l*.; I may say the capital we have at present available for re-issue is 6,920*l*.

AN "ABSORBED" PROFIT.

The profit and loss account shows a mining profit of 2,159*l*., which, we are very sorry to say, has been more than absorbed by the loss in smelting, which is on the other side of the account. This result is most disappointing, especially when we know that it might have been avoided. The causes of the loss in smelting are for one reason the high cost of the ores, leaving a small margin for profit. In any case, smelting operations last year in antimony could not be conducted very profitably. Ores ruled high, and there was little margin between the cost and the price at which the metal could be realised. Then again, there was the high cost of fuel last year, the effect of which was felt by us in common with most industrial undertakings. In the third place, I am sorry to say the principal cause of the loss was the want of management and supervision on the part of our smelting manager at the works, which resulted in a small production at an extravagant cost. We made such investigations as we could by correspondence, and discovered that his original estimates were being exceeded.

IT MIGHT INDEED.

It might naturally occur to some of you to ask, "How is it you did not find this out before?" All I can say to that is, we had no reason to suspect anything, having full confidence in him, and believing that he was conducting his operations properly. We also got returns from him, and if the costs therein given had been correct, the result would have been very different. I visited the mines towards the close of the year, and I was sorry to find

A GREAT WANT OF PROPER SUPERVISION

of the smelting works going on. On my return to London we determined to recall the smelting manager, and to get personal explanations from him. The result of that measure was that we decided to dispense with his further services. Subsequently work was conducted in a different manner altogether under our sub-manager, and we received regular daily returns from the smelting works. We carried on regular work in this manner for two months, and the result was most satisfactory. We now get returns regularly, and are very well satisfied indeed with

the expenditure of fuel and the costs. It is most important that certain work should be carried out, but it is impossible for us to do so vigorously without we have further capital. Now, the reason for our wanting that capital is known to most of you; it was owing to the forfeiture of shares, to which we refer in the report. We never anticipated such shortage, but there it is, and without that 7,000% it is very difficult for us to work and to do any real good. We look to you, therefore, to supply that deficiency by taking up the debentures which we propose to issue. I may say that we directors have sufficient confidence in the undertaking and prospects to make a start by taking 2,000% of these debentures among us—500 each, and we should not do that if we were not satisfied that it is likely to lead to good results. If every shareholder will take a certain proportion, we shall soon find the amount, and be in a position to go ahead. You must recollect it is not as if this scheme has been tried and found wanting; it has never had a fair chance on the original lines. In the prospectus we stipulated we should not go to allotment unless we had 25,000% working capital; but we never had that amount, and it is to supply the deficiency that we ask you to subscribe to the debentures. I now move: "That the accounts and balance-sheet for the year ending Dec. 31, 1890, and the report of the directors be and are hereby received and adopted."

Mr. C. D. ROYD: I second the motion.

A LITTLE BIT OF HISTORY.

Mr. CUMMINS: Whatever the initial mistakes of the directors have been, we are not indebted to them for the time and attention they have given to the business, but there is one recommendation I should like to make, and that is that they should add Mr. Shaw to the board. He was an original vendor. There is generally a prejudice about vendors joining boards, but he was not the vendor to this company—he was the vendor in partnership with Mr. Cudell to the late Col. McMurdo.

COL. MCMURDO SOLD THE MINE TO KNOWLES AND CO.,

and they sold it to this company and the usual thing went on—that is, the price increased as the thing passed from hand to hand. (Laughter.) Mr. Cudell held the great bulk of the shares, and is an antimony miner in Oporto of 30 years' standing. If there is a man who understands antimony mining it is he. Now, by having Mr. Shaw on the board you will have the advantage of Mr. Cudell's experience, and Mr. Shaw is one of Her Majesty's Vice-Consuls, and is well known to the directors. I do not know why he has not been offered a position on the board before, as the directors must know his assistance will be valuable. In a report written in Nov. 1889, the directors were warned that it was a great mistake to go on smelting, as it could only be at a loss, taking into consideration the high price at which Oporto ores are bought in London. Mr. Shaw has thousands of shares, and to add him to the board would not be to add to the expense.

ACCOUNTS AS PRESENTED NO GUIDE.

A SHAREHOLDER: These accounts are no guide to us. They are eight months old. Have we sufficient money to go on with?

The CHAIRMAN: Our position is very much now as it was then. We have been producing ore which has about paid our expenses. We have stopped the work in various shafts that was not remunerative. We are working at No. 3, and that is practically all at the present time.

Mr. CUMMINS: Is there any reason why the shares are not forfeited of those who have not paid their calls?

The CHAIRMAN: There is only one shareholder present whose calls are in arrear, and we have security.

Mr. SCHUBERT: It would be most satisfactory to have Mr. Shaw on the board, and I support the views of Mr. Cummins.

The CHAIRMAN: This is not a new thing that has been produced, and the directors have had the matter under consideration for a long time, but have never thought it advisable to adopt the course suggested, and Mr. Shaw does not hold the number of shares he did at one time, and neither does Mr. Cudell.

The meeting afterwards closed.

SILVER MINES OF LA LUZ, LIMITED.

SUBSTANTIAL PROGRESS BEING MADE.

In a circular to the shareholders, the secretary, Mr. S. Banning, says: I am instructed by the directors to inform you that Mr. Hilton, the company's manager, writes from the mines under date July 29: The San Miguel tunnel is now in upwards of 475 ft. When we strike the ore body, from all I can learn there will be no complaint as to quantity and quality for mill. He also states he has treated three large lots of ore at the Hacienda. One lot gave 380 ozs. silver, and upwards of 2 ozs. gold. Another gave 160 ozs. of silver, and a third lot upwards of 78 ozs. silver to the ton. Mr. Hilton has also made numerous assays of small lots of ore taken from various parts of the mine which have given from 35 ozs. of silver, besides gold, up to 77 ozs. silver to the ton.

HOLLOWAY'S OINTMENT AND PILLS.—Those who have given these remedies a fair trial freely admit that they inherently possess every property suitable for healing and removing eruptions, ulcerations, piles, abscesses, sores, bad legs, gathered breasts, and all disorders of the glandular system. When carefully rubbed in the Ointment relaxes the swollen muscles, diminishes inflammation, assuages pain, and even alleviates dangerous maladies which may have lasted for months, or even years. Holloway's excellent preparations are effective singly, resistless in combination, and have been recommended by grateful patients to be resorted to as alternatives when all other means of regaining health have failed. Their action is temperate, not violent or reducing.

LEEDS, HULL, FOLKESTONE: Where we are shortly opening up.

AUGUST 26, 1891.

ALSO—

DEAR SIR,—We refer to our circular, dated 11th inst., which dealt with the market occurrences of the preceding fortnight, and offered recommendations to be acted upon in the course of the account now terminating.

The events of the period have proved so confirmatory of our confident and oft-repeated advice in regard to the securities dealt with that we give the circular more than usual publicity through the medium of the daily and weekly financial press.

Not unnaturally, it has brought us a large accession of business at our Head office and branches, as above, and we desire to impress at this opening point that the favouring influences enumerated by us, so far from being exhausted, are only in the earliest stage, and the daily advance will be important throughout the next few months.

Copies of the circular and of preceding issues are still obtainable on application.

THE MONEY MARKET.

Under the influence of restored confidence in the value of securities generally, there have been more frequent transactions in bullion than for some time past. The principal demands upon the Bank have been on German account, but these have been fairly counterbalanced by arrivals from other sources, and the last return, published on 21st instant, showed a further improvement to 45½ per cent. in the reserve as compared with liabilities.

The very considerable business which has been proceeding in the purchase of favourite stocks by investors, will doubtless create a demand for money and a corresponding stiffening of rates; yet, to all appearance, the effect will be only temporary, and will not in any way interfere with the 2½ per cent. minimum.

THE STOCK MARKETS

Have been the scene of unusual animation in nearly every department, the movements being all in an upward direction. The activity, although commencing earlier than generally expected, was the natural outcome of the pent-up determination of investors and speculators to be interested on the "first blush" of an assured boom being exhibited. For weeks past, notwithstanding every possible element being in favour of the movement, there was a show of diffidence amongst influential operators in taking the initiative. What we have predicted for many weeks, adducing facts and figures in support of our argument, has now commenced and will rapidly develop.

A perusal of our fortnightly circulars from and including April 26, but particularly those of July 14 and 30 and August 11, will be satisfactory to the reader, showing what has been placed within reach of means of even the most modest character and amount. The recent appreciation in values, although important, is but fractional in comparison to what may be looked for in the next few weeks.

HOME RAILWAYS

Have answered our expressed anticipations to the letter. Our late recommendations, including the "Heavies," compare as follows, viz.:

	Making-up, Aug. 11.	Making-up, Aug. 26.	Advance.
MIDLAND	152½xd.	159	6½
NORTH-WESTERN	174½	177½	2½
NORTH-EASTERN	154½xd.	158½	3½
GREAT WESTERN	161½	165	3½

Our old friends, East Londons, seem destined to make an early and important upward move, about which we shall advise clients specially in due course.

AMERICAN RAILROADS.

On this presently all-engrossing topic we confirm every word conveyed to—we had almost said "drummed" into—our readers by confident prediction and reasoning contained in our circulars since, and including, April 26, but particularly those of the 14th and 30th ult., and 11th inst. While, as therein stated, every stock in the list is good for a much greater advance, we have only space here to make comparison of our later dated selections, which have throughout answered the interests of our friends.

	Making-up, Aug. 11.	Making-up, Aug. 26.	Advance.
NORTHERN PACIFIC	62½	72	9½
MILWAUKEE	65	70	5
LOUISVILLE	70	76	6

NORTHERN PACIFIC PREF.	88½	72	16½
OHIO AND MISSISSIPPI	28½	21½	7
PENNSYLVANIA	58½	51	4½

	Highest 1890.	Now.	Decline.
READING	25	16½	8½
UNION PACIFIC	70½	37½	33
WABASH	18½	13	5½
DO. PREF.	37	26½	10½

The most astute American railroad presidents and principal operators have been, and several of them still are in Europe, satisfying themselves upon every feature which can possibly have an unfavourable tendency. Upon the main point they are all agreed, and that is the immense prosperity which Americans will derive from present unprecedented crops and trading while Europe remains in such a needy condition for grain. They point, one and all, to American securities reaching and maintaining a higher standard of price than at any previous period of the history of the country.

The American money market promises the greatest buoyancy during the remainder of the year, and we can only, therefore, again confirm all the previous arguments upon the strength of the position for stocks, and recommend their instant purchase.

CANADIAN PACIFICS

Again show improvement on a continuance of the increased traffic so long reported, say,

reported, say,	11th inst.	Now.	Advance.
	83½	86½	2½

And MOVING STEADILY, on the way to par.

GRAND TRUNK STOCKS,

Of which we likewise had occasion to speak favourably, compare as follows, viz.:

	11th inst.	Now.	Advance.
FIRST PREF.	64½	66½	1½
SECOND DO.	43½	45½	2
THIRD DO.	23½	24½	1

The immense grain crop to be moved, and opening of the St. Clair tunnel, will benefit these stocks sympathetically with Americans, and we recommend purchase of all the preferences for a substantial further advance.

MEXICAN RAILWAY (VERA CRUZ)

Have carried over at the two dates thus:—

	11th inst.	26th inst.	Advance.
FIRST PREF.	106	109	3
SECOND DO.	56½	59	2½
ORDINARY	32½	34½	2

At the opening on Saturday last the market was afforded one of the not unusual surprises in these stocks, the quotations being:—

	First Pref.	Second Pref.	Ordinary.
112-113	62-63	37-37½	

This was attributed to the reported suspension of traffic on the Inter-oceanic Line.

We continue to impress upon clients to buy the Vera Cruz Stocks upon any serious decline, and the present moment is, therefore, favourable. Copies of the pamphlet indicated on 11th inst. are still available to applicants.

MINING AND LAND SHARES.

We referred to the improving prospect for Transvaal Securities, and the excellent yield from the gold crushings of July.

For an advance we recommend
SILATI RIVER.
OCEANA.

DE BEERS.
GOLDFIELDS OF SOUTH AFRICA.

FOREIGN AND MISCELLANEOUS STOCKS.

The Chilean civil war now approaching a certain termination, we recommend attention to be accorded the list of South American Government and railway stocks, which any moment may be good to acquire for an important advance. A list of those to which we give preference is compiled, and copies may be had on application.

Upon every Stock which we recommend we have carefully compiled "Reasons Why," and our aim is to afford such information in its entirety to all inquirers. We continue to direct constant attention to every class of investment or speculative business, including Options, which are becoming a favourite medium. Cover in protection of clients' operations may be deposited either in the form of cash or any marketable security.

The fullest information cheerfully and promptly given in response to all inquiries.

GEORGE GREGORY AND CO.

P.S.—Write for our work, entitled "Hints to Speculators" (133 pages), giving a mass of information, and teeming with reliable, honest, and straightforward advice. It also contains the highest and lowest prices of all stocks, together with dividends paid for the past 10 years. Issued gratis and post free.

£5 COMMANDS £500 STOCK AT 1 PER CENT. COVER.

£10	"	£1,000	"	1	"	"
£20	"	£2,000	"	1	"	"
£50	"	£5,000	"	1	"	"
£100	"	£10,000	"	1	"	"

With no further liability whatever.

**CAMBORNE
SCHOOL OF MINES.**

SESSION, 1891-2.

CHAIRMAN OF COMMITTEE.

JOSIAH THOMAS, Esq.

PRINCIPAL.

Mr. J. J. BERINGER, A.R.S.M., F.I.C., F.C.S.

SECRETARY.

Mr. H. T. ROBINSON.

THE above School has been formed for
giving instruction in subjects specially
applicable to mining students, and in a
district where the practice of mining may
be observed at the same time.

The subjects taught include Mining, Ore-
dressing, Vanning, Assaying, Chemistry,
Geology, Mineralogy, Steam, Metallurgy,
Plan Drawing, Engineering, &c.

The managers of the principal mines in
the neighbourhood will afford facilities to
students of the School for studying practical
mining.

Prospectuses, and any further informa-
tion, may be obtained of the PRINCIPAL or
SECRETARY.

The Session commences on Monday,
21st September.

QUINLAND—LONDON.

MINING MARKET.

CITY, FRIDAY EVENING.

BROKERS PERSPIRE FREELY, BUT DEAL LARGELY—THE "BEARS" IN A TIGHT PLACE—DUTY OF THE PUBLIC—HARVEST PROSPECTS AND MINING BUSINESS—THE WEEK'S BUSINESS.

THOSE brokers who this week have put pleasure before business may truly be said to have suffered in their basket and in their store. Partridge shooting may be all very well in its way, but business sport, when such is to be had, strikes the practical mind as much better. For this reason it is that the majority of brokers have been either semi-stified in the family vault, which temporarily done duty as their Exchange, or have wiped the drops of corporeal perspiration from their foreheads as they have stood sweltering in front of the Stock Exchange. It has been a sort of Hobson's choice between being suffocated in the vault, or baked on the pavement. The latter, for the most part, has been preferred, and thus it comes about that at the end of the week brokers are in that state which in a restaurant would be called "rather underdone." They hope to recuperate during the next two days, but they left the market to-day, for the most part, well satisfied with their week's work.

We say "for the most part," because it is pretty well known to those who have been watching closely, that there are some brokers who are by no means pleased at the turn affairs have taken. They were operating for the fall, but the sudden rise of prices, and in the dog days above everything, has somewhat discomfited them, and they are finding it extremely difficult to deliver shares, of which they are short, at prices much below those that now rule. The bears, in fact, are very nicely caught, and no amount of growling, or of head scratching, will answer for the good delivery they are now called upon to make. The public, who have so long suffered from their machinations, should now press for delivery by every available means, and compel these defaulters to purchase at existing prices the shares of which they are short. As a broker said the other day, "A little squeezing of these worthies would soon benefit prices;" and another added, "Why, I know of two brokers who are short of 2,000 Ottos Kopje at 2s."

There is no doubt that the ten days fine weather with which we have been already favoured has had a wonderfully reviving effect all over the country. The stories of ruined crops are becoming modified, and, written up to date, they point to a fair average harvest. The farmers are jubilant, for a beneficent Providence has

averted the ruin with which they were confronted, and the welcome sun has completely changed the aspect of agricultural affairs. What has this to do with mining? Everything in the world, for it means the retention of large sums of money in the country, which would otherwise go out of it, and the effect of which will be seen in mining as well as in business generally. Ingenious calculations are being made with a view of ascertaining, in some approximate way, the sterling value of the last few days' fine weather, and when these are completed, there might also be worked out the proportionate amount of benefit that will come to mining, which, after all, much as it is decried, lies very nearly at the basis of the world's comfort and prosperity.

Coming to matters generally, we may first of all refer very briefly to the meetings that have occurred during the week. New Consolidated directors are still casting about for a policy just as Japhet searched for a father. Some of the original shareholders in South Aurora were in the meeting last Monday, but what a difference. Twenty years ago when the company was started "Their locks were like the raven, their bonnie brows were bent," but now those locks are grey, and those brows are wrinkled, and the mildew of age is upon them. Still they are coming to the tree of South Aurora (*alias* New Consolidated) seeking fruit and finding none, and though some of them are disposed to cry "cut it down, why cumberst it the ground," let ours be the voice to exclaim "woodman spare that tree." There is just a chance that Major Joseph, the genial chairman will respond to the appeal we have made to him in another column, and that he will inaugurate a policy that will yet put New Consolidated upon a proper working basis. The hour has struck, and we hope in Major Joseph, the man has come. There was also a meeting of the Guadalupe Co., in regard to which concern it cannot be said that the directors are destitute of a policy. They propose to form the Santa Ana into a separate company, and thus to provide capital for working the dual concerns. With great regret we announce the disappearance from the scene of their earthly troubles Central Argentine Goldfields and Carpa Valley Companies. There was an idea that the properties might be held in abeyance at a small yearly cost, and there is some reason to regret that this has not been done. Parker Gold is turning out much better than could have been hoped for a year ago. The gold prospects are exceedingly good, and moreover the company is now in possession of a township with ever increasing demands for its land, and with the possibility of the sale of the Flint Spring Mine in the immediate future. It has been decided to re-construct Roman Gravels.

There have been active dealings in all Copper shares, and here again prices have considerably improved.

In the Indian section there has been a large amount of business, and prices all round are firmer. There have been big transactions in Balaghat to which we have repeatedly called attention as a desirable speculation, and also in Nundydroog, Ooregum, Champion Reefs, and Mysore. Cholera has almost wholly disappeared from the Colar Camp. Mysore has been quoted much higher than the price at which they finished to-night, but a rumour was industriously circulated that a 3s. 6d. dividend had been declared, though even this would have been round about the rate of 80 per cent. per annum on the par value of the shares.

Coming to the general course of business, the market for Gold, Land, and Diamond shares has been better, and prices show an all-round rise.

Our forecast was not wrong last week when we said there would be immense dealings in Ottos Kopje shares. This has veritably been the case, and these descriptions have changed hands by the thousand. Buyers are generally regarded in this case as wiser than sellers. It is thought that prices will be much better, and that after the statements made at the late meeting the highest prices that have yet been quoted are far below the real merits of the concern.

Several correspondents have written to us in respect to the "Mysore-Nagar Gold Mines, Limited," which, in our issue of Aug. 22, was described as "the first Mysore Alluvial Mine." The paragraph in question was communicated to us by a correspondent, who alone is responsible for what it contains.

The market for Queensland shares has also been lively, particularly for Mosmans, which are 3s. 3d. better on the week.

The prospects of the mine we have long held have warranted a better price for the shares than was quoted a few weeks ago. There has also been much activity in Australian Broken Hills, Gympie Golden Crown and Great Eastern, in all of which a substantial rise is discernible.

The General Foreign Market has also been better, and in the all-round advance such shares as American Belle, Yankee Girl, De Lamar, Elkhorn (which has just declared a dividend), New Guston, Richmond, St. John del Rey, and other shares have participated. The issue of the Yankee Girl circular announcing the suspension of the output for Aug. might have been expected to depress quotations, but did not do so. In fact, the worst being known, prices "firmed up," and generally brokers are advising their clients to purchase the shares. In doing so we think they do well. Good dividends have been declared by Linars (8s.); Fortuna (2s.), and Alamillos (1s. 8d.). The uncertainty of the position in reference to Golden Feather and Golden Gate has led to a fall in these shares. The Montana report is in type, and in the course of the next few days will be issued to the shareholders. The meeting will probably take place about the end of the present month. This document, we have reason to believe, will give a much more satisfactory account of the mine than the market at present gives of the quotation for its shares.

Colombian shares have been freely bought at improving prices. Tolima advises a profit for Aug. of 5,500%. Colombian Hydraulic close at 23s. 9d. to 24s. 3d. The cheaper shares have also been in demand, Lomas, Colons, and Tesoros, all being a trifle higher. We hear good accounts of these, and should not be surprised to see much higher quotations before long, the buying having been exceptionally strong. Gravel Golds close firm at 10s. to 11s.

It is said that heavy rains have almost stopped work at the Ruby Mines for the last two months, and that it will not be possible to do much for another six weeks. Meanwhile preparations are being made for energetic work at the close of the rains. The health of the staff is good.

In the Home Market we have a bitter pill to swallow, commencing with a decline in Carn Brea shares of no less a sum than 13l. each. The selling value of the property has fallen within the last two months to the extent of about 250,000l. The causes of this fall are set forth in a short leader devoted to the purpose. The shareholders meanwhile are mourning, and are refusing to be comforted. Cook's Kitchen, Dolcoath, East Pool—in fact, almost all Cornish shares—are down, and the cry is beginning to be raised, "Where is it all going to end?" Happily, there is something to be said on the other side. The market for Wheal Unys has been brisk, and is evidently a rising one, consequent upon the improvement in the mine. Also Wheal Bassett's are 17l. better, and Tincroft, 27l., whilst there has been an advance in South Crofty, and Wheal Grenvilles are held firmly at quoted prices. In Lead Mines, we prognosticate that the next dividend of Leadhills Co. will be 4s. a share, as compared with 3s. 6d. last time.

Such is the record of a week of considerable market activity, and we expect even greater things for the week upon which we shall shortly enter. We base our views not merely upon the improved state of trade and of the harvest, consequent upon the good weather, as above referred to, but also upon the prices that come from America, which are good, and last week we were at pains to show how strong is the bond of sympathy that subsists for some mysterious reason between Yankee and mining quotations.

AFRICANS.

A good amount of business has been done, and early in the week a demand set in for Piggs Peak, the ordinary shares changing hands at 11s. 3d.; but do not close so good, although showing a rise since last quoted. Stanhopes have been in request at an advance of 10s., while Johannesburg Pioneer, Wemmers, and others have been sought after at an advance. There is no fall to call for attention.

Business.—A rise is shown in the following:—Piggs Peak, 1s. 6d.; Piggs Peak Preference, $\frac{1}{2}$; Sheba, 1s.; City and Suburban, $\frac{1}{2}$; Croesus, 1s.; Crown Reef, $\frac{1}{4}$; Durban Roodepoort, $\frac{3}{16}$; Ferreira, $\frac{3}{4}$; Forbes Reef, $\frac{1}{2}$; Geldenhuis, $\frac{3}{16}$; Heriot, $\frac{1}{2}$; Johannesburg Pioneer, $\frac{1}{2}$; Llangaagte, $\frac{1}{4}$; Randfontein, 1s.; Robinsons, $\frac{1}{4}$; Simmer and Jack, $\frac{1}{2}$; Stanhope, $\frac{1}{2}$; and Wemmer, $\frac{1}{4}$. The only falls are in Jubilee of $\frac{1}{2}$; Llangaagte Block B, 6d.; and May Consolidated, 6d.

AFRICAN LANDS.

There have again been some heavy dealings in Oceana, which have advanced considerably. Sutherland Reefs have advanced, chiefly on account of the proposed amalgamation with Potsdam Reefs. This is a pure rig. The properties never should have been separated originally. Explorings have been offered and close lower.

Business.—A rise is shown in Bechuanaland of $\frac{1}{2}$; Moodies, 1s.; Oceana, $\frac{1}{2}$; Sutherland Reef, 7s.; and Transvaal Estates, 1s. The only fall is in Exploring of $\frac{1}{2}$.

DIAMONDS.

De Beers have recovered 6s. 3d. of the heavy fall they experienced last week, while one or two others have also risen, but in a lesser degree. There is not much life in the market. The public do not appear interested.

Business.—A rise has taken place in De Beers of $\frac{1}{8}$; Griqualand

West, $\frac{1}{4}$; New Jagersfontein, $\frac{1}{4}$; North-East Bultfontein, $\frac{1}{4}$; and
Bnrma Ruby, $\frac{1}{4}$. No fall to note.

AUSTRALIANS.

There has been a large business doing in these shares. Foremost have been the free dealings in Mosmans, which reached 9s. 6d. buyers, but do not close so good. It is expected they will go much higher. Australian Broken Hill Consols have ranged between 18s. 6d. and 22s. 6d., closing a firm market at 20s. 6d., 21s. 6d. Gympie Golden Crown have advanced on inquiries, but there are no shares on the market. Day Dawn and Gympie Great Eastern have again met with good support, and should go better. New Queens have receded slightly, but not much business doing.

Business.—A rise is shown in Australian Broken Hill of 2s.; Bonnie Dundee, 6d.; Cumberland, 6d.; Gympie Golden Crown, 9d.; Gympie Great Eastern, 3d.; and Mosman, 3s. 3d. A fall is noted in New Queen of 6d.; whilst others remain firm at last quotations.

INDIANS.

This class has been well to the fore, and prices have improved all round, but on the rumour this afternoon of a dividend of 3s. 6d. in Mysore, quotations fell somewhat, Mysore being offered at 5 $\frac{1}{8}$, whereas they had formerly changed hands 3s. better. Balaghat has been in strong demand, and close 12s. buyers, while 21s. has been offered for Champion Reef.

Business.—A rise is shown in Balaghat of 2s.; Champion Reef, 1s.; Mysore Reef, 6d.; Nundydroog, 4s.; Ooregum, $\frac{1}{4}$. No fall to note.

COPPER.

There has been more business doing than for some time past, and prices close firm. In some instances rises have taken place, Tinto being to the front, while Namaqua and Panulcillo are also higher.

Business.—A rise is shown in Namaqua of $\frac{1}{4}$; Panulcillo, 3s. 6d.; Quebrada, $\frac{1}{4}$; and Rio Tinto, $\frac{1}{4}$. Others remain steady at previous quotations.

GENERAL FOREIGN SHARES.

A very large amount of business has been transacted in the lower priced descriptions. American Belle and Yankee Girl have been in strong demand, large orders coming from Liverpool to purchase. New Gustons are also much firmer, and shares in this group certainly appear scarce. Richmonds are higher, and appear worthy of attention. New Russells have again been in demand, and some strong buying took place this afternoon at a slight rise. Golden Gates and Feathers have been freely offered, and close at lower prices.

Business.—A rise is shown in American Belle, 1s. 9d.; Callao Bis, 3d.; Cantabrian, 3d.; De Lamar, 2s.; Elkhorn, 3s.; New Guston, $\frac{3}{4}$; Pahang Corporation, 6d.; Richmond, $\frac{1}{8}$; Silver Mines of La Luz, 3d.; St. John del Rey, 1s.; and Yankee Girl, 1s. 6d. A fall is noted in Balkis of 3d.; Barretts, 6d.; Edwin Bray, 6d.; Golden Feather, 2s. 6d.; Golden Gate, $\frac{1}{2}$; Golden Leaf, 3d.; Montana, 1s.; and Parker Preference, 3d.

LATEST FROM THE MINES.

INDIAN MINES.

BALAGHAT.—The company has sold, through Messrs. Johnson, Matthey, and Co., Limited, the gold obtained in the month of July, which realised 1,960 $\frac{1}{2}$ lls. 9d.

INDIAN (OF GLASGOW).—A cablegram has been received from the mines stating as follows: "Ang.: total amount crushed is 560 tons, yielding 42 ozs. Ten stamps." Note: It is understood that the monsoon rains have interfered with the works and prevented more than 10 stamps being supplied.

MYSOORE.—A telegram, dated 5th inst., gives last month's return of gold as follows: "3,420 tons produced 5,084 ozs.; tailings, 706 ozs.; total ozs., 5,790. No rain yet." The company has sold, through Messrs. Johnson, Matthey and Co., Limited, the gold obtained in the month of July, which realised 22,187 $\frac{1}{2}$ lls. 8s. 2d.

NUNDYDROOG.—The company has sold, through Messrs. Johnson, Matthey and Co., Limited, the gold obtained in the month of July, which realised 7,706 $\frac{1}{2}$ lls. 8d.

OOREGUM.—The agent of the company in India, writing under date Aug. 18, states that in consequence of the interruption to the work through cholera he should defer forwarding his report until the end of Aug., by which time he hoped matters would resume their normal condition. The directors are pleased to be able to report that in answer to an inquiry by them they have received a cablegram from the mine to the effect that the cholera epidemic has subsided, and that work was now being pushed ahead. The company has sold the gold produced in July for 11,019 $\frac{1}{2}$ lls. 8s. 2d.

COLONIAL MINES.

BRITISH BROKEN HILL PROPRIETARY.—The company report that for the week ending Sept. 10, 487 tons of ore were treated (including 205 tons of iron ore), yielding 73 tons of lead, containing 5,357 ozs. silver.

BROKEN HILL PROPRIETARY.—For the week ending Sept. 10, 4,097 tons of ore were treated, yielding 574 tons of lead, containing 180,268 ozs. silver. Cable also states price of shares 9 $\frac{1}{2}$ lls. 18s.

DAY DAWN BLOCK AND WYNDHAM.—The company has sold, through Messrs. Johnson, Matthey and Co., Limited, the bullion obtained from the crushings of June 20 and July 4, viz., 1,543 ozs. 10 dwts., for the sum of 5,473 $\frac{1}{2}$ lls. 12s. 10d.

DAY DAWN P.C.—The directors have sold, through Messrs. Johnson, Matthey and Co., the gold, ex s.s. Merkara, which realised 3,970 $\frac{1}{2}$ lls. 8s. 8d.

MIDAS.—The secretary has received the following cable from the mine:—"Yield for week ending Sept. 5, 27 ozs."

NEW QUEEN.—A cablegram from Charters Towers, Sept. 7, gives result of crnsing for the past fortnight:—"350 tons (yielding) 275 ozs. (gold)."

FOREIGN MINES.

ALAMILLOS.—A dividend of 1s. 8d. per share, free of income-tax, has been declared, payable on Saturday, the 26th inst. The transfer books will be closed for such dividend from the 14th inst. to the 26th inst., both days inclusive.

ALASKA TREADWELL.—A cable from Alaska announces the following clean up:—"Shipment of bullion, \$77,900; tons of ore milled, 20,000; tons of sulphurets treated, 543; number of days mill ran (about) 30; of bullion there came from sulphurets, \$21,200; working expenses for period have been \$31,000.

DE LAMAR.—Information from the mine:—"During the month of Aug. 1,500 tons were crushed, producing \$42,625 bullion; estimated value of shipping ore, \$14,000; miscellaneous receipts, \$1,640; total revenue, \$58,265; total expenses, \$28,175. A contract has been entered into for the enlargement of the 20-stamp mill to 30-stamps, and for the purchase of a new 150 h.-p. engine. The directors hope that the additional stamps will be running early in Dec.

ELMORE.—The manager (Mr. G. McCormick) cables under date Sept. 6:—"Have crushed for Aug. 400 tons, which produced \$1,600; running 30 stamps."

FORTUNA.—A dividend of 2s. per share, free of income-tax, has been declared, payable on Saturday, the 26th inst. The transfer books will be closed for such dividend from the 14th inst. to the 26th inst., both days inclusive.

FRONTINO AND BOLIVIA.—The directors have received advices for the month of July as follows:—Produce, 5,649l. 7s. 7d.; cost, 4,680l. 19s. 10d.; estimated excess of returns, 968l. 7s. 9d.

LA PLATA.—With reference to the final call, notice of which has been sent herewith, the secretary states that half the amount of the call may (if desired) be paid on or before the 28th inst., and the balance the first week in Jan. next. The money is to provide for machinery and development work on the White Cloud property. On and after the 28th inst. all dealings will be for fully-paid shares only.

LINARES.—A dividend of 8s. per share, free of income-tax, has been declared, payable on Saturday, the 26th inst. The transfer books will be closed for such dividend from the 14th inst. to the 26th inst., both days inclusive.

MAID OF ERIN.—Cablegram from the mines: "Gross yield for the week ending Sept. 5, 970 tons; estimated value, \$25,000; temporary breakdown; shaft is being repaired."

MAMMOTH.—The manager reports that bullion, value \$15,300, has been sent to bank during the month of Aug. This does not include the amalgam in the mortars not cleaned up at time of report. During same period extensive development work has been done considerably increasing the ore in sight.

MESQUITAL DEL ORO.—A cablegram gives the result of the Aug. mill run: "50 stamps ran 596 hours (24 days 20 hours); quantity of ore crushed, 2,181 tons; bullion produced at clean-up, 1,126 ozs.; value about 4,200l."

NEW RUSSELL.—Telegram from the mine for the week ending Aug. 29: "Have crushed 404 tons this week, averaging \$5 per ton; \$100 retorted; \$1,500 obtainable from pyrites and tailings by gold ores process; wages, \$185."

PACIFIC.—Telegram from the company's manager at the Santa Rosa Emerald Mines in Colombia:—"Very fine specimens have been forwarded; will send full particulars by next mail. Good progress is being made."

SAN LUIS.—Cablegram from the company's manager:—"Bullion shipped Sept. 8, 1,500l."

SILVER MINES OF LA LUZ.—The directors have received the following cable from Mr. Hilton, the mine manager:—"Have struck the vein in San Miguel Mine; splendid body of ore."

ST. JOHN DEL REY.—The directors have received the following telegram from the mines, dated Rio de Janeiro, Sept. 5:—"36 fms. sunk during Aug."

TOLIMA.—Cablegram from the superintendent respecting the estimated Aug. returns:—"The gross returns are 8,500l.; the nett profit is over 5,500l.; engine shaft sunk 16 ft."

HOME MINES.

TREGURTHA DOWNS.—The mine was offered for sale as a going concern on Wednesday by Mr. Kerby, auctioneer, Helston. Several interested persons were present, and the bidding was very smart between Messrs. Harvey and Co. (Hayle), Mr. Matthews (Marazion), and Mr. David Bischofswerder (Penzance). The lot was eventually knocked down to Mr. Bischofswerder for 1,600l. Our enterprising townsman, says a Penzance contemporary, hopes in a few weeks to re-start the concern, and afford employment to 280 persons, to whom the stoppage of the mine meant compulsory emigration or considerable want and misery for themselves and their families.

FOR LATEST PRICES

AND ALL PARTICULARS OF FOREIGN MINES

SEE PAGES 378 AND 379.

AFRICA.

LATEST FROM THE GOLD AND DIAMOND MINES.

SALISBURY.—The crushing last month yielded 615 ozs. of gold.

CRÆSUS.—The crushing for the month of Aug. amounted to 319 ozs.

SIMMER AND JACK.—Cable from Johannesburg:—"Profit for last month, 4,400l."

JUMPERS.—Cablegram from Johannesburg Sept 7:—"Obtained 1,342 ozs. gold during month (Aug)."

EDWIN BRAY.—Cable advices received report during Aug., 878 tons crushed, yielding 240 ozs. free gold.

GIE APPANTOO.—Cablegram from mine, received 9th inst.:—"Prestea, 580 ozs. gold; 15 days crushing in Aug."

COETZEESTROOM ESTATE.—Cable from the manager:—"Have crushed since last message 540 tons, giving 4½ dwts. per ton."

GELDENHUIS ESTATE.—Crushed during last month 3,400 tons, which yielded 3,251 ozs. of gold. The profit for the month was 7,000l.

MOODIES GOLD MINING AND EXPLORATION.—Cable from head office:—"345 claims rented or leased. 1,281 tons crushed by claimholders yielded 535 ozs. of gold."

WEMMER.—A cable gives the result of the working for Aug.:—"1,202 tons crushed, yielding 1,299 ozs. gold; 21 working days. The register will be closed from Oct. 1 to Oct. 7."

LE CHAMP D'OR.—A cablegram has been received from the manager with the result of the Aug. crushings:—"Battery worked 21 days; crushed 620 tons, yielding 1,050 ozs."

NORTH EASTERN BULTFOUNTEIN.—Telegraphic advice for last week announces:—"13,000 loads, mainly re-washings, yield 1,250 carats of diamonds; increase of blueground on floors, 8,000 loads."

TRANSVAAL MORTGAGE, LOAN AND FINANCE.—A cable from the head office of the Princess Estate and Gold Mining Co., Limited, at Johannesburg, states "that the output for the month of Aug. is 695 ozs. of gold."

BARRETT.—The 60 oz. nugget lately found in Berlyn has arrived in London, and may be seen by shareholders at the offices of the company, 17 and 18, Basinghall Street, E.C. The return for July was 152 ozs. 10 dwts.

DURBAN-ROODEPOORT.—Crushings since Aug. 6 last are as follows:—"3,875 tons crushed; 25 working days; 2,150 ozs. retorted gold." Owing to a cablegraphic error the number of ounces for July was reported as 2,390 instead of 2,330.

FERREIRA.—The true vanners will be in operation in Sept., as well as the tables for concentrating the tailings now stored for treatment. One section of the main reef, about 2 ft. in width, gives encouraging assay results, but the board does not think it advisable to attach much importance to this until the reef has been further developed and tested.

VIRGINIA (TRANSVAAL).—The directors request us to state that the agreement with Capt. Joseph Richards will shortly expire, and that Capt. A. P. D. Hodge has been appointed manager, and sailed for South Africa by s.s. Athenian last Saturday. Shareholders are reminded that applications for shares in the new company must be sent in by Wednesday, the 16th inst.

FORBES REEF.—Mr. Wm. Whitburn has been appointed mine manager in place of Mr. Nicholls, who is returning to England. Mr. Whitburn took over charge on Aug. 10, and crushing has been resumed. A telegram from him received on Sept. 7 reports that he had milled 497 tons surface soil with a result of 72 ozs. of gold. Advice by letter gives details of works to be carried out at main reef.

CROWN REEF.—The crushing for last month, during 18 5-12 days of 24 hours, with 90 stamps, was 4,518 tons, yielding 2,664 ozs. of smelted gold. The revenue for the month was 9,523l. 16s., and the working expenditure was 7,128l., leaving a balance of profit for the month of 2,395l. 16s. The expenditure on capital account for the month was 2,572l., making a total expenditure for the month of 9,700l.

MAY CONSOLIDATED.—During the six months under review the gross profits earned were 14,479l. 5s. 2d.; which, after writing off the ordinary and extra redemption for mine development and the depreciation on machinery and buildings, leaves a net profit for the half-year of 4,875l. 10s. 5d., the operations of the whole year showing a profit of 10,771l. 15s. 1d. The profit and loss account now stands at a credit of 22,134l. 11s. 1d., and it will be seen from the accounts attached that almost the whole of the development of the mine has been paid out of the profits.

MAY CONSOLIDATED.—Report for July:—During the past month an increased amount of development and general work has been accomplished. Development has been chiefly on the 2nd level, both in the May and Annie shafts, where cross-driving to cut the lodes, and driving on these, when cut, has been pushed on vigorously. The following are the results for July:—Sunk and driven, May block, 418½ ft.; sunk and driven, Annie block, 370 ft.; total, 788½ ft.; timbered, nil; stoped, 5,498 tons; stopes filled in, 1,901 tons; mullock raised, 720 tons; quartz raised, 6,023 tons; quartz sent to mills, 5,789 tons; tons milled, 5,805; ore at grass, 6,912 tons; smelted gold, 2,167 ozs. 17 dwts.; value of gold, 7,858l. 8s. 6d.; average per ton, 7 dwts. 11.27 grs.; number of stamps at work, 70; average crushed per stamp, 2.90 tons; time running, 50 heads, 29 days 22 hrs. 34 mins.; time running, 20 heads, 26 days 23 hrs. 39 mins.; average on 70 heads, 29 days 2 hrs. 35 mins.

CERRO DE PASCO.—The following advices have been received from the mine, dated Barberton, Aug. 8:—Block F extension: South-east cross-cut has been driven 8 ft., making total distance 323 ft. Drive south on lode, known as 10-ft. reef, has been driven 2 ft., making total distance 55 ft. At this point we commenced to cross-cut east, which has been driven 11 ft., and proves reef to be 11 ft. 6 ins. wide, and improving in quality; quartz extracted, 17 tons; this cross-cut will be continued to cut lode known as 4-ft. reef to prove width and quality of same. Block 12: North-east cross-cut has been driven 8 ft., making total distance 166 ft. East end drive: Cross-cut east has been driven 4 ft., making total distance 13 ft. Cross-cut west has been driven 5 ft., making total distance 9 ft. 20 of our natives left the employ of our company on Aug. 3, which has retarded the progress of all our work to a certain extent. We had to take on a fresh gang of natives (15 only), who do not give the same satisfaction as the ones left. Natives are very scarce, and as soon as I can get better boys I shall discharge the ones we have now.

TRANSVAAL GOLD EXPLORATION AND LAND.—General manager's advices.—Mining—Ophir Hill—Theta vein: Ore extracted, 20 tons; assay value, 3 ozs. 12 dwts. per ton, and 35 tons, assay value, 1 oz. 4 dwts. per ton. Neither of those lots was from Theta vein proper, but were obtained during stripping work above it. Brown's Hill—Nu vein: Ore extracted at No. 1,209, 25 tons; assay value, 4 ozs. 10 dwts. per ton; and at Nos. 1,220 and 1,262, 32 tons; assay value, 2 ozs. 2 dwts. per ton. Prospecting—Edin Hill: Ore extracted, 5 tons; assay value, 4 ozs. 2 dwts. per ton. The deposit continued much the same in the drives and cross-cuts as reported last week. At Glinister's, 12 tons were extracted; assay value, 1 oz. 10 dwts. per ton. There was no new development to report. Mill: The battery and pans were re-started after a clean-up, and working as usual. Transport had almost ceased; only two waggons hauling. Summary for July: Mined, 613 tons; average assay, 3 ozs. 2 dwts. per ton. Battery working 557½ hours, crushed 708 tons 6 dwts. Mu, Nu, and Theta ores mixed, yielding 346 ozs. 4 dwts. retorted gold; 9 dwts. 19 grs. per ton. Pans working 574 hours; treated 161 tons 10 cwt. tailings; yield, 70 ozs. 4 dwts.; 8 dwts. 17 grs. per ton, 19 tons. Blanketings yield 39 ozs. 10 dwts.; 2 ozs. 1 dwt. 15 grs. per ton, and 31 tons 15 cwt. rich Nu ore yield 369 ozs. 1 dwt.; 11 ozs. 12 dwts. 11 grs. per ton. Sundries, 28 ozs. 18 dwts.; total for month, 853 ozs. 17 dwts.

HORO CONCESSION.—Report from manager, dated Aug. 6.—I beg to send you below the report of the work done here during the month of July last. No. 1 tunnel: The drive to the east from No. 1 tunnel along the reef is now in 50 ft. From the present end of this drive I am cross-cutting through the reef. Samples from the cross-cut show from 1 dwt. to 1½ dwts. in the pan to the ton. I have also begun a cross-cut through the reef at 18 ft. to the west of No. 1 tunnel from the No. 2 west drive marked on the plan; in the 9 ft. here driven the reef shows a prospect of a little more than 1 dwt. to the ton in the pan. No. 1 shaft: The drive along the reef, 35 ft. down No. 1 shaft, is now 40 ft. from the shaft to the west, and 90 ft. from the shaft to the east. Prospects from cross-cuts through the reef to the east end of this drive show about 1 dwt., and to the west wall from 1 to 3 dwts. per ton in the pan. Battery: We commenced crushing ore on July 11, and in the month we have run the 20 stamps for 10 days and 21 hours. A lot of poor ore piled on the surface of the reef had to be sent to the mill, the rest of the ore crushed has been mainly obtained by open quarrying to the east of No. 1 shaft. Our difficulties in crushing have arisen from the clayey nature of the ore allowing the brittle shoes of cast-iron, supplied by Messrs. Fraser and Chalmers, to strike the dies, thus breaking the shoes and dies, also from the lead joints of the pipes giving way. There has been a delay of a week in the working of 10 stamps through the bending of a counter shaft.

PIGGS PEAK ESTATE.—Mine report for week ending Aug. 1:—Devil's reef—Drive 200-ft. level: South end, drove for the week, 28 ft.; total, 138 ft.; north end, drove for the week, 17 ft.; total, 112 ft. Passing through a hard bar of ground containing pyrites, and showing colours. Prospecting drives, drove for the week, 28 ft.; remaining boys cutting wood and stacking same for battery. McGready's works—Drive 30 ft. from surface: Drove for the week, 12 ft.; total, 23 ft.; no change. Durning's new reef—Low drive: Drove for the week, 35 ft.; total 49 ft.; timbering ground. England's reef—Low level drive: Drove for the week, 7 ft.; total, 15 ft.; good blasting ground, but will not stand without timber; cuttings 68 ft. long 3 ft. deep.

— Mine report for week ending Aug. 8:—Devil's reef—Drive 200-ft. level south end: Drove for the week, 35 ft.; total, 173 ft.; north end, drove for the week, 5 ft.; total, 117 ft.; passing through a hard bar; prospecting drives, drove for the week, 30 ft.; remaining boys cutting wood and stacking same for battery. McGready's works—Drive 30 ft. from surface: Drove for the week 6 ft.; total, 29 ft.; no change. Durning's new reef—Low level drive: Drove for the week, 19 ft.; total, 68 ft.; all timbering ground. England's reef—Low level drive: Drove for the week, 7 ft.; total, 22 ft.; good blasting rock. Battery: Excavations for battery finished (no cutting done for engine and boiler yet), and walls battered, foundation pit dug out for mortar blocks. Nine tons sand from Komati drift has arrived. Owing to scotch cart breaking down on second trip boys have had to carry rock for concrete, which has caused delay.

HENDERSON AND FORBES.—Report for July.—North-west portion of concession—Road shaft: This has been sunk 24 ft. for the month, making total depth 36 ft. Half of the men's time is now taken up in hauling water; we have now commenced to drive towards the reef from bottom of shaft. Northern range—Cross-cut at foot of Krantz: This has advanced 20 ft. for the month, making total length 136 ft. Here, I am glad to say, we have got a change in the nature of the ground; it is much softer to work, and heavily charged with pyrites, shows no free gold in panning; a piece of it is now being assayed. Kennedy's shaft: Drive west from bottom of shaft has advanced 18 ft. for the month, making total length 29 ft.; no change in the nature of the stone. Godfrey's shaft: Drive north along the reef is in 17 ft. in this end; about a foot upon the face of the reef is cut square off. We have put in a few shoots, but can find no trace of its making again, so have decided to abandon this shaft. New shaft: This has been sunk 12 ft. for the month, making total depth 25 ft. We are now through the hanging-wall, and just commencing to sink through reef stuff, but as yet can get no gold in panning. William's cross-cut foot of northern range: Here we have driven 45 ft. for the month, making total length 180 ft. About 3 ft. from the end we cut through a small vein of quartz, and are now driving east along this vein as well as keeping the drive going north into the hill. Godfrey's drive: This it still being timbered. West camp:—Diamond drill: During the month we have put down three holes; one of 95 ft. mentioned in last report, another of 90 ft.; at this depth we came on hard stone, and in trying to work through it lost a diamond, so had to abandon the hole. We then sunk another hole with the old crown down to the hard stone, and then put on a new crown which went through it, and brought up a few loose stones of quartz, making a core of about 4 ins. long, but when crushed gave it no gold in the pan. This came from 90 ft. At about 91 ft. we got on to soft stuff again.—G. W. HALL.

WENTWORTH GOLDFIELDS PROPRIETARY.—The following advices have been received by present mail from the mines:—The south-east drive, 150-ft. level, shows a well-defined vein, with patches of good ore. The Crinoline winze, 300-ft. level, was sunk during the week 10 ft., with no change. The rise on the Carrington vein made a progress of 6 ft., showing stringers of calcite. The rise on the Crinoline vein was extended 5 ft., and shows patches of good ore. The north-west drive, 300-ft. level, was driven 12 ft. along the contact. The north-west drive, Phoenix Mine, 200-ft. level, was advanced 16 ft. The Happy-go-Lucky still shows in the face about 1 ft. wide, assaying 16 dwts. per ton of gold. The rise in the Phoenix vein has not changed, the streak of arsenical ore continues about as last reported; progress, 6 ft. The rise in Phoenix vein No. 2 made an advance of 7 ft., showing a streak of good ore. The south-east drive, 150-ft. level, was driven 5 ft. Most of the work this week was in re-timbering the drive; the rich streak is still in the face, and gives every promise of leading to an ore body. In the Reform shaft, which is one of the chief sections of our property, nothing can be done until the shaft has been re-timbered throughout. The headgear will be completed and erected next week, but it will take some weeks to finish the shaft. When this is done we can work the Industry and Perseverance veins and also develop others. We shall also drive from below the 400-ft. level to the Homeward Bound vein, where we expect to get good results. Then from the Homeward Bound we shall cross-cut through the Serpentine to the Big Quartz vein (Chapel

Hill Quartz Reef), which we shall intersect below the 400-ft. level. This will be driven with rock-drills. I consider the progress made in the 240 ft. Shamrock cross-cut, namely, 31 ft., is very good, considering the men are new to the work, by hand labour they would not do more than 12 ft. The shaft on this Big Quartz vein was sunk 8 ft. in the hanging-wall with no change worthy of mention except that the vein has changed the angle of its dip, which is now about 80 degs. to the east. This is important, as we shall reach it by cross-cuts much sooner than we could expect from the dip as shown on the surface. It also indicates that it will junction with the Serpentine at no great depth. The company has also received the following cablegram from Mr. W. H. Irwin, manager:—"During the week the progress has been 80 ft. The Happy-Go-Lucky vein, Phoenix shaft is now 15 ins. wide, and assays 12 dwts. to the tons. The south drive in the Shamrock shaft 240-ft. level, continues to look favourable. There is no change in other parts of the mine."

BALKIS CONSOLIDATED.—In a letter dated Aug. 12, our manager at Eersteling reports as follows:—New East Shaft: As my cable would inform you, this shaft is now down 100 ft., at which point I have started driving north for the reef. The ground is hard, but I hope to cut the lode in the course of a few days, as its dip where last seen in the sinking was only slightly less than that of the shaft. We are also preparing sump, &c. I want to keep the pump as far from the water as possible, so as to have as much time as may be for cleaning and repairing in the event of any stoppage before the water rises to it. Unfortunately we lose time almost every shift, owing to something or other requiring doing, and this very greatly retards progress. I need not say that I am very anxious to see the reef here, and will cable you at once in the event of its being satisfactory. Everyone who knows the property expresses the strongest belief that we are going to have something very good here. Great Western: The 75 ft. end west is driven 14 ft. beyond the cross-cut. The reef is still of no value and undefined; there is, however, a change in the formation in the present end, and I am continuing the drive. Nothing has been done here during the past fortnight owing to scarcity of labour; re-started to-day. I am now putting up rises in the back of one of the south branches from 36-ft. level; and think we shall get some stone worth saving, in addition to that in the back of the branch first driven on, and which is still standing. I have started another prospect shaft further to the west of these workings to try to pick up the extension of the reefs. This is down 18 ft., and cross-cuts begun. The country is very favourable looking, consisting of nice clay slate, well strained, and decomposed. It would be impossible to describe all the points worked in search of the good reef, if any left standing, but I think nothing is being overlooked. Prospecting: Up to the present we have not come across any reef from which the good stone mentioned in my last week's letter are likely to have been denied, but trenching, &c., is being continued. This refers to the ground to the eastward of the No. 2 reef. Prospecting north of main reef is being pushed on as much as possible. Several hundred feet of the southernmost of the two new reefs have been traced, and the quartz pans well throughout, some samples on the line having shown upwards of an ounce of gold per ton. I am sinking the first shaft, but as the ground is rather hard and the labour very poor indeed, progress is dreadfully slow. It is now down about 13 ft., and the quartz seems to improve slightly as we go down; the quartz is 16 ins. wide, and worth about 10 dwts. gold a ton. I am following the back along the course of the reef still, and starting further trial shafts at the best points. On the northern reef the shaft is down 37 ft.; the stone is 18 ins. wide, but not worth more than 5 dwts. of gold per ton. The stone, however, is the same in appearance as that taken from the rich patch on the same branch a short time ago, and I am hoping for an improvement shortly; picked stones from the reef pan very well, often over an ounce to the ton. Both these reefs are new discoveries, and I believe that we shall find some valuable ground on them. There must be many junctions and intersections between the various reefs on this part, and both the containing rock and the quartz found are of very favourable and promising appearance, and I think it very advisable that thorough prospecting should be carried on. The reefs found are, unfortunately, some distance from the mill, over a mile, I should say, along the only existing road, but a new road much easier and shorter could be quickly and cheaply made if necessary, and a tramway laid, or an aerial ropeway could be put up. If these reefs prove up to their present prospects they should be very valuable, as it will be possible for a considerable length of them to get back of 100 to probably about 300 ft. above water-level. We have, unfortunately, at the present time a very poor lot of Kaffirs for work, and I am endeavouring, and hope to succeed shortly, in obtaining better. Now that their harvest is over, boys will be returning to the Randt and Kimberley, and I shall try to intercept some of them on their way down. Labour even such as we have is very scarce still. On the main reef under what has been called, I think, No. 6 stope, I have started a winze; now down 12 ft. below the level; the quartz is 3 ft. 6 ins. wide, and the reef very well defined, between two strong walls. For about a foot on the headwall the stone is worth 4 to 5 dwts. of gold per ton; the rest is poorer. I started this work to see if there was any alteration in the water level as far west of the new shaft owing to the pumping, and also, of course, to follow the reef as far as possible in hope of improvement. I am much pleased with the appearance of the reef here. I should have started another winze below this (main) level nearer to the new east shaft long since, but for the difficulty of dealing with the deads, &c.; as soon, however, as we have the reef in that shaft, I shall commence the work, so that we can meet it by a rise up from the new level when driven. I have also put in a cross-cut from main level opposite the old No. 3 shaft south, about 25 ft., but have met with nothing of value. I do not propose to continue this, as it has proved that the southern branches are poor just here, and I do not think there is anything to be gained by further driving. The men from here I shall put out to the winze referred to. I hope by next mail, or, at all events, by the succeeding one, to be able to send you good news respecting the main reef at New East Pronded, that we are able to successfully deal with the water; we shall very quickly open up ground here sufficient to keep our mill on full time, and having done that the further development and opening up of the mine will be carried on under much more satisfactory conditions, and of this I am most anxious, and shall continue to use my best endeavours to bring about. The general health of the camp is good.

BRITISH MINING INTELLIGENCE.

DEVON GREAT CONSOLS (Sept. 10).—Wheal Maria, engine shaft, Capel Tor lode: The stope in the back of the 36-fm. level west will yield 5 tons of mundic and copper ores per fm. In the stope in the back of the 12-fm. level west the lode is worth 5 tons of mundic per fm. Wheal Anna Maria: The stope in the bottom of the 110-fm. level east of the engine shaft is producing 3 tons of copper ore and 8 tons of mundic per fm. In the bottom of the 130-fm. level west of the Field shaft on the south lode the stope is turning out 10 tons of mundic and 3 tons of copper ore per fm. Wheal Josiah, Hitchin's shaft, south lode: In the stope in the bottom of the 130-fm. level east the lode is worth 3 tons of copper ore and 2 tons of mundic per fm. The stope in the back of the 130-fm. level east of Hitchin's shaft on the main lode is worth 6 tons of mundic per fm. The lode in the stope in the bottom of the 103-fm. level east of Agne's shaft will produce 3 tons of copper ore and 2 tons of mundic per fm. Wheal Emma—Thomas's engine shaft: In the stope in the bottom of the 100-fm. level east the lode is worth 10 tons of mundic per fm. The stope in the bottom of the 100-fm. level east is yielding 10 tons of mundic per fm. The stope in the back of the 100-fm. level east is yielding 15 tons of mundic per fm. Inclined shaft: The stope in the back of the 150-fm. level east is turning out 2 tons of copper ore and 2 tons of mundic per fm. The stope in the back of the 112-fm. level west is worth 1½ tons of copper ore and 1 ton of mundic per fm. In the back of the 112-fm. level west the stope is turning out 5 tons of mundic per fm. The stope in the back of the 100-fm. level west is yielding 6 tons of mundic per fm. New shaft, new south lode: In the stope in the bottom of the 190-fm. level west the lode is worth 6 tons of mundic per fm. The stope in the back of the 130-fm. level east is yielding 2 tons of copper ore and 1 ton of mundic per fm. The stope in the back of the 100-fm. level east is turning out 6 tons of mundic per fm. Watson's engine shaft: In the 172-fm. level west the lode is 2½ ft. wide, yielding a little copper and mundic ores. In the 160-fm. level east the lode is 4½ ft. wide, yielding 2 tons of copper and mundic ores per fm. In the 160-fm. level west the lode is 4 ft. wide, producing saving work of copper and mundic ores. In the stope in the bottom of the 160-fm. level west the lode is worth 5 tons of copper and mundic ores per fm. The stope in the back of the 148-fm. level west is yielding 5 tons of copper and mundic ores per fm. —W. CLEMO.

DRAKEWALLS (Sept. 10).—Our progress in sinking the engine shaft in the past week has been interrupted by means of the bucket rods breaking, and the bottom clack of the sinking lift getting out of order under water; 2½ ft. has been sunk, and the ground continues favourable for exploration. The lode in the 160 east, where we are cutting in on the north side, maintains its very fine appearance, and continues to yield 6 tons of mundic per fm. and saving work for tin. There is no change to notice in the lode in the 160 driving west. The same remark will apply to the lode in the 147 driving east. The stopes throughout the mine are producing their usual quantities of mundic ores. We are progressing satisfactorily with all our surface operations. —H. RODDA.

EAST BLUE HILLS (Sept. 9).—In the 30-fm. level west, on the north section, we have set to cross-cut south by six men, at 5½. 5s. per fm. This is to prove whether we are carrying the whole or main part of the lode. A week or two will test this point. The 30 end west on south section by six men, at 4½. 10s. per fm. Here the lode is looking better, and we are hoping by all appearances to open out some tin ground. We have holed the rise in the back of the 40-fm. level with the 30, and have now put the men to rise in back of the 20, at 4½. per fm., to communicate with the 10-fm. level west, which will greatly improve the ventilation of the mine, and open out a section of ground for tributing. The 35 end east and the 10 end west are driven by the tributers at a small allowance for tutwork and tribute for all the tinstuff. We set nine tribute pitches to 30 men, at tributaries varying from 11s. to 13s. 4d. in the £.—J. WHITE, F. WILLOUGHBY.

LEADHILLS (Sept. 7).—Brown's vein: The 145-fm. level north of Jeffrey's shaft is in a vein 4 ft. wide, well mixed with kindly spar and ore; worth 30 cwt. per fm. The stope above the 145 north of Jeffrey's shaft is worth 10 cwt. of ore per fm. The stope above the 145 south of Wilson's shaft is worth 40 cwt. of ore per fm. The stope above the 145 north of Wilson's shaft is worth 35 cwt. of ore per fm. The two stopes above the 130 north of Jeffrey's shaft are worth 20 and 15 cwt. of ore per fm. respectively. The rise above the 130 north of Jeffrey's shaft is worth 20 cwt. of ore per fm. The stope above the 130 south of Wilson's shaft is worth 30 cwt. of ore per fm. The 115-fm. level north of Jeffrey's shaft keeps in a nice looking vein above 4 ft. wide, mixed with spar and ore; worth 20 cwt. per fm. The stope above the 115 north of Jeffrey's shaft is worth 15 cwt. of ore per fm. The 100-fm. level north of Jeffrey's shaft shows a vein 4 ft. wide, charged with spar and ore; worth 30 cwt. per fm. We are clearing out broken stuff in the stope below the 100 south of Wilson's shaft. The 70-fm. level south of Wilson's shaft is in a vein 5 ft. wide, showing improved quartz and small spots of ore, not, however, to value. The two stopes above the 35 south of flat rod shaft are each worth 30 cwt. of ore per fm. Sarrowcole vein: Gripp's adit north of George's Roust vein is in a vein 3½ ft. wide, mostly spar with ore; worth 15 cwt. per fm. —T. NEWBIGGING.

NEW MORGAN.—Mill report and clean-up from July 16 to Aug. 15:—Average number of heads working, 40; time mill was running, 590 hours; number of tons crushed, 1,520; average speed per minute, 88 blows; labour cost per ton, 9½d.; fuel and material cost per ton, 4d.; tramming cost per ton, 7d.; total cost, milling and tramming, 1s. 8½d. per ton; motive power—steam 60 hours, water 530 hours. Clean-up: Tons crushed, 1,520; yield, amalgam, 1,248; sponge gold, 432; bullion yield, 420; yield per ton, 5 dwts. 13 grs. The above-mentioned gold has realised 1,431½. 2s. 10d.

PRINCE OF WALES (Sept. 9).—The lode in the 180-fm. level east is 2 ft. wide, and somewhat disordered, being mixed with a little killas, but yielding stamping stuff. In this level west the lode is 2 ft. wide, composed principally of peach, with a little capel and spar. Fair quality tinstuff. In the 166 west the lode is 3 ft. wide, in well-defined tinny capel and spar, and worth 15½. per fm. The ground in the cross-cut south (although of a very congenial character) is at present of a closer nature, and not letting out so much water. —S. ROBERTS, J. PROWSE.

SOUTH CONDURKROW (Sept. 9).—The ground is favourable for working in the 138 cross-cut north of Marshall's shaft, and good progress is being made. The stopes and pitches are about the same value

as when reported on. The driving crank at the stamping engine broke last night; a new one will be made as quickly as possible, but unfortunately 32 heads of stamps will be idle for several days. —W. RICH, W. THOMAS.

SOUTH DARREN (Sept. 10).—The shaft is let to sink by nine men at 19½. 10s. per fm. It is now 74 ft. 3 ins. under the 142. The lode in the west end continues very good; the average value is 17 cwt. of silver-lead ore per fm. We expect to be deep enough for a 12-fm. lift before the end of the month, and it looks as if we will leave a good lode in the bottom of the shaft, and will be able to commence the drivages both east and west in good ore. There are six men put to strip and stope in the 142 west near the end, worth 10 cwt. of silver-lead ore per fm. This place is not yet let. The winze in the 130 west is let to four men at 12½. per fm., worth 17 cwt. of silver-lead ore per fm.; two men are tramming. —J. MITCHELL.

SOUTH PHOENIX.—The shaftmen are making good progress in sinking Wheal Prosper shaft below the 40-fm. level. In the 40 west there is no change to notice, the end being in the elvan. We have about 6 fms. more to drive to reach the winze, where we have a very fine lode. Possibly the lode may be standing north of the elvan course, but as the end is in the right direction to reach the winze, we think it advisable to communicate with it as quickly as possible. In the 40 east we have a strong and masterly lode, which has greatly improved during the past week. On Thursday morning the men blasted a hole in the lode, which brought out some splendid stones of tin, which speaks well, as we have several fathoms more to drive to get under the run of tin ground in the level above, and shows that the lode maintains its size and value down to this level. In the 30 east we are pleased to say that the lode has again opened up to its usual size and value, viz., 13½. per fm. The 30 west still continues in a good lode, worth for tin 13½. 10s. per fm. The new shaft has been holed to the adit level, which has improved the ventilation. The stopes are yielding their usual quantities of tin. The prospects of the mine are very good indeed. —E. PASCOE, J. KELLY.

TINDENE (Sept. 8).—The Tindene shaft is within 3 ft. of the 43-fm. level; we have also to sink 3 ft. below the level for skip pit, which will be completed next week; we shall then continue the skip road down to this level and shall push the cross-cut north to the lodes without delay; we have not yet sunk through the great caunter lode, as it does not underlie but little; it contains tin of a good quality, but we are unable yet to give its value, as we have not yet seen this north side of the lode. In the 33-fm. level on the north lode the end men are now engaged in putting up a rise to communicate with the winze sunk below the 23-fm. level, and when holed will open up and ventilate this part of the mine. In the 33-fm. level west on north lode it is about 18 ins. wide, saving work for tin. Tin sampled for four weeks ending Aug. 22, at 50½. per ton, was 107½. 10s. 3d., and for two weeks ending Sept. 5 we have sampled 87½. 6s. 8d., and from present prospects our returns will increase, and shall have more tin next sale. —J. CURTIS, W. STEPHENS.

VAN (Sept. 10).—The cross-cut towards the south lode at the 150-fm. level west of Seaham's shaft is making fair progress by six men, the ground is compact, and contains faces of lead ore in the points crossing the level. The two stopes over the 150-fm. level on the old lode each yield 15 cwt. of lead ore per fm. No. 1 stope in roof of the 135 on the south lode continues to produce 25 cwt. of lead ore per fm. The lode in the drift east from No. 2 stope is worth 10 cwt. of lead ore per fm. The stope over the 105 west of Seaham's shaft is turning out 1 ton of lead ore per fm. The stope over the 90 east of shaft is worth 15 cwt. of lead ore per fm. At the 120 east and at the 150 east from Seaham's winze nothing has been done this week, owing to a stoppage of the air compressing machinery, for repairs to the foundations, and fixing of new holding down bolts, &c.; this has been accomplished and the machinery is again at work. Dressing of ore is going onwards, and a parcel of lead being got ready for sale as soon as possible. —J. PAULL.

WHEAL CREBOR (Sept. 8).—Good progress is still being made in driving the 156-fm. level east. The end has been driven during the last four weeks 5 fms. on 4 ft. of the width of the lode, which is all good-looking lode material, yielding 3 tons of mundic per fm. The killas by the side of the lode is of a most favourable kind for the production of ore. The value of the stope and pitches and all other points are the same as given last week. —P. D. HOLMAN.

WHEAL METAL AND FLOW (Sept. 9).—The 27-fm. end east of engine shaft on metal lode is being extended as fast as possible in a lode from 3 to 4 ft. wide, composed of tin, peach, mundic, and embedded in a very congenial killas, very similar to that which produced the riches to the east of our present workings on the same lode. We should bear in mind that we are between the same cross-courses which did so well for the great Wheal Vor and other adjoining mines. The past two weeks our dressing operations have not been carried on very regular, as we have been fixing, &c., the pulverisers, which necessitated the stopping of the machinery, but I am pleased to say the new pulverisers are working well; also the new reservoir, which will effect a great saving in fuel. —S. P. CURTIS.

WHEAL UNY (Sept. 9).—The 244 end to drive east by six men with boring machine at 10½. per fm., worth for size of end now carried, 20½. per fm. The 244 west, by six men and boring machine, at 10½. per fm. This end has improved in the last 2 fms. driving, and is now worth for size of end fully 45½. per fm. Lode looks well, with every probability of continuing. The 230 end to drive west by six men at 8½. per fm., worth for tin 8½. per fm. The 230 end to be driven by four men at 5½. 10s. per fm., and is turning out low class tin stuff, but not to value. The 203 end to drive east by four men at 7½. per fm., worth for tin 13½. per fm. The 203 end west by six men at 9½. per fm., worth for tin 18½. No. 1 stope in back of this level by six men at 5s. per ton of stuff, worth 15½. per fm. No. 2 stope ditto by 10 men at 6s. per ton of stuff, worth 18½. per fm. We also sett 26 pitches and tributaries, varying from 11s. to 13s. 4d. in the £.—J. WHITE.

FOREIGN MINING INTELLIGENCE.

ALMADA AND TIRITO.—Extracts from the superintendent's letter dated Aug. 12:—Mining for the fortnight ending 8th inst.: The drive south at the 137-ft. level, Cruz Verde, on the 100 lode, was advanced 16.5 ft.; total from west cross-cut, 33 ft. The lode continues barren and narrow; the ground is easy for driving, and the west wall

is very well defined. The No. 11 winze from the 12 level on the 100 lode was sunk 9.7 ft.; total depth 28.1 ft. The bottom is again in paying ground, worth from 4 to 6 tons of good ore per fm. The No. 12 winze from 24 level, 100 lode, was sunk 16 ft.; total depth, 30.5 ft. The bottom is not now so highly mineralised, but the grade of the ore has improved in the last few days. The north-east drive from stope north of No. 7 winze under 24 level was driven 6.5 ft.; the breast is about 40 ft. north-east of the winze, and there is a branch of ore about 3 ft. wide. The south drive from stope over 36 level, 100 lode, was driven 4.7 ft. on very hard ground, carrying a branch of good ore 1 ft. wide. The north end on 100 lode at the 36 level was driven 6 ft. on very hard ground, with occasional specks of black ore. The lode looks very well, and we may find paying ground shortly. Total exploration and development 59.4 ft. The Dios Padre shaft was cleared of debris and rotten timbers for a depth of 22 ft.; it is now open and timbered for 72 ft. from its mouth. There are indications that the filling is not solid, and great precautions have to be taken for the safety of the men. From the stopes we have obtained a fair supply of ore for the mill, though the grade has fallen off remarkably, which is partly attributable to our not having stoped any ore from the 24 back, new body on 100 lode. The south stope in back of 24 west wall (west of No. 1 winze to 36) is producing considerable ore, but of low grade, barely reaching 20 ozs. per ton after cobbing. We have been short of hand drillers, and have been unable to get men to run the machine drill. For these reasons we have been compelled to postpone the work in the new tunnel, the pushing of the 36 north with machine drill, and other important work. Reduction: The mill has been running steadily (the six batteries) excepting on Sundays. The chlorination furnaces are all working, but leaching is still interrupted, some indispensable repairs to the vats and launders, the roofs, ditches, &c., preventing us from re-starting during this week. By the end of the week we shall have about 250 tons of ore in the vats ready to receive the leaching solution. We have a stock of about 500 tons of roasted ore, so that when leaching is resumed we shall have larger returns. Water is now plentiful, there having been three good rains within a week. The first rain was very heavy and brought such amount of debris from the hill side that choked the ditches and flooded the leaching works. It was fortunate that leaching was stopped at the time, otherwise we should have sustained a heavy loss. It is a pity that the leaching plant is so badly arranged as to be always exposed to damages during this season. Labour is not plentiful, but is not so scarce as before. Hand drillers are what we lack most.

BALAGHAT-MYSORE (Aug. 19).—Report of work done for the fortnight ending 14th instant:—The 600 drive north has been driven 34 ft., making a total of 201 ft. from shaft; the quartz is now about 1 ft. wide, and worth 1 oz. 2 dwts. 20 grs. The 500 winze north, sunk 3 ft. 10 ins.; total depth, 97 ft. 4 ins.; the quartz is about 8 ins. wide, and worth 4 ozs. 8 dwts. 4 grs. per ton. The 500 winze south, sunk 5 ft.; total depth, 30 ft. 3 ins., carrying quartz about 6 ins. wide, and worth 1 oz. 9 dwts. 9 grs. per ton. The 500 midway drive has been driven 16 ft. 3 ins., making a total of 31 ft. 9 ins.; the quartz is about 4 ins. wide, but not of much value. The 500 back stopes, quartz average 10 ins. wide, and worth 4 ozs. 4 dwts. 22 grs. per ton of ore. The 410 winze north, sunk 6 ft. 3 ins.; total depth, 43 ft. 9 ins.; quartz is still about 1 ft. wide, worth 6 ozs. 4 dwts. 3 grs. per ton. The 410 midway drive, driven 21 ft. during the fortnight; the quartz is about 5 ins. wide, worth 3 ozs. 2 dwts. 19 grs. per ton of ore. The 270 midway drive, driven 13 ft., making a total of 51 ft. 6 ins.; the ground is still the same as last reported. Haines' shaft: We are making fair progress in this shaft, but not as good as I would desire.—**A. S. B. OAKLEY.**

BRATSBURG.—Report for week ending Aug. 29:—Hoffnung Mine: The lode at No. 2 adit level is still yielding about $\frac{3}{4}$ ton per fm., but it is chiefly making towards the bottom of the level. No. 1 rise in the back here is yielding fully 1 ton per fm., altogether a very fine-looking lode. No. 2 rise is worth $\frac{3}{4}$ ton per fm. At No. 3 adit level the lode is well formed, and contains a good leader of quartz impregnated with ore, yielding barely $\frac{1}{2}$ ton per fm., but its general character favours a speedy change for the better. The rise in the back is worth fully $\frac{3}{4}$ ton per fm. No. 4 level still shows signs of an improvement, but remains poor in ore. The trial level at Murchison's has fallen off in value, nevertheless still producing $\frac{3}{4}$ ton per fm. 46 miners employed at this mine during Aug. Johannes Mine: The western level on Howard lode is yielding good saving stuff, but not enough to value; the lode continues of great regularity, but for the present contains but little quartz, which is generally found rather plentifully where the lode is richest. The eastern level is worth 1 ton per fm., and we are about to start a rise in the back of this level. The rise in the back of the western level continues to open up very satisfactorily indeed, yielding fully 1 ton per fm.; in fact, this point and the adjacent stopes is about the richest part of the whole mine. Number of miners for Aug. month, 15. Surface work and remarks: Heavy rain continues, and surface work is rather hindered thereby. I am pleased to report that the company's steamer, Bratsburg, is now in Skien, after having passed through the canal in a satisfactory manner, although the works are still incomplete, having taken down a large portion of the ore forwarded for the vessel now under charter for loading Sept. 1. It will be observed that we are still labouring under the disadvantage of being short of miners, no increase having been made; the season, however, has now arrived for miners to seek winter work, and we are hoping to get a good increase to this staff. I estimate that 100 tons 20 per cent. ore were mined during Aug.—**J. D. HOLMAN.**

BRATSBURG SMELTING AND REFINING WORKS.—Report for week ending Aug. 29:—Smelting was resumed last Monday morning, and was carried on continuously until Saturday night, the results being satisfactory, as regards the production of anodes, although considerably more would have been produced had we not been almost entirely running on fine buddle ore, of 7 per cent., which, of course, rendered less matte, and a considerably longer time was necessary to provide proper charges for the converters. In all 171 perfect anodes were produced. We have had trouble with the converter linings this week, and attribute the fact to the Frenchman persistently using unroasted ore. Whilst the roasted ore we had in stock lasted we had no trouble whatever, and the daily production of anodes was larger, one day being as much as 54, so we are endeavouring to get him to start next time on roasted ore. Electro deposition is going on satisfactorily, the tanks being now full, and a quantity of copper being nearly ready for shipment.—**T. F. SMITH.**

BRITISH BROKEN HILL PROPRIETARY (July 22).—No. 1 shaft, 50-ft. level: The south drive has been lengthened 22 ft. this

week, mostly through country rock, the lead ore having gone out on the eastern side of the drive; the total length is now 286 ft., and the work has been stopped for the present. The north drive has been extended 19 ft. by the new contractors, making its total length now 123 ft., with no change in the ironstone face. Second level: The cross-cut eastwards off the main south drive has been put in 7 ft. through galeua, and is now 18 ft. long. Good work has been done on the new section. No. 2 shaft: The winze in the north stope has been sunk 13 ft., and is now down 38 ft. below the sill floor. During the week we have passed through decomposing sulphides mixed with cubical galena and carbonate crystals, and this has now been cut out by solid sulphide ore coming in from the west. No. 5 shaft has had 5 ft. added to its depth, making a total of 89 ft. from the second sill. A trial shaft is being sunk on a vein of iron ore between No. 5 and No. 2 shafts, and this has now reached a depth of 15 ft. Two men are at work prospecting this vein between the trial shaft and No. 5.

CALLAO BIS (Aug. 19).—Advices from the mine:—Independiente: The shaft still continues in very hard ground, besides a quantity of water to encounter, which impedes the progress of sinking. However, I hope by the end of this month to commence driving the No. 4 level or cross-cut to intersect the lode at this point. The No. 3 level west: At this point we have driven in a north-east and north-west direction to find the footwall of the lode, but up to date have not met with it. The portion of lode driven through shows 16 ft. wide, of fair value. I shall continue driving on the course of this to discover the footwall. The No. 3 level east: At this point the lode is between two splendid walls, showing 4 ft. wide, of good value, underlaying about 40 degs. south. A great improvement has taken place in the lode at this point. The No. 2 level north-east has been suspended, but I find the lode still exists in the footwall, and as soon as possible I intend to resume work to prove its continuance. Stope north-east extended 30 ft. in length, for 30 ft. in depth. Average width of lode, 5 ft., of good value, underlaying 40 degs. Stope west extended 25 ft. in length, for 20 ft. in depth; lode, average width, 7 ft., of good value, underlaying 40 degs. The lode throughout the mine has a very promising appearance. Surface work: I hope by the end of this month the water-line will be completed to the shaft, besides the greater part of all other surface work, when we shall be able to dispense with a good deal of surface labour.

— A telegram has also been received (Sept. 10) stating as follows:—“710 tons; 1,042 ozs. gold; ore is improving in the drift as we advance.”

CAPE COPPER (July report).—Ookiep: Good progress has been made in driving the 117-fm. level east of 72 winze. The rock at the present time does not contain any copper ore. There is no material change to notice in the ground in the 117-fm. level south towards the new shaft, the forebreast is still in massive quartz. We hope to start the sinking of the new shaft below the 105-fm. level in a few days. The 105-fm. level (No. 6) north of main east level produces occasional stones of copper ore. The rock in the 105-fm. level east of the last-named level is composed of quartz, iron, and copper ore, the latter not to value. The 92-fm. cross-cut north of east level continues to present spots of copper ore. The stopes in the 92 and upper levels are yielding their usual quantities of copper ore. Trial Mines.—Kotzees Mine: The ground in the 40-fm. level west of shaft is composed of quartz and iron containing stones of copper ore. The rock in the 40-fm. level east of shaft also contains stones of copper ore, but not to value. Nababeep South: The 59-fm. level south-east of north-east level is producing a little saving work; and the 59-fm. cross-cut north of this level is yielding rich stones of copper ore. Spectakel: The 20-fm. level east of new shaft is yielding a little saving work. The stope in the 36-fm. level south-east of Kelly's shaft is worth about 2 tons of copper ore per fm.—**Capt. HENWOOD.**

— Returns for July: Ookiep, 1,760 tons of 23 per cent. Arrivals at Port Nolloth: The Cumberland and L'Esperance. Arrivals at Swansae: The Glanrafon, Hondekliip, and Glance. Bills of lading received: 410 tons of ore per Bootle, 670 tons per Foxhound, 760 tons per Cubana, and 840 tons per Mary Moore.

CASTILLON (Sept. 7).—We value the present yield of the different points in work at per cubic fm. as follows:—St. Jean level: Stope in the back, 6 cwt. silver-lead and 50 cwt. blende. St. Barbe level: Stope in bottom, Block C 5, 40 cwt. silver-lead and 30 cwt. blende. St. Eugenie level: No. 1 stope in bottom, Blocks D 12, 13, silver-lead 20 cwt. and 60 cwt. blende. No. 2 stope in back of rise, Blocks B 15, C 14, 9 cwt. silver-lead and 35 cwt. blende. No. 3 stope in back, west of rise, Block B 16 and 17, 7 cwt. silver-lead and 25 cwt. blende. No. 4 stope in back, Block B 20, 6 cwt. silver-lead and 35 cwt. blende. No. 5 stope in back, Block E 21, 12 cwt. silver-lead and 30 cwt. blende. No. 3 level, No. 1 stope in bottom, Block E 23, 6 cwt. silver-lead and 30 cwt. blende. No. 2 stope in back, Block C 20, 12 cwt. silver-lead and 50 cwt. blende. St. Victorine level, No. 1 stope in back, Block A 17 and 18, 55 cwt. blende. No. 2 stope in bottom, Block B 17, 10 cwt. silver-lead and 60 cwt. blende. Ezpeleta level, No. 1 stope in back, Block A 30, 25 cwt. silver-lead and 50 cwt. blende. No. 2 stope in the bottom, Block B 29 and 30, 7 cwt. silver-lead and 30 cwt. blende. We are pleased to be able to say that the lode at the St. Barbe level still continues to be very encouraging, as will be seen by the above values. We are making satisfactory progress with the preliminary works referred to in mine of the 24th ult. The No. 5 level sent south is without change since last referring to that point. We shall sample a parcel of silver-lead to-morrow, which we compute at 53 tons. 195 tons blende have been dressed towards next shipment of 300 tons, which we hope to complete about the 21st inst. All the various machinery continues to work well.—**J. EDWARDS.**

CHAMPION REEF.—Superintendent's report for the fortnight ending Aug. 17.—Mysore section—Carmichael's shaft: At the 225-ft. level the north drift has been extended 9 ft. 6 ins.; total 27 ft. 9 ins. Work suspended until the ground is proved further east. The cross-cut east from the south level about 100 ft. from shaft has been driven 10 ft. 6 ins. The rock in the end is still dipping west and carrying small stringers of quartz, which appear to indicate the lode is still further east. Ribblesdale's shaft: Sinking 1 ft. 6 ins.; total depth, 245 ft. This is only the result of three days' work, as the contractor failed to get sufficient coolies to carry on the work. At the 240-ft. level the drift north from end of cross-cut has been driven 23 ft.; total, 34 ft.; the lode at this point has improved during the past week; it now shows 1 ft. 6 ins. of quartz, which assays 1 oz. 6 dwts. 3 grs. per ton. The south end at this level has been driven 23 ft. 6 ins.; total, 29 ft.; the lode is $3\frac{1}{2}$ ft. wide, composed of $2\frac{1}{2}$ ft. of quartz and 1 ft. of

mixed rock. Assays from the quartz give 1 oz. 4 dwts. 14 grs. per ton; the lode at this level is very regular and carries good walls, and the prospects are very encouraging. Garland's shaft: Sinking 2½ ft.; total depth, 255 ft. 9 ins. We have only been able to work half the time owing to a scarcity of men; the lode in bottom of shaft is 2 ft. wide of quartz, assaying 6 dwts. 12 grs. per ton. At the 240-ft. level the north end has been driven 20 ft.; total, 83 ft. 2 ins.; the lode in this drift has been disordered for the last 30 ft., but during the past day or two the quartz is opening out again on the east side, which has the appearance of making stronger as the drift is advanced. The south end has been advanced 8 ft. 6 ins.; total length, 60 ft. The contractors after a few days work had to stop the work for want of coolies; the lode in the end is 2½ ft. wide of quartz, which assays 2 ozs. 10 dwts. per ton. This is an improvement in the quality of the ore since last report. This shoot of good ore is in all probability the same as that discovered in the 160-ft. level north from Dalyell's shaft, which was dipping north rapidly. Dalyell's shaft: Sinking 4 ft. 6 ins.; total depth, 255 ft. The north drive at the 240-ft. level has been extended 15 ft.; total, 100 ft. 4 ins.; the lode in the end carries 6 ins. of quartz. Trial shaft has been sunk 23 ft. 6 ins.; total, 80 ft. 6 ins. We are still in old workings which are about 2 ft. wide. On the footwall in bottom of shaft there is 1 ft. of quartz standing, which assays 9 dwts. per ton. Coromandel section: Driving north at the 380-ft. level, 6 ft.; total, 33 ft. 6 ins.; lode 2½ ft. wide, of low grade ore. At the 320-ft. level north the cross-cut west has been driven 5 ft. 6 ins. With the exception of a few stringers of quartz nothing has yet been discovered. The winze below this level has been sunk 4½ ft.; total, 31 ft.; the lode is 3 ft. wide, 2 ft. of which is quartz, assaying 7 dwts. 6 grs. per ton. At the 290-ft. level south the drift has been advanced 4 ft. 3 ins., and the cross-cut west, 3 ft. 9 ins.; the lode in the drift is small, and assays 6 dwts. per ton. Surface: Very little has been done on surface during the past fortnight owing to scarcity of labour from sickness prevailing among the coolies.

CHIAPAS.—Report for July:—Mine: 20 miners have been breaking ore on day's pay, producing 1,800 lbs. of first-class ore, assaying 5½ ozs. gold, 69½ ozs. silver, and 47 per cent. copper per ton; on hand June 30, 15,850 lbs., equal to 17,650 lbs. on hand July 31. 400 tons second-class ore concentrating at the rate of 8 per cent., and assaying after concentration 3½ ozs. gold, 49 ozs. silver, and 38 per cent. copper.—1,748 tons previously on hand, equal to 2,148 tons on hand July 31. Santa Fe tunnel No. 2: Four men have been driving to the north-east following the course of the ore into the hill. They have driven 3.70 metres at \$50 per metre. The ore has been continuous all the way, showing up very well in back, bottom and south side. An average sample taken from the ore broken during the month from this end concentrated at the rate of 15.8 per cent., the concentrates assaying 5½ ozs. gold, 32 ozs. silver, 25½ per cent. copper. The course of the contact between the ore and the barren spar is about north 70 east, which should carry us into the ground between the main tunnel and Copper Creek tunnel. It, therefore, may be policy to continue one of these tunnels, preferably the latter as being almost on the same level. Copper Creek drift: Four men have been running a heading south-west on the contact between the spar and syenite, as it is much cheaper driving than in the spar. During the month they have driven 4.80 metres at \$30.00, on a small vein of iron pyrites; my object is to cross-cut the spar every 15 or 20 metres. Break Neck Guich stoep: At a height of 22 metres, or 72 ft. above the level of the patio, four men have been opening out ground for an underhand stoep to come down on the back of No. 2 tunnel. Ore is now coming in, and I think we have some good ground below us for stoping underhand, as the tunnel shows 8.3 metres of ore. I enclose a sketch which will give an idea of the ground. This may be simply a chimney of ore, but it looks as if it continued into the mountain on a north-east course under a regular wall, composed of a flinty quartz. Road: Good progress has been made during the month, and I hope to finish it by Aug. 31. The freighters are arriving with machinery, and report Mr. Hardy's road in good condition. We are keeping 12 men on it to drain it and keep it in repair. Mill: We are hauling up the mill timbers with oxen, but they work so slowly, I have telegraphed Don Panfilo Maldonado to hire me eight mules with harness. It is simply a question of getting the stuff up now to have the mill ready in Oct. next. Water power: The contractor will finish the flume next week, and I am in treaty with him for making another in Copper Creek. Accounts: We pay to-morrow, and as soon afterwards as possible I will forward the accounts to London with press copies to San Juan Bautista.—A. H. STOCKDALE.

COLAR CENTRAL (Aug. 19).—South drive, driven 4 ft. 9 ins., making a total of 21 ft. 9 ins.; the lode pinched very small, showing very little gold. North drive, driven 4 ft.; total, 37 ft.; the lode at present is 1 ft. wide, and is down in the bottom of the level; worth 8 dwts. per ton. Winze: Sunk 5 ft. 3 ins.; total depth, 15 ft. 9 ins.; the lode looks very well, and 1 ft. wide; seems to be coming in from the north; worth 8 dwts. per ton.—A. S. B. OAKLEY.

CORTEZ (Aug. 22).—Report from superintendent.—Work at the mines for the week ending this date has been as follows:—Cross-cut from No. 1 east, advanced 4 ft.; No. 2 tunnel west, stoped 9 tons of ore; No. 3 tunnel west, stoped 3 tons of ore; north-east raise, stoped 30 tons of ore; north-west raise, stoped 155 tons of ore; run into mine ore-house, 171 tons of ore; worked at mill, 161 tons of ore; trammed to mill, 90 tons of ore; average assay for the week, 83.700 ozs. silver.

DAY DAWN BLOCK AND WYNDHAM.—Mine manager's report for fortnight ending July 18.—No. 2 underlie shaft: This shaft has been sunk an additional 8 ft., making total depth from the surface 1,474 ft.; the ground is favourable for sinking. The 902-ft. level west: The contractors have driven a further distance of 23 ft., making a total distance of 90 ft. from the cross-cut; the reef is 5 ft. in thickness, of fair quality. The leading stoep also carries a reef 5 ft. thick, of about the same quality as that in the drive. The 805-ft. level west: The reef in the stoeps will average about 4 ft. in thickness. There is a bar of diorite between the stone, but the reef is well-defined notwithstanding. No. 1 winze from this level has been sunk a further depth of 25 ft., making total depth 76 ft. It should hole through into the 902-ft. level stoeps after another fortnight's sinking. Preparations are now being made to sink a No. 2 winze; the reef in No. 1 winze is of payable quality. The 630-ft. level west: The reef in the stoeps over this level is 2 ft. in thickness, of good mundic stone; further west the reef will average 2 ft. in thickness, but is divided by a diorite formation 6 ft. thick. The 500-ft. level:

The cross-cut from this level has been driven a further distance of 16 ft., making total length of same 24 ft. The present end is in disordered country, and requires timbering. Repairs to underlie: The roadway has been made good from the surface to the 500-ft. level, new sleepers and rails having been put down.

EAGLEHAWK CONSOLIDATED.—Abstract of reports received from the mine dated July 25 and Aug. 3:—Since my last report the drive north at the 650-ft. level has been extended 31 ft.; total distance from the cross-cut, 1,019 ft. The reef in the end of this drive is a splendid formation about 3 ft. wide, and is just the kind of reef that a practical man expects to find gold in, but we have not found it yet.

FLAGSTAFF (Aug. 29).—I have the pleasure of again reporting to you the progress made during the past week. Main 6th level is now in 193 ft.; the rock is still very hard and progress is slow. The raise above 6th is in 62 ft., that is from the point where it made the turn from south-west to north-east; the ore is from 8 ins. to 10 ins. wide, and nearly all first-class. From this place we have taken out, the past week, seven cars of first-class and two of second. 7th level: This is now in 142 ft.; the number of sacks of ore taken out this week is 76, of first-class, and two of second-class. The big body of iron that I spoke of last week has now pinched down to a few inches, but I think that we will find a large body of good ore here. I now have the building well under headway, and the boilers are now in place. The brickwork is nearly completed, and we begin to put the engine-house in position in a few days; the machinery will, therefore, be running by Oct. 1. We are still shipping to market from 12 to 15 tons per day.—A. L. SWOPE.

GARFIELD (Aug. 22).—Report from mine.—The following work has been done at the mine:—Western mine, 180-ft. level: Drift running east was lengthened 14 ft., making in all 32 ft. Although our indications, when we commenced, were most favourable, after driving 22 ft. we came into hard rock, which cut our ledge formation and quartz out; so for the present I have ceased extending the drift. Mr. Hooper advised getting the water out of No. 15 winze (which I reported having found, in sinking, in my report of June 6), so we are securing the winze in order to do so. This winze is directly under where we cut a small seam of quartz, containing some very valuable ore.

GOLDEN GATE ALLUVIAL (Aug. 25).—I find that a large amount of *débris* is still in the claim, particularly at the lower end, undoubtedly due to the retarding of the winter floods at that point by the foundations of the Golden Feather head dam, but I shall start a large force to work on the 27th inst. to run a cut to bed-rock, and once this is done the thorough opening and working of the claim will be rapidly accomplished. I am pleased to report that the *débris* in the claim is much finer than last season, and, therefore, more rapidly and cheaply got rid of.—F. McLAUGHLIN.

—Cable received 10th inst.:—"Still sinking for pay; when reached will undoubtedly make continuous returns."

INDIAN CONSOLIDATED (Aug. 15).—Phoenix section: Tramway level has been extended 8 ft.; the lode matter is quite as wide as in my last, and carries a little more mineral, but is otherwise unchanged. No. 1 level: At this point we have driven 12 ft.; the lode is as strong as ever, with a splice of quartz across the face about 2 ft. wide at top, but it is at present poor and broken up. Stoeps A and B are still about 3 ft. in thickness, but a good deal mixed with black rock. C and D are quite 5 ft. wide, and the quality of the stone is good. E: very little can be done at this point until it is drained by a short drive we are making below, which will, I hope, be finished in the course of the week. F: I changed the contractor here, as the former man worked very irregularly; the lode here varies from 2½ to 5 ft., and is of fair quality. G, H, and J: The stone here is poor, the lode being from 2 to 6 ft. in width.—G. A. PATERSON.

—(Aug. 18).—Colar section: No. 1 shaft has been sunk for the past two weeks 2 ft. 6 ins., making a total depth from surface 239 ft. We have had a lot of hindrance here with the water, owing to the donkey pump giving out; had to take it to surface, and have had it thoroughly repaired, and it is again replaced in position and doing good duty. We hope to make better progress for next fortnight. No. 2 shaft has been sunk 10 ft. 6 ins., making a total depth on the underlie of 96 ft.; the lode here is thrown out very flat, and we are obliged to leave it and continue the sinking of shaft on its regular underlie; the rock is very hard, and bad for blasting. The 240 main shaft west cross cut has been driven 24 ft. 3 ins.; total distance from shaft, 480 ft. 9 ins.; the end is still in the trap dyke, and occasionally letting out a little water. No. 5 shaft: The 425 cross-cut has been extended 23 ft. 3 ins.; total distance, 41 ft. 6 ins. There is no change here since last report.—M. STEPHENS.

KANGARILLA.—The board sends extract from the Colonial newspaper, the *Register*, published at Adelaide, of date Aug. 3, containing an interesting account of the ceremony of starting the machinery at the Aclare Mine on Aug. 1 last by the Hon. W. Copley, M.L.C., Minister of Public Lands and Mines. The directors have since received advices by cable from Mr. Rosewarne, stating that the adjustment of the ore-dressing machinery, jiggers, classifiers, &c., so as to work automatically and synchronously had taken longer time than had been expected, and also that additional delay had been occasioned by the accidental breaking down of the crushing rolls. It was, however, expected that this breakage would be repaired, and a working start made on the 9th inst. To those who are acquainted with the usual vexatious delays and difficulties in the erection and successful working of new, complicated and untried mining machinery this slight delay will not be altogether unexpected, in short, it would have been a marvel had not some of the gear given way when tried for the first time. Mr. Rosewarne reports that the whole of the ore-dressing machinery and plant is of the latest and most improved description, and the board has authorised the erection of an electric lighting plant, so that the machinery can be kept at work the full 24 hours per day. Specimens of ore from various parts of the mine have been received, and can be seen at the offices.

LA PLATA.—The results for Aug. as cabled by the manager are as follows: "Value of mine output \$6,300; slag dump output, \$1,000; profit at mines, \$1,090. A small shipment realised 50¢ per ton." Whitecloud (Red Mountain): The manager reports that the shaft house, machinery, and all necessary buildings are completed. The tunnel intersected the shaft at a depth of 117 ft., draining it entirely of water. The shaft has been further sunk to 160 ft., still free from water. The tunnel is now cutting into the reef with very good indications of ore.

LEEDS COPPER (Aug. 28).—Kent's shaft: The 20-fm. level driving west of shaft is again poorer, the bed vein being considerably mixed with poor quality stuff. I only look at this as temporary, producing 2½ tons 15 per cent. ore per c.f.g. No. 2 stope in the bottom of the 20-fm. west level has improved, having a rich vein of ore in the bottom of the stope 1 ft. wide; bed vein, 4 ft. 6 ins., and producing 5 tons 15 per cent. ore per c.f.g. No. 1 stope in the back of the 20-fm. west level continues as last reported, producing 3 tons 15 per cent. ore per c.f.g. No. 3 stope in the back of the 20-fm. west level has further improved, and is producing 4 tons 20 per cent. ore per c.f.g. The 25-fm. level driving west of shaft has further improved and is producing 3 tons 15 per cent. ore per c.f.g. No. 1 stope in the back of the 15-fm. level is without change, producing 4 tons 15 per cent. ore per c.f.g. No. 2 stope in the back of the 15-fm. level is not quite as good, the vein in the bottom having got very poor, producing 3 tons 15 per cent. ore per c.f.g. No. 3 stope in the back of the 15-fm. level continues the same, producing 5 tons 15 per cent. ore per c.f.g. McGee's shaft: The drive in this shaft is without change, producing 3 tons ore per c.f.g. We have made some trial blast on outcrops, which shows a little ore, but nothing worthy of mention. Surface: The mill is now running night and day, doing good work; the crusher will be at work in a day or two.—T. R. DAVEY.

MONTE DEL ORO (Sept. 1).—Fortnightly report:—Taylor's engine shaft: In the 316-ft. level north of this shaft 18 ft. were driven in the past fortnight, making its total length 92½ ft. The lode has declined to a width of 4 ins. to 6 ins., and it is composed of flookan and slate, both samples obtained assaying a trace of gold. Capital progress was made in extending the 316-ft. level south, its total length being 97 ft., or an advance of 29½ ft. for the two weeks. Two samples were taken, one from 6 ins. of flookan, slate, and fine quartz, and the other from 2 ft. of quartz and slate, but neither yielding any gold. At present the lode is composed of a small flookan. A depth of 57 ft. has been attained in winze No. 12 sinking below the 244-ft. level north of this shaft, of which 26 ft. were sunk in the fortnight. The lode of quartz maintains a width of 2½ ft. and two samples were taken from it, the first giving a trace and the second no gold. Shaft No. 6: The driving of the 244-ft. level north has been suspended on account of foul air, but we hope in the course of a few days to effect communication with the rise from the back of this level from winze No. 11 sinking below the 186-ft. level. In this winze the lode is composed of 2½ ft. to 3 ft. of quartz, but no sample has been obtained from it. Low's engine shaft: An advance of 35 ft. was made in the 120-ft. level north, and its total length is now 100 ft. For this distance the lode has an average width of 6 ins. to 8 ins., while its composition is flookan and slate, but the two samples taken gave a result of no gold on assay. Note.—Since writing the foregoing, communication between winze No. 11 and the rise from the back of the 244-ft. level north has been effected.—J. ROBERTS.

MOSMAN.—Mine manager's report for fortnight ending July 25:—North Australian Mine: This mine continues to turn out very good quality stone in limited quantity, taken from the various stopes. The reef varies from 2 ft. in thickness to a few inches. During fortnight 50 tons of quartz have been raised, making a total of 115 tons in the paddock, the quality of which is about the same as that last crushed; if anything a little better. Eastward Ho! Mine: Nothing has been done in this mine except by tributers, who have raised some stone from old workings; one party during 16 weeks have obtained 84½ tons, which has been crushed, yielding 94 ozs. 15 dwts., value 326l. 12s. 8d.; the company receive from this amount 32l. 13s. 4d. percentage, and for carting, crushing, and other costs, 78l. 0s. 4d.; total, 110l. 13s. 8d.; leaving the tributers 215l. 19s. between four of them for 16 weeks' work. I intend removing six or eight men from the stopes in Wyndham shaft to try some ground in old shaft, where I think a few tons of quartz may be obtained. Wyndham Mine, Underlie shaft: This shaft has been sunk 13 ft. during the past fortnight; the rock passed through is very hard and difficult for working; the total depth from surface is 859 ft. I feel more confident than ever that the shaft has missed the reef, which I think is underneath—i.e., the shaft is going down over the top of it, and shortly, as the shaft is continued down at an angle of 48 degs., the reef will be met with. (Cabled July 21: "740 tons; 1,036 ozs. gold." Actual figures: 221 tons, North Australian, 698 ozs.; 525 tons, Wyndham, 346 ozs. 9 dwts.; 746 tons yielded 1,044 ozs. 9 dwts.) Small leaders, from ½ in. down to the smallest thread in thickness, appear to be coming from below through the hard rock. The 550-ft. level south: This level has been driven 8 ft. during fortnight; total length from shaft, 141 ft.; reef, 6 ins.; poor quality stone. The 550-ft. level north has been driven 8 ft.; total length, 138 ft.; the reef is 1 ft. in thickness of mineralised stone, but I fear the amount of gold it contains is small. 55 tons of quartz are now at grass towards next crushing; 525 tons of stone was put through the battery for a yield of 346 ozs. 9 dwts. of gold. (Cabled Aug. 21: "Have struck quartz 2 ft. thick in Wyndham shaft with specks of visible free gold." The crushing mill is running on stone from tributers, which will be finished on Monday next, when about 350 tons will be crushed from the Victoria Mine. Although there has been no rain for some time past there is plenty of water so far for crushing purposes without having to pump from the Mystery D (workings), but ere long it will be necessary to do so.

MYSORE (Aug. 18).—Mining operations for the fortnight ending Aug. 17:—There has been very excellent progress made with the rock-drills in the different bargains throughout the mines. The 890 east of Rowse's shaft has been driven 29 ft. 2 ins.; we have met with several small veins containing quartz, but not sufficient to value; the rock presents a very congenial appearance for gold, and the quartz is of an auriferous character. The 620 south of incline shaft, on the west lode, has been driven 25 ft.; total distance, 121 ft.; the lode is 1 ft. 6 ins. wide, and assaying 4 dwts. The 550 south of incline shaft, on the west lode, has been driven 26 ft.; total distance, 168 ft.; the lode is 3 ft. wide, and assaying 19 dwts. Glen's shaft: The 250 north of shaft has been driven 33 ft. 6 ins.; total, 391 ft. 10 ins.; the lode is 2 ft. wide, and yielding quartz of low quality. The 250 east of this shaft has been driven 28 ft.; total distance, 167 ft. 6 ins.; the ground is mixed with patches of quartz, but nothing regular or defined. Tennant's shaft: The 360 north of shaft has been driven 35 ft.; total distance, 626 ft. 5 ins.; the lode is 1 ft. wide, and yielding some saving work for quartz. The 360 south of shaft has been driven 25 ft. 6 ins.; total distance, 114 ft.; the lode is 9 ins. wide, but unproductive. The 290 cross-cut east of shaft has been driven 24 ft. 6 ins.;

total distance, 47 ft.; at this point it intersected the east part of the lode, on which we have also driven 6 ft. 6 ins. in a lode 2 ft. wide, and assaying 6 dwts. I feel confident this lode will greatly improve as it gets further north. The 290 south of shaft has been driven 20 ft.; total distance, 535 ft.; the lode is 1 ft. wide, but disordered by trap rock. The 235 north of winze north of shaft has been driven 26 ft.; total distance 45 ft.; the lode is 2 ft. wide and assaying 9 dwts. Schaw's shaft: The 450 north of shaft on the west part of the lode has been driven 3 ft.; total distance, 472 ft.; the lode is small and unproductive; the part of the lode recently discovered in the cross-cut driving east at this level is 2 ft. wide, and assaying 3 dwts. 14 grs. The 450 south of shaft has been driven 7 ft.; total distance, 114 ft. 6 ins.; the lode is 1½ ft. wide, and assaying 2 dwts. The 320 north of shaft has been driven 3 ft.; total distance, 185 ft. 6 ins.; the lode is small and poor. The 320 south of shaft has been driven 4 ft. 6 ins.; total distance 246 ft.; the lode is 1 ft. wide and assaying 1 dwt. 7 grs. Stopes: The lode in stope in back of the 780 north of Rowse's shaft is 3½ ft. wide, and assaying 4 ozs. The lode in stope in back of the 700 north of the shaft is 3 ft. wide, and assaying 5 ozs. 5 dwts. 19 grs. The lode in No. 2. stope in back of this level north of the winze is 2 ft. wide, and assaying 2 ozs. 3 dwts. 2 grs. The lode in stope in back of this level south of Rowse's shaft is 2 ft. wide, and assaying 19 dwts. 14 grs. The lode in stope in back of the 700 south of incline shaft is 3 ft. wide, and assaying 19 dwts. 14 grs. The lode in stope in bottom of this level, south of incline shaft, is 2½ ft. wide, and estimated to be worth 1 oz. The lode in stope in back of the 620 south of Rowse's shaft is 3 ft. wide, and estimated to be worth 15 dwts. The lode in No. 2 stope in back of this level is 2 ft. wide, and estimated to be worth 1 oz. The lode in stope in back of the 620 north of shaft is 1 ft. 6 ins. wide, and assaying 3 ozs. 5 dwts. 8 grs. The lode in stope in back of the 550 south of incline shaft on the west lode is 2 ft. wide, and assaying 1 oz. 4 dwts. 9 grs. The lode in stope in bottom of the 550 south of Rowse's shaft is 3½ ft. wide, and assaying 7 dwts. 19 grs. The lode in stope in back of the 550 north of Rowse's shaft is 2½ ft. wide, and assaying 2 ozs. 4 dwts. The lode in No. 2 stope in back of the 466 north of Taylor's shaft is 3 ft. wide, and assaying 7 dwts. 6 grs. The lode in stope in back of the 400 south of the shaft is 2 ft. wide, and assaying 7 dwts. 6 grs. The lode in stope in back of the 400 north of Rowse's is 3 ft. wide, assaying 4 dwts. 13 grs. The lode in stope in back of the 400 south of Plummer's is 3 ft. wide, and estimated to be worth 5 dwts. The lode in stope in back of the 360 south of shaft is 3 ft. wide, and assaying 8 dwts. 19 grs. The lode in stope in back of this level north of shaft is 2 ft. wide, and assaying 5 dwts. The lode in stope in back of the 296 north of Rowse's is 1 ft. 6 ins. wide, and assaying 1 oz. 7 dwts. 10 grs. The lode in stope in back of this level south of shaft is 3 ft. wide, and assaying 1 dwt. 15 grs. The lode in stope in back of the 236 north of shaft is 4 ft. wide, and assaying 1 dwt. 7 grs. The lode in No. 2 stope in back of this level is 2 ft. wide, and assaying 5 dwts. The lode in stope in back of the 290 north of Tennant's shaft is 3 ft. wide, and assaying 2 ozs. 12 dwts. 6 grs. The lode in No. 2 stope in back of this level is 2½ ft. wide, and assaying 3 ozs. The lode in stope in back of the 180 north of shaft is 3 ft. wide and assaying 2 ozs. 3 dwts. The lode in No. 2 stope in back of this level is 3½ ft. wide, assaying 2 ozs. 3 dwts. Sinking: Rowse's shaft has been sunk 10 ft. below the 890 level; the ground is rather hard and spare for progress. The winze in bottom of the 730 north of shaft has been sunk 14 ft.; total distance, 33 ft.; the lode is 4 ft. wide and assaying 4 ozs. 6 dwts. 8 grs. At Tennant's shaft the men have been engaged cutting ground for bearers and cistern, and fixing plunger lift at the 360-ft. level. Gilbert's shaft has been sunk 9 ft.; total distance, 160 ft.; the ground is much harder, but the progress continues to be fairly satisfactory. We have had no rain yet to give us any increased quantity of water for our dressing operations, but at the present time the mills and all our tailings machinery are in full work. Mill samples: New mill quartz, 2 ozs. 5 dwts.; old mill quartz, 1 oz. 17 dwts. 6 grs.—J. GILBERT.

NEW DEVALA-MOYAR.—Mine manager's report for week ending Aug. 13.—The 186 level, drive west: Driven 5 ft.; total, 41 ft. The 186 level, drive east: Driven 3 ft.; total, 11 ft. No. 4 winze, 116-ft. level: Driven 3 ft.; total, 19 ft. 6 ins. Mill and machinery running as usual, 24 hours per diem.

NEW VISO (Aug. 31).—In consequence of the dry and hot weather now prevalent, there is a considerable falling off in our water supply for dressing, and thereby a corresponding reduction in the quantity of tin being cleaned, and as the autumn season is generally dry I do not expect much improvement in this respect for some weeks yet to come. There is no falling off in the quality of the alluvial being worked at Mi Amor, and its breadth and depth continue just the same as they have been, being on an average about 40 ft. wide and 5 ft. deep. Our underground operations on the lodes are going on actively, and regularly. The California adit is being driven north on the east, or footwall, side of the lode, which is of a very kindly character, and seldom without yielding tin. It is also favourable for driving, the price being a dollar per metre, and at the rate of one-third tribute, or 6s. 8d. in the £ on the value of the tin got out. Seeing the time and circumstances are now convenient, I have started a winze below the adit, in order to prove the character of the lode in depth. As far as yet seen it is harder than in the upper part of the mine, and consists mostly of quartz, with patches of tin. The price for sinking is about 10s. per metre, and one-third tribute on the tin. I intend pushing on this point by a full set of men, in order to get down as far as possible before the winter sets in.

GOLDEN LEAF, LIMITED.

MR. STEWART WALLACE AT THE MINE—AUGUST RETURN.

THE secretary announces the following telegram, received from Mr. F. Henry Longmaid, the company's general manager:—"During Aug. the mill at Empire worked 60 stamps for 28 days; crushed 5,000 tons; and the yield was as follows:—Bullion, \$12,500; sundries, \$1,350; total, \$13,850. The working expenses for the month were \$9,500; \$1,350. Expended on capital account, \$1,500."

Mr. Longmaid adds:—"Chairman arrived (at Bannack, Golden Leaf) Sept. 1. The mill was started Sept. 3; running well. We have struck high-grade ore in the south drift, 100 ft. below main tunnel."

REPORT UPON EMPIRE FOR JULY.

Aug. 18.—Empire Mine—Lower drift: This has been driven a distance of 72 ft. on a strong vein of quartz, carrying gold up to \$6.02 per ton, and during the last few days of the month, as much as \$15.50 in silver per ton—something very unusual in the Empire Mine. No. 4 winze in floor of No. 3 tunnel, to connect with bottom drift, has been discontinued at a depth of 60 ft., a large vein carrying practically no value in gold. No. 2 winze: Good ore is still being broken in both ends of this winze, about 15 ft. below floor of No. 3 tunnel. No. 2 tunnel: The stopes at the east end towards No. 1 shaft and the surface are producing a large quantity of ore daily, and east of No. 1 shaft the stopes are very wide, and will produce enough to keep the mill in operation at least three months alone. Smithville: All the stopes in this mine going towards Empire Mine are looking well, and during the month a body of ore assaying an average of \$5 to \$6 has been found and opened out, showing at least a three months' supply for the mill. At present, in both mines, we can estimate a six to eight months' ore supply, and during that time, our developments, being pushed ahead as rapidly as possible, may develop bodies of pay ore, and keep us in continual operation. Mill: The mill is now working very smoothly, and in better condition than ever, hence the larger crushing capacity. Tailings mill: The tailings mill is in smooth working order, and, whilst operating on old company tailings, pays well. In addition to treating the entire tailings from 40 of our stamps it also handles about 50 tons daily of tailings produced last winter, in admixture with those made by old company. The tailings from 20 stamps working on Smithville ore are concentrated in the 60-stamp mill, and so not re-handled in tailings mill.

REPORT UPON GOLDEN LEAF FOR JULY.

Aug. 5.—Golden Leaf Mine: Main south drift has been driven 57 ft. towards the Wadhams, a small bunch of quartz being found, assaying \$2 to \$5 to the ton. We are now following this with one man, but as yet have no results to report. We hope to strike another contact between syenite and lime in a few days. From No. 1

winze, north drift has been continued 17 ft. and south drift 72 ft. but no bodies of high-grade ore have been found; nearly the entire distance being driven in soft vein matter, at times assaying as high as \$8 to \$15. From 30 ft. down No. 3 raise a drift has been run 39 ft. to the south on a very promising vein of quartz, assaying low, at present \$2 to \$5, but apparently leading to ore bodies not found as yet in our lower workings. From our main north drift, above tunnel level, drift has been continued 9 ft. in vein matter of no practical value. A cross-cut has been driven 13 ft., connected with old Shenon workings, and proving a very large vein with pockets of low grade quartz. Another cross-cut has been driven from this drift 9 ft. on a very promising quartz body. No. 2 tunnel has been driven a further distance of 112 ft. towards Wadhams shaft, ground remaining comparatively soft, with no change to report. Pioneer Placer: This has shown a decided improvement through month of July, and we have been able to obtain wood enough to keep our pumps in operation. A good profit will be realised from season's working, but this it is impossible to estimate until final clean up. Deep Placer: To Aug. 1 we have sunk present shafts 15 ft., and driven drifts 88 ft. 8 ins., in ground that would pay if worked by some improved plan, but not by drifting and heavy timbering—now a requisite. We are, however, making expenses, and may at any time strike a rich channel, and yet make a handsome profit for summer's work, besides well prospecting our ground. New mill: We have been unable to haul machinery in as fast as we should, one trip from Dillon, 30 miles distant, taking 12 days, owing to unusually heavy rains, which are still of almost daily occurrence. We, however, have all our lumber in and hope to complete haulage of machinery this week, and hope to start mill towards end of month. Store: About half the stock has been hauled in, and is now coming in daily. Business commenced on July 1, and our sales are steadily increasing as stock is displayed. No results of any importance need be looked for until the mill is in operation, and the partial extraction of ore bodies now exposed of high grade ore leads to the discovery of others. This is the only economical way of thoroughly opening and prospecting a mine, whose ore bodies exist on such an irregular contact.

PUBLICATIONS RECEIVED.—We have received from the Institute of Civil Engineers the following publications: "Webster on Fire-proof Construction;" "Unwin on the Transmission and Distribution of Power;" "Eliot and Aytoun on Scarborough Improvement Works;" "Harris on Skew-arch Course Traces;" "Kidd on the Construction of Piers and Breakwaters;" "Redgrave on the Manufacture and Properties of Slag-cement;" "Tait on the Lanarkshire and Ayrshire Railways;" "Urquhart on Communication in Trains."

House, Old Broad Street, London, E.C.

NOTICE TO READERS.

Replies to Annual Subscribers will be sent by wire or letter, as
may be necessary.

Peter X.—Say, 50 in the first-named, and 100 each of the others. Your selection
is a very good one.

Balham.—The report is considered bad. We think, under the circumstances
you name, a better chance of recovering your loss will be by waiting.

Molar.—We can give you the names of a few shares likely to rise if that is what
you require. State exactly, when we will reply by letter.

C. H. (Bruce).—Buy Nos. 1 and 4, but for the time being we consider you
have sufficient at stake in the others.

Dutchman.—Yes. It is a good time to buy while they are so low. Any day the
shares might have a sharp rise.

Amazed.—Why not take the good profit shown? They may possibly go higher,
but we cannot, of course, state positively.

S. W. R. (Milderton).—The prospects are exceedingly encouraging, and we cer-
tainly do not advise you to sell.

Tasmanian.—No.

Hopeful.—Give it another chance. We cannot advise sale of your holding.

Stylo.—The management is anything but satisfactory. Do not touch the
shares.

Lemore.—On their merits they should go much higher. Wait events.

B. K. (Cromer).—Sell immediately.

Baltic.—You should hold.

Flinstone.—Higher prices are expected. Do not sell.

Admirer.—Our opinion is that they ought to be sold.

Norwich Sub.—Will probably reach the price before another month. Hold.

"General."—Directly an improvement is shown we advise you to take advan-
tage of it and sell. No great rise in our opinion is likely.

Capital (Manchester).—They are worth taking up. Advise your broker at
once.

Y. A.—We rather think by selling your shares you will have a better chance
in the other concerns named.

SOUTH AFRICAN TRUST AND FINANCE COMPANY, LIMITED.

THE MANCHESTER AND LIVERPOOL DISTRICT BANKING
COMPANY, LIMITED.

THE STANDARD BANK OF SOUTH AFRICA, LIMITED.

The Company undertakes the following business:—

The skilled investment in South African Mining, Land, or other
securities for European investors.

Professional and confidential reporting upon companies, mines,
mineral properties, lands, and generally advising European share-
holders and others in South African ventures.

To act as agents on behalf of principals interested in South
African investments, and for the protection of their interests, and
where desired, to register shares in such undertakings, and to issue
certificates in exchange for same, thereby enabling European holders
to co-operate for their mutual protection.

Financing or advancing moneys to corporations, companies, syndi-
cates, or persons in South Africa.

The receiving of money on deposit.

The purchase and sale of properties, and all classes of South
African securities or interests.

A Mining Circular containing special information will be posted
weekly from the South African Office to all subscribers.

A SPECIAL CABLE CODE FOR PROMPT AND ECONOMICAL COMMUNI-
CATION BETWEEN THE SOUTH AFRICAN AND LONDON OFFICES.

Further information can be obtained at the Head Office of the
Company.

The Mining World.

LONDON: SATURDAY, SEPT. 12, 1891.

Speculator nor under the control of any clique.*

RANDT CRUSHINGS.

It is worthy of observation that the output of gold from the Wit-
watersrandt mines during Aug. was, to the extent of 2,688 ozs., larger
than in any previous month. The actual yield is reported by the
Johannesburg Chamber of Mines to have been 59,070 ozs., comparing
with 42,862 ozs. a year ago; 32,142 ozs. in Aug., 1889, and 19,877 ozs.
in the corresponding month of 1888. This is certainly evidence of
very marked progress, and it proves conclusively what we have never
attempted to dispute—that the district is highly auriferous, and it
points further, to the conclusion that under proper conditions the
majority of the Randt Mines, instead of a small minority of them,
ought to pay satisfactory dividends. In the following table we show
the yields obtained month by month since the beginning of 1888:—

	1888.	1889.	1890.	1891.
	ozs.	ozs.	ozs.	ozs.
January	11,269	24,986	35,088	53,205
February	12,162	25,800	36,886	50,079
March	14,706	28,075	37,602	52,949
April	15,853	27,136	38,799	56,362
May	19,002	36,298	38,844	54,673
June	16,328	31,272	37,419	55,863
July	19,966	32,407	39,456	54,920
August	19,877	32,142	42,862	59,070
September	20,495	34,369	45,456	—
October	27,775	31,914	45,249	—
November	27,336	36,116	46,783	—
December	26,148	39,218	50,352	—
	230,917	379,733	494,756	437,121

During 1887, monthly returns were not published; but the total
output for the year was stated by the local Chamber of Mines to have
been 34,897 ozs. If that amount be added to the totals for three years
and eight months since, it will be found that the Randt district has
yielded up to date 1,577,434 ozs. of gold, or roughly, 6,000,000%. This
is, of course, a very good showing for an industry which is practically
only about five years old, and which it must be admitted, has been,
for the most part, about as badly managed as it is possible to imagine.
It may be of interest if we give the returns of a few of the most

productive mines during the past four months, so that those who are concerned may see at a glance the sort of progress that has been made :—

In several instances the progress shown is satisfactory, and from the views expressed to us by men of position and probity, who have recently returned from Johannesburg, we gather that the prospects of such mines as Sheba, Crown Reef, Robinson, Geldenhuis, Durban-Roodepoort, Ferreira, Langlaagte, City and Suburban, and May Consolidated are all that could be desired. The management of the properties is in good hands, and the developments in depths are turning out well. But of the industry as a whole the reliable information is not encouraging. Many of the mines are rich enough to pay good dividends on moderate amounts of capital; but there are a few unscrupulous adventurers who, directly and indirectly, dominate nearly the whole business, and until some means are devised of ensuring that the interests of absent shareholders shall be safeguarded, we should strongly advise our readers to leave Randt shares alone.

THE FALL IN CARN BREA.

Now that Carn Brea shares have fallen from 72 $\frac{1}{2}$., at which they were quoted a few months ago, to 23 $\frac{1}{2}$., at which we quote them to-night, the Cornish papers are telling their readers (the shares being mainly held in Cornwall) not to be alarmed. It is difficult to act up to this advice, well-intentioned as it is. Holders of the shares are, to put it mildly, considerably alarmed, and are beginning to ask "What is to become of Carn Brea?" The fall is due mainly to the disordered ground met with in Highburrow West lode, and to the advantage which has been taken in the Redruth Exchange, and out of it by interested persons to depress the shares. Comparatively a short time ago the selling value of the mine was considerably over 400,000 $\frac{1}{2}$., and that value has dropped within the past few weeks to the extent of no less than a quarter of a million sterling. The situation calmly reviewed is, however, not without features of encouragement. At the next meeting it is estimated there will be a round sum in hand of 10,000 $\frac{1}{2}$., after paying the usual 30s. dividend or 9,000 $\frac{1}{2}$.. It is also expected that the disordered ground referred to will be passed through, and that in a short time Carn Brea will justify the numerous favourable reports that have lately been written concerning it. It should also be remembered that the position is certainly better than it was when Carn Brea re-entered the dividend list (after a long absence from it) sometime ago. At that period the shares were actually higher in price than they are at the present time, although large reserves are now known to exist which were purely problematical at that time.

THE HARMONY GROUP AGAIN.—A CAUTION.

THE public have heard rather more of the Harmony Group in the past than has been agreeable, as well as of the Budge Row cabal, which has taken it, of course, with "disinterested" motives, under its wing. The shares the public have so far been induced to swallow have proved indigestible, but the dose is now to be changed. Potsdam Reefs and Sutherland Reefs are to be joined in a sort of unholy matrimony, and if shareholders are wise they will forbid the banns. The chief work done by the Sutherland Reefs so far has been to disappoint the shareholders, and Potsdam Reef has been "equally successful." Both concerns have made a promise to the ear and broken it to the hope. They are now about to be united, but we have yet to learn that two bad mines ever made a good one. If shareholders are well advised they will give these concerns a wide berth. They know the losses they have already entailed upon them, and if they act prudently they will decline to add to them by throwing good money after bad.

NEW CONSOLIDATED.

AN APPEAL TO MAJOR JOSEPH.

MAJOR JOSEPH is equally distinguished in the walks of military and civil life. Like Othello, he can "set a squadron in the field, and the division of a battle knows," but he has the advantage of the Moor in this respect, that he can also talk like a sage to a body of shareholders on the subject of finance. Just as he can detect the weak place in

the enemy's position, so he can put his finger on the vulnerable point of New Consolidated. But though he can detect the wound, has he the courage to apply to it the poultice of bank notes which alone can heal it? We shall see.

Since New Consolidated shareholders last met (now an unaccountably long time ago) Mr. H. W. Spratt has resigned the chairmanship into the hands of Major Joseph. There was a day (it must now be quite 20 years ago) when Mr. Spratt made a speech, which, to use a theatricalism, "brought down the house." In the old London Tavern—what a host of memories does it conjure up—he lifted up his voice before South Aurora shareholders with so much eloquence that they looked upon him as a sort of Joshua, and called him to lead them into the promised land, across the Jordan of difficulty in which they were then floundering. They asked him to head the committee, which they then and there appointed at the sole invocation of his voice. The committee sat to such good purpose that a return of 30,000 $\frac{1}{2}$. was made to the shareholders—a result we feel quite sure such as was never obtained by any committee before, and has never been obtained by any committee since. Mr. Spratt was invited to become the leader and lawgiver of New Consolidated, and since then has grown grey in service. If Mr. Spratt had been as wise 20 years ago as he is now, wild horses would not have extorted that London Tavern speech from him, for it has brought upon him a heritage of work and worry, such as few companies have entailed upon those who, in a rash moment, have undertaken to direct their operations. But let that pass. Mr. Spratt's eloquence was of a fervid kind, and carried all before it, like an avalanche. Major Joseph's powers of speech are of the persuasive order, and carry you whither you would not, and even into paths which you do not understand. The successive chairmen of New Consolidated have not been found wanting in the matter of oratory, though in that of action we shall proceed to show that they have, possibly through circumstances beyond their control, been somewhat deficient.

The position of New Consolidated at the present time is this—that it has most valuable properties which, to all intents and purposes, are lying dormant. Major Joseph, in terse and pointed sentences, tells the shareholders that it is so, and his colleagues cry "Amen." But why are they lying dormant? Far be it for us to question in the least degree the courage, financial or otherwise, of the gallant Major, but we venture to put it to him whether, in dealing with New Consolidated, he has displayed quite as much financial backbone or initiative as might have been expected from one so gifted in speech. To all intents and purposes he is the leader of the Consolidated Co., as much as Genl. Booth is of the Salvation Army; but instead of giving his troops marching orders he asks them to dictate what those orders are to be. It is new, in the ethics of warfare, to see the troops direct the general instead of the general directing the troops. We appeal from Major Joseph in his civil capacity to the same gentleman in his military capacity, and ask him what he would think of a general in the field who addressed his soldiers thus :—"Well, my men, here we are, but what are we to do, or, as the Yankees would put it, what's your platform?" Major Joseph, as a military man, would scout the idea. He would form his own plan of campaign, issue his orders, and, gentle though he looks, and grey-headed though he be, he would shoot those who disobeyed them. Now, why cannot Major Joseph do in his civil capacity, as chairman of New Consolidated, what he would do if he were acting in his military capacity? We can assure the Major that so long as he contents himself with asking shareholders for a policy when he ought to be prepared with, and give effect to, one himself, so long the shares of his company will be comparatively worthless in the market, and so long valuable properties like those in Corsica and Nevada will remain unworked.

Major Joseph knows perfectly well that the shareholders expect action from the directors as well as eloquence. If Major Joseph is casting about for a policy, what does he think of this one? Call up the last shilling due upon the Consolidated shares, and apply the proceeds to the vigorous working of the Corsican properties. Let the South Aurora property lie dormant for the time, as just now the Eberhardt Co., whose mine adjoins it, is actively proving the ground. If they find nothing, then South Aurora need not be worked. If, as we strongly suspect will be the case, they discover a big body of ore, then money, as swift as thought, can be raised to develop South Aurora. The strategic point of New Consolidated position (if the Major will allow us the term) is the Corsican properties, and we venture to think that by the time the last shilling was spent in its development, so great a measure of success would have been reaped, that, if necessary, a re-construction of New Consolidated, which would provide ample working capital, would not merely be within the bounds of possibility, but might be regarded as an assured success. Now, will the gallant Major screw up his courage to such a point as this? We feel that the whole future of this company lies in his hands. If he will initiate a bold policy on something like these lines he will earn the gratitude of the shareholders, who hold him already in such high esteem. He is eloquent in speech—let him be prompt in action. Come, Major Joseph, the future of New Consolidated lies with you. Will you act up to the measure of your responsibility, or will you permit the company to pursue the lamentably drifting policy that has characterised it during the better part of the last 20 years?

SHALL ROMAN GRAVELS DIE?

"SHALL Roman Gravel die? To that question Mr. Peter Watson and his colleagues, at Wednesday's meeting, answered with an emphatic "No." If the present shareholders do not join the re-construction there are those who will—a fact they may take for granted. Why should Roman Gravel die? It has produced in former years 500,000Z. worth of lead-ore, and though it may be said that no mine can live on its past, yet this is always some guide to the future, and in mining it is one of the most reliable that can be had. The greatest body of ore Roman Gravel ever found was in the 65-fm. level and from that to the 80. At the 110 the lode fell off, and that was the cause of the mine's troubles. At the 125 down to the 155—the latter being the deepest point in the mine—the lode has improved, but a sudden bend shows that it is passing, much earlier than was anticipated, into the adjoining sett, known as East Roman Gravel. After seven years negotiations, and only through the death of the proprietor, and the consequent desire of the executors to realise the estate, East Roman Gravel has fallen into the hands of its big neighbour, for a trifling consideration, and the importance of this is that three or four of the best levels in the mine are passing directly into the new sett. "If this property were as valuable as you represent (said a shareholder), why does not a fresh company work it?" The answer given was clear: "Because they would have to sink a shaft from the surface at enormous cost, whereas Roman Gravel can attack the ground from the levels we have stated and from the shafts already sunk." A further advantage to Roman Gravel is that the pumping charges will not be greater than formerly, for ever since East Roman Gravel has ceased working, its neighbour has drained its ground. Under the new scheme the shareholders will be asked to provide 5s. per share. It may be said that the necessity is regrettable, to which we reply that the speculation is a good one. We hope no shareholder will be so unwise as to throw away his interest. If he does, then he must not blame the directors if they take steps to put other people in his place, who can appreciate a good mining chance when they see one. As Mr. Watson said, "This is no mythical district, for Roman Gravel and the surrounding mines have already produced between seven and eight million sterling worth of mineral." It would be good enough, as a mining chance, to commence *de novo*, but when it is considered that Roman Gravel is a fully equipped mine, upon the machinery and other appliances of which a sum of not less than 30,000Z. has already been spent, the folly of thinking for a single moment of abandoning such a property is so manifest that it need not be dwelt upon. However, one shareholder seems inclined personally to adopt this policy of abandonment, because "some one in the city" told him the mine was worked out! With the reserves of ore pointed out by the manager, such advice is folly—almost criminal folly. If the blind lead the blind in this way, is it surprising that both should fall into the muddy pond? We remember Leadhills to have been in much the same position. The illustration is not out of place, seeing that many of the shareholders in that company are also shareholders in Roman Gravel. Leadhills was losing heavily for several years, but owing to the exertions of Mr. Peter Watson and his directors, as well as to the management at the mines, a change for the better was brought about, and instead of the dividend being 3s. 6d. as last time, it will, unless we are very much mistaken, be 4s. The facts connected with Leadhills should be an encouragement to the shareholders of Roman Gravel.

PARKER GOLD MINES, LIMITED.

WHEN this company was originally started it had no other hope—a very good one, by the bye—than that of finding gold. It has now developed into a land company of much promise. Already it has running through its extensive estate a railway, with a station in the heart of it. Population has begun to come round the neighbourhood, and "the citizens of New London," as they have called the place out of compliment to English capitalists, have petitioned that water may be supplied to them, for which they are prepared to pay. More than this, for one of the outlying mines, called Flint Spring, there is a purchaser in the field, who understands that cash, as well as a large interest in the shares of the new company proposed to be formed, will be wanted before negotiations are closed. In regard to the development works going on, Mr. Henry Judd gave a graphic description. He is evidently one who is quite out of the ordinary run of mine managers, and who may be expected to give a good account of the Parker Mines, if anyone can. We must congratulate his esteemed father, Mr. James Judd, who is chairman of the company, on having delivered the best speech we have ever heard from him in the course of his connection with this property. In this discourse, which we reproduce *verbatim* in another column, Mr. Judd elucidated and elaborated the whole position, so that no shareholder can truthfully say that the utmost information has not been supplied to him. It will thus be seen that the company has three strings to its bow—the land, the sale of one of its mines, and its own excellent prospects in the dual departments of hydraulicking and quartz mining, besides which there is also the prospect of considerable revenue to be derived from the sale of water to the budding City of New London. Under these circumstances, Parker shares, ordinary and preference, look amongst the cheapest

on the market, and we shall be greatly surprised if much higher prices be not quoted after the facts brought out at Wednesday's meeting become generally known.

BROKEN HILL PROPRIETARY CO.

THIS is the great silver mine, we need hardly say, of Australia, by which all the other mines in the vicinity swear. We have before us the report presented to the half-yearly ordinary general meeting held in Melbourne last July. The general tenour of what was said and read on that occasion points to a hopeful future for the mine. It mentions that two new shafts will soon come to aid the output. Little has been done in the way of sinking during the half-year, owing to a scarcity of labour. The furnace appliances have been increased, and large stocks on hand, within a period of five weeks, were realised to a value of 100,000Z. In the amalgamation plant great improvements have also been made. The output of lead has somewhat decreased, but that of gold continues to increase. It is now from 70 to 110 ozs. per week, and the opinion is expressed that as the mine is deepened, more and more of the precious metal will be found. The financial position is satisfactory. The quantity of ore treated has been increased in the year by 34,733 tons, but the company has not much benefitted from this, for several reasons, notably because the value of silver fell 8s. 9d. per ton, whilst the average grade was reduced from 39 ozs. to 35 ozs., or a total loss of 1Z. 3s. 9d. per ton. Against this must be set estimated yearly savings due to a tramway, cheapened freight and other causes, equal to 100,000Z. There is now a London office, and board of directors, the advantages of which are much appreciated in Melbourne. An official quotation here has not yet been obtained. The shareholders would not part with their shares, because "they are good to hold." When there is a disposition to sell, the English public will know from this what prompts it. At the same time the number of shareholders in London is steadily increasing. It is said that the total length of the lode is 3,960 ft., and the average width 105 ft., though at one point it has been found to be 310 ft. wide. It is estimated that only one-eighth of the lode has hitherto been extracted to the 300-ft. level, producing 787 tons silver and 108,000 tons of lead. The mine, directly and indirectly, gives employment to at least 5,000 men, and the company's freightage requirements keep actively employed tonnage equal to 22 steamers, of 3,000 tons capacity each, and the dividends paid are equal to 50 per cent., or, as it has been put, "half of those paid by the 20 leading banks of issue in Australia." The aggregate capital value of this remarkable concern is now 11,000,000Z. sterling, and the dividends amount per annum to 1,250,000Z.

IMPROVEMENT IN WHEAL UNY MINE.

IN connection with the recent meeting we drew attention to the encouraging state of affairs at Wheal Uny Mine. We are pleased to be in a position to say that important improvements have since then taken place in the bottom of the mine. It will be seen from the agent's report, which will be found in the usual place, that the western end is valued at fully 45Z. per fm. for the width carried, and the eastern end 20Z.—the aggregate value of the different points now being 137Z., exclusive of the 26 tribute pitches. It is quite correct to say that such a valuable lode has never before been seen in the mine. In future it is intended to sell at the fortnightly instead of at the monthly ticketing. The shares have been dealt in during the week at ever advancing prices.

SOUTH AUSTRALIAN PETROLEUM FIELDS, LIMITED.

ALTHOUGH nothing of a definite nature was decided at the meeting of this company on Monday last, as regards the object for which it was called, viz., the raising of fresh capital, the meeting certainly answered a purpose by bringing facts to light which will be read with considerable interest by a large number of persons. The petroleum trade during the past few years has undergone a greater change than, perhaps, any other industry that could be named. The United States no longer enjoys the monopoly which it once had. Fresh fields have been discovered in other parts of the world, which have proved rivals of no insignificant kind. This company possesses petroleum fields in Burmah and Australia. The former are said to be paying the expenses of working, and the latter, it is estimated, can be developed for the modest sum of 300Z. The company is, however, in the unhappy position of having no working capital, and the meeting was called with the object of increasing it. A statement, however, made by Mr. Pearson (the vendor of the Burmah property) that he was in a position to pay 7,500Z. to the company, in respect to the said property, and that he could obtain a loan of further money at a low rate of interest, decided the shareholders not to pass the resolution, but to have another meeting in the course of a month. The properties owned by the company are, no doubt, of a valuable nature, and if it can supply the demands of India alone the revenue will be something considerable.

THE JAY HAWK AND LONE PINE CONSOLIDATED MINING CO., LIMITED.

THE capital of this successfully re-constructed company is now fixed at 285,000Z. in 1Z. shares, with a liability of 3s. 6d., instead of 300,000Z., with a liability of 3s. each, as originally determined. The Lone Pine

Mine has been secured on the faith of very re-assuring reports supplied by the manager, Mr. Prideaux, and still more recently by Mr. Grothe, late of the Tharsis, and now mining manager of the United Mexican Co. The latter gentleman, like the former, strongly recommends the purchase of the mines, and states that they possess every indication of permanence and value. Profits can be made immediately possession is obtained, which will be on payment of the first moiety of the purchase-money. Mr. Grothe says:—"Taking the average ore contents at only \$40, there will be a net profit of \$20 per ton on the basis of recovering 80 per cent. of the silver. This gives \$800 per day, or \$280,000 per year of 350 working days. The ore now in sight will feed the mills for about 10 months, but there is no doubt that the ore reserves opened up will be more than what can be taken out of the mine, provided the development works under the lowest level are energetically pushed on by means of air drills. To all appearance the supply will last for a considerable time to come." In the face of facts such as these it would be tantamount to financial suicide on the part of any shareholder who did not avail himself of the rights which have been preserved for him to apply for new shares, particularly when he knows that the success of the re-construction scheme is assured.

THE MONEY MARKET.

CITY, FRIDAY EVENING.

FOR the present the weight of capital thrown out of its usual channels and seeking temporary employment, depresses not only its own value but the discount market as well. Offering at $\frac{1}{2}$ per cent. for short dates, it affords the opportunity for the discount houses to take bills at any margin of profit; hence the rate has fallen until it is now no better than $1\frac{1}{2}$, $\frac{3}{4}$ for bills of two months, or $1\frac{1}{8}$, 2 per cent. for those of three months' date. In spite of this, however, it is fully apparent that the uneasiness in the market has disappeared, and that more confidence prevails. This is undoubtedly largely due to the turn affairs have taken in Chili. The contrast between the bombastic attitude of Balmaceda, and the cool determination of his opponents, has been characteristic of the result. The windbag has been pricked and burst, and lo! all is over; the Government *de facto*, and the country, have nothing to do but to recover from the protracted struggle. A rise of from 10 to 15 per cent. has taken place in the bonds, the value of which can scarcely be over-estimated in regard to those interested in South American affairs here. It has helped the recovery in Argentine Securities, and, combined with the boom in the American market, has so strengthened the whole position as to afford relief to bankers' fears concerning the commitments in connection with the Baring Guarantee Fund. The substantial basis in which the rise in American Securities rests affords every prospect that the improvement in business and values will be maintained. The brilliant weather of the past week, at least, affords a hope that the harvest will be partially saved from the worst, and the figures of the Bank return seem to bear out the idea that farmers, as a rule, have wisely deferred operations for finer weather, and will now be amply repaid, for the circulation of notes and coin shows a return of equivalent to an increase of 565,000*l.* in the reserve, making it 17,282,000*l.*, against 14 million last year; but the proportion is only $1\frac{1}{4}$ better, at $46\frac{1}{2}$ per cent., as on balance the liabilities under deposits have augmented. The private securities have run off 270,000*l.* The Paris Exchange has advanced, until some sovereigns have found their way to the Bank; while the Berlin rate has fallen, until the demand at the Bank was renewed; but discount on the Continent is now dearer.

The upward movement continues on the Stock Exchange. That this should be so at the far-end of a long account is truly remarkable, and shows the solidity of the "boom." It should be observed that the Dardanelles question at no time had any very widely depressing effect, and now that is notified as settled it is a point favourable to all. Again, the country has now the benefit of splendid harvest weather, and money promises to remain reasonably cheap. Consols are somewhat flatter, owing to an issue of New South Wales $3\frac{1}{2}$ per cent. stock for 4,500,000*l.* which at 95 should be a success, but it has knocked down the price of the existing loans. Home Railways are steady, and slightly better for the week. Brighton "A" has been a feature, the weather having promoted a "bull" campaign in that mercurial security, but North British stocks have been lately heavily sold, and their dividend announcement is depressing for the Three per Cent. Preferred Ordinary only gets 1 per cent. per annum. The Leeds Co. propose to consolidate and convert their preference debentures into one grand 4 per cent. stock. Mexican Railways are somewhat firmer, but there is a distinct recovery among Nitrate Railways and the producing companies, Araucoshares, &c. United States descriptions exhibit gains of several dollars, notwithstanding extensive sales here and liquidation in Wall Street. Their harvest is realising the best anticipations, and earnings are increasing. International Bonds have risen on French support, and Greek, Russian, Suez Canal, and Spanish show most movement, though as regards the last reports have been in circulation of a sinister character. Argentine and other South Americans remain good excepting Uruguay, which continues to be sold owing to the hubbub created by the unpopular conversion scheme. Trusts, Banks, and Breweries are stronger, likewise Electric Lights, Elmore's Copper Depositing Group, and Deccan shares.

No change has been apparent in the money market to-day, short and full dated three months' bills remaining $1\frac{1}{4}$, $\frac{3}{4}$, and $1\frac{1}{8}$, 2 per cent. respectively, while money at call was as idle as at any time of late, and quite as nominal in value. The glorious harvest weather, late though it is, helps to keep the market dull. The bullion operations have been practically *nil*, but it is to be noted that against the influx of 19,000*l.* from Lisbon, the export of 20,000*l.* was for Germany. In the silver market bars were unaltered and Rupee paper dull.

Activity reigns supreme in Public Securities, owing chiefly to a continuance of splendid weather, which, though delayed, is simply

an incalculable boon to the country at large. However, the British Funds are flat, and New South Wales Stocks have fallen to about the minimum price of the new loan. In English Railways, Brighton "A" has run up to 151, and influential buying of this security has benefited other English railways, excepting British, Leeds, North-Eastern and Great Eastern Stocks. Grand Trunks were dull, while Mexican showed comparative buoyancy. North-West Uruguay Railway Preference fell 5 upon their report. United States Railways opened flat, and were sold until the afternoon, when a general recovery set in on good buying, in which New York took a prominent hand. Northern Pacific, Ohio, Wabash, Milwaukee, and Erie rose most, and as regards the latter their preferred dividend is considered assured. South American Government Bonds further advanced, and Spanish, French, Egyptian, and Ecuador showed great strength, otherwise Inter Bourse loans appeared weak. Iron, &c., seemed better, also Joint Stock Banks, Electric Lights, and Tarapaca Water Shares.

Annexed are the final quotations to-day:—Consols Account, 94 $\frac{1}{2}$, 95; Egyptian Preference, 91 $\frac{1}{2}$, 91 $\frac{3}{4}$; Egyptian Unified, 96 $\frac{1}{2}$, 97; French Four-and-a-Half per Cents, 104 $\frac{1}{2}$, 104 $\frac{3}{4}$; Hungarian, 88 $\frac{1}{2}$, 88 $\frac{3}{4}$; Italian, 89 $\frac{1}{2}$, 89 $\frac{3}{4}$; Mexican, 87 $\frac{1}{2}$, 88; Peru Five per Cents, 10 $\frac{1}{2}$, 11; Peru Six per Cent., 29 $\frac{1}{2}$, 29 $\frac{3}{4}$; Russian 1889, 98, 98 $\frac{1}{2}$; Portuguese, 38, 38 $\frac{1}{2}$; Spanish, 72 $\frac{1}{2}$, 72 $\frac{3}{4}$; Turkish 1871, 95 $\frac{1}{2}$, 96; Turkish Defence, 91 $\frac{1}{2}$, 92 $\frac{1}{4}$; Caledonian 115 $\frac{1}{2}$, 115 $\frac{3}{4}$; Great Eastern, 89 $\frac{1}{2}$, 89 $\frac{3}{4}$; Great Western, 161 $\frac{1}{2}$, 162 $\frac{1}{4}$ xd.; Brighton "A," 150 $\frac{1}{2}$, 151 $\frac{1}{2}$; North Western, 173 $\frac{1}{2}$, 173 $\frac{3}{4}$ xd.; Metropolitan, 84 $\frac{1}{2}$, 84 $\frac{3}{4}$; Metropolitan District, 29 $\frac{1}{2}$, 30 $\frac{1}{2}$; Midland, 158 $\frac{1}{2}$, 159 $\frac{1}{4}$; North British, 37 $\frac{1}{2}$, 38; North Eastern, 155 $\frac{1}{2}$, 155 $\frac{3}{4}$; South Eastern "A," 85 $\frac{1}{2}$, 85 $\frac{3}{4}$; Mexican Ordinary, 35 $\frac{1}{2}$, 35 $\frac{3}{4}$; Grand Trunk, 10 $\frac{1}{2}$, 11; Grand Trunk First Preference, 70 $\frac{1}{2}$, 70 $\frac{3}{4}$; Grand Trunk Second, 50 $\frac{1}{2}$, 50 $\frac{3}{4}$; Grand Trunk Third, 26 $\frac{1}{2}$, 27 $\frac{1}{4}$; Canadian Pacific, 92, 92 $\frac{1}{2}$; Denver Preference, 47 $\frac{1}{2}$, 48 $\frac{1}{4}$; Erie, 29 $\frac{1}{2}$, 30 $\frac{1}{4}$; Milwaukee 73 $\frac{1}{2}$, 74; Lake Shore, 121 $\frac{1}{2}$, 122 $\frac{1}{4}$; Louisville, 81 $\frac{1}{2}$, 81 $\frac{3}{4}$; Atlantic First, 38 $\frac{1}{2}$, 39 $\frac{1}{4}$; Ontario, 19 $\frac{1}{2}$, 20 $\frac{1}{4}$; Ohio, 23 $\frac{1}{2}$, 24 $\frac{1}{4}$; Norfolk and Western, 55 $\frac{1}{2}$, 56 $\frac{1}{4}$; Reading, 18 $\frac{1}{2}$, 19; Reading Bonds, 83, 84; Union Pacific, 43 $\frac{1}{2}$, 43 $\frac{3}{4}$; Wabash Preference, 29 $\frac{1}{2}$, 29 $\frac{3}{4}$; Ottoman Bank, 12 $\frac{1}{2}$, 12 $\frac{3}{4}$; Anglo-Telegraph, 48 $\frac{1}{2}$, 48 $\frac{3}{4}$; National Telephone, 4 $\frac{1}{2}$, 4 $\frac{3}{4}$; Hudson's Bay, 15 $\frac{1}{2}$, 15 $\frac{3}{4}$; Suez Canal, 112 $\frac{1}{2}$, 112 $\frac{3}{4}$; Guinness, 315, 317xd; Allsopp's Ordinary, 24, 26; Bryant and May, 13 $\frac{1}{2}$, 14; Eastman's Ordinary, 4 $\frac{1}{2}$, 4 $\frac{3}{4}$.

COMMERCIAL NOTES.

METALS.

COPPER has been quiet. G.M.B. warrants improved from 52*l.* 5s. to 53*l.* 5s. cash, and 53*l.* 15s. three months, but has eased off again to 53*l.* cash and 53*l.* 10s. three months. To-day's prices are 52*l.* 17s. 6d. cash, and 53*l.* 5s. three months. We quote English tough, 54*l.* 10s. to 55*l.* 10s.; best selected, 56*l.* to 57*l.*; strong sheets, 65*l.* to 66*l.*; India sheets, 60*l.* to 61*l.*; yellow metal, 53*l.* 6d. to 6d.; ore, 9s. 6d. to 10s. 9d. per unit.

TIN has been steady. Straits improved from 91*l.* 10s. to 92*l.* cash, but eased again to 91*l.* 12s. 6d. To-day's prices are 91*l.* 7s. 6d. cash, and 91*l.* 15s. three months; three months prompt has ruled 5s. to 7s. 6d. over spot tin. Mount Bischoff tin landing was sold yesterday at 93*l.*

The Dutch market has been firm. Banca quoted 55 $\frac{1}{2}$ *fl.*; billiton, 56*fl.* The Dutch Trading Co. announce their usual sale of banca for 30th inst. at Rotterdam, when 28,600 slabs will be offered. English ingots, 94*l.* 10s. to 95*l.*

TINPLATES are quiet, and quoted 13s. 3d. to 13s. 6d. for ordinary coke. Liverpool.

SPELTER steady, at about 23*l.* 15s. for ordinary brands ex ship here.

LEAD quiet. Soft Spanish about 12*l.* 5s.; soft English, 12*l.* 5s. to 12*l.* 10s.; L.B., 12*l.* 15s.; sheets, export, 13*l.* 5s.; home trade, 13*l.* 10s.

QUICKSILVER.—Rothschild reduced his price to 7*l.* 5s. on the 7th inst.; second hands quote about the same.

ANTIMONY quiet. Hallett quotes 41*l.* to 42*l.* for shipment to America; ordinary brands and delivery, 40*l.* to 41*l.*

DIVIDENDS DECLARED AND ANNOUNCED FOR WEEK ENDING SEPT. 12.

Bank of Australasia	14 per cent.
Borax	6 per cent.
Brighton and Hove Co-operative Supply	7 $\frac{1}{2}$ per cent.
British Gas Light...	10 p.c. and 2s. 6d. bns.
Bristol Waterworks	7 $\frac{1}{2}$ per cent.
Canterbury and Paragon	4 $\frac{1}{2}$ per cent.
Central Uruguay Railway	2 $\frac{1}{2}$ per cent.
East London Water	8 per cent.
Harpen Colliery	20 per cent.
Junior Army and Navy Stores	5 per cent.
London Joint Stock Trust	12 per cent.
Milwaukee and Chicago Breweries	8 per cent.
New England Breweries...	10 per cent.
New York Belting and Packing	8 per cent.
North British Railway, Preference	1 per cent.
Rosenell Gas Coal	20 per cent.

HOLLOWAY'S PILLS.—Liver, Lungs, and Kidneys.—Most diseases of these purifying organs arise from obstructions, over the removal of which these celebrated Pills exercise the most perfect control. A course of them is strongly recommended as a remedy for such chronic affections as liver enlargements, congestion of the lungs, torpidity of the kidneys, and other functional disorders which cause much present suffering, and if neglected lay the foundation of organic diseases. Holloway's Pills are specially adapted for the young and delicate; their gentle and purifying action ranks them above all other medicines. In indigestion, nervous affections, gout, and rheumatism these Pills have achieved for themselves universal fame. They expel all impurities from the blood, and thus restore cheerfulness and vigour.

CORRESPONDENCE.

We do not hold ourselves responsible for the Opinions or Statements of our Correspondents.]

To the Editor of the MINING WORLD AND ENGINEERING RECORD.

HARMONY GROUP—A NEW SHUFFLE OF THE CARDS.

SIR,—I hope your readers, who may be shareholders in the Potsdam and Sutherland Reef Co.'s, will refuse to apply for any of the shares offered to them under the amalgamation scheme. I hope also they will not be tempted in this direction by any reports that may emanate from interested brokers and other persons as to movements in the shares, which, I believe, are entirely confined to themselves for the purpose of getting a quotation in the papers. It is the old game which has been played so often, that the public ought to be familiar with the rules, the chief one of which is the greatest good for the greatest number and the greatest number, No. 1—that is the Harmony group of Budge Row.—I am, &c.,

ONE WHO DOES NOT INTEND TO SUBSCRIBE.

GUIANA GOLDFIELDS.

SIR,—I am glad you have directed attention to this concern as a means of exploiting the British public rather than of developing the mine. I am extremely surprised that Mr. Sowerby should have connected himself with such a concern as this. Is the rumour true that Mr. Greville Wears, "the distinguished mining engineer," was simply a timekeeper at some Venezuelan mine, and has had little, if any, practical mining experience?—I am, &c.,

Sept. 10.

RUSTICUS.

PRICES.

SIR,—I am glad to see the steady rise that has characterised mining prices during the last few weeks. I anticipate we are only on the threshold of a great improvement. It should be remembered that we are now in the dog days, when people, who pull the business wires are supposed to be out of town. When they return we may expect a period of greater market activity, and much better quotations than those which now prevail. Indeed, I view the present rise as infinitesimal compared with that which will follow. I think investors are very unwise who take advantage of the small advance that has already characterised mining shares, for they will thereby miss the much greater improvement I anticipated at a very early date.—I am, &c.,

Sept. 11.

HOPEFUL.

EMMA AND FLAGSTAFF SHARES.

SIR,—While strolling by the side of the sad sea waves at Yarmouth this week, the familiar form—perhaps the expression will be pardoned for the sake of the locality—"hove in sight." It was the professor. Does anybody wish to know who is the professor? To me there is only one professor, and his name is Vincent. I was enjoying, I must admit, a very pleasant holiday at the time, and thoughts of mining shares and business generally were far from me, but when, as I say, the professor "hove in sight," and I saw him from a considerable distance—thoughts the reverse of agreeable took possession of my soul, and the mood in which they left me was that of cursing rather than of praying. I remembered what the professor said at the last Flagstaff meeting which I had the opportunity of reading in your paper, and on the spot I bought 200 shares at 7s. 3d. each. I fancy my broker charged me 31. too much. Since then I have gradually seen them dwindling to a price so small, that it will very soon require Sam Weller's microscope of double extra power to make out what it is. I was under the impression that the professor was at Salt Lake City looking after the ore sales, and though I grudge no man his holiday, I confess my feelings were mingled as I viewed the professor in the distance taking his constitutional. At the same time I thoroughly believe he will yet redeem all the promises he has made, only I wish he would make haste and do so, for time is getting on, and I feel that I am growing no younger.

In regard to Emma, I am bound to say that a more disappointing mine I have never had anything to do with. What is the matter with the manager? How is it that the reports come so irregularly? How is it that they contain so little information? What is Judge Bennett about? What is being done in the mine? Precious little ore has been sold from it, and need I remind your readers that the winter is approaching when operations will practically have to be suspended. For my own part my decision is made. If between now and the end of the year Emma does not do something to redeem the promises so often made regarding it, I shall sell every share I have for whatever I can get, and never—this under the blue canopy of heaven—no never will I have anything to do with fickle Emma again.—I am, &c.,

ALMOST DESPAIRING.

Yarmouth, Sept. 10.

WHEAL UNY.—For the sake of the locality, as well as for the whole of the shareholders, it is very gratifying to learn of the continued improvement in the 244 west at Wheal Uny. Here they have a most valuable discovery, and one which there is every reason to believe will continue, and be of lasting benefit to the mine. The exact value of the lode is not yet known, but the stuff, for about 12 ft. wide, is doing nothing short of 2 cwt. to the ton. A full report will be issued, it is expected, by the manager next week. It will be remembered that Mr. Arthur Strauss stepped in at a critical period in the history of the mine, and by taking up several hundred of the relinquished shares, saved the mine being "knocked," as it undoubtedly would have been but for his action. It is very gratifying, therefore, to hope—although it is too early yet to speak with anything like certainty—that there is a strong probability of his being repaid along with other large shareholders, such as Mr. Bain and Mr. Hodgkinson, for his enterprise and pluck. The shares, which were practically unsaleable a few days since, have risen to about 10s.—*West Briton.*

THE RUBY MINING CO., LIMITED.

MR. HOOPER SENDS A REPORT OF AN UNDECIDED CHARACTER.

THE directors send the following report upon the mines by Mr. Hooper, and also the latest telegrams from Eureka:—

Aug. 10.—The mines:—Lord Byron: Since my last visit no very great amount of work has been accomplished on day's pay—consisting principally of (1) connecting the 160-ft. level with the ore-chimney that had been followed from the adit tunnel, and is, in fact, the continuation in depth of the ore-body said to have been left by Mr. Morcom; and (2), following the said ore-chimney, which branched out in two directions, making two distinct pipes, one of which is now said to extend beyond the north end-line of the company's claim, and work thereon was consequently discontinued; the other pipe of ore, which is at present being attacked, is also supposed to be adjacent to the boundary line, but this I cannot vouch for in the absence of plans. The ore from these pipes is of good grade, although it is doubtful, considering all things, whether the value thereof will much more than pay for the cost of extraction; but at the same time they might very possibly lead to other deposits of more importance. There is, I believe, quite an area of unexplored ground to the east of above-mentioned workings, and it would be advisable to prove same by following the main fissure in that direction. There are, I understand, nine men now tributing in this mine, only two of whom, namely, Butson and Sleep, appear to have anything more than fair prospects in sight—the other tributaries are following small pipes of ore, which about covers the cost of extraction, but may eventually lead to something of value. Messrs. Butson and Sleep have from 15–20 tons of good ore on the dump, and are preparing to continue sinking in a cave that they had previously discovered. Dunderberg Mine: The development work accomplished on the 800-ft. level, by the three men employed by the company, has not been altogether void of encouragement, and is, moreover, of considerable extent. It is expected that the upraise, which is now being put up in the ore, will soon hole into the old works. If nothing of importance can be discovered in following any of the fissures showing indications of ore on this 800-ft. level, I would suggest that the level be continued southwards as well as westwards; but I would have it understood that it cannot be expected, for several reasons, that I should lay out any definite programme for you to follow with regard to development work. I have advised the suspension of operations on the 500-ft. level (in which Mr. Fraser concurs), and the man who has hitherto been working there will, at my suggestion, prospect for ore in the Bismarck upraise from the 700-ft. level. Of the tribute pitches, both that of Cable's (one man), and also that of Giles and Medlin's (two men), are looking well, and will probably well repay the work expended in them. Bullwhacker Mine: The lessees are at present extracting good ore, better, indeed, than has hitherto been found there, the probable continuity of which it is impossible to determine. General remarks: The work done in the various mines by the company since my last inspection has been, as far as can be judged, performed in a miner-like manner, and with all due regard to economy. In considering the prospects of the company's mines, as regards the discovery of large and valuable deposits, I may say that, although from the very character or mode of occurrence of the ores, our highest anticipations may be realised almost any day, yet the general impressions gathered from the results of the development work of the past few months do not tend to make one so hopeful, as before, of attaining that end.

The following are the latest telegrams from Eureka:—"21 tons ore on company's account shipped and smelted, realising \$990." "30 tons tribute ore shipped and smelted, producing to company \$166. 19 tons ore on company's account shipped and smelted from Dunderberg, realising \$223."

ELKHORN MINING CO., LIMITED.

A 40 PER CENT. COMPANY.

BULLION produced for week ending Sept. 5, \$7,465. Mill stopped for repairs on Sept. 3, will start again on Sept. 7.

The directors have declared a sixth interm dividend of 2s. per share for the quarter ending Aug. 31, being at the rate of 40 per cent. per annum, payable on the 22nd inst. A balance of about \$4,000. is carried forward.

During the past quarter the municipal authorities of Jefferson County, Montana, U.S.A., where the mines are situated, have revived a hitherto disused statute, providing for a tax upon the net earnings of all mines in the county, and the company has been assessed upon all profits earned during the year 1890. This charge, amounting to 1,2287. 15s. 5d., is not payable until Dec. next, and is chargeable against the balance of revenue carried forward as stated above.

The company have received the following information from the mine:—"During the month of Aug. the mill worked 28 days, crushed 912 tons, and produced \$38,620 bullion. Smelting ore sold, 300 tons; \$15,438; total produce, \$54,058. Total expenses on revenue account, \$24,946. Everything is going right."

OSCAR (Aug. 28).—Hodgkinson's shaft: The men have sunk 6 ft. during the week, and there is a slight increase of quartz on the footwall, which assays 4 dwts. gold to the ton. The 300-ft. level continues to improve; the quartz varies considerably in value owing to the galena, &c., which is mixed with it. About the middle of next week we shall hole to the winze, which will open a good section of stopping ground, and add to the ventilation. The 200-ft. level north: We are still cross-cutting east to find the lode. Last week we struck on some quartz, which has the appearance of being the footwall of the lode, but as the ground is very much disturbed we are at present unable to form any definite opinion. We are following the lode along the bottom of the level where it first disappeared, and are breaking some good quartz, assaying about 1/4 oz. to the ton. We shall continue this work, as it will enable us to trace the lode later on. The 80-ft. level: We are pushing this level ahead as fast as circumstances permit. The cross-cut toward Bluet lode is being advanced about 6 ft. weekly. Williams' lode shows no alteration; we are sinking about 5 ft. weekly. Beyond the above there is no alteration to note.—J. DAW, jun.

REPORTS OF MEETINGS.

ROMAN GRAVELS CO., LIMITED.

RE-CONSTRUCTION TO BE MADE TO RESTORE THE FORTUNES OF A GRAND OLD MINE, WHICH HAS PRODUCED £500,000 WORTH OF ORE—ACQUISITION OF EAST ROMAN GRAVELS SETT, AND ITS IMPORTANCE TO THE FUTURE OF THE COMPANY.

AN extraordinary general meeting was held at the Registered Office of the company, No. 30, Finsbury Circus, on Wednesday, for the purpose of passing, with or without modification, the subjoined resolutions:—

RESOLUTIONS.

1. "That it is expedient to re-construct the company, and accordingly that the company be wound up voluntarily under the provisions of the Companies Acts 1862 to 1890." 2. "That pursuant to section 161 of the Companies Act, 1862, the liquidator be and he is hereby authorised to sell and transfer (subject to due provision being made for dissentient shareholders, if any) all the business, property, undertaking and assets of the company to a new company upon the terms of the scheme of re-construction now submitted to the meeting and identified by the signature of the chairman, and to enter into all necessary agreements for that purpose."

Mr. Peter Watson, C.C.

(chairman of the company), presided.

Mr. FELIX F. WILSON (secretary) read the notice of meeting.

A LITTLE HISTORY.

The CHAIRMAN: Gentlemen, the directors have called you together to-day at the earliest possible moment, after long negotiations in connection with the East Roman Gravel property. They think it necessary to have this property amalgamated with Roman Gravel Co., but before I proceed I will remind you of a few facts concerning the past history of our own mine. It was started in 1870. Previous to that the whole of the property was abandoned, and it lay dormant for about 25 or 30 years. Afterwards some people in Shrewsbury took it in hand, and from 5 to 15 tons of lead ore a month were produced, and the quantity was gradually increased. They came into very great riches ultimately, and it passed from their hands into those of the company then formed (1870), when the working capital provided was 6,000*l.* or 8,000*l.* In addition, something like 30,000*l.* has been spent out of revenue on the machinery, and for purposes of development. Great riches were found, and about 18 years ago, I believe I am right in saying,

THE PROPERTY WAS SELLING AT 250,000*l.*

We all know the price of lead went up to something like 17*l.* a ton, and afterwards fell to something like 6*l.*, though from the latter point it has ascended to 9*l.* a ton, and we have it to-day at about 8*l.* 10*s.* Now, that makes a vast difference to a mine like this, and so, after several years' struggle, we came to you about three years ago with the statement that we believed by developing the mine at a greater depth and sinking the shaft from the 125 to the 155 (which had not been done for a great number of years) we should be doing the right thing, and that the expenditure would be justified. We have since spent nearly the whole of the money then raised—nominally, 20,000*l.*, but actually, 17,000*l.* We have sunk the shaft from the 125 to the 155, and by means of rock-drills have done it in three years, whereas by hand labour it would have required four or five. Mr. Waters will explain presently that the ground which we are approaching in the 140-fm. level represents about 90 fms. of ore-ground, standing in one section, and then there are about 30 fms. in another, which comes to about 120 fms. in length in all, still in reserve, and we are driving the 140 and 155 levels, by means of which we also believe we shall come into good paying ground. In addition to this we find that the south-east lode is running direct into East Roman Gravel, and not only at those levels—the 125, 140 and 155, but at the 140 north and underlying into that mine.

Mr. DEAN (brusquely): How long ago did you find out that you were trespassing?

The CHAIRMAN: We are not trespassing. We found this inclination of the lode only a short time ago, as you can see by the plan. These matters will be explained out to you if you will have a little patience. Therefore, the 140 is not only running into, but underlying in o East Roman Gravel. The 155 will also take a similar course, and, therefore, we say it is absolutely necessary to the welfare of this company to obtain East Roman Gravel sett. I need not go more fully into the reports, and think there is nothing for me to do further than to move the adoption of that of the directors. I may, however, call attention to a letter I received yesterday from Capt. Paull, in which he says:—

"I have read, and quite approve the mode in which it is proposed to re-construct this company, and, if carried out, believe it will bring the properties into a successful condition again. I hope all will be arranged satisfactorily at the meeting on Wednesday."

BRUSQUE MR. DEAN.

Mr. DEAN: How many shares has that gentleman?

The CHAIRMAN: 400.

Mr. DEAN: Did he get them at half-a-crown a dozen?

The CHAIRMAN: I cannot tell you what he gave for them, but he has held them for a considerable time—years ago. (Hear, hear.) On East Roman Gravel Mine, which was then being worked, you will find in a report written by Capt. Waters, dated Oct. 11, 1882, the following words:—

"We are anxious to sink the shaft 15 fms. deeper, and then cross-cut south to the great lode seen in the bottom of the 109, immediately adjoining the Roman Gravel boundary, a lode 6 ft. wide, composed of beautifully white calc spar, and charged with rich soft galena, worth 2, 3, and up to 4 tons per fm. in places. The ore ground here, which is in profitable quantities, is, as I have said, close to the boundary, and, therefore, cannot be followed northwards, but

the dip of the bunch being southwards nearly 6 ft. in 6 ft., by deepening the shaft another 15 fms. the 124-level would intersect a rich deposit of ore in our own right boundary. I feel confident that East Romans at the 124 is only at a corresponding depth, geologically speaking, with Roman Gravel at the 80, in which level, south of new engine shaft, there is to-day a course of ore worth quite 10 tons per fm. I can remember when the output in Roman Gravel proper was not 10 tons per month, and East Romans is just as likely to make a great and lasting mine in depth as its great neighbour proves to be at this date. I may tell the shareholders that there are several people largely interested in Shropshire lead mines who are anxious to get hold of East Romans, but I sincerely hope that the present company will stick to the property until it is brought into a state that shall reward them for their patience and outlay. And I believe that I shall live to see the mine with this hope realised."

That was written about four years before he died. East Roman Gravel people had to drive a long cross-cut. Now, by extending these three bottom levels, which are close to the boundary, we shall have good ore ground, and considerably increase our returns. With regard to the amount we are to give for the property—after long negotiation we have come to something like terms. On behalf of Roman Gravel, I have been endeavouring for six or seven years continually to secure East Roman Gravel, but the owner would never set a price upon it, and I found it impossible to come to any understanding with him whatever. He died, and immediately after his death his executors communicated with me on the subject, and I brought the matter before the directors. We have since negotiated, and done all we possibly could to facilitate the obtaining of the land. The price, in cash and shares will come to about 1,250*l.* We have negotiated with Lord Tankerville's agent, Mr. Howe, who has undertaken to give us a lease on about the same terms as Mr. Jasper Moore granted for our present property: so that I think we are in a fair way of carrying matters through successfully, and in obtaining the property also to get a satisfactory lease.

Mr. VAUGHAN: Was not East Roman Gravel sold to a Manchester company?

The CHAIRMAN: There were others in the field against us, but no agreement was ratified.

Mr. VAUGHAN: I think Roman Gravel ought to have had this ground some years ago.

Mr. GLEN (director): It is only just now that our lode, instead of going into our own property, has really turned in the direction of East Roman Gravel.

Mr. VAUGHAN: I know it, because I live close to the place.

OPINION OF THE LATE CAPT. WATERS.

Mr. WATERS: In 1872 or 1873 my father wrote a report, and said that the Roman Gravel lode, at 200 fms. or thereabouts below adit, would be entirely in the East Roman Gravel sett. That was his calculation. At that period we did not know the shale was going off so flat as it has done, or that the workings would extend so far south. Now we find that instead of the whole of the Roman lode being in East Roman sett at 200 fms.—it may not be so at 400 fms., but, anyhow, the lode north of the main engine shaft at 200 fms. will undoubtedly be in this sett.

IMPORTANT QUESTION AND ANSWER.

Mr. DEAN: I am very reluctant to interrupt, but if this lode is so valuable, how comes it to pass that they are willing to sell it to us for 1,250*l.*?

The CHAIRMAN: It is executors' property, and must be disposed of and the estate closed.

Mr. WATERS: Before they (the executors' party) could reach this lode they would have to sink 200 fms., at a cost of about 20*l.* per fm.

Mr. GREENIP (Snell, Son, and Greenip): That would ultimately cost about 20,000*l.*

The CHAIRMAN: That company (executors' party) could not work to the same advantage; besides which the property is in the hands of executors, who wish to realise it, and who would have no power to expend any money. We are very fortunate in being able to negotiate the purchase on such favourable terms, which really represents hardly the value of the machinery. There are three or four steam engines on the property. The reports are very explicit, but it is most desirable to have this property, and, therefore, I beg to move "That the report of the directors, along with those of Capt. Paull and Mr. Waters, be received and adopted."

Mr. GLEN: I second the motion.

A BEND IN THE LODE.

Mr. WATERS: The main engine shaft is sunk 155 fms. below adit, and is equipped with the very best pit-work and pumping machinery, capable of taking us down another 100 fms. The 155 north is now driven 18 fms., and present forebreast is in a lode worth about 1 ton of blende and $\frac{1}{2}$ ton of lead ore to the fm. The 140 north is driven 99 fms., and rather a peculiar thing has taken place here in the inclination of the vein, which we cannot yet understand. We are, however, inclined to think that the Roman and east lodes are in junction here, the result being what is known as a "throw." In this instance the inclination of the vein or veins is turned in the direction of the adjoining property. If it had maintained its usual course, the forebreast would still be at a safe distance from the boundary line. Nevertheless, the underlie of the vein carries it, in depth, into the East Romans property. It is clear, by the plan of the workings, that had the vein at the 140 followed its course as at the 125, the said 140 forebreast would now be far away from the boundary, as I said before. It was impossible for any miner to have foreseen this sudden change in the direction of the lode, for he cannot see even a foot in front of him, and until we came to the crucial point, we did not think it was even possible for the vein, at this point, to run into the adjoining property, as it proves to be doing. A winze is being sunk at a point some 24 fms. behind said forebreast, in a lode producing 2 tons per fm. We are down about 14 ft., and the vein is getting wider, and will doubtless improve in productiveness. This proves, at least, that the bunch passed through by the forebreast for a distance of 12 fms. or 13 fms., averaging, say, 2 tons per fm. throughout, has gone down below the level, and speaks well for the coming up of the 155 level underneath. But unless we secure the East Roman Gravel property we shall not be able to extend the latter level to this bunch, since the underlie of the vein, as before stated, will take it out of our sett. With reference to the

south-east lode—I have dotted on the section the different points where it intersects the Roman lode. At the 65 it is north of the main shaft; at the 125 it is in the shaft; and at every level below the 125 the intersection will be south of said shaft. Therefore, by developing the Roman lode southwards we shall pass through the south-east lode, and obviate that great extent of cross-cutting which any other company who acquired the East Romans property would have to perform in order to work the mine. They would have to extend a long cross-cut through the country rock at each level, at a cost, say, of 7l. per fm. with rock-drills, or 12l. to 13l. by hand. I calculate that the cross-cut at the East Romans bottom level is about 12 fms. long, through country rock, and that at a deeper level would be 3 or 4 fms. longer, the distance, of course, increasing with the depth of the level. We have a great advantage, therefore, for in developing the Roman we intersect the south-east vein, rendering cross-cuts unnecessary. And it would not be an unusual occurrence if we met with a good bunch of ore at the junction. Another, and very strong, point is, we are pumping all the water from the East Romans Mine, but if Roman Gravels were stopped nobody would think of working the first-named, since they would have to deal with, I may say, "an impossible quantity" of water. Now that we have the opportunity of buying the said property, it would, indeed, be a great mistake not to do so. We have not only drained the East Romans Mine to its present bottom, but the ground underneath also to a depth of, say, 45 fms. We have a very good lode at our 140 south-east, which will average 2 tons per fm., for a distance of, say, 12 to 14 fms. up to present forebreast. The 155 level is coming forward in the same direction, and the vein in the present forebreast looks very promising. I saw it yesterday, and it gave me the impression, and also Capt. Rowe, that there will be a profitable lode there very soon. We know it cannot be far away from the perpendicular of the above bunch. Mr. Watson read just now an extract from my father's report, dated Oct. 11, 1882. Now, there was a good lode left in East Romans when operations were suspended, at which time they had great difficulty in pumping the water. We had then done practically nothing on this lode below the 50-fm. level, and consequently only had, say, a third of their water, whereas we have now the whole. A very good bunch has gone down below that mine, worth 2 and 4 tons per fm., and we have worked away a good bunch in our 110, which was worth in places 4 and 5 tons per fm., and I calculate that the ground worked away up to the boundary produced some 300 or 350 tons of ore. We have driven this level up to the boundary, leaving still a good lode going into that property. Taking these facts into consideration, and also that

ALL THE BUNCHES IN THE LODE DIP SOUTH,

the inference is that there will be a continuation of this bunch met with by our different levels as they come up. In fact, the whole of this ground may be looked upon as productive, and is, as I said before, completely drained. We have only to extend the levels, sink the winzes and lay open the ground for stoping. We met with one or two bunches in the neighbourhood of Lewis's winze, where we have a continuous run of ore-ground, which we have every reason to suppose will go down still further. The bunch is continuous for 90 fms., and there are other bunches quite 30 fms. long, which would average $1\frac{1}{2}$ tons. The shaft is sunk 10 fms., and the lode in one or two places was worth 6 tons, according to my father's valuation. The driving of this level has been done in my time, and I know in places the lode was worth 5 tons per fm., but taking the average distance given for 20 fms. it will produce 3 tons per fm., and the bunch has gone down equally as good. The object is to drive the 140 and 155 to get underneath the ore-ground. We are sinking a winze, and as soon as it is down 15 fms. shall drive back. We know that we can only drive a certain distance, and if we had sunk it eight or nine months ago we should have had to leave it standing full of water. Now, we calculate we have started at the proper time, and that we shall be able to communicate the ends without difficulty. That is the reason we did not sink the winze before. At present it is being sunk in country rock at the east side of the lode, in order to get into it, as the lode underlies into the perpendicular of the winze. We cannot follow the lode, but calculate it will go down half way at least worth 2 tons to the fm. The 125 south forebreast is 350 fms. from the shaft, and we have a lode there at the present moment worth about 1 ton to the fm., even at that distance. In my report I speak of the prospects, and if anyone were to look at the section for five minutes he would clearly understand my views. It shows a zone of unproductive ground, and it was only when we got down to the 65 underneath, that there was a rich course of ore. If history does not repeat itself below we cannot help it. We have simply to follow the argument, and say if such and such happen in one place why should it not in another? The prospects foreshadowed lead myself and Capt. Rowe (and I am sure Capt. Paull also concurs) to that which I am endeavouring to tell you—that we shall have

A REPETITION OF OUR FORMER GOOD FORTUNE.

If we do we shall not only have a length of ore ground 240 fms. long, but one which will extend throughout, according to the dip of the shale. That is the only inference any miner can draw. (Cheers.)

A SHAREHOLDER WHO DESPAIRS.

Mr. DEAN: I have been a shareholder in this company for about 20 years, when the shares were worth as many pounds as they are now pence. As I am the owner of 1,120 shares, I have proved my faith in the mine by during the last three years paying up something over 500l., or 10s. per share. (No, no.) I do not know whether any other gentleman here has done the same, but possibly they have acquired their shares at recent quotations. When I received this circular I was filled with astonishment, not to say indignation, for this reason—that during the last three years, while the calls have been made, for which the last cheque is hardly dry, we have not had one single word of doubt from you. The reports have all been most encouraging. Roman Gravels was going to return to its own prosperity, and we had nothing to do but pay up, and look for a rapid fortune. As soon as you have fingered the last instalment you issue a circular asking us to venture another 20,000l.—to do what? Not to throw down the shaft of the old Roman Gravels, but down the shaft of a mine which has been deserted for many years, because, as I am told in the City, it could not be made to pay. I will venture to remind Mr. Waters, that at the opening of his speech he said that the miner could not see a foot ahead of him. If so, I do not see what is the use of trusting him and the directors

with another 20,000l. to grope about in the bowels of the earth in a discarded and bankrupt mine.

I MADE INQUIRY IN THE CITY.

and am informed that Roman Gravels Mine is worked out—(oh, oh)—and that it would be a pity to put any more money into it. Another opinion gives rather a more favourable response, which is, that possibly the new property may be worth having, but I do ask most emphatically, why in the world, when you must have known that we had a three-cornered mine on the verge of another person's property, you did not let us know?

POINTED QUESTIONS.

Is that treating the shareholders with confidence? I should like to ask, are any of the directors, directly or indirectly, interested in East Roman Gravels, and have all the directors paid up the 10s. a share, and, if so, on how many shares? If not, have their shares been forfeited? I am sorry to see such a small meeting, because it appears to me to show that most of the shareholders take the same view of this unfortunate property as I do.

The CHAIRMAN: Indeed they do not. (Hear, hear.)

Mr. VARLEY: I bought my shares just before the concern got into difficulties at 9l. each, and I have had the pleasure of paying various calls since. I was rather astonished at this intimation that we must subscribe more money or all was gone. Supposing we put another 5s. a share into it, can we be sure that three or four years hence we shall not have to put more? If I could be absolutely certain it was a good investment, then I should be ready to subscribe. What is a paying amount of ore per fathom? Will 2 tons pay us?

Capt. WATERS: Yes.

Mr. VARLEY: Is it likely that we shall have to spend the whole 20,000l.?

A SHAREHOLDER WHO LIVES CLOSE TO THE MINE.

Mr. VAUGHAN: I live close to the mine, and think it will be wise to buy East Roman Gravels. The miners say so too, and that it will become paying in a short time, if purchased. (Hear, hear.)

REPORTS FROM THE CITY.

The CHAIRMAN: Whether Mr. Dean has had a favourable or unfavourable report in the City, I maintain that that is hardly the place to seek for correct information. I should like to know if the gentleman who has pronounced this confident opinion has ever been underground or knows anything of mining. I am not casting any reflection upon him, but I do say this, that I have been associated with this district for the last 40 years, and do know what I am speaking about, and what I am conscientiously recommending to the shareholders. The directors and managers have worked most manfully with the amount placed at their disposal. We asked for 26,000l. or 27,000l., but in reality, after paying old debts and various other things we, have not had anything like 20,000l. with which to work. I will challenge any man in this country to show at any other mine the same amount of work that we have done here in the last two and a half years. In sinking that shaft 30 fms. we have fulfilled the terms of the new lease. We now want to extend the levels and get underneath the ore ground, for which the shafts have been sunk. This gentleman casts reflection upon us that we have not been more explanatory to the shareholders, but if he had followed the remarks of Mr. Waters just now he would have seen that we knew nothing of that particular bend in the lode going away north until recently. We have, however, been trying to obtain this property (East Romans) for six or seven years, and the fact was well known to the large shareholders. We have at last succeeded in getting it, and instead of being censured for what we have done, I think we ought rather to be congratulated and praised. I remember when this very property (East Roman Gravels) was selling for 50,000l. on the Stock Exchange. When we take it over, there will be no extra charge for pumping, and, in fact, we have only to put on men to continue the levels into it, and by getting possession of that property we believe we shall repeat the history of the past in regard to our properties. The mine is in one of the best districts.

IT IS NOT A MYTHICAL DISTRICT.

It has produced 7,000,000 or 8,000,000 sterling worth of mineral, and every mine there has been most productive. Snailbeach paid dividends for 100 years, and also Roman Gravels and East Roman Gravels (the latter in the time of the Lawrences) produced 600,000l., and we are coming into possession of it for less than the value of the machinery on the property, with our shafts sunk, and with all we have to do to extend three or four levels simultaneously into the ore ground. From the 125 to the 140 we have an important lode. The 140 and 155 have improved, and we intend in Roman Gravels to sink another 15 fms. That is the recommendation not only of Mr. Waters, but of Capt. Paull. We unite in recommending the shareholders to subscribe this money, and I believe it will be most beneficial to the interests of all concerned. I think

THE DIRECTORS HOLD PERSONALLY 8,000 SHARES

—about one-tenth of the mine—and they have long ago paid their calls. That is independent of what their relatives and friends also hold. We have no secrets from the shareholders, and believe that if we have 5s. credited as paid up, and 5s. to call, 6d. on application, and 6d. on allotment, it will be sufficient to commence with, and the calls afterwards will be made as required. We have sufficient money now to pay all our liabilities and start with a clean balance-sheet, and not with a large amount of liabilities as we had before. The position is really a great deal better than when we met here some months ago. Last month our returns were about 100 tons of lead (825l.), and about 40 tons of blende (240l.), so that we have about 1,000l. worth of returns, and, notwithstanding the expenditure on all this work, I think we may say our costs are about the same. Roman Gravels, in fact, is in a better position with regard to costs and returns than it has been for some years, which shows the wisdom of having sunk the shafts and driven the levels. We believe, with this other property tacked on, we shall again make Roman Gravels a paying concern, and give satisfaction to every shareholder. We have neither directly nor indirectly one penny of interest in the new concern. I do not believe we shall require another re-construction, or that we shall need to spend the whole 20,000l., though it is impossible to say. My interest in this mine has cost me quite as much as that of any gentleman in this

room, and our largest shareholder, Mr. Olding, is a director, and so also is our next largest shareholder, Mr. Southgate, who, I regret, cannot be here. Both of them are anxious to go on, and the directors some time since made themselves personally responsible for money so as to avoid making a call at a time that would be inconvenient. Mr. Deane stated that he had paid 10s. per share in calls amounting to 500%. Now it was 5s. per share in calls only, and not 10s. per share as he states.

IMPORTANT FOR THE SHAREHOLDERS TO KNOW.

Mr. VARLEY: Do you intend to send a report of this meeting to the shareholders generally? I ask, because if this scheme is to be carried, it will be most important for them to know that the directors, who hold 8,000 shares, are ready to make themselves liable in the same way as the other shareholders. It will have great weight with the shareholders. (Hear, hear.)

The CHAIRMAN: The proceedings will be sent to all the shareholders.

In reply to a shareholder, Mr. WATERS stated that East Roman Gravels in area was fully as extensive as Roman Gravels original sett before South Roman Gravels was added to it under the terms of the new lease.

A SHAREHOLDER: Is Roman Gravels worked out? (Laughter.)

The CHAIRMAN: Certainly not; and we have told you we are driving under a course of ore 120 fms. long, and there are very few mines that can say the same. (Hear, hear.)

Mr. VAUGHAN: I am told by old miners that the blende in East Romans alone will pay for the working of the mine and leave profits. The motion was carried unanimously.

The CHAIRMAN proposed, and Mr. VAUGHAN seconded, the first of the resolutions as above, and it was carried *nem. con.*

The CHAIRMAN proposed, and Mr. OLDING seconded, the next resolution as above, which was also carried *nem. con.*

A PLAIN INTIMATION.

The CHAIRMAN urged the shareholders, one and all, to fall in with the new scheme, and said that, whatever happened, the directors would not let go a property that had already produced 500,000% worth of mineral, and that promised such great success again. (Hear, hear.) Votes of thanks were then passed to the chairman and directors.

LATEST REPORT.

Sept. 10.—The 155-fm. level north of main shaft has now been driven 19 fms. 4 ft.; the lode here has improved since last week, and shows signs of further improvement. We value it to-day at quite 1½ tons per fm. for lead and blende. The 155-fm. level on caunter lode south-east of main shaft is driven 20 fms. 4 ft., and is in a lode 6 ft. wide, worth 15 cwt. for blende per fm. The 140-fm. level south of main shaft is now driven 16 fms. 1 ft. south of No. 1 winze. The lode here is 2½ ft. wide, but we are unable to value it. The 140-fm. level south-east on caunter lode has been driven 22 fms. 5 ft.; the lode is 6 ft. wide, and worth 2 tons per fm. for lead and blende. The stope in back of this level is worth 2 tons per fm. for lead and blende. The winze in the 140 north is 2 fms. 2½ ft. deep, and is in a lode 3 ft. wide, worth 1½ tons lead ore per fm.; 3 stopes in back of the 140 north are together worth 3½ tons for lead ore per fm. The lode in the 125 south of main shaft is still split up, and is worth 1 ton per fm. for lead and blende. In the winze in this level, which is now 2½ fms. deep, we have cut a portion of the hanging part of the lode which shows stones of lead ore. The two stopes in back of this level north of Lewis winze are together worth 2 tons lead ore per fm. The three stopes in back of the 110 south of Watkin's winze south of main shaft are together worth 4 tons lead ore per fm., and a stope in back of this level south of shaft is worth 1½ tons lead ore per fm. The three stopes in back of the 80 fm. level south of Jones's winze south of main shaft are together worth 4½ tons for lead ore and blende per fm.; and two stopes on east lode north of main shaft are together worth 2½ tons lead ore per fm. We are by this mail sending out samples of a parcel of 20 tons of blende for sale on Thursday next.—A. WATERS and SON.

SOUTH AUSTRALIAN PETROLEUM FIELDS, LIMITED.

NO PRIORITY SHARES TO BE ISSUED—STATEMENT BY MR. PEARSON.

AN extraordinary meeting of the shareholders of this company was held on Monday, at the City Terminus Hotel, for the purpose of confirming the following resolutions passed at the previous meeting on Aug. 12:—

"That the capital of the company be increased to 125,000% by the creation of 25,000 new shares of 1l. each, to be called priority shares, to which the following special rights and privileges shall be attached: (a) The nett profits of the company in each year shall, before any dividend is paid on the ordinary shares for the time being issued, be applied first, in payment of a cumulative preferential dividend at the rate of 10 per cent. per annum upon the amount paid up on such priority shares for the time being issued; the said nett profits shall then be applied in payment of a dividend on the ordinary shares for the time being issued, until such ordinary shares shall have received dividends at the rate of 10 per cent. per annum; any surplus nett profit shall then be divided equally, and one-half shall be distributed amongst the holders of the priority shares, and the other half amongst the holders of the ordinary shares for the time being issued; (b) upon the winding up of the company the surplus assets of the company shall be applied (subject to the terms upon which any issue of preference shares may hereafter be made), first, in payment of the arrears (if any) of the aforesaid preferential dividend on the priority shares, and subject thereto in re-payment to the holders of priority shares of the amounts paid up thereon respectively, and the residue (if any) shall be divided among the holders of the ordinary shares in proportion to the nominal amount of the capital held by them respectively."

Mr. William Howard Smith

presided.

The SECRETARY read the notice calling the meeting.

The CHAIRMAN said that before he put the resolution he would ask

Mr. Pearson, the vendor of the Burmah property to the South Australian Co., to address them, as that gentleman desired to make a statement with a view of inducing the shareholders not to issue priority shares.

Mr. PEARSON said that since the previous meeting his position had somewhat altered, and he was now able to pay the 7,500% in respect to the Burmah property.

THERE WAS, THEREFORE, NO NECESSITY FOR THEM TO ISSUE PRIORITY SHARES.

If any of such shares were issued it was evident that the holders of them would be entitled to take the whole of the profits of the company. In the course of a few days he hoped to have arranged matters, and he would then be able to lend the company from 4,000% to 6,000%, at a low rate of interest, which would provide them with sufficient capital to work the two properties without having to issue priority shares. (Applause.)

The CHAIRMAN said that the only way in which they could meet the difficulties of the case would be to adjourn the meeting to enable Mr. Pearson to carry out the proposed arrangement, after which they could either decide to issue the shares or to rescind the resolution which was passed at the last extraordinary meeting.

Mr. PEARSON said that since the last meeting was held he had paid off some of the money owing to the late owners of the property.

Capt. PROUT said that he had been one of the members of the committee appointed to look after the affairs of the company, and he felt that the best thing he could do would be to move the rescission of the resolution. From his personal knowledge he was convinced that the company had an excellent property, and, in his opinion, it would be a great mistake to issue priority shares. All he desired was a guarantee from Mr. Pearson that the money would be paid. He believed that the company had a great future before it, and he had much pleasure in moving "That the resolutions passed at the last meeting be rescinded."

Mr. PEARSON, in reply, said that he was quite willing, if the meeting would elect three gentlemen, to give the necessary guarantee, and

TO PROVE THAT THE MONEY WOULD BE PAID.

The CHAIRMAN said that Capt. Prout's motion was quite out of order, inasmuch as it was only a direct negative to the proposition before the meeting, and could not be put as a separate resolution. The shareholders could vote either for or against the original resolution, but he could not legally put the motion proposed.

The motion was then seconded and put to the meeting. No hands being held up in its favour, the CHAIRMAN declared the resolution lost.

A SHAREHOLDER: Have you sufficient money to work the concern?

The CHAIRMAN: We have no money at all.

Mr. PEARSON: The Burmah property is, however, at the present time, paying its own expenses.

The CHAIRMAN: Yes, that is so; but we have no money in the bank.

A SHAREHOLDER: Why do you not get some?

The CHAIRMAN: You have just voted against the resolution giving us the power.

Mr. PEARSON: I think it will be of interest to the shareholders if Mr. Fraser, who has just returned from Burmah, and knows the property well, will give his opinion on the value of our land.

Mr. FRASER said that he would be pleased to give the shareholders any information he could. He thought that undoubtedly the company possessed a good property in Burmah, but they could not expect to properly develop it without capital. He believed that from 4,000% to 5,000% would be sufficient for the purpose, as the property was now paying its way, but they could not expect to get large returns from it unless they spent some money upon it first. They had got two grants of land in Burmah, one of 4 square miles, and the other 2 square miles. He had sunk three wells on the property, which yielded

12 BARRELS OF OIL PER DAY.

During the last 10 years the 5 acres now producing have produced oil to the value of 25,000%. He had recently received a private letter from an independent source, in no way connected with the company, which stated that their manager, Mr. Crosbie, had struck a well, yielding three barrels per day, on the Boronga, at a depth of 260 ft. When he (the speaker) sunk the wells he had never got any oil at a less depth than 400 ft.

Mr. PEARSON: Would you consider that the 2 square miles belonging to this company are oil-bearing throughout?

Mr. FRASER: There are parts of the 2 miles where there is plenty of oil, but, of course, there are parts of the land where no oil is to be obtained at all.

A SHAREHOLDER: Has the company ever had any working capital at all?

The CHAIRMAN: Yes; but the whole of it has been expended in sending out machinery to South Australia and in drilling for the oil.

In reply to a question,

The CHAIRMAN said that he hoped that the shareholders would not expect him to carry on the work of the company without capital. At the last meeting of the company he had retired from the board by rotation, but, though eligible, had not been re-elected. The shareholders had rescinded the resolution for creating priority shares, and they, therefore, were responsible, and should exonerate him if anything happened to the company.

The Marquis of STACPOOLE: What return are the shareholders likely to get for the money Mr. Pearson proposes to lend to the company?

Mr. PEARSON: If we spend a little money in putting down wells we ought to get an enormous profit.

The Marquis of STACPOOLE: Can you, Mr. Chairman, give us a little information concerning the South Australian petroleum fields?

The CHAIRMAN: The following letter I have just received from Mr. Boverton Redwood, dated Adelaide, South Australia, June 23, 1891:—

"I beg to hand you herewith extract from a letter which I have received from Mr. Thomas M. Scrutton, of Adelaide. You will remember that my original report was to some extent based upon the published statements of Mr. Scrutton, and this voluntary communication of that gentleman's present views is, therefore, as interesting as it is opportune. I have been away, or you should have received the extract more promptly."

The extract runs:—

"I have reduced, by careful search, the whole of their land (east coast ground) to 10 acres. The directory here said they had not power to engage my services. The theory of the substance being cryptogramic I have battled with over and over again. No work treats of it, not even Bennett and Murray (published 1889). It is imperishable by nature by atmosphere or insect, for I have some in my possession that lay on the surface at high-water mark over 40 years, and

NOTHING BUT FIRE WILL DESTROY IT;

and, again, it is not reproductive, and no botanist was ever able to cultivate it, or even to find any signs of fructification. The oil when found will be of a very light colour. My nearest bore to it was 16 ft. deep, when I found a rush of gas, water, and oil, and brought a bottle down to Adelaide, and it was on the table when I read my lecture—a lecture still in print. I have read all your reports of the American fields, and I may say every scrap of information has been sought for for the subject. Especially the Coroong deposits I have made a close and careful study of. Geology, I have proved, is no guide to its development. I have made six distinct journeys on to the ground, and have traversed the country round for miles and miles. That petroleum exists I need not say to you more than I have, and I am prepared at very little cost—say, 300%—to develop it fully. I am sure of a run of 60 miles to its exit at Kingston Harbour, south-east—how far north-west I cannot say. Every bore put down has differed in stratification. You can learn who I am from A. James Scrutton, Stock Exchange; London office, 80, Old Broad Street. I am getting older every year, and less able to rough it after 40 years of colonial life, but I should dearly like the question settled during my lifetime, and the sum I mention would do it, as far as the first testing is concerned. I may here mention I am in correspondence with two men—one in New South Wales and one in Victoria—who knew the country as shepherd and stockman in 1854 to 1864, and who both tell of hundreds of tons at that time lying on the surface at Albert flats, 3½ miles by 2½ miles, and in no other part of the 90-mile desert a particle to be found. The distillation of the oil I burnt to read my lecture was undertaken by Robert Harrison, formerly of Young's Oilworks, Scotland. Of course, if approached in a business-like way,

I AM PREPARED TO ANSWER ANY QUESTIONS,

and show all my correspondence and papers."

Mr. PEARSON said he thought that that was a very satisfactory letter, and in a short time he believed they would be having enormous profits. They had pipes laid down from the wells to the ships; a distance of 8 miles, and they had refineries erected. All they wanted was a little more capital. As to the sale for the oil, within a four days' journey they had Calcutta, with an annual consumption of 1,000,000% worth, a small slice of which would satisfy them, and a certain place near them could take all they could supply at the present time for the local demand. If they gave the property away by issuing priority shares, the original shareholders would get no advantage whatever from the property.

A SHAREHOLDER asked if there were any liabilities which would make it likely a receiver would be appointed.

Mr. PEARSON said that as far as a receiver being appointed, he could safely say that would never be done. The liabilities were 1,300%.

A SHAREHOLDER asked if the South Australian Mine was closed.

Mr. PEARSON, in reply, said that

THEY HAD OBTAINED AN EXTENSION FROM THE GOVERNMENT, so that they need not commence work yet. He believed that there were people who wished to buy the South Australian Fields, but he would rather himself see them worked.

The CHAIRMAN said it would be advisable to appoint three gentlemen to receive Mr. Pearson's guarantee, and he hoped that those gentlemen who voted against the resolution were prepared to find the money if he did not.

No motion was put to the meeting, and it was ultimately agreed that the chairman should call a meeting of shareholders within a month to report on what had been done.

The proceedings then terminated.

THE PARKER GOLD MINES, LIMITED.

AFTER A LONG STRUGGLE, THE BOARD SEE THE CLEAR LIGHT OF PROSPERITY BEFORE THEM—IMPORTANT RESOLUTIONS ARE PASSED, AND STATEMENTS ARE MADE BY THE MANAGER.

THE second ordinary general meeting was held at the Charing Cross Hotel, on Wednesday, "for the purpose of receiving the directors' report and statement of accounts, and electing an auditor for the ensuing year. Also to authorise the directors to sell that part of the property of the company known as the Flint Spring Mine, including minerals and the land for mining; also plots for building or otherwise as may appear advisable, and to make arrangements to supply water to the town of New London."

Mr. James Judd, J.P.

(chairman of the company), presided.

Mr. NEWMAN GOLDMAN (secretary) read the notice of meeting.

The CHAIRMAN: Gentlemen, as I wish to make comments upon each paragraph of the report, it need not, therefore, be read. The report indulges in no very sanguine spirit that I can discern, and simply claims to be a plain statement of facts. However, there are some important points, which I am sure you will be prepared to consider and ask questions upon, as you will find necessary. The first paragraph is in reference to the winding up of the old company, where difficulties have been met with, and surmounted, as there always are, even in cases where no opposition is offered. One of the difficulties has been the disposal of the shares into which the old company had resolved itself, and which have been offered from time to

time to the members of this company. The liquidator has sent out four or five different circulars asking shareholders to subscribe for these shares. The position is as you know—the preference shares are 5s. each, and the ordinary shares for 10s. each. Those shares can be obtained by any shareholder, fully-paid, but there are now only some 2,000 or 3,000 of them remaining. In reference to the second paragraph, the directors submit the accounts which are before you, and which need no remark from me, although questions are invited. In reference to No. 3, we have had to contend with an unwonted season. The weather has been probably in its character almost exceptional, and we have suffered very much. The pipe line that we laid down at considerable expense was constantly breaking and bursting, and at last we were compelled, after full consideration, to determine that we must try heroic means of meeting the difficulty. In March last we purchased, under favourable circumstances, some 20-in. steel piping, which we had substituted for the defective piping. The old pipe line was bought by the late manager, Mr. Nance. It is never well unnecessarily to attack a man dead—dead so far as we are concerned—but nothing we originally heard in reference to Mr. Nance ever induced us to believe that he was other than an engineer fully capable, but there are other matters on which, to say the least, his discretion was at fault. If there be a lack of supervision on the part of your superintendent on the spot, and at such a distance, you may be sure of the result that is likely to follow. We have, therefore, to tell you that from what was done in those early days we are suffering now. We are credibly informed that it is not at all an uncommon thing for tenders to be made for works called for, and for little enclosures to be addressed privately and purposely, with the view that the orders may be placed in certain quarters, and that a certain honorarium will then be paid. It is absolutely essential under such circumstances, as far as possible, that we should have someone in whom we have the utmost possible belief, and whose integrity is above question and suspicion. We have succeeded, we believe, in having such an one in Capt. Henry Judd as our manager there, and I am prepared, notwithstanding that for some reasons I would rather not speak of matters in connection with our manager, to congratulate you that we have such an officer. He is here to-day, and will be prepared to give you the fullest information upon all matters connected with your mine, and especially connected with those things which induce us to believe that we have still, despite the past,

A MOST VALUABLE PROPERTY.

When I tell you, for example, that out of many tests, almost indiscriminately made, scarcely one of them is without the trace of gold, it is impossible for us, as your advisers, to do other than recommend you to continue these works, in the full belief that you will ultimately have your reward. (Cheers.) In addition to that, paragraph 4 calls your attention to what, perhaps, will turn out to be one of the most important things connected with your property. Some short time ago we heard that there was a chance of the railway passing within 6 or 7 miles of your property. Our purpose was, if possible, to get that railway to pass through your property, because we and the whole world know that the advantage or disadvantage connected with the presence or absence of a railway at your mine, as compared with several miles distant, is of importance, and I am very glad to say that we succeeded in

GETTING THE RAILWAY CARRIED THROUGH THE PROPERTY.

At one time we were afraid that other land owners would obtain the preference, or that it would be necessary for us to subsidise the company, but we ultimately gave them the right of way through our lands, and sufficient land upon which to build their station. There were several offers outside the limits of our property for the building of this station, but you will see that we did well to get it on our property, especially in view of what is likely to follow. We shall call upon you to justify us in having done this, although probably our articles would have enabled us to do it without your sanction. Resulting from this, we find that two things are following, and I cannot lay too much stress upon what may possibly happen in the future. Cities rise very rapidly in America, as you know, and although we cannot hope that we shall have a Cincinnati there or a Chicago, we yet may hope (judging from past experience) that we may have a city of some importance. (Cheers.) The fact that there are very few people there now does not give the denial to that belief. We have received a petition signed by 30 or 40 of the inhabitants, and commencing thus:—

"WE, THE CITIZENS OF NEW LONDON,"

a name that has been given to the place in deference to your operations, and the expenditure of your money in this locality—"We, the citizens of New London, call upon you to supply us with water, which we are prepared to take." (Laughter.) I mention this with the view of showing that they are aware of the coming importance of "New London," and if they are aware of it you should be also. In addition to the fact that I have mentioned, many applications are made, and will be made, for plots of building ground; we shall, of course, reserve the mining rights, and what we propose to do will in no way interfere, but rather help us in the primary purpose we have, which is that of mining. We have instructed our engineer to prepare such plans as will enable us to have a potential influence in the laying out of this future city—if city it is to be. We thought it advisable, before giving our representative authority to dispose of any land, that we should see him, and that you should see him also, and that the fullest discussion should take place upon that, which is a new phase in reference to our affairs. One offer has been made at the rate of 20% or 30% per acre for a plot of ground, and I need hardly say that, except for the purpose of building, and except with the hope in connection with a coming town, it could be bought for much less. This shows that the matter has assumed a practical shape in regard to a township. In regard to the water supply—we are in a position to provide it under proper regulations, taking care that the primary purpose for which we shall use it will be to supply our own works. But it also can be supplied to the town very profitably. It is estimated that although the returns immediately will not be large, yet from the first there will be a profit of something like 100 per cent. upon our outlay, to be received at once from the sale of water. That it is small to-day is no reason why it should not be large to-morrow. This you will be called upon in a resolution to approve. In reference to paragraph 6, your vote also will be asked. We have upwards of

1,000 acres of freehold. We have a frontage on the Yadkin River, and 800 to 900 acres in the centre of the town in what may be called a ring fence. This consists of various mines, only one of which has been worked by you. Some of them will be ultimately worked, but there are some that unless special capital be raised for the purpose, it would be impossible to hope to work. Therefore, we have welcomed an offer we have received for the

DISPOSAL OF THE FLINT SPRING MINE,

which is outside that circle of 800 or 900 acres, and which is part of 150 acres quite separate from your main property. We shall ask power from you to dispose of it. If we succeed in doing so upon satisfactory terms there will be something good to distribute amongst the existing shareholders. These are the important matters connected with the business. We are glad Mr. Henry Judd is here, in order that he may answer questions, and that you may hear from him the reasons he has for believing that our property is good, and that the work he has done will be effectual in proving it. He has displayed indefatigable energy. Young men are valuable, but sometimes they have a tendency to think they know as much as their fathers. They are not to be blamed for this, for we had the same tendency, and I do not know that there is any special manifestation of that characteristic in our manager. At all events, we have every reason to be satisfied with the appointment we have made, with the work he is doing, and with the judgment he is manifesting, and altogether we believe we are in the hands of those who are

HONESTLY, AND FAIRLY, AND WISELY CONDUCTING OUR AFFAIRS.

(Cheers.) I formally move the adoption of the report and accounts which are in your hands, and the other resolutions will follow after discussion.

Genl. COLLINGWOOD (director): I second the motion.

DISCUSSION.

Mr. GEORGE HAMILTON: May I ask whether the conditions offered to the board for a certain portion of the property will be communicated to this meeting?

The CHAIRMAN: We only want power to be able to deal with these people.

Mr. HAMILTON: Have you already prospected that part of the property to any reasonable extent?

The CHAIRMAN: Not to a very great extent.

Mr. HAMILTON: Then my object in putting the question is this—if your purchasers buy it they will give you very little for it, and after a time it may turn out to be very good, in which case our position would not be enviable. It was long ago held out as being a valuable part of the property, and it would be sad for us if, after all, it was parted with for a mere song.

The CHAIRMAN: We also have felt that, and our decision is that we will have money for the full value of the land, and such a large amount of shares in the projected new company as shall give us a substantial interest in the undeveloped riches of the property we are parting with. In other words, we will be paid partly in cash and largely in shares. (Hear, hear.)

Mr. HAMILTON: Would it not be possible for you to ascertain something about the value of the property before you go into the sale?

The CHAIRMAN: We do not want to spend money for such a purpose. All your mines were prospected, and the result was that we believe those to which we devoted our attention were the most valuable. Nothing has occurred in the experience of our engineer to lead us to think that Flint Spring is more valuable than it was originally supposed to be.

The first resolution was carried unanimously.

The CHAIRMAN then proposed: "That the directors be, and they are hereby authorised to deal with, or dispose of, by way of absolute sale, or otherwise, that part of the company's property known by the name of Flint Spring, with or without the minerals thereunder, for mining, building, or other purposes; also such other portions of the property of the company, in plots or otherwise, for building or other purposes, on such terms, and at such price or prices, payable in such manner as may appear to them desirable in the interests of the company; and that the directors' action in giving the Yadkin Railway Co. land upon which to run its line and to build its station be and is hereby approved." The terms of this resolution are wide, because we may find it advisable to reserve a part of the Flint Spring land. The resolution means that you give us the fullest powers.

VIEWS OF A RECENT DIRECTOR.

Mr. WILMOT (director): I have quite recently joined the board, and wish to express my entire satisfaction with all that I have been able to discover with reference to the acts of my predecessors. (Hear, hear.) I have looked through the plan of the estate, and find that this Flint Spring is a considerable distance from the property we are working, and if we were to be ever so successful with what we are doing it would be many years before we could touch this property. If you adopt the resolution it will have the effect of giving us money to work the mines more effectually. I therefore heartily second the resolution.

QUESTIONS OF IMPORTANCE.

A SHAREHOLDER: What is the frontage to the river?

Capt. HENRY JUDD: We have about 80 acres facing the Yadkin, and probably 100 acres at the back of that.

A SHAREHOLDER: Are milling and hydraulicking now going on?

Mr. ADAMES: What would it cost to extend the water into the new town, and have we sufficient pipes, already paid for, to carry on that undertaking?

A SHAREHOLDER: How many inhabitants are there in the "city"?

Mr. SNAITH: Before a final sale of Flint Spring is settled will the shareholders be consulted?

The CHAIRMAN: Our object is to get your consent to the sale. I am afraid if you do not give us power we shall not be able to make the terms that will be in the best interests of the company. As to prospecting the ground, the outlay would be about 1,000*l*. We do not think we ought to weaken our resources in any way. (Hear, hear.) We are going on satisfactorily, but it will be inadvisable to attempt too much.

VIEWS OF CAPT. H. JUDD.

Capt. JUDD, in reply to many questions, said: We are at present

running the pump at 24 strokes, and are supplying the mine at the rate of one and a half million gals. every 24 hours. The town cannot use at the outside more than 50,000 gals. in 24 hours. But as the town increases the supply will augment in proportion, and so will your revenue. You will be more than repaid the cost of laying down the main by the first year's rental. You have 6,000 ft. of piping on hand which you cannot sell, and I recommend that you lay piping down through the village, which will be more than sufficient. You will not require to use one half of what you have. All expenses of connecting with the main are paid by the consumer, and no connection is made before he has paid the cost of making it, and no water is turned on to the house until the rent has been paid in advance. Hydraulicking goes on the whole of the 24 hours of every day of the week except Sunday when it is limited to 12 hours, and even then I keep the nozzle running where I can do it without much labour. I am not allowed to work men on the mine on Sunday, but I claim it to be a necessity to run my pumping engine. Apart from that, the hydraulicking goes on continually. The mill is only being run 12 hours a day on low grade ore, which we are making to pay better by previously concentrating it. In this way we are dealing with fairly paying ore. We are not at present into the rich belt from which we shall obtain the majority of the quartz we are going to crush, but when I left the mine I should judge that in another six weeks, at the outside, we should be in the centre of that belt. I brought home specimens from the new discoveries in that belt, and you have every indication of being able to make good returns from the mill apart from hydraulicking. You treat your ore at the mill more cheaply than it is treated anywhere else in the neighbourhood, for the simple reason that it is conveyed to it automatically. It only requires one man to attend to it to keep the batteries fed, and the usual superintendence. Therefore, out of very low grade ore we can still make a profit. Out of various tests made in various parts of the surface recently,

OUT OF 49 PANNINGS

there were only two that failed to show gold. The ground all through has been more or less tested by the old time workers. Pits are sunk, some of which I have cleared out to see the extent of the gravel, and am satisfied that we have a great deal of gravel immediately ahead. At present you are only doing surface, or placer mining, or hydraulicking. You have no men employed underground at present time; but I have advised your directors, when they are in a position to give me the order to do so, to sink the shaft, for the indications of the outcropping of the veins dipping from west to east, and east to west, are very promising. If the stringers last there will be a contact, when the probability is that

YOU WILL HAVE A FISSURE VEIN

to sink upon. Now, I have suggested that you should sink a new shaft 250 ft. or 350 ft. from surface, and drive and cross-cut, and then you will know what you have. If these stringers form a contact you will have a permanent vein, and this can be done whilst the hydraulicking is proceeding. We can mill the lode at a very low rate. I do not recommend you to do anything with the present shaft. The timbers put in were too small, and the ground being rotten around them, and after having stoped out little stringers, which went away east to west, and north to south, your manager stoped all round the shaft. The ground then caved in, and the shaft crushed together, and I had to hurry the men out so that they should not be covered up in the 85-ft. level. The manager then put in a double set of timbers without taking out the old set. Therefore, all passage to the levels of your stopes are practically blocked, so that in getting ore out we had to pass it through a place where you have to crawl on your hands and knees to get out. You can understand the difficulties that we have. I would decidedly recommend you to sink an entirely new shaft, for to repair the old one would be a greater cost than to make the new one entirely.

The CHAIRMAN: The suggestion is valuable, but we think we had better go on as we are, and then if we get returns from the hydraulicking we shall have money to deal with the quartz mining.

A SHAREHOLDER: What will be the probable cost?

Capt. JUDD: You can sink 300 ft. and drive cross-cuts for about 1,000*l*. There are at present 100 inhabitants in the place which we call a "city." There is already a Mayor and Corporation. (Laughter.)

The resolution was carried unanimously, and

The CHAIRMAN moved: "That the directors be and they are hereby authorised to make arrangements to dispose of the surplus water for supplying the inhabitants of New London and the district and other places upon such terms and conditions as they may consider advisable in the interests of the company."

The resolution was carried unanimously, as was also one re-electing the auditor, Mr. E. J. Hart, chartered accountant, after which Mr. ADAMES moved a resolution cordially thanking the chairman, the directors, and notably Capt. Henry Judd, for their invaluable services.

THE CENTRAL ARGENTINE GOLDFIELDS, LIMITED.

THE COMPANY TO BE WOUND UP.

THE extraordinary general meeting of the Central Argentine Goldfields, Limited, which was adjourned from Aug. 26, was held at Winchester House, Old Broad Street, on Wednesday last, for the purpose of considering, and, if thought fit, passing the following resolutions:—

RESOLUTIONS.

"1. That it has been proved to the satisfaction of the shareholders of the Central Argentine Goldfields, Limited, that the company cannot, by reason of its liabilities, continue its business, and that it is advisable to wind up the same." "2. That the Central Argentine Goldfields, Limited, be wound up voluntarily, and that Mr. T. Watkin Davies be and he is hereby appointed liquidator for the purpose of such winding-up, at a remuneration of 50 guineas." "3. That it is desirable in such liquidation that the undertaking of the company should be disposed of to the West Argentine Extensions, Limited, and as nearly as possible upon the terms suggested, set forth in a draft agreement already prepared, but not yet concluded, and which is expressed to be made between the Central Argentine (Carpa Valley)

Exploration Co., Limited, of the first part, the Central Argentine Goldfields, Limited, of the second part, and the West Argentine Extensions, Limited, of the third part, and which draft agreement has been submitted to the meeting, and is hereby approved." "4. That the liquidator be and he is hereby authorised to enter into an agreement with the West Argentine Extensions, Limited, in the terms of the said draft, and to carry the same into effect with such (if any) modifications as he may deem expedient." "5. That in the event of the liquidator not being able to carry through the sale of this company to the West Argentine Extensions, Limited, upon the terms of the said agreement, or with such modifications as he may deem expedient, then that the winding-up of the company be carried through by him in the ordinary course."

Mr. G. H. M. Batten

presided.

The SECRETARY having read the notice convening the meeting, and the minutes of the previous meeting,

The CHAIRMAN moved the first resolution, which was seconded by Col. HOWARD, and carried unanimously.

The CHAIRMAN then moved the second resolution as above, which was seconded by Col. HOWARD.

An amendment substituting the name of Mr. John Henry Tilly for that of Mr. T. Watkin Davies as liquidator was duly carried, and the resolution was altered accordingly, and put as a substantive motion, which was carried.

The CHAIRMAN formally moved the other resolutions, but they were not seconded.

Mr. JENNINGS expressed his great regret that the arrangement, made some 11 months ago, could not be carried through. He knew a great many shareholders who still had a firm belief in the property of both these companies. He was one of them himself. He would have opposed these resolutions, but he felt it was like fighting against fate, and one could only hope that some arrangement would be made with the liquidator by which these properties could be preserved intact, in some shape or form.

The CHAIRMAN said he quite agreed with these remarks. He had not lost faith in the properties, but at the present time there was no enthusiasm about finding any more money, and Argentine affairs generally were not in a state that gave them much hope of raising money to carry on the work.

The meeting closed with a vote of thanks to the chairman.

CENTRAL ARGENTINE (CARPA VALLEY) EXPLORATION CO., LIMITED.

THE COMPANY TO BE WOUND UP—APPOINTMENT OF LIQUIDATOR.

THE extraordinary general meeting of this company, which was adjourned from Aug. 26, in consequence of there not being sufficient shareholders to form a quorum, was held at Winchester House, Old Broad Street, E.C., on Wednesday last, for the purpose of considering, and, if thought fit, passing the following resolutions:—

RESOLUTIONS.

"1. That it has been proved to the satisfaction of the shareholders of the Central Argentine (Carpa Valley) Exploration Co., Limited, that the company cannot, by reason of its liabilities, continue its business, and that it is advisable to wind up the same." "2. That the Central Argentine (Carpa Valley) Exploration Co., Limited, be wound up voluntarily, and that Mr. T. Watkin Davies be and he is hereby appointed liquidator for the purpose of such winding up, at a remuneration of 50 guineas." "3. That it is desirable in such liquidation that the undertaking of the company should be disposed of to the West Argentine Extensions, Limited, and as nearly as possible upon the terms suggested, set forth in a draft agreement already prepared, but not yet concluded, and which is expressed to be made between the Central Argentine (Carpa Valley) Exploration Co., Limited, of the first part, the Central Argentine Goldfields, Limited, of the second part, and the West Argentine Extensions, Limited, of the third part, and which draft agreement has been submitted to the meeting, and is hereby approved." "4. That the liquidator be and he is hereby authorised to enter into an agreement with the West Argentine Extensions Co. in the terms of the said draft, and to carry the same into effect with such (if any) modifications as he may deem expedient." "5. That in the event of the liquidator not being able to carry through the sale of this company to the West Argentine Extensions upon the terms of the said agreement, or with such modifications as he may deem expedient, then that the winding-up of the company be carried through by him in the ordinary course."

Mr. G. H. M. Batten

presided.

The meeting having waited one hour for a quorum, in accordance with the articles of association, the proceedings were then commenced.

The SECRETARY read the notice convening the meeting, and the minutes of the previous meeting were read and confirmed.

The CHAIRMAN then proposed the first resolution as above, which was seconded by Mr. PROBYN.

Mr. WILEMAN was proceeding to address the meeting when the SOLICITOR ruled that he was out of order, he not being a shareholder.

The motion was carried unanimously.

The CHAIRMAN then moved the second resolution as above, which was seconded by Mr. WARD.

It was formally moved, as an amendment, that the name of Mr. John Henry Tilly, public accountant and auditor, be substituted for that of Mr. T. Watkin Davies as liquidator of the company.

The amendment was carried.

Resolutions 3, 4, and 5 fell through for want of a seconder.

The meeting then closed.

WEARDALE.—Report on mines for week ending Sept. 5.—Ore raised for week, 44 tons; ore dressed for week, 71 tons; ore, slag, and fume smelted for week, 122 tons, producing 61 tons of pig lead.

MR. JOHN H. TILLY, chartered accountant (Messrs. Tilly and Co.), 37, Queen Victoria Street, E.C., has been appointed liquidator of the Central Argentine (Carpa Valley) Exploration Co., Limited, and of the Central Argentine Goldfields Co., Limited.

THE NEW GUSTON CO., LIMITED.

TOTAL OUTPUT FOR AUG.

THE mine superintendent cables to the following effect:—"Ore shipped, 1,200 tons; value (estimated), 20,661*l.*; mine expenses, 3,615*l.*; railway freight, 930*l.*—4,545*l.*; estimated profit for the month, 16,116*l.* No. 8 level commenced. Mine looking well."—B. McNEILL, Secretary.

Mr. Harvey, the mine superintendent, under date Aug. 21, reports on the mines, viz.:—No. 3 level—South drift: The south drift has been extended a total distance of 70 ft.; there is scattered low grade ore in the forebreast. No. 5 level—North drift—No. 1 stope: But little work has been done here during the past fortnight, the men being employed on repairing work. No. 6 level—No. 6 ore body stope: Height of stope, 70 ft.; length, 42 ft.; width of ore for length of stope, 11 ft.; value of ore, from 90 to 10,000 ozs. silver per ton; gold, from 1 to 3 ozs. per ton; copper, from 3 to 40 per cent. The last car (10 tons) of ore shipped from this point sampled as follows:—Silver per ton, 942 ozs.; gold per ton, 2 ozs. 2 dwts.; copper, 13 per cent. The appearance of this stope is remarkably fine. South drift—new stope: Length of stope, 34 ft.; height over back of level, 34 ft.; width of ore for 17 ft. in length, 15 ft. Remainder of stope considerable ore, but broken in appearance; value from 50 to 350 ozs. silver per ton; gold from $\frac{1}{2}$ to 1 oz. per ton; copper, 3 per cent. to 7 per cent.; the stope looks well. North level—Stope south end of winze: Length of stope, 35 ft.; height over back of level, 26 ft.; width of ore, 6 ft.; value, from 60 to 2,000 ozs. silver per ton; gold, $\frac{1}{2}$ to $\frac{3}{4}$ oz. per ton. North level—Stope north end of winze: Height over back of level, 25 ft.; length, 26 ft.; width of ore, 4 ft.; value from 100 to 200 ozs. silver per ton; gold, $\frac{1}{2}$ to $\frac{3}{4}$ oz. per ton. These stopes look well. North level—South drift: Distance driven, 17 ft.; total distance extended from south end of winze, 34 ft.; width of ore in the forebreast, 3 ft.; value from 45 to 70 ozs. silver per ton. North level—Pioneer level: Distance driven, 21 ft.; total distance extended from north end of winze, 43 ft. No. 7 level—No. 7 ore body stope: Length of stope, 50 ft.; height over back of level, 16 ft.; width of ore, 10 ft.; value, from 40 to 700 ozs. silver per ton; the stope looks well. Shaft: The main shaft has been sunk 28 ft.; total depth below base of No. 7 station, 93 ft. South drift: Distance driven, 17 ft.; total distance extended, 49 ft.; thickness of ore in the forebreast, 2 ft.; value, from 40 to 60 ozs. silver per ton; gold from $\frac{1}{2}$ to $\frac{3}{4}$ oz. per ton. The mine continues to look well throughout.

P.S.—A cable just received from Capt. Harvey is to the effect that he is now engaged putting in shaft bearers, and that he will commence to-morrow (Sept. 9) to open out for No. 8 level.

YANKEE GIRL SILVER MINES, LIMITED.

NO RETURN FOR AUG. ON ACCOUNT OF REPAIRS TO SHAFT.

Sept. 8.—Referring to the circular of the 21st ult., shareholders were informed of the necessary repairs to the Robinson shaft and the Yankee Girl stopes. As this work materially affected the output for Aug. month, no return will be issued. The repairs are, however, now about completed, and the general output will shortly be resumed. Capt. Harvey cables this morning:—"No. 9 level—South-west (new) ore body: Ore in face of drift looks well. Have started stope at this point."—B. McNEILL, Secretary.

PROGRESS REPORT.

Mr. Harvey, the mine superintendent, under date Aug. 24, reports on the mines, viz.:—Yankee Girl Mine: No. 2 level—Orphan Boy: Length of stope, 30 ft.; height of stope over back of level, 8 ft.; ore broken in appearance and scattered; value of ore from 20 to 100 ozs. silver per ton; this stope has been worked up from No. 4 level. No. 6 level—North-east drift: Drift extended 48 ft.; total length of drift from raise 148 ft.; appear to have encountered the Robinson ore break; here low grade scattered ore has been met with; the drift has been driven 12 ft. into the break, but as yet are not through it. Six-and-half level—Winze stope: Length of stope, 54 ft.; width of ore varying from 1 ft. to 5 ft.; value of ore from 20 to 1,000 ozs. silver per ton. Owing to having a heavy fall of ground in this stope, but little work has been done, excepting timbering and repairing. It will probably take until the end of the month before this place is again in good working order. No. 8 level—South-west ore body: Height of stope over back of level, 15 ft.; length, 34 ft.; width of ore, 7 ft.; value from 20 to 50 ozs. silver per ton; lead from 10 per cent. to 40 per cent. No. 9 level—South-west ore body: A drift has been extended 29 ft. with the object of meeting with the south-west ore body. At this point (viz., 29 ft. from point of commencement) the ore was met with, and the drift continued 12 ft. through ore 4 ft. wide; value of ore 20 to 40 ozs. silver per ton; lead 20 per cent. to 40 per cent. Robinson Mine: No. 1 level, South drift, No. 1 stope: Length of stope 50 ft.; height over back of level, 12 ft.; width of ore, 4 ft.; value from 10 to 500 ozs. silver per ton. North drift—No. 1 stope: A stope has been commenced here not far from the south boundary line; length of stope, 60 ft.; height over back of level, 15 ft.; ore from 1 ft. to 2 ft. thick; value from 10 to 40 ozs. silver per ton. No. 3 level—South drift: Drift extended 25 ft. There is low-grade iron pyrites ore 4 ft. thick in the forebreast. South-east drift: This drift has been extended 15 ft. through hard quartz; total length of drift 100 ft. In order to test the value of this quartz two cars of it (approximately 20 tons) were put through the concentrating mill, the assay result of which was—No. 1, 319 ozs. silver per ton; gold, 1 oz. 12 dwts.; lead, 30 per cent. No. 2, 122 ozs. silver per ton; gold, $\frac{3}{4}$ oz.; lead, 23 per cent. South drift—No. 3 stope: The appearance of stope is poor. It has been deemed advisable to suspend operations here *pro tem.*, having started a drift at No. 1 level just over this stope, which will prospect the ground in this direction. No. 3 level—South drift: Drift extended 30 ft.; total length driven, 452 ft.; there is low-grade ore in the forebreast 1 ft. thick. South drift—No. 2 stope: Length of stope, 35 ft.; height, 62 ft.; width of ore, 1 ft.; value 10 to 30 ozs. silver per ton. South drift, No. 3 stope: Length of stope 60 ft.; height 45 ft.; width of ore 2 ft.; value from 10 to 60 ozs. silver per ton. No. 4 level—South drift, No. 1 stope: height of stope 70 ft.; length 160 ft.; width of ore 2 ft.; value from 10 to 40 ozs. silver per ton. No. 5 level—South-east drift: Drift extended 60 ft.; total length driven 220 ft. Scattered ore has been met with varying in value from 5 to 20 ozs. silver per ton. Shaft: Owing to some square sets having crushed in the shaft, the

hoisting arrangements were interfered with for some days, until the timbers could be repaired. Concentrating mill: Work at the mill was delayed eight days, owing to the rolls breaking. New rolls have been put in, and the general work here is again progressing satisfactorily.

AMERICAN BELLE MINES, LIMITED. PROGRESS REPORT.

SILVER BELL MINE: The new hoisting apparatus is nearly completed at Silver Bell, and this mine will shortly resume shipments. **National Belle Mine:** The ore in the No. 3 level has changed its character from hard to decomposed pyrites and galena similar to that found in the Yankee Girl and Guston Mines. Under these favourable circumstances, the question of treatment of the low-grade ore in the upper levels has been deferred, and the sinking of the shaft another 100 ft. has been decided upon, in order to ascertain what further change in the ore may have occurred at that depth.—B. McNEILL, Secretary.

MONTANA CO., LIMITED. MONTHLY RETURN.

THE secretary of the Montana Co., Limited, states that the following information has been received by cablegram from the manager at the mine:—"Total weight of ore crushed during Aug., 6,967 tons; yield from the mills, \$57,500; working expenses for the month, \$45,000." N.B.—The estimated number of ounces contained in returns by assay being, gold, 2,090 ozs.; silver, 11,805 ozs.

FOREIGN MINING INTELLIGENCE. (Continued from page 377.)

NUNDYDROOG (Aug. 18).—Report of work done for fortnight ending Aug. 17:—Owing to the cholera outbreak we have had to suspend some of the places, and put the rock-drills to work at other points where there was not so much labour required to clear away the dirt; we shall resume work at these places, notably the two winzes in the bottom of the 520, as soon as we can get our labour back. All the hand labour stopes are practically suspended. The 520 north: Driven 22 ft., by one Italian with a rock-drill; total length of level, 228 ft. I am glad to inform you that the lode has now opened out to 4 ft. in width; the quartz assays $1\frac{1}{2}$ ozs. per ton. The 520 north, stope in back: Ground stope 6 fms., by one Italian with a rock-drill; the lode is a good one, 3 ft. wide, and worth 2 ozs. 11 dwts. per ton. The 520 south, winzes Nos. 1 and 2: These were working for a few days this month, when they had to be suspended owing to our not being able to clear them on account of a lot of the coolies having gone when the cholera made its appearance; the lode in each winze was as wide as reported previously, viz., 7 ft. and 5 ft. The 520 south, stope in back: Ground stope 5 fms., by one Italian with a rock-drill; the lode is a very fine one, 4 ft. in width, and assaying over $5\frac{1}{2}$ ozs. per ton. The 450 south, stope in bottom: Ground stope 10 fms., by one Italian with a rock-drill; the lode looks very well, being 3 ft. wide, and assaying 3 ozs. 1 dwt. 18 grs. per ton. Webb's shaft, 480 north, winze in bottom: Sunk 4 ft., by one Italian with a rock-drill; we purpose sinking this to the 520, and carrying the skip-road down to that depth, so as to increase the facilities for hauling quartz. Taylor's shaft, 300 north, bob plat: Ground cut 5 fms., by one Italian with a rock-drill; we have nearly completed the work here, and are finishing it with hand labour; we hope to get the new bob in very shortly. Taylor's shaft: The 600 cross-cut east driven 17 ft. 6 ins., making a total length of 35 ft. 6 ins., and cutting ground for plat 4 fms., by two Italians with two rock-drills; we are expecting to cut the lode with this cross-cut very shortly, as from the appearance of the forebreast we cannot be very far from it. We have been greatly hindered owing to the absence of coolies. (Office note.—The lode referred to was cut on the 25th ult., and was 6 ft. wide, assaying 3 ozs.) Kennedy's shaft: Sunk 4 ft.; total depth, 159 ft. 3 ins., by two Italians with a rock-drill; the water has increased here, some of it, I expect, coming from the north shaft cross-cut; we expect to hole very soon. The mill: The mill is running very well, and the tailings machinery is also running very well. Health: We have had a good many cases of cholera on the camp since my last report, but I think that the violence of the outbreak is now diminishing. We had no case yesterday, and only one to-day, so I trust it will soon cease. The rains are still holding off, but as soon as we get a really heavy down-pour, I hope we shall be all right. Mill samples: Rough quartz through stonebreaker, 3 ozs. 6 dwts. 12 grs.; smalls through stonebreaker, 2 ozs. 17 dwts. 18 grs.—F. W. GREY.

OSCAR (Sept. 5).—Hodgkinson's lode:—The shaft is being sunk by six men, who have made good progress during the week. The lode in bottom still presents a disturbed appearance, and carries but little quartz. We, however, anticipate an early improvement. The 300-ft. level north is being driven by three men; the ground is very hard, and scarcely the usual progress is being made. The end shows about 3 ft. of hard bluish gray quartz of like appearance and character to that which accompanied the richer run of quartz from the surface to the 80-ft. level. It contains a quantity of pyrites, and assays 3 dwts. 13 grs. gold per ton. There is no alteration to note in the 200 north. The winze sinking in bottom of this level is showing a well defined lode, with quartz 2 ft. wide. The quartz is the hard blue sort, carrying galena and copper. Assays during the week have shown value, varying according to the amount of contained mineral, from 7 dwts. 19 grs. to 2 ozs. 9 dwts. A stope working in back of 200 north is producing quartz more highly mineralised than any previously broken in the mine. Assays have shown values from 2 ozs. to nearly 7 ozs. gold per ton, the usual result with quartz of such character. The cross-cut towards Bluet lode is being pushed with all speed, and satisfactory headway has been made. Williams' lode: There is a good lode in bottom of winze sinking on this lode. The quartz is over 3 ft. in width, and is carrying an increasing quantity of mineral as depth is attained. Assays, however, still run low, as an average 2 dwts. 17 grs., some few samples though have run as high as 11 dwts. All other points are without alteration.—J. DAW, jun.

PAHANG CORPORATION (July 15).—Extract from letter from the manager:—Pollock's lode: The lode in bottom drive west has cut very small, but is still carrying good tin, and will probably make larger. The stopes in east and No. 2 west are still on good tin; lode about 1 ft. wide. The main middle drive is being pushed ahead, but

there is not much in the face at present; the stopes are, however, yielding fair ore. In top drive there is a good-looking lode, some 2 ft. wide, in the face, but poor in tin. Willink's lode: On this lode, if you remember, very rich stone was met with in No. 3 winze, the ore sent down to the mill going over 7 per cent. At the junction of No. 2 drive with the winze good stone was found, but I am sorry to say the lode became poorer in the face when the drive was continued. We are now about to commence stoping above this drive. Jeram Batang: The contractors in the rise at the end of the cross-cut have broken through into the old workings. In the west end of these there is a lode 2 ft. wide, a fair sample of which gave, on assay, 15 per cent. oxide to the ton. The east end is not yet cleared. This is most encouraging, and shows that here, at all events, the Chinese did not stop working for want of good ore. The mill: 586 tons of ore were put through the mill during the month (June), producing 22 tons of dressed oxide, viz., 12 tons "A," assay 67.85 per cent. metal, and 10 tons "B," assay 63.65 per cent. metal; also 5 tons concentrates, assay 20 per cent., which requires re-grinding; average nearly 90 lbs. per ton. Loss in tailings, 0.5 per cent., chiefly from the top concave buddles. This loss will be much reduced when the jiggers and classifiers are in. The river is now extraordinarily low, and if this is to continue we must have better means of communication next year. There are now between 50 and 60 tons of bagged tin at Sungei Lembing, but it is impossible to get it down the river except at extravagant prices. Such a year has not been known before, the Malays say. I sold a small parcel of big to the smelting works here as an experiment; price, 57l. 14s. 9d. per ton. I will send you the details of this when I receive assay from the mines. I am convinced that on comparison we shall find it far more advantageous to sell in Singapore.

PESTARENA (Sept. 3).—No. 1 lode: In the 150 end north the lode maintains its size, but carries no ore. At the 90 north there is nothing new to report. The 70 north is yielding 7 tons of ore per fm., worth 14 dwts. per ton; the lode is wide, but much mixed with schist, and is evidently reaching the northern limit of the ore shoot. At the 70 south the stoping over the stopes from the 90-fm. level will probably be completed this week, when driving will be resumed. The lode is yielding 4 tons per fm. at 18 dwts. per ton. Caunter lode: The 55 east is producing 4 tons per fm., at 1 oz. per ton; the lode is about 35 centimetres wide, and carrying a fair quantity of pyrites. The western end of this level has become harder for driving; there is a little ore on the footwall, but not sufficient to value. The 46 west is suspended. The cross-cut at the 150 driving south has passed through a division showing a little quartz. On the No. 1 lode there are six stopes at work, yielding on the average $6\frac{1}{2}$ tons per fm., worth 17 dwts. per ton, and on the caunter lode seven stopes of the same productiveness and value. Val Rossa: An Italian tramroad is being laid down, and on completion a cross-cut will be driven north. All the machinery, both at surface and underground, continues to work satisfactorily.—W. ROBERTS, W. H. TRELEASE.

—Val Toppa (Sept. 2).—In the rise stope over Zero level on the eastern lode, the vein on the western side now averages 70 centimetres wide, and carries a fair quantity of pyrites; the eastern vein is very irregular, but frequently produces good pockets of ore. The total yield is estimated at 10 tons per fm. at 15 dwts. per ton. In the stope in side of intermediate level over No. 3 level the quartz has become so small and poor that it does not pay to work and has been abandoned. A stope under No. 2 level on west lode is in a big arch of low grade ore, yielding 8 tons per fm. at 8 dwts. per ton.—W. ROBERTS.

PORT PHILLIP (July 28).—North shaft has been sunk a further distance of 21 ft.; opening sets have been placed in position at the 18th level. Sinking still being carried on; depth of shaft from surface 1,714 ft.; cross-cut No. 17 level west has been extended 25 ft., principally through hard country. Total distance west of shaft, 325 ft. Country at present fair for working. No. 6 level, East lode, Criterion: Two parties of tributors are raising payable stone. No. 5 level, Robinson's lode north: Tribute party raising payable stone. Second party starts to-day to repair level further north. Tributors have raised 215 tons of quartz for a yield of 71 ozs. 16 dwts. 12 grs. of gold.

SAMBAS EXPLORATION (July 19).—Balaban's Moie: This week I discovered three small reefs running parallel to each other, two of which are 1 ft. wide, and prospect 1 oz. to the ton in free gold. They are in a soft clay slate, and heavily charged with pyrites, with a good show of gold. About 50 yds. to the east of these is another reef 14 ins. wide. I took a sample of 23 lbs. of this stone, which gave on crushing about 6 grs. (equal to about 1 oz. per ton of 2,240 lbs.) of the coarsest gold I have seen in Boedock. This I consider a fair show for a surface sample. The leader can be traced for a distance of 40 ft. There is another leader to be found here. The great thing, however, at the present moment is to get the machinery erected and running.—G. R. FEARBY, M.E.

—The machinery and plant referred to above was shipped per s.s. Laertes, which sailed on the 29th ult., and the directors hope to receive results of the first crushings by the end of the year.

TILT COVE.—East Mine—Minnie winze: We have put nine men to cut ground for bearers and cisterns at the bottom of the winze, and to make other necessary preparations for sinking. No. 11 stope at the 10-fm. level east of winze: We have started the rock drills in this stope, which are working fairly well. I think a further improvement will be made when the men get a little more used to the work. Output for month: 3,900 tons of 5 per cent. wet assay. Arrival at Swansea: The s.s. Rochefort, with 390 tons of regulus of 23 per cent., 540 tons of East Mine ore of $4\frac{1}{2}$ per cent. wet assay, and 25 tons of Long Pond Mine ore of 16 per cent. wet assay.—W. R. TOMS.

YURUARI.—The secretary advises receipt of map from the mines and full report, of which the following are the most material extracts:—The connection has now been formed between the Water and Cenicero shafts. The working of No. 4 level seems to have been suspended, owing to the quartz being of low quality. No. 5 level from No. 204 in plan has been driven at an elevation, and is doubtless off the lode. To test this I put in a cross-cut at No. 204, when we came across some very good-looking quartz. I must call your attention to the sinking of the Water shaft. From No. 193 this shaft has been going off its proper pitch. The pitch is 51, but at the bottom of shaft it has gone away to about 43. The dotted lines from 193 will show you the course which should have been pursued in sinking, and the painted portion is the shaft as it now stands. It will be necessary to

pull this shaft back to its proper pitch. With reference to the reserves on the east side of the Water shaft, and on the west of Cenicero, I would point out that there is some good ground in Nos. 141, 142, 152 and 162, and I believe the quartz here will be found of good quality. As far as we can judge from appearances, the stopes running down Nos. 142 and 153 contain good ground still standing there. The only temporary drawback being some water now standing in No. 154, and as the mines now stand, it will be necessary to use the Cenicero shaft for raising quartz. I would recommend a winze to be sunk from 8 to 9, and then have a shoot for the purpose of lowering our quartz to No. 9, when the Water shaft can be utilised. (This point is within 150 ft. of the Water shaft, while it is nearly 1,000 ft. from the Cenicero shaft.) Going back to Nos. 105 and 94 in No. 9 level, there is some good looking quartz along the breast of this stope, which seems to have been worked in an extraordinary manner. I propose continuing the winze down from the eastern corner of 194, leaving that portion as a pillar, and begin beating away 194. My reason for this is because in 195 the quartz from all appearance carries visible gold. A plan and full report are open for inspection at the company's offices, and will be found most interesting to shareholders.

REPORTS OF MEETINGS.

NEW CONSOLIDATED MINING CO., LIMITED.

CORSICAN AND SOUTH 'AURORA' PROPERTIES DESCRIBED AS OF GREAT VALUE—IMPORTANT REPORT AS TO THE FORMER—PROFITABLE VENTURE IN THE GRAND CANON GOLD PLACER CO. OF NEW YORK—THE COMPANY'S OTHER PROPERTIES—UNANIMOUS MEETING.

THE third ordinary general meeting of the shareholders was held at the Cannon Street Hotel, on Monday.

Major H. A. Joseph

(chairman of the company) presided.

Mr. ERNEST H. COLLINS (secretary) read the notice of meeting, and the minutes of the last general meeting.

EXHAUSTIVE STATEMENT.

The CHAIRMAN: Gentlemen, may we take the report and balance-sheet as read? (Hear, hear.) Then, gentlemen, it is my painful duty to begin by announcing the death, in May last, of one of your directors, Mr. Cunningham, who had been a long time resident in Corsica, and at one time was manager of our mines there. It was through my intervention mostly that he came on the board, so that I might always have him at my right hand to let me know exactly what the position of the Corsican properties was. I regret his death; but I do not think the company will in any way suffer, because the board understand (at least I understand pretty well now) what is the real position of the company's properties in Corsica. Now, gentlemen, I intend, with your permission, to make my remarks as brief as I can, compatible with my duties to you, and will solicit you to make as many enquiries as possible, in reply to which I give you the assurance that I will impart every information I possess, and give the most sincere replies to your questions. Then I shall ask you, after you have passed the report and accounts, as I have no doubt you will do, to remain here and let us have a few minutes' conversation, by way of conference, as to what really you would wish to do with your property.

A CLEAR BALANCE-SHEET.

I will commence with the balance-sheet, and think I may give you comfort in regard to it, to this extent, that on the debit side your liabilities are only 31*l*. 15*s*.—15 guineas being due to the auditor, and only due on the day the balance-sheet was made up for auditing it; 16 guineas due also to your agent in Corsica—10*l*. for his month's salary and 6*l*. for the sundry payments we have to make there. On the credit side you find that your expenses in London for two and a half years, including directors' fees, office, secretary, expenses of general meetings in 1889, printing and all current expenses, amount to 684*l*., being about 237*l*. per annum. I think that you will give your board credit for having been as economical as it was possible for them to be. Now, with reference to your properties. The report enumerates every one of them, and I can only say that, with the exception of the British Tintic Co., of which I know nothing, and the Gilbert and Chaudière Co., of which I know something, and the Marcus Mine, of which I also know something—I say that our South Aurora and our Corsican properties are all of great value, that the Grand Canon Gold Placer Mining Co., as I shall show you presently, is a concern of great promise; that the Marcus Gold Mine remains in the same position as when our late chairman spoke to you about it (of which also I know but little, as it was before my time), and the British Tintic also was before my time. There is rumour that this British Tintic Co. will at no distance date give back to you all the money you have invested in it. Whether the report is true or untrue I am unable to tell you. Now, with reference to the

GRAND CANON GOLD PLACER MINING CO.,

the amount invested by some of the shareholders is 1,200*l*. We had originally sent to us not only an excellent report of the mine, showing that if these Placers were economically worked the profit would be no less than eight millions sterling; but we had a sample of the black sand forwarded, and to our very great astonishment it showed 35 ozs. to the ton. It was a small sample of about 2 ozs., in a bottle, and very likely, by shaking, the deposits of gold had gone to the bottom, and showed that enormous yield. Therefore we wrote to the other side, instructing them to sweep into three sacks from as many different places (and we have seven) 1 cwt. or so of the sand as it lay there, and send it home. Those three sacks came to Johnson and Matthey, who assayed them. The yield of two was small, but the other was upwards of 18 dwts., or nearly 1 oz., to the ton. That being so, we wanted to know what quantity of sand there was, and how it lay, and for that purpose we wrote to Mr. Kimber, who is the

treasurer of the company on the other side, to tell us exactly the position we were in, and asked him to send up a report in this way:— "In furnishing us a report of each separate property, to describe how the black sand lies, whether in strata, and if so, to send a sketch or section showing this in connection with other matters. If in the bottom of the river, and mixed with ordinary sand, to show in what proportion the percentage of black is to ordinary sand. If trial holes are necessary, to send a section of the same in those holes, and give an idea of the quantity of sand in depth, with the cost of separating the black from the ordinary sand. The best method of so doing, whether by dry or wet process, and the probable cost of each process. What quantity can one man raise and prepare in a day, and if it be necessary to wash it, is there sufficient water? Will Edison's Sand Separating Apparatus apply to these properties, and if so, the cost of each machine and the amount of work it will do per day." I find that after this report is made, and all that is necessary done, that out of our 1,200*l*. we had sufficient left to pay for this report, to pay for all the work that is necessary to be done to the Placers under the Government Act, because the Government require a certain amount of work to be done every year upon every property for which a concession had been given, or the concession will be forfeited—I say, I find that after doing all that is necessary we will still have \$1,000 left. We made it a stipulation when we remitted that money that no portion of it should be spent for office expenses—only for work done upon the mine. I have a letter from Mr. Kimber, dated the 7th, stating that up to that time the report had not come down to the chairman and directors in New York, but that as soon as it does it shall be forwarded to us. I come back to the position that we anyhow had 1 cwt. of the sand as if swept up by a broom promiscuously into a sack, and it has given nearly 1 oz. to the ton. If, as we are told, that this sand exists in unlimited quantity, then it will be a very good thing for us, and afterwards I shall have a proposition to make to you with reference to our holding in this Grand Canon Gold Placer Co.

A PROFITABLE VENTURE.

All it has cost this company is 153*l*. 19*s*. 9*d*. for its interest, which consists of 16,240 fully-paid shares of \$10 each. We have sold some of them, which has brought us 370*l*., so that, in point of fact, the company has spent nothing at all. You are no money out of pocket, by reason of the interest you have acquired in that property, and you have also this, that if the property turns out well, we can claim for 1,800*l*., 30,000 more shares. I trust the proprietors will think with me that during my time of office anyhow we have done all we could to protect the interests of the shareholders in this direction. (Cheers.) With reference to

THE CORSICAN PROPERTIES

—I mentioned at our last general meeting, and I do so now, that I am convinced they are of great value. I do not say that of mere hearsay. I do not say it as the result of a report, but it has been repeated to me again and again, in such a way and by such people, that it was impossible to doubt it. I do not know that I shall be in anyway breaking confidence if I say this, that an offer (not a positive offer but a sort of offer) was made to us to purchase these properties, and, I believe inadvertently (for I am sure the report was never intended to come, to me) this report, made by the engineer of the French Government, came into my hands, and showed that if a capital of 23,000*l*. be raised for working those properties the net profit would be 18,000*l*. a year. The report was not made to me, but I have it in the original, and also the translation. I have six tests, made from different parts of those properties, made by this Government engineer, burning one set of ore with another, because you cannot always treat one class of ore by itself—you must mix the ores sometimes, and he shows from these six tests how a handsome profit can be made by the treatment of the produce in bulk. (Cheers.) It was for that reason that we have been so desirous of getting from the French Government (which we did in last July after three years of unremitting effort) the concession for the amalgamation of the two mines.

AN APPEAL.

I do appeal to all present, and to the shareholders who are absent, not to lose the concession of Corsican properties, but, somehow or other, to find among ourselves the means to work them. I am assured that all the money that has been spent on those properties has been well spent. There has been very little taken from them. There are thousands upon thousands of tons of ore exposed, and it is the hope of a great many that we shall be compelled to abandon these properties, with all the work done upon them, so that they may become possessed of them, and the work has been done in such a way in the hope that we shall lose them, and that these persons may possess them, and it is for that reason nothing has been taken from the mines, and that the mines are there with the ore exposed, and all you have to do is to take it out and treat it in the way that we know how to treat it. Even now there is lying there on the dumps a certain quantity of ore that only wants hand picking to be sent here at once and turned into money without treating it at all. (Cheers.) I fully believe in the Corsican properties. I assure you that the

BOARD HAVE A VERY LARGE INTEREST

in this company, and that they are in the same boat as yourselves.

They are not like the directors of many companies—with a small interest in the shares and a big interest in the fees, but they have a small interest in the fees and a big interest in the shares. I assure you also our labours are very great. My directors will tell you, and the secretary also will tell you, that I am frequently at the office three and four hours at a time. I am sure my colleagues do all they can to help me, and I am sure also of this, that I am justified in saying to you that no body of men could attend to your interests more closely than we do. I had a seat at this board for a short time in 1883, and for a short time in 1884, and when it was decided to rent the properties to the Corsican Copper and Chemical Co., to which I strongly objected, I left the board. I took no fees, but two years afterwards, when what I predicted came to pass, and nothing was done with the Corsican properties, I came back, certainly at the request and invitation of the board, but I preferred to ask you in general meeting to send me back. I then found that the Corsican Copper and Chemical Co. was at loggerheads, and that it was for the interests of this company to get the property back, for which purpose it was necessary to put a petition on the file. I filed that petition myself and got the properties back, with all the advantage of the money spent upon them by that company, free of debt, and I also got for you 750%, and might have had more, only I should have had to plunge you into a series of lawsuits in which the expenses were certain, the results very uncertain, with costs as between attorney and client other than those as between plaintiff and defendant.

SOUTH AURORA.

Now, as to South Aurora—you know those shares were at one time worth from 12% to 20% each. Well, your property is still there. (Hear, hear.) All silver properties in that district are what are called pocketty. There are no veins, but the silver is found in large deposits. It is 10 years now (long before I held a share in your company) that you gave up working those properties, and you did right, because the price of silver was then so low, and the cost of working so heavy, that if you had worked the property and found silver it would not have paid you, and yet the gentleman who had charge of the property for the Eberhardt Co., which adjoins it, and which, in fact, was part of it once, was continually writing to us saying he was sure deposits were there, and you have in your report the extracts from the letters that he wrote on the subject. You have there a mill of which I have the description here from the report of the engineer at the time it was put up. I am confident, as I think you all may be, that at no distant date the price of silver must increase, and should it do so, from the great demand there will be for silver currency, to pay for labour in the East and in Africa, and on behalf of many countries that have a gold currency which will have to adopt a silver currency, and one or two other countries which will have to adopt a joint currency of gold and silver—I do not say these properties should be worked at present, but I do give you hope that you still have a fine property there. We continue to pay taxes (80%) by reason of

THE STAMP MILL WE HAVE THERE, WHICH COSTS 40,000% TO ERECT.

There is the mill. No doubt it is damaged by want of use, as all such things are, but still it has not been damaged to anything like the extent of its cost, and I tell you to hope still as regards that property. It is not because your property has been lying dormant that it is to be called utterly valueless. The property cost you (the original shareholders) many thousands. Do not fling it away to anybody who chooses to take it from you. We did lose it three years ago, because neglect was made to pay the United States dues, and who bought it? Why, our neighbour. We made him give it back, because by the United States law you can get a property back by tendering within 12 months the money paid with 10 per cent. interest. We at once remitted the money, and got the property back. The

GILBERT AND CHAUDIÈRE

I can say little about except this, that there was a lawsuit between the Gilbert and Chaudière Co. and the Government as to whether the company had a proper concession. The Gilbert Co. gained the day, but I only learnt last week that the lawyer, not being able to get his costs, put an execution upon the property, which was sold to pay rent; but an approach has been made to us to ask if we would find a small amount, and they would give back a certain amount of land. My advice is to have nothing to do with it—I do not like it. I do not think all the directors are of the same opinion, but what I say is—out adrift anything that is of no use keeping, and that is what I have the assurance to tell you with respect to this property.

THAT "GRAY-HEADED OLD MAN."

I now repeat my invitation, that you should ask me any questions you may feel inclined to, and I venture to feel sure, after I have replied to them, you will leave the room saying "that gray-headed old man is not such a fool as he looks." (Laughter.) I propose "That the accounts and report be received and adopted." (Cheers.)

Mr. H. W. SPRATT (director): I second the motion. *San Francisco Record.*

DISCUSSION.

Mr. COOPER: What is the amount of directors' fees for last year, and have they been paid in cash, or simply placed to their credit? Who pays for the proxies sent out—the company or the directors?

Mr. BLUNDELL: We have so many irons in the fire that I fear it is impossible we can keep them all hot. I am, therefore, very glad that you are in favour of reducing the number, as far as possible, so that we may give all our attention to the development of those properties that really give some promise of profit. I had hoped that you would have been able to give us a revenue account, but that I see is impossible, as nothing has been done. It does really seem strange that we should be nominally working for three years, and yet actually we have done nothing. Instead of devoting our money to one or two objects it has been scattered over a large number. I was a shareholder in South Aurora, and to that fact is due my appearance here to-day. I did hope we should have had all our money used to develop that property, and more particularly the Corsican one, which was taken up, if I am not mistaken, by the South Aurora Co. before it developed into the New Consolidated Co. I have

MORE FAITH IN THE CORSICAN CONCERN THAN IN ANY OF THE OTHERS.

Whether the time has come to work the South Aurora, even if we had the money, is questionable; but I do trust that means will be found

to work the Corsican properties, so that in that way we may get something in the shape of revenue. We have about 1,200% cash in hand, which will carry us on for another year, but unless something is done within 12 months I suppose we shall have spent all we have, and shall be in the condition of having all these properties, with no funds to work them. Failing this there will be re-construction or winding up. The latter, I think, will be a pity under the circumstances. I see in the report you state that you are going to give some proposition with regard to development operations, and that, I presume, will come at a later stage of this meeting, when the report and accounts have been disposed of. It is very important to-day to go fully into what we purpose doing in the future.

Mr. WILLIAMS (a former director): Has the board any offer for the purchase of the Corsican property?

CHAIRMAN REPLIES.

The CHAIRMAN: I will answer Mr. Cooper first. The directors' fees have been at the rate of 50% a year to each director, and have never been more at any one time, and they have been paid in cash. The expense of the proxies will not be borne by the company. They amount to a few shillings. Mr. Blundell has spoken very wisely, and has stated that for three years nothing has been done with your properties. What could we do with them for three years, but beg of you, as we have always done, to find us the means of working them—a prayer we present to you again to-day. It is no use our taking a few hundred pounds and paying for a man here and a man there. That would be flinging away your money, and we decline to do it.

THE REAL WANT OF THE COMPANY.

What we want, and with less we cannot act efficiently, is 20,000% to work properly, and I undertake to say that if you find that our properties will pay you 25 per cent. I should propose this to the proprietors, that they should establish a new company with a moderate capital for the purpose of working the properties, and that the first results should be to pay the new proprietors 10 per cent., and that afterwards they should pay a rental, and after the rental the parent company and the new company should divide the profits. If that is not a fair, liberal, proper, and mercantile offer, that those who run the risk shall take the first profit of 10 per cent., a rental be paid to us after that and afterwards the profits be equally divided, then I do not know what is. That is what I should propose, and that is what I should ask you to speak about in the conference. Mr. Williams asks if we have had any offers for the Corsican properties. We have had some sorts of offers. One offer has been made to our agent in Corsica, and it is only last week (Sept. 1) that I wrote thus:—

"Now, with reference to what you call the fresh proposals, made by a notary of position at Nîmes to the manager of the Bastia Water-works for our Corsican properties, we cannot make out what the offer is. Be pleased, therefore, to have the offer sent to us in detail so that we may consider it. Such must include a deposit of 500% sterling to guarantee the carrying out of any proposal that may be made to us."

Only an hour ago we have had a letter from Corsica. It is in eight sheets of paper, written in very bad Corsican-French, and we shall have it translated at once. I have called our board together for to-morrow at 12 o'clock to consider it, but I

BEG OF YOU NOT TO PART WITH YOUR CORSICAN PROPERTIES.

If it is worth their while to buy them, it is worth ours to retain them, and they would not want to buy them if they were not worth buying. A Corsican is a very clever man, and you must get up early in the morning to get the better of him in a bargain. (Laughter.)

Mr. WILLIAMS: Will the result be made known to the proprietary?

The CHAIRMAN: That might spoil the negotiations, and, truth to tell, I do not want it to come to a successful issue, though I will not hinder it in any way. Mr. Brodrick holds a good many thousand shares, and I, with my friends, hold many thousands more. I represent here to-day with the board 56,000 shares.

Mr. COOPER: How many of these are by proxies?

The CHAIRMAN: None whatever. (Cheers.) Mr. Smedley represents a large and wealthy house in the City. I asked them to come on the board, but they said they would ask a friend of theirs to represent them, and they nominated Mr. Smedley. I can rely fully on that gentleman, who is faithful in all he says and does. (Cheers.) The proxies we have received are only for 14,000 shares, because we only sent out a few forms—(cheers)—and they are in addition to the 56,000 shares held by the board.

The report was unanimously adopted.

The CHAIRMAN: I must now blame you very much. We sent two appeals to ask whether we, as a board, should be justified in approaching the Eberhardt Co. to join us in some way in working the South Aurora property. We sent out upwards of 1,200 circulars, and enclosed in each a card, upon which the proprietor had only to write "yes" or "no," but we got back only 120, and yet are told we are doing nothing.

IT IS THE SHAREHOLDERS WHO DO NOTHING,

and the directors who do all they can. I am willing to serve you again if I am of any use. But do not keep me here simply to get 1% a week. I do not want your 1% a week—I would rather not have it, because the time I have to give to this company is infinitely more valuable. At the same time I have a large interest in it, and so have my relatives and friends. My interest is therefore your interest, and as we are all in the same boat, let us pull together, and see if we cannot do something to make these valuable properties productive.

A SHAREHOLDER (surprised): Are there really 1,200 shareholders?

Mr. SMEDLEY: Yes—it is a very large list.

The CHAIRMAN: Mr. Bergtheil retires, but is willing to serve you again. He knows more about this company—even more than I do, and I am frequently obliged to appeal to him. As to myself—if you wish to retain me as a director, I shall be happy to serve you, but if you would rather not, then say so, send me about my business, but I should like to remain to look after my own interests, because they are very heavy, and also to look after yours and those of my friends.

Mr. SPRATT proposed the re-election of Mr. Bergtheil.

Mr. WILLIAMS seconded the motion, which was carried unanimously.

TRIBUTE TO MAJOR JOSEPH.

Mr. SMEDLEY: I shall have equal pleasure in proposing that Major Joseph should also remain on the board. (Hear, hear.) As far as my

own individual testimony can go, I can very safely say that we have one of the best chairmen possible. (Cheers.) He knows this thing from beginning to end. We sometimes do not agree, but I do not believe in a board that is always of one opinion. We hammer out everything, and hope, in the end, to come to the right conclusion.

Mr. H. A. THOMPSON: I second the proposal, and do so with great pleasure, for I happen to know Major Joseph in another place and in another capacity, and I can testify to everybody assembled here that he is a man who gives himself thoroughly to every duty that comes before him.

The motion was carried by acclamation.

The CHAIRMAN: I can only thank you for your renewed confidence, and give you at the same time the renewed assurance that you shall have my best efforts. (Cheers.)

Mr. BLUNDELL moved the re-election of the auditors, Messrs. Ogden, Palmer and Langton, which Mr. COOPER seconded, and it was carried.

THE CONFERENCE.

The CHAIRMAN: We have said in our report that we have had a great many other things offered to us, but that none of them were worth accepting, though during last month we have had something of a different character offered, which is before us now. If we accept it, our outlay, to commence with, will be only 150*l.*, and the property is within three days' journey of London. It is offered by a gentleman as to whose integrity we are satisfied after many inquiries. We have not closed with him, but appointed him to come to our board meeting to-morrow, and if the matter comes to anything we shall take care to let you know. With reference to the Grand Canon Gold Placer, we are of opinion that the property is valuable.

AN OFFER TO SHAREHOLDERS ONLY.

Now, in the absence of a dividend, if any proprietor chooses to take any of these shares, with \$10 paid upon them, for the price of 6*s.* each, we can let him have them to a limited number. You had them at 8*s.* before, and we offer them at 6*s.* now. We shall submit that offer by circular, and if you disapprove, there is no need to take them. If they become of value the company will have a good number of shares left, and you, individually, may have a few on your own account, if you wish to do so, but to those who already have them at 8*s.* they will be offered at 4*s.*, so as to equalise all at the same selling price of 6*s.*

A SHAREHOLDER: What is the capital of the Placer Co.?

The CHAIRMAN: 200,000*l.*, and it is an American company. Should any of these properties turn out well your shares will not be at the price they are now very long. You are not so deep in the mire that you need not take heart—in fact, you are not in the mire at all. We could have called up the last shilling, but we are a long way from it yet.

Mr. SPRATT proposed a cordial vote of thanks to the chairman, which was carried by acclamation, and this ended the meeting.

THE GUADALUPE (HONDURAS) GOLD AND SILVER MINING CO., LIMITED.

SHAREHOLDERS UNANIMOUS IN BOTH THE ORDINARY AND SPECIAL BUSINESS—VALUABLE TESTIMONIES FROM THE CHAIRMAN, MR. FOSTER, AND OTHERS AS TO THE VALUE OF THE PROPERTIES—IMPORTANT PROPOSALS.

The ordinary general meeting was held at Winchester House, on Tuesday, for the transaction of the ordinary and special business, set forth in the notice.

Mr. John Cox

(chairman of the company) presided.

Mr. R. H. NERNEY (secretary *pro tem.*) read the notice of meeting.

POSITION GREATLY CHANGED FOR THE BETTER.

The CHAIRMAN: Gentlemen, in moving the adoption of the report, I have great pleasure in appearing before you to-day as your chairman. We are certainly in a clearer atmosphere than we were on the last occasion the board met you, and are more hopeful of future success. Without going into any details of my visit to the mine, which I shall be glad to reserve for the meeting which will follow this, I will ask you to assist me just to get through in a formal manner the report and accounts of the company—in other words, to carry through the ordinary business first, and then we can deal with that of special meeting. The details of my visit will come naturally before the second meeting. There is one item to which I will draw attention in the profit and loss account—a sum of 1,463*l.* 1*s.* 11*d.*, which is described as being for salaries, wages and fees for local directors (respecting which negotiations are proceeding), but that is not quite so. The heading of this item was, unfortunately, copied from the report which was placed before you last year, but as then, so now, it embraces other items, namely, the salary of Mr. Gilbert, the superintendent; the salaries and expenses attending the appointment of Mr. Harvey (who was there prior to Mr. Gilbert, and who had to return to this country); the salary of the local directors—Mr. Foster and Mr. Coello—the latter being appointed by the late secretary, Mr. Vincent, and the portion of the Cornish miners' wages paid to their wives in Cornwall. I shall be glad to answer any questions, and will conclude this part of my statement by moving the reception and adoption of the report and accounts.

Mr. BERRY: I second the motion.

Mr. PERKINS: How many Cornish miners are at the mine?

The CHAIRMAN: There were at the time of the report four, but there is only one now.

MR. COELLO.

Mr. PERKINS: In regard to Mr. Coello's salary—how is it that any payment was made to him?

The CHAIRMAN: I am glad you have asked the question, as a little explanation is required. When your late secretary, Mr. Vincent, was sent out on the second occasion he felt it part of his duty to depose Mr. Foster and to appoint Mr. Coello. Mr. Coello claimed to have occupied the position of local director for six months, for which period Mr. Foster paid him and also himself. That is the question now in

negotiation between the company and Mr. Foster. The latter appears to have been paid for the whole time, and Mr. Coello for the time he was supposed to have been in office.

Mr. ROBINS: You say Mr. Foster paid himself his salary for the six months as well as the local director appointed by Mr. Vincent, but, if my memory serves me, at the last meeting it was stated that in the action in which the late secretary took while at the mines,

HE HAD EXCEEDED HIS POWERS.

I represent Mr. Foster, and should be sorry for the impression to be left that he had received an amount which he was not entitled to. I presume Mr. Foster did not regard the action of Mr. Vincent sufficient for deposing him from his position.

The CHAIRMAN: It is true Mr. Foster did not regard the appointment of Mr. Coello as being a proper appointment, inasmuch as he asserts, or alleges, at all events, that it did not receive the confirmation of the board here, but it was also a fact that Mr. Foster, knowing these circumstances, did pay Mr. Coello for what he claimed for his services as local director during six months.

Mr. ROBINS: I do not wish to be misunderstood, but it should be made clear that Mr. Foster would not take money for services for himself with the knowledge and belief that he was not entitled to it. I brought out the point at the previous meeting that the secretary had exceeded his powers in his action in regard to Mr. Foster. I am not wishing to offer any obstruction. (Hear, hear.)

Mr. WATERFIELD: Why was Mr. Coello paid without authority from the board?

Mr. WEBBER (director): Simply for the reason that Mr. Foster did not recognise Mr. Coello as a local director.

Mr. WATERFIELD: That seems to me a very singular reason for paying him. (Laughter.)

The motion was carried unanimously.

On the motion for the election of the retiring directors, Mr. Webber and Mr. W. De B. Seagrave, a discussion arose in the course of which it transpired that the board have held 40 meetings, that Mr. Webber had attended eight of them, and would have attended most of the remainder if he had been in a good state of health, that some of the directors were resident in London, and some in the country, and that the two gentlemen now retiring had rendered great service to the company, and were valuable members of the board.

Mr. ELSON moved the re-appointment of these gentlemen, which Mr. ROBINS seconded, and it was carried unanimously.

Mr. WEBBER and Mr. SEAGRAVE both returned thanks, and promised to give the company their best services.

Mr. ROBINS proposed the re-election of the auditors, Messrs. Herman, Lescher and Co., at a remuneration of 16 guineas.

Mr. ELSON seconded the motion, which was carried unanimously.

THE "SECOND PART OF THE PROGRAMME."

The meeting was then declared extraordinary, for the purpose of considering the following resolution:—

"That, in the opinion of this meeting, it is desirable to sell the Santa Ana Mine to a separate company, and that the directors of the Guadalupe (Honduras) Gold and Silver Mining Co., Limited, be and are hereby authorised to carry out such sale, and to do and execute all acts and things incidental thereto, and necessary for carrying into effect this resolution."

The CHAIRMAN then introduced what he termed the second part of the programme. This (he said) is a scheme that has been laid before you in the confidential prospectus you have all received. The scheme which has been propounded and carefully thought out by the directors has been sent to each of you, and I have no doubt you have made yourselves practically acquainted with its details. The gentleman who, more than any other member of the board, has been instrumental in drawing it up and bringing it to the condition and focus it now possesses is Mr. Beavis, and I am sure he will be able to put the matter before you more concisely and professionally than I am able to do. I now ask him to do so.

SCHEME EXPLAINED.

Mr. BEAVIS: I certainly do not deserve to take to myself any of the flattering remarks the chairman has been good enough to make. I am in an awkward position, but having from time to time found myself in other awkward positions, have had to do the best I could. The awkward position in which I have been placed here has not been unmixed with benefit and gratification to myself; but whatever it may have been, it has been a position which has brought me a vast amount of work in connection with this company. (Hear, hear.) The difficulty here arose out of the want of that which you all know is the crucial need of all commercial pursuits—that of money. We had not sufficient money to go on with, and it is a fact, patent to all of you, that at one time, unless we had taken exceptional measures and had turned ourselves inside out, we should not have had the necessary funds to carry on the business of the company. But we did manage to tide over the difficulty, and were very pleased indeed when the property, which was so depreciated at the meeting last year, turned out to be far more valuable than we at one time supposed. We put our shoulders to the wheel, and had to find money for the necessities of the moment. We were further helped by ore coming to sight, which was sold, and produced a fair amount of cash. But we are not out of the wood—in fact, we are a long way from its borders, and it became absolutely necessary that we should have capital. When the difficulty was presented to me, I looked at it in all its bearings. We had the 10,000 shares unallotted, and we made them preference shares. The ordinary shares were selling as low as 1*s.* and even 9*d.* in the market, and, after considering all matters, and hearing the report on

THE SANTA ANA MINE,

which is a good report, from whatever source it comes—we decided to make a vigorous effort. Even our late superintendent, to whom I will not now refer, but who depreciated our efforts in regard to Guadalupe Mine, spoke most highly of Santa Ana. I thought the best thing we could do would be to offer the Santa Ana as a separate company, and although I may claim the parentage of this scheme to a certain extent, I think I am only saying, that which I firmly believe, and which my colleagues believe also, that we do not want to put it before you as a cut-and-dried scheme. We want to put it before you as the best one we could devise under very

difficult circumstances, and it is the purpose of this meeting that it shall be properly and fully canvassed, and that we shall set it going, if we think it a good one, in the most correct and useful manner. Now, there have been

VARIOUS CRITICISMS ON THIS SCHEME.

I have had the pleasure of interviewing several shareholders who have called at my office, which is also that of the company. Their criticisms have been various, but the balance of opinion is in favour of the scheme put before you. It has been asked—"Why should we sell the Santa Ana Mine, which is our own property?" and even one of the shareholders went so far as to say—"I am not going to pay money for that which is my own." Let us look at that. Is it not a better plan to carry out the scheme as proposed to you than to ask you to subscribe so much per cent. upon your holding for nothing, which is not an uncommon method of proceeding when re-constructing companies? (Hear, hear.) We are here

GIVING YOU SOMETHING FOR YOUR MONEY.

and so far as I can see we are paying you adequately for anything that you may be pleased to invest in this new company. We are giving you in the 10,000 preference shares offered for subscription an absolute income. From all we have heard and have been told, we believe the Santa Ana to be a most valuable property, and that it will be sufficient to pay the preference dividend. If so, are we not offering you a very valuable security for any investment you make. (Hear, hear.) It is open to you to make your own arrangements. Then there is the question of management, which my colleagues are pleased to leave in your hands. This is the best scheme we can think of for placing the company in funds and working this valuable property. If we have two mines we must have a divided superintendence, and I think, considering the extent and value of the two properties—if we can properly employ two good superintendents, one at Guadalupe and the other at Santa Ana, it will be evident to you that there is a distinct and decided advantage. It is our opinion that it would be well perhaps if we could save expense in every direction by as closely as possible identifying the management of the two mines. (Cheers.) I am quite sure, speaking for myself and those who sit at the board, we have not the slightest wish even to go beyond suggesting that the management should be other than is approved of by the entire body of shareholders and the general balance of opinion. (Cheers.)

AN ALTERNATIVE SCHEME.

Mr. BERRY said he wished to submit an alternative scheme, and at the same time to take this opportunity of thanking Mr. Beavis for the polite and courteous manner in which he always received him at the office and given him every information he asked for. He thought that that gentleman had hit upon the only scheme by which this property could be made valuable to the shareholders, but he differed from him as to some of its details. Now, he had devised a scheme mostly upon the same lines, but yet he thought improving upon them. (Laughter.) Santa Ana belonged to the present company, and every advantage to be derived from it should be given to the owners—in other words, the shareholders. He would support a scheme which would not admit the outside public to any of the benefits the inside shareholders should enjoy. He proposed that the capital of the suggested company should be 65,000£. instead of 60,000£., because it was a total more divisible with the capital of the present company. The 65,000£. shares should be divided thus—52,000 ordinary and 13,000 preference, but all except 5,000 shares should be issued. Shareholders should have the option of taking the whole or any part *pro rata*, and he would offer to every shareholder in this company holding five shares two paid-up shares in Santa Ana Co. If every holder of 10 shares were to receive four paid-up Santa Ana shares they should be given to him on the understanding that he took up and paid for one share of 1£., for which £ he would only receive five shares in Santa Ana. By these means 12,000£. in cash would be raised, which would be sufficient to work Santa Ana, especially as there were 15 stamps now on the ground. He would be happy to attend any meeting of the board, and explain his plans more fully.

Mr. BEAVIS, to put the meeting in order, proposed the adoption of the resolution as given above.

Mr. ROBINS seconded the motion, and asked whether the capital being 130,000£., what the board propose to do with the balance of 50,000£.?

Mr. BEAVIS: We must use part of it to get rid of our debit to profit and loss and clear off various matters of detail.

Mr. ROBINS: I am perfectly satisfied with the explanation. On page 2 of the prospectus, I see it is estimated that a 15-stamp mill will crush 2 tons per stamp per day. Is not that excessive?

The CHAIRMAN: Not at all.

APPROVAL OF THE SCHEME.

Mr. ROBINS: I heartily approve of the scheme as propounded by Mr. Beavis. I would like to add, for the information of the meeting, that I have every reason to believe that you, sir, have in no way overstated the value of the property. My only interest in this company is that I represent Mr. Foster, as his attorney, and I hold in my hand private communications from him, in which he gives me the most satisfactory accounts of the value of the property. He says he does not know of two better properties than yours; that he has been devoting his attention for some time to the getting out of export ore, and that in a comparatively short time they have taken out, and sent to San Francisco, 36 tons, of the value of 300 ozs. of silver to the ton, and

SOME OF IT WENT AS HIGH AS 1,251 OZS.

He says: "The mine is extraordinarily good, and another, owned by the same company, close to it is a magnificent property. These mines alone, judiciously managed, will pay very largely." I thought, possibly, the shareholders might be glad to get that information. (Cheers.)

The CHAIRMAN: I am glad to say we are now again in the heart of very rich ore. There is a lively hope for the shareholders of this company in the future if they will only help to realise it.

A SHAREHOLDER: What is the date of the last communication.

Mr. BEAVIS: Aug. 4, and we had a telegram confirming it on Friday.

Mr. BERRY handed in his scheme, on the suggestion of Mr. WEBBER, for the consideration of the board.

QUESTIONS AS TO THE CHAIRMAN'S VISIT AND MR. FOSTER'S REPORT.

Mr. PERKINS: I wish to ask the chairman, who went out to see the property, how far the level was driven in the Santa Ana Mine, and did that level run parallel with the reef? Was the thickness of the reef ascertained? From the first the whole affair has been irregular. Mr. Foster is the agent who reported in the original prospectus, saying—"There are thousands of tons on the surface that will average from 30 ozs. to 35 ozs. per ton." Why was not the machinery erected to treat it? I was told by Mr. Moon that there was not sufficient ore to start the machinery, and yet Mr. Foster has been retained in our service. Mr. Perkins went on to speak very strongly about Mr. Foster, but Mr. Robins told him that if he persisted he would hold him legally responsible for his language.

Mr. PERKINS: The chairman has stated in his report that there is no such ore as that described by Mr. Foster in his report.

MR. FOSTER DEFENDED.

Mr. ROBINS: At the last meeting I publicly challenged anyone to make and substantiate any charge against Mr. Foster, and I repeat that challenge to-day. I believe Mr. Foster to be an honest and truthful man, and cannot conceive it possible that the chairman would have retained him as local director if he had not been such as I describe him.

The CHAIRMAN: I will reply to the questions of Mr. Perkins. The tunnel from the face was driven about 100 ft., and I traversed the whole distance. It was not a pleasant journey, for we had to

DISTURB A FEW THOUSAND BATS ON OUR WAY.

We got to the end, which presented the appearance described in my report—a mass of ore, driven parallel to the ridge in a vertical line. As to the practical tests, there was no jugglery about them. Solid samples could not be placed in position, and simply knocked off with the pick as I saw them. Everything was done in the most honest and straightforward manner. I saw the pieces knocked off, and was most satisfied with the results when they were assayed. At the adit, the ore first extracted during the excavation of the tunnel was piled up on the platform, which had been judiciously made for its construction, and it was in such quantity that they had practically to build a wall in order to accommodate it. As to the first ore taken from the adit, the assay gave 20 ozs., and the last ore 70 ozs. (Cheers.) I went out in your interest and in my own. I went out to ascertain the true facts, and, without being egotistical, I say it was an undertaking for a man of my age, and

ON THE TRUTH OF THE STATEMENT IN MY REPORT

you can assuredly rest. (Loud cheers.)

The motion was carried unanimously.

The CHAIRMAN read a note left by one of the shareholders, Mr. Waterfield, of the Imperial Ottoman Bank, saying—"I cannot wait, but am inclined to think the proposed proportion of allotment to shareholders is good." That is important, because it comes from a man of great experience. But what is even of more importance is your subscriptions, which I cordially invite.

A SHAREHOLDER: Is Mr. Foster a shareholder?

Mr. ROBINS: I should rather think he is—he holds 10,000 shares.

The CHAIRMAN: We have proxies to the extent of 13,000 votes. If 4,000 preference shares are subscribed by the shareholders, the board will themselves take another 1,000—that is, a fifth of the whole. In the new company we propose that the qualification for directors shall be 500 shares each in this company, and 150 preference shares in the new company.

Mr. WILLIAMS proposed a cordial vote of thanks to the chairman for presiding.

Mr. ROBINS seconded the motion, which was carried by acclamation.

The CHAIRMAN: My only desire is that the company shall be a success. We were in fear and trembling the last time we met you, but there is no fear and trembling now, for the future is ours: but I recommend you strongly to support the scheme before you. (Cheers.)

THE NEW EBERHARDT CO., LIMITED.

PROGRESS REPORT AND TELEGRAM.

THE mine manager reports under date, Aug. 23, as follows:—Monitor: Total weight of ore extracted and assorted for the two weeks, 36 tons. Assay value of the same as per mine samples, \$33 per ton. The general prospects of the mine are somewhat better than they have been for the past few weeks. We have two or three small flat seams of ore which we are following, but at present it is very hard for me to determine what the results will be. The ore is not very high grade, but should this grade of ore continue it will be very acceptable, for we can work it to a fair profit. I trust, however, that our prospects will again brighten up, for they are certainly encouraging. Mill: All being well I expect to start our battery one week from to-day, as we have over a month's run on our mill dump now, and with the ore already out at the mine, and what we expect to get out by the time the mill gets through, crushing will be between 200 or 300 tons more; and in addition to this there will be some custom ore to mill, and taking it altogether, what we have and what we expect to get, will carry our mill run until cold weather comes. Eberhardt: I now desire to hand you my statement for the week ending Aug. 23, at Eberhardt. Drift south from No. 2 upraise advanced for the week 3 ft.; total length 25 ft. This drift continues to show some quartz and a great deal of spar, but is still very hard. Cross-cut east from No. 3 upraise advanced for the week 7 ft.; total length to date, 41 ft.; no change in this drift worthy of mention. No. 3 cross-cut west advanced for the week, 11 ft.; total length, 11 ft. The face of this drift is in very favourable ground, showing considerable black spar and low-grade quartz, and is, I consider, very favourable ground for ore. No. 4 cross-cut west advanced for the week 4 ft.; total length, 4 ft.; rock quite hard, but carrying small seams of quartz.

CABLE.

"Mine prospects remain unchanged; weekly output quantity, 18 tons; the average is \$30 per ton; expenses during the month of Aug., \$5,300; Eberhardt, \$3,500, Monitor, \$1,800; Telegraph, \$5,000. I will pay all back. I have commenced milling Sept. 1; ore pulping \$31 per ton. Eberhardt making all progress possible."

ROBEY & CO., Globe Works, LINCOLN.

ROBEY & CO.'S IMPROVED STONE BREAKER AND ORE CRUSHER.

ROBEY & CO.'S STONE BREAKER AND ORE CRUSHER, for crushing Ores, Quartz, Road Metal, Railway Ballast, Cement, Phosphates, Coke, Coal, &c.

The above illustrates the most simple form of Stone Breaker made, and has no equal for easy transport over bad roads or mountainous countries. Steel has been largely employed, and in the place of the usual heavy Cast-iron Frame, a neat and much stronger Frame of rolled steel is used, with a saving of some tons in weight. The great depth of the side gives it increased stiffness, and the materials of which the machine is constructed ensure great rigidity and thorough adaptability for heavy work.

The parts are few and simple, and thoroughly accessible for oiling, adjusting, and cleaning, and the liability to breakage is reduced to a minimum.

The jaws are easily renewed, and are made of our own special mixture and treatment, rendering the face well suited for quartz. These jaws can be adjusted while the machine is running so as to reduce the material to any desired size, and are adapted for either cubing or crushing.

TELEGRAPHIC ADDRESS—

QUINLAND—LONDON.

MINING MARKET.

CITY, FRIDAY EVENING.

A WEEK OF EXCITEMENT—PRICES IN ALL SECTIONS ADVANCE RAPIDLY—SOME PLAIN HINTS AS TO WHAT TO BUY, WHAT TO AVOID AND GENERALLY HOW TO ACT.

We have passed through an eventful week. Indeed we may truly say we have passed through a booming week. Ours has long been as the voice of one crying in the wilderness telling our readers to prepare for the upward movement, because it would begin when least expected, and now we pose with more or less of the grace of the prophet who can shake his fore-finger and say, "I told you what would happen." Our advice for weeks, if not for months past, has been to buy, and on no account to sell. We can only trust that what we have said has fallen into the recipient minds of our readers, and that the results are beginning to be felt in an appreciably swelled banker's account.

With scarcely an exception shares are up. This remark applies not merely to one but to all sections into which for the sake of convenience the Mining Market is ordinarily divided. The nature of the telegrams received by brokers has not been in the spirit of inquiry, but in that of business. It has been either "buy" or "sell," and there has been a hurrying and a skurrying between the telegraph office and the market—the market and the telegraph office, and only at the end of the day has it been possible for brokers to visit their offices, or even to partake of those refreshments which are necessary if body and soul are to be kept in unison. The sea-side has not been thought of this week, and brokers have gone no further into the country than the area bounded by Threadneedle Street on the south, Throgmorton Street on the north, Broad Street on the east, and the Bank of England on the west.

African Gold, Land and Diamond shares have led the way with the most notable rises, and have been followed by Indian, Colonial, Copper, and General Foreign shares, and, to a certain extent, even by those of Home min s. Towards the middle of the week a strong force of buyers from the "Garden" (as the diamond merchants affectionately term Hatton Garden for the sake of brevity) began to march in the direction of the City, and their ranks were swelled by a contingent from the neighbouring thoroughfare of Holborn Viaduct. It is long since these worthies have been seen on the Mining Rialto, but they were there in full force this week, and the

consequence has been an amount of careering in the Kaffir circus that has done considerable credit to their financial agility, more particularly seeing that of late they have been out of practice. First of all, they had a turn at Goldfields of South Africa, and the record of the week shows them up 17. Then Sutherland Reefs came within their purview, and afterwards there was a great run on London and Orange Free State, London and South African, Bechuanaland, Oceana, Transvaal, Zoutpansberg, and even our old friend, Silati. All these shares rose rapidly in the proportions that the subjoined lists show.

So far as regards the Land section, scarcely less remarkable has been the upward movement in African Gold shares, some of which were positively unsaleable a week ago, but to-night are eagerly sought after at quoted prices.

The diamond section has also been firm, De Beers leading the way with a substantial advance. Of course, all this is a market gamble—the mines intrinsically are no more valuable to-night than they were a week ago, when, in many cases, they were quoted at half their present prices. It is a gamble as pure and simple as *baccarat* or *trente et quarante*. The fever has re-commenced and the question is—will the pulse of the market go higher? We think it will for some time, but our readers should be extremely cautious as to what they buy, and prompt to take profits, for at any moment the bloom may be off the rye, and there may be mining Rachels refusing to be comforted because they are not.

At any rate to-night the "Garden" and Viaduct contingents left the market with smiling faces, saying as they went "s'welp me, we have hadst a goot day."

So they have, but we do not want the public to have a bad one.

In the Indian section the state of affairs has not been so lively. The issue by the Champion Reefs directors of a debenture appeal for 50,000*l.* knocked down prices to existing quotations, at which shares should certainly be bought. The directors will no doubt get the money from the shareholders, for it would be difficult to imagine any better security in mining than that they offer. We need say no more, as the position is fully explained in our leader columns. There has been another flutter in Harnhallis, but as we hold the mine to be next door to valueless, we advise our readers to have nothing to do with the shares. Some of them have suffered from Harnhalli before and the burnt child, as well as those who have seen it in pain, should dread the Harnhalli fire. Quite a different opinion do we hold of Indian Consolidated shares, for which to-day a strong demand set in, closing 2*s.* firmer than they opened in the morning. There has been a good demand for Mysore Reefs and Mysore West shares which are up, and would, if the public appreciated them at their true value, be double or even treble the price at which we now quote them before we go to press next week. A slight fall in Goldfields of Mysore and Nundydroog is unwarranted. These shares should be bought at present prices and held for a good rise. Balaghats are up on the week and Ooregums have moved unevenly, the preference being up, and the deferred down. These shares should also be bought.

Colonial shares have moved somewhat unevenly, and it is difficult to understand why in an exciting time like the present such shares as Mount Zeehan and Australian Broken Hills should remain so low.

In the Copper section the movements have been uneven, but all the facts point to better prices. The large consumption of sulphate of copper that will be required for the destruction of the phylloxera, and which, once used, is used for ever, and never comes back in the form of old copper, coupled with the fact that no new sources of production are being opened out, ought to make these shares much better than they are.

There has been a good time for the General Foreign Section. A demand for Amador shares sprang up to-day, but simply amongst brokers and a few of their misguided clients. No one really believes that the concern has any intrinsic value. Amador has been a disappointment from the commencement, and our readers have been well advised to have nothing to do with it. On the contrary, they may buy freely Callao Bis shares, which have advanced considerably on the week, and bid fair to see much higher prices. Don Pedros are also up, and we should not be surprised to see one of

these days a very big rise indeed in this description. There has been a large gamble in Lisbon Berlyns, which are likely to see better prices, but when a profit can be had it should be taken without weakness or hesitation. Golden Feathers and Golden Gates are up, although Oroville's Colonel has felt himself bound to a slight extent still further to postpone the day of great things for which we have been waiting so long. Montanas advanced 2s. on the report, which we publish to-night and comment on in our leader columns.

It is somewhat difficult to answer off-hand the question very often put to us as to which are the best South African mines in which to invest. We have frequently mentioned Sheba, not merely because we have corroborative testimony as to the value of the property itself, but because we know, and can feel confidence in the management in London. Enquiries can be made about it, and there can be here no doubling of the capital (even if there existed the wish) without the knowledge of shareholders, no tricks of any kind played to disturb the equanimity of the proprietors or to upset the calculations of the brokers. Still, if, after highway-man-like fashion, it were put to us, "Name the best South African mines or your life," we should reply that about the best of them seem to be Simmer and Jack, Crown Reef, May Consolidated, May Deep Level, Graskop; and for a pure gamble into which you may put your money over night, and find it either doubled or totally lost before you have well turned out of bed in the morning, we should say, Lisbon-Berlyn and Balkis. Simmer and Jack at the present time is paying about 10 per cent. upon the present purchase price of the shares, or 40 per cent. upon the par price. Last month's profit was 4,400%. It seems to be a carefully, though locally managed mine.

In spite of all that has occurred to damp the ardour of Flagstaff shareholders, we still have faith to believe that ere long better prices will be seen as the result of large sales of ore. In regard to the neighbouring mine, Emma—it looks as though the careful calculations and estimates of those on this side are being baffled by bad or indifferent management on that.

The shares are decidedly below their real value. There has also been a big demand for Ottos Kopjes, which have changed hands by the thousand, and have advanced in price. We should not be surprised to see during the week a considerable rise in these shares, which seem to be viewed with favour alike by the market and by the public. The statements of Mr. Lisle at the recent meeting were certainly of a very reassuring character.

The latest news from Ottos Kopje is of a satisfactory nature. The local director appears to be working with a considerable amount of energy and foresight. He hopes to have a few thousand loads of good ground through the machine in a very short time. The prospects of this company seem exceedingly good.

There has been a good demand for Lomas at better prices, and considerable activity has characterised the market for New California, Palmarejo, Tolima, Yankee Girl and Elkhorn. New Russells have changed hands largely, but without material alteration in price.

We are delighted to report a recovery of 8% per share in Carn Brea, and are assured by a Cornish correspondent that they were never so low as 23—this being the price quoted by a Western paper—possibly by mistake. We are glad to hear it, and think the rise that has just taken place quite justified in view of the satisfactory special report to which reference is made elsewhere. South Crofty, South Frances, and Wheal Agar are all up, but Wheal Bassett is decidedly down with a fall of over 1%, and there have also been fractional declines in one or two other cases.

The meetings this week have been fewer than we ever remember at this time of the year. They embrace Maid of Erin Silver Mines, Limited, and New Mashonaland, and with the merits of both properties we deal in our leader columns. In a week or so companies' meetings will re-commence in downright earnest, and we shall gain have to publish big supplements to keep pace with our full reports of them. Montana will open the meeting season on Sept. 29, and the gathering it will then hold promises to be of great interest and importance. The contents of the report are fully discussed elsewhere. The meeting of Wheal Crobor showed that the mine is just about paying its way, but in the next quarter a small amount of speculative work will be done which it is expected will result favourably. The D'Eresby and Gwydyr meeting was adjourned, no business being done.

This week we have felt it more than ever incumbent upon us to name, with no uncertain sound under the circumstance of a rising market, those shares in which we think investment desirable. It is a great responsibility (and we feel it keenly) to speak out plainly, where possibly as the result large sums of money may be at stake, but we fancy that our readers expect from us something more than

mere generalities—something rather in the nature of light and leading by which they may be guided in selecting their mining investments. There are sufficient hints to serve their purpose in the foregoing remarks.

The next week promises to be one of very great activity, and prices in most cases are likely to rise above to-night's quotations.

KAFFIRS.

To use a mild term, there has been considerable excitement in the Kaffir market, and in no case has a fall been recorded. On the other hand, prices are booming, and have every appearance of going much higher. Of course, this market like others is affected to a very great extent by the Yarec prices.

The close is certainly not at its best, although prices are very firm. Durban-Roodepoort have had a rise of 16s. 3d.; Ferreira and others to a smaller extent.

Business.—The following have risen:—Pigg's Peak, Ordinary, 1s.; Pigg's Peak, Preference, $\frac{1}{2}$; Sheba, 3s. 6d.; Aurora, $\frac{1}{4}$; Bankets, $\frac{1}{2}$; Bothas, 2s.; City and Suburban, $\frac{1}{16}$; Croesus, 7s.; Crown Reef, $\frac{1}{2}$; Durban Roodepoort, $\frac{1}{2}$; Dornkop, 6d.; Edwin Bray, $\frac{1}{4}$; Ferreira, $\frac{1}{2}$; Forbes Reef, 2s.; Geldenhuis, $\frac{1}{16}$; Glencairn, $\frac{1}{2}$; Golden Kopje, 1s.; Great Gold Zone, 2s.; Henry Nourse, $\frac{1}{16}$; Heriot, $\frac{1}{4}$; Johannesburg Pioneer, $\frac{1}{2}$; Johannesburg Waterworks, $\frac{1}{16}$; Jubilee, $\frac{1}{2}$; Jumpers, $\frac{1}{16}$; Kimberley Roodepoort, $\frac{1}{2}$; Kleinfontein, $\frac{1}{16}$; Langlaagte, $\frac{1}{16}$; Langlaagte Block B, 2s.; Luipaards Vlei, 2s. 6d.; Main Reef, 2s. 6d.; May Consolidated, 3s.; Modderfontein, 2s. 6d.; Moss Rose, 2s.; Nabob, 3s.; Randfontein, 2s.; Robinson, $\frac{1}{16}$; Royal, 6d.; Salisbury, 2s.; Simmer and Jack, $\frac{1}{2}$; Spes Bona, 2s.; Stanhope, $\frac{1}{2}$; Wemmer, $\frac{1}{2}$; Witwatersrandt (Knights), 3s. 6d.; and Wolhuters, $\frac{1}{2}$. No falls to record.

AFRICAN LANDS.

The upward move in Land shares still continues, and a large volume of business has taken place during the week. The market

although not closing at its best is certainly very firm, with an upward tendency, and it is very plain that the public is now becoming interested in this description, and, indeed, in mining shares generally. Goldfields of South Africa have been the favourites, and have risen to the extent of about 20s., while London and Orange Free States, Sutherland Reefs Exploring, Chartered, and many others have also risen in a marked degree.

Business.—The following have risen :—Bechuanaland, $\frac{3}{8}$; British South African Chartered, $\frac{1}{16}$; Exploring, $\frac{1}{2}$; Gold Estate (Transvaal), $\frac{1}{16}$; Goldfields of South Africa, 20s.; Horo Concessions, $\frac{1}{8}$; Johannesburg Estate, $\frac{3}{8}$; London and South African, $\frac{1}{2}$; London and Orange Free State, $\frac{3}{8}$; Moodie's, 3s.; Moodie's, 15s. paid $\frac{1}{8}$; Noitgedecht, 6d.; New Grahamstown, 2s.; Oceana, $\frac{3}{8}$; Ophir, 6d.; Read's Drift, $\frac{3}{8}$; Silati River, 2s.; South African Gold Trust, $\frac{1}{8}$; Southern Land, 3s. 6d.; Sutherland Reef, $\frac{1}{8}$; Transvaal Estates, 6d.; Transvaal Gold, 1s. 6d.; Transvaal Lands, 4s.; Zoutpansberg, 4s. 6d. No fall to record.

DIAMONDS.

There has been more life in this class, and prices have hardened. De Beers have again been the touchstone, and after continual variations leave off with a substantial rise of 21s. 3d. Other shares when changing hands have been at an advance.

Business.—The following show a rise :—Bultfontein Consolidated, 1s.; De Beers, $1\frac{1}{16}$; Gordon, 1s.; Griqualand West, $\frac{1}{16}$; New Jagersfontein, $\frac{1}{2}$; North-Eastern Bultfontein, $\frac{1}{4}$; and Burma Ruby, $\frac{1}{8}$. No falls to note.

$1\frac{1}{8}$	Burma Ruby Mines 15s. paid	$1\frac{1}{8}$ — $1\frac{3}{8}$

INDIANS.

There has been some fairly good investment buying of these shares, and prices are again becoming firmer. Last Friday there was a determined attempt to depress prices on the announcement of the the Mysore dividend, but this week they have recovered, and show at the close every appearance of improvement, especially in the low-priced market. Indian Consolidated has been in special demand, and Colar Central, Mysore West and Mysore Wynaad are being inquired for at an advance.

Business.—A rise is shown in Balaghat of 6d.; Colar Central, 3d.; Indian Consolidated, 2s.; Mysore Harnhalli, 4s. 3d.; Mysore Reefs, 3d.; Mysore West, 3d.; and Ooregum Preference, $\frac{1}{8}$; whilst a fall is noted in Champion Reefs of 2s.; Gold Fields of Mysore, 1s.; Nundydroog, 1s.; and Ooregum Ordinary, $\frac{1}{8}$.

AUSTRALIANS.

The chief demand has been for Gympie Great Eastern and Wentworth, which have, however, only risen to a slight extent. Australian

Broken Hills and Scottish Australians have receded. Day Dawn and New Queen close firm without alteration to note.

Business.—A rise is shown in Day Dawn Block, 6d.; Gympie Great Eastern, 3d.; Kangarilla, $\frac{1}{8}$; New Queen, 3d.; and Wentworth Proprietary, $\frac{1}{16}$; whilst a fall is recorded in Australian Broken Hill, 1s. 6d.; Mount Zeehan, $\frac{1}{16}$; and Scottish Australian, New, $\frac{1}{8}$.

COPPER.

Some good business doing in Copper shares, and prices have improved in several instances, Cape and Capiapo taking the lead, while, on the other hand, Tintos have fallen slightly.

A rise is shown in Cape of $\frac{1}{4}$; Capiapo, $\frac{1}{4}$; Mason and Barry, $\frac{3}{8}$; Namaqua, $\frac{1}{8}$; and Quebrada, $\frac{1}{8}$; whilst a fall is noted in Libiola of $\frac{1}{8}$; Panulcillo, $\frac{1}{16}$; and Rio Tintos, $\frac{1}{4}$.

GENERAL FOREIGN SHARES.

There can be doubt that among the many rises that have taken place in this market Lisbons take the palm, for on one day alone over 35,000 shares changed hands, and after being 4s. 3d. buyers they close this evening a strong market at 3s. 6d., 3s. 9d., a rise of $\frac{1}{16}$. Callao Bis have also risen on some good buying, and much higher figures are spoken of. Ottos Kopjes, although only slightly higher, leave off firmer. Loma and Colon are also firmer on buying from the mines. American Belle and Yankee Girl are also inquired for, and close slightly harder. Other shares freely dealt in have been Amador, Balkis, Barrett, California, Don Pedro, Golden Gate, Montana, Emma, Palmarejo, Russell, Tesoro, and Yuruari.

Business :—A rise is shown in Balkis of 2s. 3d.; Barretts, 6d.; Callao Bis, 1s. 9d.; Colombian Hydraulic, 6d.; Colon, 6d.; Dickens Custer, 3d.; Don Pedro, 3s.; El Callao, $\frac{1}{8}$; Flagstaff, 3d.; Golden Feather, 1s. 6d.; Golden Gate, $\frac{1}{8}$; Lisbon-Berlyn, 1s. 3d.; Loma, 1s. 3d.; Montana, 2s.; New California, 1s. 3d.; New Gold Hill, 3d.; Ottos Kopje, 3d.; Palmarejo, 6d.; Spitzkop, 3d.; Tolima "A," $\frac{1}{4}$.

The following have fallen :—American Belle, 3d.; Elkhorn, $\frac{1}{8}$; Linares, $\frac{1}{4}$; St. Augustine, 3d.; and Yankee Girl, 1s.

The following list shows the principal changes which have taken place :—

	Last Week.	This Week.

LATEST FROM THE MINES.

INDIAN MINES.

MYSORE.—As announced in our "Mining Market" last week, this company has declared an interim dividend (free of income tax) of 3s. 6d. per share, payable on Oct. 10.

COLONIAL MINES.

BRILLIANT (Sept. 8).—The company crushed 1,927 tons for 2,927 ozs. gold; value, 11,000l.; and paid a dividend (the 25th) of 2s. per share.

BRITISH BROKEN HILL PROPRIETARY.—The company report that during the week ending Thursday, 17th inst., the yield from the furnace at the mine was 517 tons of ore treated, including 170 tons iron ore, yielding 67 tons of lead, containing 4,653 ozs. silver.

BROKEN HILL PROPRIETARY.—A cable states that during the week ending Thursday, 17th inst., 4,511 tons of ore were treated, yielding 632 tons of lead, containing 171,418 ozs. silver. The cable also states that the shares are 9½/17s.

DURHAM AND LORD BYRON.—Cable information from the new general manager, Mr. Harris, states that the mine is now unwatered, the third level having been completed. He also states that the mine has the appearance of good body of ore underfoot, and that he has started winzes with a view to proving the stone.

DAY DAWN P.C.—The cablegram just received from the manager at Charters Towers gives the result of this company's crushing for the fortnight ending Sept. 12, viz.:—"470 tons, 845 ozs." (Estimated value, 2,957l.) "25 stamps idle eight days; breakdown machinery."

DAY DAWN BLOCK AND WYNDHAM.—A cable from the general manager at Charters Towers gives the result of the crushing for the fortnight ending the 12th inst.:—"Tons crushed, 745; yield of gold, 913 ozs.; approximate value, 3,150l.; fortnight's expenses, 1,230l."

GYMPIE GREAT EASTERN.—A cable from the mine, dated Sept. 15, is as follows:—"The mine is free of water. No harm has been done. Work commenced to-day."

MOUNT LEYSHON.—Fortnightly crushing:—1,300 tons crushed, 470 ozs. gold; 40 stamps mill ran 288 hours; estimated profit for fortnight, 200l.

SILVERTON (BROKEN HILL).—The secretary writes to us from Leadenhall House, E.C. (the registered office of the company), that the directors have received advices that the titles of the property purchased by them are all in perfect order, and operations at the mine are being continued without interruption.

FOREIGN MINES.

ALMADA AND TIRITO.—The company has received the following cablegram from the superintendent:—"Last month's profit was \$1,850."

COLOMBIAN HYDRAULIC.—Cablegram of the result of run No. 175:—"We have cleaned up after a run of 35 days, during which time we have washed 740 hrs. The gross returns are 1,050l., which, at the current rate of exchange, will leave a profit of about 100l."

ELKHORN.—Cable information from the mine:—"Bullion produced for week ending Sept. 12; \$4,540. Mill partially shut down for repairs, as reported last week, which accounts for small output."

FRONTINO AND BOLIVIA.—The directors have received advices from the mines dated July 22 and Aug. 6. The statement for the month of July is as follows:—"1,217 tons of ore produced—bar gold, 1,394 ozs.; tributary gold produced—bar gold, 679 ozs.; bar gold, 2,073 ozs.; also 3,465 lbs. of sulphurets, containing 236 ozs. of bullion. Estimated value of the gold and sulphurets, 5,649l. 7s. 7d.; cost at the mines, Medellin, and in London, and paid for gold bought of tributary, 4,680l. 19s. 10d.; estimated excess of returns, 968l. 7s. 9d.—J. JAMESON TRURAN, Secretary."

FRONTINO.—Profit for Aug., 968l. 7s. 9d.

GOLDEN FEATHER CHANNEL.—Cable from Col. Frank McLaughlin, the company's general manager at Oroville:—"Putting in additional pump elevator, and should be running sluicing elevator about end of next week (i.e., week ending Sept. 19.)" Col. McLaughlin, under date of Aug. 25, writes:—"We have the claim drained down to stretches of dead water; and the banks and portions of river-bed thus exposed prove conclusively that the claim is a most perfectly riffled sluice. The debris exposed is fine, and can be easily, rapidly and cheaply moved by the elevators."

GOLDEN FEATHER CHANNEL.—Cable to-day from Col. Frank McLaughlin, the company's general manager at Oroville:—"Sluicing next Monday, 21st inst. Mine is looking splendid."

GOLDEN GATE.—Cable (Sept. 15):—"Golden Gate: Crushed 287 tons for 605 ozs. gold; value, 2,200l. From this and previous

week's crushing a dividend of 1s. per share is declared on the new issue of 48,000 shares."

GOLDFIELDS OF URUGUAY.—Telegraphed result of milling for month of Aug.:—"3,000 tons of ore crushed, 520 ozs. of bullion produced, value \$6,500; 50 stamps running 30 days."

LEEDS COPPER.—The manager, Capt. T. R. Davey, under date Sept. 3 advises:—"There is no particular change to notice in any of the points since my last report. The mill is working in good shape, but crusher and jigs not yet started."

NEW CALIFORNIA.—Cable from the mine manager, dated Sept. 17:—"Aug. output, 488 tons; yield, 130 ozs. of gold; value, 410l.; costs, 860l.; expenditure on mine, development and exploration account, 265l.—RICKARD."

NEW PIERREFITTE.—The company has sold 150 tons lead ore to the Pontgibud Co. at 11l. 19s. 1d. per ton f.o.b. Bordeaux.

OURO PRETO.—A telegram, dated Sept. 14, gives last month's return of gold as follows:—"3,274 tons of quartz produced 8,741 oits. of gold (1,008 ozs.)"

QUEBRADA RAILWAY, LAND AND COPPER.—The company has purchased a fast steamer, called the Tocuyo, which is now being fitted out in the Thames, and which will start for Venezuela during the present month, to carry passengers between Puerto Cabello and Tucacas, to facilitate the passenger traffic on the Quebrada and Barquisimeto (South-Western of Venezuela) railways. By this means it is hoped to establish a passenger service between the City of Barquisimeto and Puerto Cabello in one day, as there is already one steamer employed in the same service.

RIO TINTO.—The company announce payment of the drawn bonds of their 5 per cent. issue of 1880, and coupons on their 5 per cent. issues of 1880 and 1884 due 1st prox. They invite holders to present coupons and drawn bonds at once.

ROYAL SILVER MINES OF POTOSI (BOLIVIA).—The Royal Silver Mines of Potosi, Limited, has received advice that the production for the month of July amounted to about 26,700 ozs. silver.

RUBY.—Mr. J. Forster Hamilton having resigned his post through ill-health the board of directors have elected Mr. Legai W. Robinson in his stead.

ZARUMA.—The produce for the month of July has been sold and realised 695l. 12s. 5d. net; concentrates estimated at 120l.—not included in this return.

HOME MINES.

WEST WHEAL GRENVILLE.—This mine was offered by auction, as a going concern, last week, by Mr. Tangye, but no sale was affected.

CARN BREA.—Mr. J. F. Maynard, of East Pool Mine, writes:—"Capt. John Penhale, one of the agents of East Pool, inspected Carn Brea on Tuesday last. His opinion is that the lode will improve at the 310 as they get further west, and that the fears entertained by some that the lode is cut out are groundless."

NEW COOK'S KITCHEN.—An improvement is reported from New Cook's Kitchen. The 195 end west is worth about 30l. per fm. This end is about 70 fms. from the Dolcoath boundary, and is going into whole ground, and inasmuch as it is now between two cross-courses, the probability is that there is something very good there.

MID-DEVON COPPER.—This mine by order of the trustees of the debenture-holders, is offered for sale, and the whole of the materials are to be sold for the benefit of the debenture-holders.

AFRICA.

LATEST FROM THE GOLD AND DIAMOND MINES.

AFRICAN GOLD RECOVERY.—The company announce that 1,080 tons of Sheba tailings treated for July realised 2,060 ozs.

GLENCAIRN.—The London agents announce receipt of the following cable:—"Glencairn started 20 stamps Sept. 1, averaging 8 dwts."

GRASKOP MILL AND MINING.—A cablegram announces the result of the Aug. crushing as follows:—"Crushed, 716 tons; yield, 191 ozs.; estimated cost, 450l."

NORTH EASTERN BULTFONTEIN.—Telegraphic advice for last week announces 15,000 loads, mainly re-washings; yield, 1,050 carats of diamonds. Increase of blue ground on floors, 8,000 loads.

WEMMER.—The company has declared a dividend of 10 per cent., payable on Nov. 4, to all shareholders registered on the London register on Sept. 30. The books will be closed from Oct. 1 to 7.

WENTWORTH GOLDFIELDS PROPRIETARY.—The company has received the following cablegram from Mr. W. H. Irwin, the company's permanent manager:—"Progress for the week, 80 ft. We will finish the repairs to the Reform shaft in about two weeks. We have let contract for sinking winze on the 200-ft. level, Phoenix shaft, in order to connect with the 300-ft. level, Reform shaft."

WASSAU (GOLD COAST).—During the month of July last the mills crushed 239 tons of ore, yielding 157½ ozs. of gold, standard weight, equal to 0.66 ozs. per ton. By latest advices from the coast we are advised that the manager reached Cape Coast Castle on the 18th ult., so that his arrival in England may be expected early next week. As soon after this as possible the directors will convene the annual meeting of shareholders.

EDWIN BRAY (Aug. 15).—The manager reports:—"Mine: I am happy to report that our No. 2 and No. 3 levels are connected by the winze since Saturday last, the 15th inst. I have consequently stopped

every other work at the mine and started opening a large chamber under the winze to enable me to start stoping east and west. A good improvement in the mill returns can be anticipated for next month. Ropeway: The ropeway has worked well, and transported according to our requirements. Mill: Twenty stamps have been working well.

WASSAW AND AHANTA.—It being necessary (says the secretary in a letter to the shareholders) to raise further funds by disposing of some of the shares held by the syndicate in the Gie Appantoo Co., the directors invite offers for 340 shares from members of the syndicate in the first instance, at a minimum of 10s. per share. The Gie Appantoo Co. is now doing well, the July crushing from the Essaman section alone having been 335 ozs. for 21 days' work, and Aug. 580 ozs. for 15 days' work, with 12 to 18 heads of stamps only. The original Gie Appantoo section is being developed at greater depth, and consequently crushing is suspended for a short time. Any shares not applied for by the 25th inst. will be otherwise disposed of.

CITY AND SUBURBAN.—The total measurement of driving, sinking and rising during the month is 459 ft., of which 214 ft. is on south reef, 212 ft. on main reef leader, and 33 ft. in cross-cuts. The ore mined is 3,145 tons, being 940 tons from south reef, and 2,205 tons from main reef leader and main reef. Of the total 691 tons came from drives, etc., and 2,454 tons from stopes. The ore crushed during the month, with 30, 40, and 50 stamps running 27 days 17 hrs. 5 mins., was 3,238 tons, of which 940 were from south reef, and 2,298 tons from main reef leader and main reef. The gold produced from the above, including that obtained from cleaning up the old battery site, is 1,325 ozs. 5 dwts. The average yield per ton being 8.185 dwts. The average duty per stamp head per day is 2.979 tons. The average assay of tailings is not given this month owing to some of the samples being accidentally affected, thus vitiating the results obtained; the latest fire assay shows a loss of about 6 dwts. in the tailings.

CERRO DE PASCO.—Advices have been received from the mine, dated Aug. 17th and 24th. Mr. Howse, the superintendent, reports that he has been informed by the engineer in chief of the Barberton Branch Line that they propose bringing the railway through the company's property, and that the surveying staff is daily expected. Mr. Howse states with regard to the mine:—I am very pleased to say the 10-ft. reef has considerably improved, the gold daily becoming more regularly diffused throughout the reef, and the last pannings from the face of the south drive give very good results. The mine captain reports:—Block F extension: South-east cross-cut has been driven 6 ft., making total distance 337 ft.; this cross-cut is still in very hard rock. Drive south on 10-ft. reef has been driven 12 ft., making total distance 71 ft.; quartz extracted, 24 tons; the lode is improving, and panning more regular. Block 12: North-east cross-cut has been driven 13 ft., making total distance 187 ft.; this cross-cut still continues in mica schist. East end drive: Cross-cut east has been driven 3 ft., making total distance 19 ft. Cross-cut west has been driven 4 ft., making total distance 17 ft.; this cross-cut still continues in quartzite bar. Working day time only.

TRANSVAAL GOLD EXPLORATION AND LAND.—The following particulars are from general manager's advices dated Aug. 17 and 24:—Mining—Ophir Hill—Theta vein: Ore extracted, 90 tons; average assay value, 3 ozs. 9 dwts. per ton; all from deposits overlying Theta proper. Brown's Hill—Nu vein: Ore extracted at No. 1,209, 40 tons; assay value, 5 ozs. 7 dwts. per ton; at other workings, 75 tons; average assay, 2 ozs. 16 dwts. per ton. There was nothing new to report regarding any of the workings. Prospecting: From the deposit at Edin Hill (which had been named Rho vein) 22 tons were extracted; average assay, 3 ozs. 9 dwts. per ton. At Glinister's a deposit, 4 to 5 ft. thick, was being opened out, one half of which was payable ore. Ore extracted, 15 tons; assay value, 1 oz. 16 dwts. per ton. (This deposit has been named Sigma vein.) Total ore extracted in two weeks as above, 242 tons; average assay, 3 ozs. 9 dwts. per ton. Mill: The battery and pans were working as usual. Transport of ore was almost at a standstill, but there was a sufficient reserve on the mill dump. Bullion: A shipment of eight bars melted gold, weighing 838 ozs. 15 dwts., value 3,145*l.* was despatched on Aug. 11. This was July produce, exclusive of gold in pan residues.

HORO CONCESSION EXPLORATION.—Report received from the manager, dated Aug. 17:—I beg to send you below the report of the work done here from the 1st to the 15th of this month: (1). No. 1 tunnel: The cross-cut to the north from the end of the drive to the east from No. 1 tunnel is now in 29 ft. from the drive. The ground here averages about 1 dwt. to the ton in the pan. The cross-cut from the No. 2 west drive at 18 ft. to the west of No. 1 tunnel has been pushed forward 11 ft., and the last 9 ft. is in fairly solid quartz, panning from 4 dwts. to 10 dwts. to the ton. (2). No. 1 shaft: The drive along the reef half way down No. 1 shaft to the east is now 112 ft. from the shaft. Prospects at this end barely show 1 dwt. to the ton. From a cross-cut from this drive at 30 ft. from No. 1 shaft some pannings have been taken running over 2 ozs. to the ton. I am at present following this. (3). Battery: The battery has run 13 days 1½ hours, the ore put through being 1,012 tons. A great deal of this has been surface stuff that I have had to send down, as it was too good to throw away, and the bulk of the remainder has been from the open quarry to the east of No. 1 shaft. As the gold is free we are not using the frue vanners now, they will be required when we get deeper.

PIGGS PEAK ESTATE.—Mine report for week ending Aug. 15:—Devil's reef—Drive 200-ft. level, south end: Drove for the week, 20 ft.; total, 202 ft., passing through hard iron stone. North end: Drove for the week, 18 ft.; total, 135 ft.; ground improving since last report. Prospecting drives: Drove for the week, 25 ft. Remaining boys cutting wood and stacking same for battery. McGready's Works: Started cross-cut, 30 ft. from surface; drove 14 ft. Durning's new reef—Low level drive: Drove for the week, 44 ft.; total, 112 ft. No change since last report. England's reef—Low level drive: Drove for the week, 26 ft.; total, 48 ft. Battery report.—Have laid the concrete for base of mortar blocks, and will place same as soon as concrete sets. Cutting for tramline from mouth of drive to battery site is completed, and work is progressing favourably. Mine report for week ending Aug. 22:—Devil's reef—Drive 200-ft. level: South end: Drove for the week, 29 ft.; total, 231 ft.; passing through hard iron stone. North end: Drove for the week, 38 ft.; total, 173 ft.; good ground. Prospecting drives: Drove for the week, 12 ft. Remaining boys cutting wood, and stacking same and clearing ground. McGready's Works: Cross-cut 30 ft. from surface. Drove for the

week, 15 ft.; total, 29 ft.; no change. Durning's new reef—Low level drive: Drove for the week, 28 ft.; total, 140 ft. England's reef—Low level drive: Drove for the week, 31 ft.; total, 79 ft. Battery report: Have finished putting concrete in foundation pit, put in and levelled bottom sills, fitted new cores to mortar blocks and set same.

WESTERN LANGLAAGTE.—The directors submit report for the half-year ended June 30 last, together with balance-sheet and profit and loss account made up to the same date. The period under review has been governed by the financial position of the company. It has been found impossible to raise, except at onerous rates, the balance of the 20,000*l.* which it was intended to provide by first mortgage, consequently your board had to wait for better times, and in the meantime to keep the work within the limits of the resources at their disposal. These have chiefly been devoted to keeping the mine in good order, to sinking the main shaft to the 162-ft. or second level, and driving thence towards the main reef. The principal matter we have to acquaint shareholders with is the arrangement entered into with the United Langlaagte Gold Mining Co. for the hire of 30 stamps of their battery for a period of two months, with the option of renewing the same for a further 12 months. The directors expect to derive sufficient profit from milling operations here to carry on the work in the mine until funds have been raised; and they will further be able to demonstrate what results may be confidently relied upon when milling on a large scale. So far the results have proved satisfactory: In the first 16 days 1,350 tons have passed through the mill, yielding 492 ozs. 16 dwts. of gold, or an average of 7 dwts. 7 grs. per ton; the operation resulting in a nett profit of 227*l.* 9s. 7d., or 3s. 4d. per ton after covering all expenses during the period, and writing off for redemption of expenditure on mine development 4s. per ton. As three-fourths of the ore has been taken from a 5-ft. stope on the main reef, and one-fourth from the south reef, there is every reason to expect that this average at least will be maintained. Should the board decide to continue crushing for a further 12 months they feel confident that savings can be effected in the hire of the mill and in the transport of quartz, resulting in a material increase in profit. The most encouraging feature your directors have to report is the result of the crushing, yielding as it has done, over 7½ dwts. per ton, and showing a substantial profit. With the continuance of such results, your directors have no doubt that, upon the present financial depression being overcome, a sound and reasonable re-construction scheme can be promulgated.

COMMERCIAL NOTES.

METALS.

THE Metal Market has been quiet during the current week. Bank rate remains 2½ per cent. Bar silver declined to 41¼*d.*, and closes 41½*d.*

COPPER continues quiet. A moderate business has been done in G.M.B. warrants at easier prices. Spot declined from 53*l.* to 52*l.* 5s., and three months from 53*l.* 10s. to 52*l.* 15s. To-day's prices are—52*l.* 7s. 6d. cash, and 53*l.* 1s. 3d. three months. Stocks in England and France are given as 54,639 tons, against 55,679 tons on Sept. 1; and visible supply as 58,838 tons, against 58,829 tons on 1st inst. We quote English tough, 54*l.* 10s. to 55*l.* 10s.; best selected, 56*l.* to 57*l.*; strong sheets, 65*l.* to 66*l.*; India sheets, 60*l.* to 61*l.*; yellow metal, 5¼*d.* to 5½*d.*; ore, &c., 9s. 6d. to 10s. 9d. per unit.

TIN has been easier. The price of spot Straits declined from 91*l.* 10s. to 91*l.*, improving yesterday to 91*l.* 5s. To-day's prices are 91*l.* 10s. cash, and 92*l.* three months.

TINPLATES are in fair demand except for America. We quote ordinary coke, 13s. to 13s. 6d. Liverpool.

SPELTER has been firm at about 23*l.* 15s. per ton ex ship here.

LEAD quiet. We quote Soft Spanish, 12*l.* 5s. to 12*l.* 7s. 6d.; soft English, 12*l.* 7s. 6d. to 12*l.* 10s.; L.B., 12*l.* 15s.; sheets, 13*l.* 7s. 6d. export; 13*l.* 10s. home trade.

DIVIDENDS DECLARED AND ANNOUNCED FOR WEEK ENDING SEPT. 19.

Western and Hawaiian Investment	5 per cent.

BRITISH MINING INTELLIGENCE.

CWMYSTWYTH.—Report for Sept.—The 15 fm. west : After passing through 2 fms. of mineralised rock we have again struck another joint, or wall, but have not yet sufficiently proved it to be able to write anything definite about it. A cross-cut north of the 15 : The 15 end west is now sufficiently advanced to enable us to start this cross-cut north with the object of finding the north lode, west of the fault, the driving of the 15 west being continued meanwhile by two men. The 15-fm. west on branch of new lode does not afford sufficient encouragement for us to prosecute the trial further, and is consequently suspended, and the men put to drive the 15 west (No. 1). The 30-fm. level east on the new lode : The lode has not been taken down since last report, when it was valued at 2½ tons of blende per fm., owing to an obstruction. As soon as this is removed the lode will be cut and valued in due course. A stope in the back of the 30 east, on the new lode, is valued at 2 tons of blende per fm. A stope in the back of the 30 west, on the new lode : The men are at present engaged putting in timber to lengthen stull preparatory to clearing off ore-stuff, and re-placing with deads. The lode will yield 2½ tons of blende per fm. A stope in the back of the 15 east on the new lode, will yield 1½ tons of blende per fm. A stope in the back of the 15 west on the Comet lode will yield ½ ton of lead and 1½ tons of blende per fm. A stope in the back of the 30 on the Comet lode will yield about ½ ton of lead and ¾ ton of blende per fm. The estimated produce of lead and blende this month is 4½ tons and 31 tons respectively.

DEVON GREAT CONSOLS (Sept. 17).—Watson's engine shaft : In the 172-fm. level west the lode is 2 ft. wide, yielding a little copper and mundic ore. In the 160-fm. level east the lode is 4 ft. wide, producing 1 ton of copper and mundic ores per fm. In the 160-fm. level west the lode is 3½ ft. wide, yielding 1 ton of mundic and copper ore per fm., and is looking very promising. The stopes throughout the mines continue to turn out the usual quantities of copper and mundic ores.—W. CLEMO.

DEVON UNITED (Sept. 17).—Willesford's shaft : In the 144-fm. level east the lode is 2½ ft. wide, producing a little copper and mundic ores. In the 144-fm. level west the lode is 2½ ft. wide, and is more promising, and is yielding a little copper and mundic ores. In the stope in the bottom of the 132-fm. level east, and west of the winze, the lode is improved, and is yielding 3 tons of good copper and mundic ores per fm. In the stope in the back of the 132-fm. level west the lode is also looking well, and is producing 3 tons of copper and mundic ores per fm., of good quality.—W. CLEMO.

DRAKEWALLS (Sept. 17).—There is no change to notice in the ground in the engine shaft since last advised. The sinking is progressing favourably, and a further depth of 3½ ft. has been reached during the past week. In cutting into the lode in the 160 east the lode maintains its very fine appearance, and is producing 6 tons of mundic per cubic fm. and saving work for tin. The lode in the 160 driving west is producing both a little mundic and tin. In the 147-fm. level driving east, from appearances, we are getting near the great cross-course, as we have cut more water, and the ground is a little easier for exploration. The three stopes in the back of the 160 west of the engine shaft are producing as follows:—No. 1, 10 tons mundic per fm.; No. 2, 8 tons mundic per fm.; and No. 3, 9 tons mundic per fm., and saving tin work. The stope in the bottom of the 147 east is producing 14 tons mundic per fm., and saving tin work, and the stope in the bottom of the 132-fm. level west of the cross-course is yielding 4 tons mundic and 2 tons of copper ore per fm. We purpose turning the draught on Saturday for another clean out of arsenic soot. We are getting on as fast as possible with the rebuilding of the old arsenic chambers which recently fell in, and all other surface work is going on satisfactorily.—H. RODDA.

EAST GRASSINGTON.—The following report, dated Sept. 17, has been received from the mine manager:—Hammond shaft : In the 47 west, the ore-bearing part of the lode is narrower, carrying three small seams of lead ore, and the enclosing rock continues hard and slow for progress. We are now within a short distance of reaching a strong branch vein, coming in obliquely as a feeder, which will strengthen and enrich the lode. Stope in back of level in a vein 2 ft. wide, yields 20 cwt. of lead ore per fm. No. 3 Sump : In the western drive the lode is 2 ft. wide, carrying soft lime spar and gossion, well mixed with lead ore, worth fully 20 cwt. per fm. In the eastern end the two divisions have joined together, forming a lode 2 ft. wide, and producing 20 cwt. of lead ore per fm. Stope in intermediate level, yields 8 cwt. of lead ore per fm. Harris' main engine shaft : This shaft has been deepened 10 ft. during the past fortnight, and is now down 70 ft. below the 47. The country rock continues extremely hard and very wet. In the 47, the lode east of 4th heave is upwards of 2 ft. wide, the filling matter is limespar, sulphate of barytes, intermixed with good patches of lead ore. Stope in back of level in a vein 2 ft. wide, yields 15 cwt. of lead ore per fm. In the 37 east, the lode is 1 ft. wide and producing occasional stones of lead ore. Machinery throughout the mine in good order and working smoothly. Produce for Aug. has been smelted and sold, leaving a profit upon the month's operations.

HEX WORTHY.—Mine agent's report for four weeks ending Sept. 12.—Low's adit level has been extended 6 ft. for the first week. Since that time the men have been rising in the back of the level for ventilation. They have risen 17 ft., and have holed to the ancient workings. We shall now commence to sink a small shaft to communicate with the rise. The lode in the end is fairly good for tin, and 1 ft. 6 ins. wide. Low's engine shaft and bottom end : We are still driving and stopping ; the lode is about 1 ft. 6 ins. wide, and very good for tin. Taylor's shaft and adit level : In our previous report, Taylor's part of the mine has been poor ; but we are very pleased to be able to report a good improvement which has taken place (since our last monthly report) in the bottom levels, which are 13 fms. under the adit ; the lode is poor. In the adit above, about 25 fms. in advance of the bottom level, we have driven a cross-cut south for 2 fms., where we intersected some ancient workings, and we are very pleased to say that we have seen a part of the lode for 4 ft. wide, and very good for tin ; and we are not to the footwall yet. We shall now push on the bottom end with all speed, with the hope of the tin making down to the lower level, and if so, Taylor's will open out well. We have sold a good parcel of tin during the last four weeks, which has fetched the highest price in the market, and we shall make another sale in a short time. Our stuff still looks very good at the stamps and dressing floors.

KINGSIDE.—Report for Sept.—The 44-fm. level to drive west of

cross-cut north of Taylor's shaft on Kingside lode : This end is going forward in a large lode, and for the width of the level is worth 12 cwt. to 15 cwt. of lead ore per fm., with lode standing on both sides. The 44-fm. level to drive east of cross-cut north of Taylor's shaft on Kingside lode : Here the lode is also large, and the portion carried in driving the level we value at from 15 cwt. to 18 cwt. of lead ore per fm. The 11-fm. level east of Taylor's shaft on Pengueilian north lode : Having now cut through the branch or counter lode, which is being worked upon in stope over the 22-fm. level, and is here proved to be worth 10 cwt. to 12 cwt. of ore per fm. We have suspended the drive of this level, and placed the men to stope on same over the 22-fm. level. The 22-fm. level to drive north of rise on branch or counter lode : Worth in forebreast, 12 cwt. of lead ore per fm. A stope over same level north of rise on same branch : This stope will now produce 13 cwt. of ore per fm. A stope over the 22-fm. level east of rise, on Pengueilian north lode : The lode, 5 ft. wide, will yield 10 cwt. to 12 cwt. of ore per fm. A stope over the 11-fm. level east of Taylor's shaft on Pengueilian north lode : The lode here is 4 ft. wide, producing ½ ton of ore per fm. A stope over the deep adit level, 28 fms. west of Taylor's shaft on Pengueilian north lode : The lode will yield 9 cwt. to 10 cwt. of ore per fm. Suspended for the present, and the men employed at surface, excavating ground, &c., for turbine and air compressor. Estimated produce of lead ore this month is 12 tons.

LEADHILLS (Sept. 14).—Brown's vein : The 145-fm. level north of Jeffrey's shaft is in a vein above 4 ft. wide, mostly spar, mixed with ore ; worth 40 cwt. per fm. The stope above the 145 north of Jeffrey's shaft is worth 15 cwt. of ore per fm. The stope above the 145 south of Wilson's shaft is worth 45 cwt. of ore per fm. The stope above the 145 north of Wilson's shaft is worth 20 cwt. of ore per fm. The two stopes above the 130 north of Jeffrey's shaft are worth 20 and 5 cwt. of ore per fm. respectively. The rise above the 130 north of Jeffrey's shaft is worth 10 cwt. of ore per fm. The stope above the 130 south of Wilson's shaft is worth 40 cwt. of ore per fm. The 115-fm. level north of Jeffrey's shaft shows a vein above 4 ft. wide, nicely mixed with spar and ore ; worth 25 cwt. per fm. The stope above the 115 north of Jeffrey's shaft is worth 25 cwt. of ore per fm. The 100-fm. level north of Jeffrey's shaft is in a vein above 4 ft. wide, charged with spar and ore ; worth 30 cwt. per fm. The rise above the 85 north of Jeffrey's shaft is worth 5 cwt. of ore per fm. The 70-fm. level south of Wilson's shaft is in a vein 5½ ft. wide, mixed with spar, and although a little damp, ore is only to be seen in specks. The two stopes above the 35 south of Flat Rod shaft are each worth 35 cwt. of ore per fm. Sarrowcole vein : Gripp's adit north of George's Roust vein shows a vein 4½ ft. wide, mostly spar with ore ; worth 30 cwt. per fm.—T. NEWBIGGING.

PRINCE OF WALES (Sept. 16).—Since last week the men in the 180-fm. level have been driving both east and west by the side of the lode, and making fair progress. In the 166 west, we are also driving by the lode, consequently no change here to report. The cross-cut south appears to be in a very close bunch of ground at present, which causes the end to be comparatively dry. The water still issues without abatement a little behind the end, which inclines us to think it is only a bunch of watertight ground.—S. ROBERTS, J. PROWSE.

ROMAN GRAVELS (Sept. 17).—The 155 north is driven 21 fms.; the division of the vein in present forebreast being about 2 ft. wide, producing 1½ tons per fm. The 155 south-east on caunter vein is driven 22 fms.; the vein in present forebreast being quite 6 ft. wide, letting out a very strong feed of water, and producing good stones of lead ore and blende. The 140 south-east on same vein is driven 23 fms. 2 ft. 6 ins.; the lode in the forebreast to-day being 6 ft. to 7 ft. wide, producing 2½ tons of lead ore and saving stuff for blende. The stope in back of this level is worth 2½ tons of lead ore and ½ ton of blende to the fm. The 140 south on Roman lode is driven 17 fms. 4 ft. 6 ins. south of No. 1 winze, but there is no material change in the vein since last report. The new winze being sunk in the 125 south (at present 3 fms. deep) has just touched a part of the vein, which shows stones of ore ; the vein seems to be very upright here, so that the winze may have to be sunk 2 or 3 fms. deeper before we shall be able to see much of the lode ; the distance at present between the 140 south forebreast and this winze is about 90 fms. The said winze is being pushed down as fast as possible, and when the required depth has been attained no time will be lost in driving north to meet the above-named forebreast. The winze in the 140 north is 2 fms. 4½ ft. deep ; the vein is still very upright, and 4½ ft. wide, producing 1½ to 2 tons per fm., and promises to further improve. The lode at the 125 south has improved for lead ore during the past few days, and is to-day producing 1 ton of lead ore and good stones of blende. The vein is at present split into two or three divisions, which, however, look like coming together again. The stopes throughout the mine are just as reported last week. The 20 tons of blende sold to-day realised 144l.—A. WATERS and SON.

SOUTH CONDURROW (Sept. 16).—We have had the new crank for the stamping engine brought to-day, and the fly-wheel shaft, which has had two new ends put on. We are now doing our utmost to put the full number of stamps to work as quickly as possible, and hope to be in good working order in a day or two. There is a little water coming from the end of the 138 cross-cut north of Marshall's shaft. The value of the stopes and pitches are without material alteration.—W. RICH, W. THOMAS.

SOUTH DARREN (Sept. 17).—The shaft is 78 ft. under the 142-fm. level : no lode has been broken down this week. The stope in the 142 west is looking rather better ; worth 12 cwt. of silver-lead ore per fm. The winze in the 130 west is not quite so good ; worth 12 cwt. of silver-lead ore per fm. The best ore seems to be dipping into the west end.—J. MITCHELL.

TINDENE (Sept. 16).—The Tindene shaft will be completed to the 43-fm. level this week, and shall commence fixing the skip-road to bottom on Monday morning, and will put out the cross-cut as early as possible to the lodes. There is no change to notice in the rise, nor in the 33 west on the north lode since our last. In the tribute department we have 35 men, varying in tribute from 10s. to 13s. 4d. in the £, in this we have rather improved.—J. CURTIS.

VAN (Sept. 17).—The cross-cut at the 150-fm. level towards the south lode continues in the same kind of ground as stated in recent reports, and is being driven as fast as possible by six men ; present length, 18 fms., which leaves 21 fms. more to reach the hanging-wall of the lode, as seen in the 135-fm. level above. The three stopes over the 150-fm. level on the old lode (worked by four men in each) are

producing 15 cwt. of lead ore per fm. No. 1 stope (on the south lode) over the 135-fm. level is worth 25 cwt. of lead ore per fm. The lode in the drift east from No. 2 stope yields 10 cwt. of lead ore per fm. In the stope over the 105-fm. level the lode produces 1 ton of lead ore per fm. The stope over the 90-fm. level is worth 15 cwt. of lead ore per fm. At the 150-fm. level driving east of Seaham's winze (on the south part of the lode) the forebreast is still in very strong blende, and present appearances are good. The lode in the 120-fm. level going east of Seaham's shaft contains a mixture of blende and lead ores. In the dressing department we are progressing favourably with the next parcel of lead for market.—J. PAULL.

WEARDALE.—Report for week ending Sept. 12:—Ore raised for week, 37 tons; ore dressed for week, 73 tons; ore, slag and fume smelted for week, 120 tons, producing 61 tons of pig lead.

WHEEL METAL AND FLOW (Sept. 16).—The lode in the 27 end is still maintaining its large size and congenial nature. The pulverizers are working very well. The surface water is increased a little, but not very much.—S. P. CURTIS.

WHEEL UNY (Sept. 16).—We have started to stope by six men behind the 244 end west, and to open out south by six men; no change to note in the 244 east or west, or any other point throughout the mine since last reported.—J. WHITE.

FOREIGN MINING INTELLIGENCE.

ALMADA AND TIRITO.—Extract from a letter from the superintendent at the mine dated Aug. 25.—Mine: The following progress was made in the past fortnight:—No. 11 winze, sinking from 12-fm. level, 100 lode, was sunk 11 ft., holing into the 24 stope at a depth of 40 ft. The ground opened up by this winze may be estimated to average 7 tons ore per fm. No. 12 winze, sinking from the 24 on 100 lode, was sunk 11.4 ft.; total depth, 41.9 ft. The bottom is worth about 8 tons ore per fm. The ley of the ore is very variable, ranging from 15 to 41 ozs. per ton. The north end at the 36-fm. level, 100 lode, was driven 8.8 ft.; total extension, 14.8 ft. The ground is very hard, but the lode looks well for ore. The south-end from stope over 36-fm. level, 100 lode, was driven 1.2 ft. on very hard rock. The branch of ore gave out and the drive was stopped. The north-east drive from stope under 24, north of No. 7 winze, was driven 3.5 ft. on the branch of ore previously referred to, and the breast became poor, and work was discontinued. A cross-cut east was started from the north end of the 12-fm. level (main lode); drive in the past week 3.8 ft. on very hard quartz and limestone. This cross-cut will prove whether the ore in the southern part of main stope reaches the 12 level. The south drift on 100 lode at the 137-ft. level, Cruz Verde, was driven 15.1 ft.; total from west cross-cut, 48.1 ft. The lode is very narrow and disordered, and further driving was suspended for the present. Total exploration and development 54.8 ft. The Dios Padre shaft was re-timbered and furnished with ladders to a depth of about 80 ft.; from this point down for another 140 ft. the shaft is empty and cased with planks. In case this old timber-work can be made serviceable by repairing it and replacing rotten planks we shall probably very shortly be able to reach the bottom of the shaft. The stoping done during the fortnight was confined to the main stope in back of 24 south, 100 lode, on west wall. We had from eight to nine pairs of hand-drillers working on those places. The ore supply was rather below our mill requirements, and the average ley at the battery was low. Now that the connection of No. 11 winze has re-established ventilation at the stope in back of 24, 100 lode, we have resumed work on it. Water is plentiful now, owing to frequent rains, but labour is scarce owing to numbers of men being employed in their harvest. We are also getting very short of fuel, and I have been compelled to raise the price of firewood to \$9.50 per cord till the end of Sept. next, and even with so high a price I have not been able to obtain a supply of the article.

ANGLO-MEXICAN (Aug. 9).—The manager says: Main incline shaft was sunk 13 ft. during the past week, making the total depth 1,159 ft. I hope within two weeks to reach the new level, when the cross-cut to the vein will at once be started. Garcia winze, 908-ft. level, was sunk 14 ft. during the past week, making the total depth 33 ft. Yack upraise, 908-ft. level, advanced 10 ft., making the total 77 ft.; this upraise is looking a great deal better than it did last week. A well-defined streak of ore has come in, about 18 ins. wide, a sample from which, taken yesterday, assayed 40 ozs. Yack winze, 814-ft. level, was sunk 10 ft., making the total 29 ft. We now have a streak of 3 ft. of good ore from which samples have been taken assaying 44 ozs. and 53 ozs. I expect to make connection with the upraise of same name in the course of 10 days or two weeks, when we shall at once commence a stope following the ore wherever it may lead us. East intermediate drift, Ricardo stope, 726-ft. level, advanced 3 ft., making the total 14 ft. There are some 2 ft. of ore in the face, but it does not look very well. The last samples taken assayed 5 ozs. and 17 ozs.

ASIA MINOR (Sept. 4).—Ara Dere: The winze is now down 29 metres, and in another fortnight we shall commence driving. For the whole way the winze has had lead in it, and it seems probable that something better will be met with in the course of driving. Chief mine: The lode in Intermediate Hamburg stope is getting more productive as we go up, and we have started an end west from the stope which is worth 17 cwt. The end east from the Savalan Pass stopes is worth about 10 cwt. per fm.; the winze in Savalan, 14 cwt.; and end from Michael stopes, 10 cwt. Production to Sept. 4: 9,427 tons crushed, yielding 694 tons silver-lead ore.

AUSTRALIAN BROKEN HILL CONSOLS.—The mining manager reports by mail for the fortnight ending Aug. 6:—Engine shaft—280-ft. level west: Driven 18 ft.; total, 446 ft. Tender has been accepted for driving a further 100 ft., and good progress is being made. Rise intermediate level west: Driven 21 ft. 6 ins.; total, 50 ft. Formation continues large, and much oxidized with occasional seams of ironstone carrying galena. Intermediate level east: Driven 19 ft. This level has been started to open out on the eastern side of main stopes. Formation widening. 180-ft. stopes: Have been engaged in stoping a quantity of high-class galena, the vein of which is getting stronger, and occasionally shows nice bunches of sulphide and chloride of silver with canary ore. Incline sunk 14 ft.; total, 136 ft. 6 ins. The intrusion in the lode has not yet cut out, but the lode has become more compact, and occasionally carries fahlerz and galena. Sinking has been stopped temporarily to admit of a level being put in eastwards at the point where the native silver and fahlerz mentioned in last report were met with. Intermediate level: No. 2 east driven 19 ft.

This level has been started to prove the eastern side of the incline; the lode is of a more defined character, and shows a little ore. A good body of water is coming from the face. Surface: The late heavy rains filled both dams.

AVALA QUICKSILVER.—Report for Aug.:—Shaft pumped dry and enlarged; excavating chamber for boilers. In Shuplia Stena 167.6 cubic metres stuff excavated, produced 142 tons ore; stopes looking well; No. 45 contains rich brown bituminous ore. Reduction works treated 323 tons.—W. E. FRANKS.

BONNIE DUNDEE (Aug. 1).—Mine manager's report:—Have continued stoping from the back of No. 7 south-west level. As the stope east of winze continued very poor I considered it advisable to stop stoping up any further for the present. I have started the men stoping back on a flat run of stone which is going back into the hanging wall; the stope at present is about 1 ft. thick, and, judging from its appearance, should be payable. The stope west of winze shows a little improvement for the fortnight. The reef has been running more evenly on the footwall, and certainly has a more permanent appearance than it has had for some time. It is about 10 ins. thick at present, some of it showing gold. Have also continued stoping east and west of winze between Nos. 7 and 8 south-west levels. There is not much change in these stopes since my last report; both stopes are still looking rather poor, the formation continuing hard as we stope away from the winze. Have driven the cross-cut from No. 8 south-west level a further distance of 9 ft., with two men, making a total distance from the level, 27 ft. There is no sign of the footwall formation yet, so that the wall must have gone down very steep from No. 7 level. We are not driving the cross-cut at a direct right angle to the reef which would be nearly due south, but are putting in the cross-cut at about 20 degrees west of south on a small cross formation. This formation is carrying a strong leader of stone. I thought it advisable to do this as the cross-cut is proving this cross leader, and the ground being hard the wall of this formation is a great help in driving. On Thursday last I started two men to clean up the end of No. 5 south-west level and start driving. It was considered advisable to do this on account of the large amount of ground on this side of the lease that has never been prospected in any way. There is a distance of 200 ft. to drive from the present end of the level to the boundary, and, as several good crushings have been taken out from and around this level, I think we may fairly expect to meet with payable stone in a short time by continuing the opening up of this part of the mine. During the fortnight we cleaned up a crushing of 136 tons 14 cwt. of stone at the company's mill for a yield of 123 ozs. 11 dwts. of smelted gold. Have raised about 65 tons of stone for the fortnight. 30 tons in hopper towards the next crushing.

BRATSBURG.—Report for week ending Sept. 5:—Hoffnung Mine: At No. 2 adit level the lode is yielding about $\frac{3}{4}$ ton per fm., but for the greatest part the ore is making towards the bottom of the level, there being evidently a valuable piece of ground standing below here. The rises in the back are still yielding respectively 1 ton and $\frac{3}{4}$ ton per fm. No. 3 adit level continues to carry a strong quartz leader, and is otherwise composed of a favourable matrix, but as yet has not improved in value. The rise in the back here is worth $\frac{3}{4}$ ton per fm. No. 4 level is looking very promising indeed, but is of no value for the present. Johannes Mine: The western level is worth $\frac{1}{2}$ ton per fm., and the eastern $\frac{3}{4}$ ton per fm., and the eastern rise a similar quantity. The main rise on the western level is worth 1 ton per fm. Surface work and remarks: Sufficient ore is now forward for the fourth cargo, and the vessel chartered, viz., Mary Owens, has arrived at Skien and started loading.—J. D. HOLMAN.

BRATSBURG SMELTING AND REFINING WORKS.—Report for week ending Sept. 5:—Smelting was re-commenced Tuesday, and was continued without cessation until Saturday night, when we stopped, as we had so little ore left, that there would have been none for a start this morning had we gone on. We are now receiving 20 per cent. ore from the dressing house each day; and the results of the smelting for the past week have been of the usual satisfactory nature. In all 251 anodes were obtained, and, with the exception of a few, were all delivered to the electro deposition department, which is now running regularly night and day at full capacity, and last week we shipped to you 200 plates conductivity copper, of the net weight of 3,478 kilos, which we hope will arrive safely, and be of the same good quality as the last consignment. We were running on unroasted ore, and when using 20 per cent. ore the converters stood well, and, in fact, we have obtained the best results as yet, only it was found necessary to use a little iron as a flux in the converter. This morning we have lit the fire in the roaster, and will be running this week on roasted ore, when we will compare and report on the results.—T. F. SMITH.

BRITISH (BROKEN HILL) PROPRIETARY.—The mining manager's report for the week ending Wednesday, Aug. 5, is as follows:—No. 1 shaft, 50-ft. level: The stope in the ironstone in the north drive has this week yielded iron ore which has been used in the furnace with satisfaction. Second level: The work on the new section is still going on well. The old south drive is being re-timbered. No. 2 shaft: No change has occurred in any of the stopes, which are all yielding as usual. No. 5 shaft: The cutting out of the station at each side of the shaft at 2nd level is now nearly completed. The trial shaft south of No. 5 on the ironstone vein has been sunk 3 ft. by two men, making its total 22 ft. Ore-dressing plant: The reconstructed ore-dressing plant has had some trial runs during the week, and we hope to start regularly to work before next report.

COLORADO.—The mine report for fortnight ending Aug. 31 is to hand. The manager states that the improvement of the mine still continues. This you will more clearly understand from the mill-run of ore from the 8th level west. The ore, in two classes, returned 489 ozs. silver per ton, and 43 per cent. lead; 204 ozs. silver per ton, and 15 per cent. lead. This is better than anything we have taken out of the 8th level, and tends to confirm the statements made from time to time in regard to this western ground. I have increased the force in this drift, and am now working day and night shift. This level has now been driven 529 ft. from the main shaft. Brown lode —Brown adit level: Lode, 4 ft. wide; mineral vein, 2 to 3 ins. wide. Mammoth tunnel level advanced 11 ft. since last report; now driven 640 ft.; lode, 5 ft. wide; mineral vein, 2 to 3 ins. wide; this level shows a steady improvement. Silver-ore tunnel level: Lode, 4 ft. wide; mineral vein, 3 to 4 ins. wide. Rockwell adit level driven 7 ft. since last report; now in 561 ft.; mineral vein, 2 ins. wide. Coiu lode—Brown adit level: Driven 12 ft. since last report; now in 645 ft. from cross-cut No. 2; the lode is 4 ft. wide, and well-defined,

and the mineral is very firm on the footwall. During the fortnight the various drifts have been advanced 48 ft.

COLORADO BOY.—Latest news from the mines:—Preparations are being made to develop the large chimney of ore recently discovered in running the prospecting drift. Samples taken at a depth of 40 ft. from the surface ran from 100 ozs. to 400 ozs. of silver per ton, and the new shaft will undoubtedly uncover a large ore body. It should be in ore, at the depth of 40 ft., as the drift below has been run on ore for 35 ft. The shaft is admirably situated as regards dump, rail, and waggon road, and is almost in the town of Irontown.

CORTEZ.—Report from the superintendent, dated Aug. 29.—Work at the mines for the week ending this date has been as follows:—Cross-cut in No. 1 east advanced $4\frac{1}{2}$ ft. From No. 2 tunnel west stoped 5 tons of ore; from No. 3 tunnel west stoped 2 tons of ore; from north-east raise stoped 29 tons of ore; from north-west raise stoped 106 tons of ore; run into ore house, 148 tons of ore; trammed to mill, 96 tons of ore; worked at mill 147 tons of ore. Average assay for the week, 82.92 ozs. silver per ton. On Aug. 25 shipped 12 bars of bullion. Lot 72 containing, as per our assay, 15,038.20 fine ozs. silver (gold not yet assayed). We have ready to ship to-morrow morning 16 bars. Lot 73 containing 19,456.20 ozs. fine silver.

DAY DAWN P.C.—Report for the fortnight ending Aug. 1:—The output of quartz is 1,058 trucks. Sent to the Excelsior mill 1,080 tons. No. 13 level has been extended a further distance of 9 ft., making a total distance of 79 ft. The formation has widened out to 16 ft., and a new make of stone has come in on the footwall 3 ft. thick, of good quality. We have also 3 ft. of stone on the hanging-wall, of fair quality, the remainder being a horse of mullock, which is a very hard diorite. The leading stope over this level is carrying 2 ft. of fair quality stone. I am getting the shaft made secure at this level with a few styes and lining sets, as the ground is very heavy. No. 12 level has been extended a further distance of 10 ft., making a total distance of 395 ft. from the shaft. The formation is about 12 ft. wide, carrying 8 ft. of stone, of good quality. The leading stope over this level is carrying 10 ft. of very good stone. This stope I will have to discontinue working, as it is drawing very close on to the face of the level. No. 2 stope is carrying 6 ft. of stone of good quality. In the No. 1 stope we have 3 ft. of good stone. In the No. 1 stope going west from the No. 2 winze we have 6 ft. of stone of good quality. No. 11 level: The leading stope over the footwall drive is carrying 2 ft. of fair stone. In the No. 6 stope we have 6 ft. of good quality stone. In the Nos. 4 and 5 the stone will average 3 ft., and in the stope going west from the No. 3 winze we have 8 ft. of good stone. In the Nos. 1 and 2 stopes the stone will average 4 ft., all of which is of good quality stone. The leading stope over the hanging-wall drive is carrying 3 ft. of very good stone. The No. 5 winze on the footwall drive has been sunk a further depth of 14 ft., making a total depth of 66 ft. We have fully 3 ft. of heavy mineral stone in the bottom of this winze. No. 10 hanging-wall drive: The stope going west from the winze is carrying 1 ft. 6 ins. of stone of fair quality, and in the stope going east we have about 1 ft. of stone of medium quality. The 240-ft. level has been extended a further distance of 8 ft., making a total distance of 116 ft. No further change has taken place. We now intend driving a cross-cut at the end of this level into the footwall. The number of trucks of quartz hauled from each level is as follows:—No. 13, 47 trucks; No. 12, 427 trucks; Nos. 10 and 11, 512 trucks; No. 2 shaft stopes under 5 west level, 52 trucks; stopes over 5 west level, 20 trucks; total, 1,058. No. 2 underlie shaft: The No. 5 east level has been extended a further distance of 14 ft., making a total distance of 461 ft. from the shaft; no change to report. I have taken the men out of this drive and started a cross-cut about 30 ft. from the shaft on the east side at No. 4 level; this cross-cut will be driven in to the footwall. No. 5 level, west side: The stope under this level is carrying about 2 ft. 6 ins. of stone of fair quality. The stone in the stopes over the back of this level has been all beaten out. No. 4 level west has been extended a further distance of 5 ft., and holed through to old ground, making a total distance of 437 ft. from the shaft. The cross-cut has been extended a further distance of 6 ft. and cut the hanging-wall, which is carrying about 1 ft. of stone of inferior quality. I have taken the men out of this drive and started them to make ready for a winze at a point 350 ft. from the shaft. No. 3 straight shaft: I expect to have the brace mullock top and all connections complete about the latter end of next week. The water-shaft or well has been sunk a further depth (with one rock-drill) of 15 ft., making a total depth from surface of 69 ft. Lease No. 1,280: Since my last report the water has been lowered to the drives which were started by the former owners of this lease, a distance of 170 ft. from the No. 2 level, or a total distance from surface of 308 ft. The western drive is in about 20 ft. from the underlie and the other 15 ft. The formation is large and there are 2 or 3 ins. of stone in each drive; the latter are very narrow, and will have to be widened for the whole distance. There is a considerable amount of work to be done before we can commence actual driving such as making a plat and repairing the underlie. In addition to the pumping, we have fixed ladders right down to the pump and repaired the underlie in several places. After the rollers are in position and one or two had places patched up, the underlie ought to do for some time. We shall finish this part of the work this week.—T. LESTER.

DON PEDRO (Aug. 15).—Maquine Mine half-monthly report:—Since our last operations have been continued in the sinking of Gordon's shaft, also the drivage towards same, and the continuing of 50-fm. cross-cut, the latter making a great change by all appearance. Gordon's shaft: This is now sunk under the 40 horizon 4 fms. 5 ft., with another set of back laths in position for another 6 ft. The ground still remains hard for excavating, although progress has been better for the last 15 days, owing to better attendance of native force. The drivage towards this shaft from the 50 has been somewhat slow, the ground being very hard for excavating, although every effort is being made to push this with all speed. We hope to complete this drivage before the end of the month, when we shall rise towards the shaft. The 50-fm. cross-cut: Since our last report we had surveyed and dialled the cross-cut, and find by the distance and position that we ought to cut the Canoa shoot of lode. We have since our last fixed another set at face. Another set of back laths is now started, and up to date they are advanced 3 ft., and so far driven, they are in a bunch of rich mineral. In our last report we mentioned having penetrated different formation of jacotinga, which, from its peculiarities and increased richness, we are inclined to believe to be the No. 5 or lost shoot. An entirely different quality of mineral, composed of quartz—specular—iron, jacotinga, and clay,

which are the characteristic peculiarities of the Canoa shoot of lode has now been met with. As these changes have occurred in the same order as at the higher levels, we are strengthened in our belief that we have actually cut the shoots in the above order. At this date our samples, from what we believe to be the Canoa shoot, are little or anything short of borwork, and fully up to any which that body of mineral afforded in its best days. This shoot of lode is now standing 3 fms. on dip of lode to the 50 horizon. You will also remember that for the same distance or more the underlie lode remains untouched above this. Gordon's shaft repairs have been attended to throughout; several sets have been put in, and the renewing of laths kept on where required most. New lobby: Good progress is being made, and since started, in July, 125 ft. have been driven through hard sandstone, which stands firm without timbers. New adit: This has been open cut for the distance of 100 ft. We have now taken backs, two sets of timber been fixed, and we hope to advance with this very important work, and cross the flookan before the wet season comes in. A masonry wall has been built at the entrance, 48 ft. long, height 5 ft., to protect the entrance from storm water. A tramroad has been made and completed around Sugar Loaf Mountain for the distance of 390 ft. for the removal of new adit stuff. One mason is now employed paving water-course near the entrance. The adit will be driven in a direct line from the entrance to Gordon's shaft, at the horizon of the old adit, when, if required, the mineral can be removed from the bottom of mine direct through the sail adit to the reduction. Running work throughout the mine has been attended to, and all machinery connected with same working well. Explorations: These have been carried on in north gully. Frequently lines of jacotinga are met with in the drivage north, which show samples giving gold.

GARFIELD (Aug. 29).—The following work has been done at the mine:—Western Mine—180-ft. level: Winze No. 15 has been sunk 4 ft., giving a total in depth of 40 ft. Since beginning to sink on Wednesday we have taken out about 900 gals. of water every 24 hrs. The flow of water seems to slightly increase, but I think when we sink through the hard bar of rock we have at the bottom of the winze it will give the water an opportunity to percolate through the ground, so we will accomplish more work. We are sinking on a small seam of quartz.

GYMPIE GOLDEN CROWN.—Report for the fortnight ending July 30.—I have to report that on the March reef at the 105-ft. level the north drive has been carried in 115 ft., and the south drive 70 ft. from top of rise, making the total distance driven 185 ft. by 30 ft. in height. From the above workings about 200 tons of stone has been raised and crushed for the small return of 32 ozs. 13 dwts. 14 grs. smelted gold. Owing to the poor return, and no prospect of any improvement, I advised the local directors—they having gone through the whole of the workings—that total exemption for six months be applied, and that all work in the mine be stopped as soon as possible, and keep the mill crushing on public stone as long as we could do so with a profit. The three boilers have been cleaned this week, and the whole of the machinery and boilers are in first-class order. The 6-in. pipes that were lying between the river and the dam have all been collected and stacked on the mine. The total number of pipes is 202. Lease 777, two mile, main shaft: The north drive on the Peter and Paul reef is advanced a total distance of 146 ft.; the reef is 1 ft. in thickness, and shows fine colours of gold. At the eastern shaft the south drive has been carried in a total distance of 76 ft. from top of rise. The drive north has been carried in 31 ft. in good slate country; a portion of the reef, which is 2 ft. in thickness, has been broken down, but is not showing any gold.—T. RAMAGE.

IDAHO.—Crowu Point lode: Before continuing further the driving of the main tunnel, Mr. Berger advised us to sink a few feet upon this ledge at a point slightly below where Capt. Hambly was working, and where the indications led him to believe that an ore shoot might reasonably be supposed to exist. This we have done, and have sunk 9 ft.; and so far the appearance of the lode is very promising, and is improving at every shot; the shaft is entirely in ledge matter highly mineralised, but cannot tell full width, as we have not opened to the footwall. We are unable to assay the rock, as we have no bone ash at present in camp, but are expecting some at any time. The miners there working say that some of the ore would carry about \$60 per ton; but, of course, we should not like to say that this is correct until some of the rock has been assayed. We certainly think that there has never been a better showing on this hill before for a permanent paying lode. We will send you samples in the course of a few days. The progress made thus far is good; but as the rock is becoming of a harder nature, we do not expect so good a measurement next week.

INDIAN GOLD (GLASGOW) (Aug. 24).—Davey's tunnel: 4 ft. driven, totalling 360 ft. from opening. A little more colour in lode; assays 1 dwt. 15 grs. Nos. 1 and 4 rises: 6 ft. 10 ins. cleared in reef 6 ft. wide; both finished. No. 8 side stopes: 7 ft. stoped; lode 6 ft. wide; assays 11 dwts. 10 grs. No. 9 side stopes: 3 ft. 6 ins. stoped; lode 6 ft. wide; quartz of good colour; no pyrites. No. 5 under stopes: 8 ft. 1 in. of ground cleared; lode 6 ft. 6 ins. wide; assays 1 dwt. 15 grs. No. 3 bottom stopes: 7 ft. stoped; lode 6 ft. wide, very unequal in quality. No. 4 bottom stope: 2 ft. 6 ins. stoped; lode 5 ft. wide. No. 7 bottom stopes: 6 ft. stoped; lode 6 ft. wide; assays 6 dwts. 12 grs.; good ore, but mainly refractory, about 20 tons of ore from No. 4 pillars. No. 11 north: 10 ft. driven, making total length from cross-cut 178 ft. General appearance indicates that we are passing the disordered belt proved above in No. 9 tunnel; water making freely. No. 11 south: 6 ft. 6 ins. driven, totalling from cross-cut 160 ft.; ground very tight for blasting; assays 3 dwts. 6 grs. Prospecting operations on Little Bear reef are being pushed. So far, there is a want of uniformity in the lode, which may disappear with development. An assay from the reef, where it was 18 ins. wide, gave 17 dwts. 23 grs. The lower tunnel, which is to test persistence of reef downward, has been extended 14 ft.—PHILLIPS.

MYSORE HARNHALLI (Sept. 18).—The secretary sends below copy of the resident director's report from the mines, dated Aug. 23, 1891, and is instructed to say that a special report on the state of the mine, by a mining engineer now employed in the Colar Goldfields, has just come to hand, and will be published immediately on receipt of the resident director's comments thereon, which are expected by next mail:—A. sikerri—No. 2 shaft—South drive: West cross-cut has been extended to 18 ft.; east cross-cut to 12 ft. At the 125-ft. level water still stops work. The east drive let in such a body of water

that we cannot yet master it. Middle field: The north drive on the lode has been extended to 13 ft. 6 ins., and the south to 17 ft.; the stone continues poor and mixed with country rock, as described in report No. 33.—W. LONSDALE, Resident Director.

MYSORE REEFS (Aug. 25).—Fortnightly report.—Harvey's shaft: For the past two weeks the 520-ft. level north has been advanced 17 ft., now 107 ft. 6 ins. from shaft. The lode is 4 ft. wide, but at present mixed very much with black rock. Against the hanging-wall there is a seam of quartz 1 ft. thick, assaying 2 dwts. 14 grs. of gold per ton. The 520-ft. level south has been extended 16 ft. 6 ins., now 36 ft. 6 ins. from cross-cut. The lode is 3 ft. wide, composed of black rock and small branches of quartz, assaying 16 dwts. 7 grs. of gold per ton. Winze below the 460-ft. level north has been sunk 5 ft., now 29 ft. below the level. The lode is of greater width than the winze, composed chiefly of quartz, and worth according to assay 1 dwt. 23 grs. of gold to the ton. The 400-ft. level south has been extended 14 ft., now 177 ft. 3 ins. from shaft. The lode is pinched, being now 10 ins. wide, composed chiefly of quartz, and assaying 1 dwt. 23 grs. of gold per ton. The 400-ft. level north has been advanced 12 ft. 6 ins., now 235 ft. 7 ins. from shaft. We are driving through a very hard bar of ground, meeting occasionally with small stringers of quartz.—M. SCANTLEBURY.

MYSORE-WYNAAD AND MYSORE WEST.—The mining manager reports for the fortnight ending Aug. 21:—Tank Mine: During the past fortnight very little work has been done owing to our having had cholera in the camp. On the 12th inst. all the coolies except a few ran away, and I had only sufficient left to continue the timbering work at South shaft. The heaviest part of this was completed on the 18th inst., and I was able to take off a few men to North shaft. Here a little work has been done, cutting hitches for bearers and enlarging the bottom of the shaft ready for the cistern. This will be completed as quickly as possible, and the sinking continued. At South shaft the timbering is now completed, and the shaft cased and divided to 12 ft. from the bottom. We shall now proceed to put in the pumps, and I hope to have them ready for work by the end of the month. I am now trying to get in new coolies, and as soon as I am able shall have work in full swing again.

NAMAQUA.—Abstract of superintendent's report for July.—Tweefontein Mine:—Shaft below the 73-fm. level: There is no change in the appearance of the ground. Shaft below the 73-fm. level east: The rock is chiefly quartz, and nothing of value has been found. Shaft below the 73-fm. level west: This level is being driven through a large massive lode of highly crystallised quartz and iron mixed with good quality copper ore, and there is every reason to expect it will lead to a large body of ore as progress is made further west and in depth. This point is looked upon as a very important one. Shaft below the 58-fm. level east: This driving has been poor during the month. The ore ground driven through during the previous months will now be opened up. Shaft below the 58-fm. level west: A level is now being instituted in this direction with a view of reaching the same run of ground as on the 43 and 73-fm. levels, and also to sink winzes for the purposes of ventilation. Stopes—58 east: The ore here is of good quality, and it is hoped it may prove to be the beginning of another good piece of productive ground; worth 6 tons of ore per fm. The 43 east, No. 1: The ore here is very much mixed with chlorite and iron; worth 10 tons of ore per fm. The 43 east, No. 2: The quality of ore is good; worth 6 tons of ore per fm. The 43 west: The ore has not been so good, but has now again an improved appearance; worth 7 tons of ore per fm. The 33 west: A new stope has been taken up here; at present it yields fair quality ore, and is worth 5 tons of ore per fm. Wheel Julia Mine: A branch or vein has been met with which has increased from 2 to 12 ins. in width, and contains spots of yellow ore. It is hoped it may be leading up to the main part of the lode from which the surface outcrop came. Shipping: The Carmelita arrived at Swansea on Aug. 24 with about 800 tons of ore. Output for June, 332 tons of 28½ per cent.

NEW EBERHARDT.—The mine manager reports, under date Aug. 30, as follows:—Drift north from No. 2 upraise advanced for the week 3 ft.; total length, 28 ft. Face of drift continues in quartz, spar and limestone, but the quartz as yet of no material value. Drift south from No. 2 upraise advanced for the week 3 ft.; total length, 39 ft. Face of drift in quartz and spar. Cross-cut east from north drift No. 3 upraise advanced for the week 6 ft.; total length, 47 ft. The face of this drift is in a mixture of quartz and limestone, but the ground breaks quite well, which enables us to make good progress. No. 3 cross-cut west advanced for the week 10 ft.; total length, 21 ft. This drift continues in quite favourable ground, the face of our drivings being broken ground, composed of quartz and limestone, black and white spar, and some little clay, which altogether looks very favourable. No. 4 cross-cut west advanced for the week 4 ft.; total length, 8 ft. The ground in this drift is still hard, but shows some seams of quartz and black spar. Beecher cross-cut east advanced, for the two weeks, 12 ft.; total length, 37 ft. The ground passed through during the past week has been a little softer, otherwise the face of this drift remains unchanged, being still in a mixture of quartz and spar.

NEW DEVALA-MOYAR.—Mine manager's report for the week ending Aug. 20:—186 level west has been driven 6 ft.; total, 47 ft. The 186 east: 2 ft.; total, 13 ft. No. 4 winze sunk 4 ft.; total, 23½ ft. 380 tons quartz were crushed during July, with a result of 83 ozs. The secretary is instructed to add that 255 ozs. from previous crushings have realised in London 9057.

NEW HOOVER HILL.—Report for the month of August:—Briol's shaft: The ore at the 230 is split up into several small stringers, which we are following. Driving south at the 130 advanced for the month 12½ ft., the ground is very hard, and there is plenty of quartz in the end but poor. Sinking south of Provost shaft there is no change to note. The mill ran for the month six days, crushed 116 tons of ore; yielding 68.27 ozs. of bullion, which I am shipping you.

OSCAR GOLD (Sept. 12).—Hodgkinson's shaft: Progress in sinking this shaft has been somewhat slow, chiefly owing to the heavy rains. We are about 38 ft. below the 300-ft. level. It will be remembered that the sinking of the last 40 ft. or 50 ft. has been in dead ground. We are now able to report a change, having struck a small run of quartz about 5 ins. wide on the footwall. At present it does not assay over 2 dwts. to the ton. We anticipate an early increase in quantity for quartz and value for gold. The 300 level

north is 80 ft. from shaft, and just under the winze sunk from the 200-ft. level. Communication will be made during the month. 200-ft. level north is 180 ft. from shaft. Owing to a depression in the ground, the lode has been squeezed out. We are following it in bottom of level, and hope soon to have it in the level again. The quartz in the bottom of the level contains a little galena and iron pyrites, and assays 11 dwts. 8 grs. for gold. Above this depression we are stoping a small section of ground to make room for stocking the deads from new cross-cut. The quartz averages about 12 ins., and contains a good deal of galena, iron and copper pyrites; assay value, 2 ozs. 19 dwts. to the ton. New cross-cut: This cross-cut has been driven about 45 ft. According to surface measurements we have about 21 ft. more to drive to cut Bluett's lode. Williams' lode: The winze is 35 ft. below the adit level. Quartz varies from 2 ft. to 3 ft. in width, but the assays are very erratic, sometimes showing several pennyweights, while during the last few days only traces were obtained. Prospecting: The level going south from Croft's shaft has been driven 90 ft., or half-way towards York's shaft. We shall pull the water out of the last-named shaft, and drive back towards Crofts to hasten communication. Beyond the above no alteration to note.—J. DAW, jun.

PITTSBURG CONSOLIDATED.—Report from the superintendent Sept. 2.—I have to report that during the month of August No. 7 tunnel was advanced 34 ft., the vein at the present moment has gone clean out again, without any apparent reason, there being no cross-course. The assays during the month have been very low, only averaging \$2.47. For the present, at least, whilst we are so short of water, I must discontinue this and also No. 9 winze, I am afraid, and shove on with sinking in No. 7 tunnel, for on this depends the future of the mine. No. 9 winze is down a total depth of 80 ft. The assays from here during the month have averaged \$2.44. You will see how the rock changes, in the first 50 ft. or so of this winze we had good ore. We have still very good assays, occasionally as high as \$300 from No. 7 winze, but it is only a small patch and the vein only 1 ft. to 18 ins. wide, it hardly pays high as it goes to extract it. The cross-cut north from No. 6, which I was in hopes would discover the vein, is in 20 ft., the signs are favourable, but if there is a vein at all it is further in. I think there is little doubt there is something there. I have discontinued this for the present. As regards the rest of the mine, there is plenty of ore at present to run all the mills if I had water, but the quality of the ore is exceedingly low all round. I occasionally get good assays, even running up very high, but the mill returns will show what poor stuff I have been putting through this last month. The total number of tons milled in Aug. was 974-32, yielding, \$5,370.05.

RED MOUNTAIN.—Latest news from the mine: The Pickwick tunnel is in 800 ft., and is now gaining ground very rapidly. Many stringers of quartz and mineral have been encountered, but, so far, they have not been prospected; as one of the main objects of the tunnel is for drainage, and ventilation for the Jackstaff shaft which is being sunk. It is a 4½ ft. by 9 ft. double compartment shaft, and, when the erection of the engine and hoister is finished, will be as complete and powerful a plant of the kind as is seen in operation in the country. A streak in the company's Pittsburg claim, averaging 8 ins. wide, which has been opened near the present shaft shows some very fine-looking copper and iron. From the dip of the ore streak it should be cut by the shaft about 200 ft. from the surface. One of the largest quartz reefs in the district is covered by the company's claim, and the shaft and tunnel together will develop in fine shape.

RUBY.—Report upon the mines for the week ending Aug. 29.—Dunderberg: We have five tributaries at work here. In the 800 level we have about 2 ft. of fair-looking ore making in the shape of a pipe. I find by survey that this ore is within a few feet of, and parallel with, some old works, and I should not be surprised if we ran into them. If we do we will clean out the waste, and try and get on to the continuation of the main ore body. Lord Byron: We have 10 tributaries at work here. The ore for the past week has been running nearly level, and is now apparently taking a dip, and is getting a little smaller (being about 3 ft. by 6 ft.). I have observed that in this mine the ore gets smaller when it dips, and by the look of the cave above the ore I have no doubt but that it will get larger again. Bullwhacker: We have four men at work here, and this mine looks, if anything, better than for some time past. The men are now working in three different places, on streaks from 10 to 15 ins. of good lead ore. We have now about 80 tons in transit.—A. FRASER.

—Telegram:—“51 tons tribute ore shipped and smelted, producing to company \$307.”

SOUTH-EAST MYSORE.—Mine agent's report for the fortnight ending Aug. 25:—During the past two weeks the winze below the 500-ft. level has been sunk 15 ft. 3 ins., which makes a depth of 52 ft. 9 ins. below the level; the lode is about 4 ft. wide, but the quartz is a little pinched for the moment, being 1 ft. wide, and assaying 17 dwts. 14 grs. of gold per ton. The assay certificate is enclosed herewith. Everything seems to be dipping rapidly to the north. We should, I think, push down the winze as quickly as possible to a depth of 100 ft., and then drive north on the course of the lode.

VENEZUELAN AUSTIN GOLD MINING CO., LIMITED.

IMPORTANT CIRCULAR TO THE SHAREHOLDERS.

THE directors have received such a large number of assents to the scheme of re-construction set forth in the resolutions passed at the extraordinary general meeting of the company held on July 31 last, and have received so many promises from shareholders to come in and subscribe to the ordinary shares in the new company, that they propose to prolong the time originally fixed for placing this company in liquidation, and have decided to extend the time within which they will receive assents and payments of the deposit until the first week in Oct. If by that time the whole of the preference shareholders shall have signified their assent in writing to accept ordinary shares in the new company in exchange for the like amount of preference shares in this company, the scheme will proceed, but, failing this, the directors will not place the company in liquidation, but will lease the properties to a working company, to the shares of which all shareholders will be given an opportunity of subscribing.—F. O. SMITHERS, Secretary.

House, Old Broad Street, London, E.C.

NOTICE TO READERS.

Replies to Annual Subscribers will be sent by wire or letter, as
may be necessary.

Cautious.—We have a very poor opinion of the concern and advise you not to
buy. Sell Amador.

Robinhood.—A handsome profit is shown, and you should certainly take it.

Irish Sub.—It is the best of the whole. Purchase a few Mysore West.

Electric.—Yes. They may yet have a further rise. There is every reason to
expect it.

Cambridge.—As a speculation it is good, but not as an investment.

Lady Investor.—Lock them up for a time. We think they will yet pull round.

Seller.—You are entitled to the dividend just declared, provided you do not sell
your shares before the date mentioned in your letter.

Croydon.—Only one class of shares dealt in.

Dickey.—No. The shares in both companies have not been so low as you state.
Your broker is right.

Laden.—Unlikely to rise at present.

C. G. (Aberystwyth).—Thanks for remarks. We still advise both shares you
name.

Agent (S. Y.).—It is a question of time, and we advise you to hold on.

A. G. C. B.—Join the re-construction. If you sell the old shares they will
realise very little indeed.

Disparate.—Only a rumour. Do not by any means sell just now, as we believe a
good rise will take place soon.

W. B. F.—Sutherland Reef Co. is now amalgamated with Potsdam Reef, and
all dealings are in Sutherland Reefs, the shareholders in Potsdam receiving share
for share, fully paid.

SOUTH AFRICAN TRUST AND FINANCE COMPANY, LIMITED.

SUBSCRIBED CAPITAL, £255,000.

BOARD.

B. B. TRENCH, Esq., Chairman.

Sir CHARLES METCALFE, Bart.
L. BALFOUR BURNS, Esq.
Sir STUART S. HOGG.

Major J. W. M. COTTON.

BANKERS.

THE LONDON AND SOUTH WESTERN BANK,
LIMITED, LONDON.

THE MANCHESTER AND LIVERPOOL DISTRICT BANKING
COMPANY, LIMITED.

THE STANDARD BANK OF SOUTH AFRICA, LIMITED.

The Company undertakes the following business:—
The skilled investment in South African Mining, Land, or other
securities for European investors.

Professional and confidential reporting upon companies, mines,
mineral properties, lands, and generally advising European share-
holders and others in South African ventures.

To act as agents on behalf of principals interested in South
African investments, and for the protection of their interests, and
where desired, to register shares in such undertakings, and to issue
certificates in exchange for same, thereby enabling European holders
to co-operate for their mutual protection.

Financing or advancing moneys to corporations, companies, syndi-
cates, or persons in South Africa.

The receiving of money on deposit.

The purchase and sale of properties, and all classes of South
African securities or interests.

A Mining Circular containing special information will be posted
weekly from the South African Office to all subscribers.

A SPECIAL CABLE CODE FOR PROMPT AND ECONOMICAL COMMUNI-
CATION BETWEEN THE SOUTH AFRICAN AND LONDON OFFICES.

Further information can be obtained at the Head Office of the
Company.

The Mining World.

LONDON: SATURDAY, SEPT. 19, 1891.

*The "MINING WORLD" is not the property of a Mining
Speculator nor under the control of any clique.*

THE BOOM IN RANDT SHARES.

FOR two or three days this week the "Kaffir circus" was decidedly
livelier than it had previously been for well over two years—livelier,
indeed, than at any time since the collapse in the early part of 1889.
Last week we had to report the practical beginning of the revival,
but few people imagined that it would so soon have gathered force,
least of all, we may suppose, the "bears" who have lately been
beating a hasty retreat, in view of the strength displayed by the
operators on the opposite tack, and rumours, which we believe to be
unfounded, that arrangements have been made for pooling the
shares of some of the better known companies. *En passant*
we may say that we have no sympathy with the "bears."
They have had a very long innings, and if in the end they have been
caught it is because they were too greedy to take the substantial
profits which they could have secured a month ago. On the other
hand, we are by no means disposed to consider the upward move-
ment entirely, or even generally, warranted. It is true that even now
prices are, as a rule, very substantially lower than they were two or
three years ago; but then prices were so monstrously inflated that it
would be absurd to take them as a criterion of present values. In the
interval the Randt industry itself has shown considerable
progress, in spite of all the sinister influences by which it has
been surrounded, and, as we pointed out last week, the
August yield of gold was close upon 60,000 ozs., or over
2,000 ozs. in excess of the previous "best on record." But the
improvement in the total production has been more largely due to
the increase in the number of companies contributing to it than to
any material augmentation by individual mines. And it is further
to be observed that there have been neither important discoveries nor
striking developments to account for the general advance. It is
simply the result of a change in the fashion of speculation, for there
is just as much a fashion in speculation as in dress or old china. In
these circumstances, it may be of interest to show how the prices
quoted on Thursday when the "boom" reached its zenith, compared

with those ruling at the end of Aug., and with the lowest quotations of the year. This we do in the following table:—

Company	Lowest this year.	End of Aug.	Sept. 17.
City and Suburban...	2 $\frac{11}{16}$	3 $\frac{1}{4}$	4 $\frac{1}{8}$
Crown Reef ...	3 $\frac{5}{8}$	4	5
Durban-Roodepoort	1 $\frac{13}{16}$	2 $\frac{1}{16}$	3 $\frac{1}{4}$
Ferreira ...	6 $\frac{3}{4}$	7 $\frac{3}{4}$	9 $\frac{1}{2}$
Geldenhuis ...	1 $\frac{1}{8}$	1 $\frac{1}{16}$	2 $\frac{1}{16}$
Henry Nourse ...	$\frac{1}{2}$	$\frac{3}{4}$	1 $\frac{1}{4}$
Heriot ...	$\frac{1}{2}$	1 $\frac{1}{8}$	1
Jubilee ...	2 $\frac{3}{4}$	3 $\frac{1}{2}$	5
Jumpers ...	1 $\frac{7}{16}$	2	2 $\frac{1}{16}$
Knight's ...	$\frac{1}{4}$	1 $\frac{5}{16}$	9s.
Langlaagte ...	2	2 $\frac{3}{8}$	3 $\frac{1}{4}$
May Consolidated ...	$\frac{1}{4}$	$\frac{3}{8}$	$\frac{5}{16}$
Pioneer ...	2 $\frac{1}{4}$	2 $\frac{7}{16}$	3 $\frac{3}{4}$
Robinson ...	1 $\frac{15}{16}$	2 $\frac{3}{16}$	2 $\frac{1}{16}$
Simmer and Jack ...	2 $\frac{1}{8}$	3 $\frac{1}{2}$	4 $\frac{3}{8}$

In such instances as Ferreira, Crown Reef, Stanhope, Simmer and Jack, Durban-Roodepoort, and Meyer and Charlton, the rise is to some extent intelligible, because the companies are dividend-paying, and in Geldenhuis, Pioneer, and one or two others, which have shown marked improvement in their monthly returns. But in most cases we fail to see any sort of justification for the "boom." And even in the more favourable examples mentioned, the yield represented by the dividends upon the basis of current quotations is much below what shareholders in ordinary mining companies usually look for, seldom exceeding 5 per cent. per annum, and hardly ever reaching the standard rate of 10 per cent. In our view, therefore, the present prices of Randt shares owe too much to future possibilities, which may or may not become actualities, and probably will not until some sweeping reforms in the local management of many of the companies are effected.

THE COLAR FIELD AS SEEN BY A RECENT VISITOR.

THE letter of a valued correspondent, Lieut.-Col. Hamilton, in respect to the Colar Goldfield, will be read with deep interest by those who have intelligently followed the development of the Indian mines. It is the unbiassed and totally independent view of one who has recently visited the Field. It will be observed that our correspondent speaks of Mysore, Nundydroog and Oregum Mines as beyond the reach of speculation, and of Champion Reef and Mysore West as "bound to succeed in the near future." These are the views we have expressed all along, and it is very gratifying to have them so spontaneously and completely confirmed by an observer like Lieut.-Col. Hamilton. In regard to the management, what he says bears out the testimony Mr. Rowse brought home with him some time ago, and the only regret our correspondent feels is that more companies are not at work upon the line of the same Champion Reef, for he feels sure that, let them work as hard as they may, they cannot exhaust the various properties in 20 or 50 years. We quite agree with him that time will prove the correctness of his remarks, as well as the correctness of those of Mr. John Taylor, as so frequently expressed at the meetings of the various companies. Meanwhile, cannot we on this side and our friends on that be equally agreed as to the spelling of the word "Colar." Here we spell it with a "C"; there they spell it with a "K." It wants Sam Weller's father to come and settle the business. Our friends on the other side are more likely to be right than we, for they have access to the native records, not to speak of our familiar friend, the oldest inhabitant. We have been misled here by the "Colar" concessionaires on the one side, and by the "Colar" Central Co. on the other.

MONTANA REPORT.

THE directors of the Montana Co. have issued their report for the half-year ending June 30 last. As was to be expected, it could not present those brilliant features which characterised the earlier productions of the present board when it took the reins of office and literally dragged the concern off the rocks. Under the original management Montana had been left almost a total wreck, but the present directors, who for the most part formed the committee that at that time was appointed to inquire into the company's affairs, seized the helm with so much vigour, and did the steering with so much skill, that Montana has paid under their management, with but a trifling deduction, 537,057*l.* in dividends. The highest payments were in 1887, when the dividends were at the rate of 30 per cent. per annum. Big dividends were paid subsequently, but during the last year or two the developments of the mine have not been equal to what they were formerly, though in this connection, as we shall presently show, the report is by no means devoid of encouragement. The present accounts show that in addition to all charges payable out of revenue both here and on the spot, 6,519*l.* was appropriated for expenditure properly chargeable to capital account. Of this amount, 2,519*l.* was paid out of revenue, but as the pumping engine is not yet in operation, the directors have decided to carry forward 4,000*l.* of the cost to a suspense account, to

be dealt with in successive half-years. Out of the 10,628*l.* remaining, a dividend was paid in Apl. last of 2 $\frac{1}{2}$ per cent. for the half-year, which left a balance of 2,378*l.* to be carried to the credit of the current half-year ending Dec. 31. The gold (assay value) produced from the commencement has been 1,118,711*l.*, and silver, 725,201*l.*, or a total assay value of 1,843,912*l.* Up to the period dealt with in the report the mine returned a total profit of 686,397*l.*, out of which the before mentioned sum of 537,057*l.* has been paid in dividends, and the balance dealt with in a variety of ways for the benefit of the company. In addition to the total profit, there has been spent out of revenue upon exploratory works alone since 1884, 135,299*l.* The work of the year has been equal in volume, though not as productive in bullion, to any previous six months in the company's history. The mills crushed 33,708 tons, of the value of \$11.52 a ton, but the actual realised value of the bullion and concentrates amounted to only \$402,989, giving an average of \$10.41 nett yield—the difference being \$42,775, or \$9.60 per cent. The price of silver in New York has varied during the half-year from 96c. to 106c. per oz., being an average of slightly under 100c. for the six months, as against 109c. for the previous half-year. It is a feature in the report that the production of gold shows a steady increase, whilst that of silver shows an equally steady decrease. Briefly summarised, the facts and main features of the working for the half year ending June 30, 1891, compared with the preceding six months, are as follows:—Number of dry tons of ore raised and crushed in the mills, six months, Dec. 31, 1890, 42,753; six months, June 30, 1891, 33,708; decreased tonnage, 4,045 tons. Weight of concentrates obtained in the mills, for the half-year ending Dec. 31, 1890, 333; for the half-year ending June 30, 1891, 295; decreased tonnage, 38 tons. Assay value of bullion obtained direct from the mills for the half-year, \$367,190.74; assay value of concentrates obtained direct from the mills for the half-year, \$78,574.54—\$445,765.28. The average cost of prospecting, mining and milling per ton of ore for the six months ending June 30, 1891, was \$8.22 against \$8.30 for the previous six months.

The official report on the state of the mine is this time signed by Mr. G. H. Robinson, and not by Mr. Rawlinson T. Bayliss, who simply figures in the list of directors, though he has spent some time at the mine since the last meeting. Mr. Robinson's report leaves nothing to be desired on the points of either clearness or fulness. He states "the prospecting work is being prosecuted as vigorously and economically as possible." He admits that for the past two or three months the output has been the lowest for several years, but warns the shareholders against harbouring any idea that the old mine is near the point of collapse. Whilst admitting that the ore is low in grade, he adds that it can be made to pay all charges, and something besides. He expects to be able from this time to improve the mill runs, and though the change for the better will not be startling, he promises that it shall be substantial. He has been able to effect a reduction in cost, even though the expenditure on permanent improvements has exceeded that for the corresponding half-year of 1890 by \$20,570. The total expenditure on all accounts shows a saving of \$19,431. Mr. Robinson concludes a very able report by assuring the shareholders that the best is being done in their interests, and that he and his associates will endeavour to so conduct the enterprise as to return the greatest nett revenue from the works. A report on the underground workings follows by James H. Henley, in which the position and prospects of the various levels are described. He mentions that the surface workings are yielding large quantities of ore for the mills, and that the grade of ore is satisfactory. The old stopes are also in good condition, whilst everything about the mine is in a fair state, and the work is being pushed on as rapidly as possible. To grasp the importance of the reports signed by Mr. Robinson and Mr. Henley the full text of these documents must be read, but the general impression they leave is that there is life in the old Montana yet, and that the sun has by no means yet set upon its prosperity.

NEW MASHONALAND—A POOR OUTLOOK.

THERE is little upon which the shareholders of New Mashonaland Explorations Co., Limited, can be congratulated. Whatever money they have subscribed in response to the too gushing prospectus appears to have been on a mere geological chance. Whether it was worth while to go so far to obtain so little is a matter upon which shareholders must decide. Assuming that the meeting of Tuesday was of a *bona-fide* character, in other words, that it was attended by what may be called the "cash shareholders," they are scarcely to be congratulated upon the reticence they displayed. Not a single question was asked, although rumours of a serious character have been circulated far and wide with respect to the financial position of the company, and the concern has met with an unusually hostile reception from the Press, for reasons that are to be found within the four corners of its prospectus. This document we analysed and criticised at the time the company was brought out some four months ago, and the adverse verdict we then pronounced upon it has been strengthened rather than weakened by what occurred at Tuesday's meeting. It has been roundly stated that the company proceeded to allotment upon a miserably inadequate subscription of capital. Now it never occurred

to any of the "independent" shareholders at this meeting to ask what was the capital actually subscribed by the public as represented by the cash in the bank. This is the crucial point of all, because if even the company had an Eldorado in Mashonaland, it would be impossible to profit by it without the expenditure of capital in the first instance. This remark is all the more to the point, seeing that the chairman himself admitted that should it ever come to a matter of getting machinery to the spot, it would be "a most expensive business." Have the board really considered the position from this point of view, and if they have not, then it is time for the shareholders to get the necessary information; and even if they decline to pay calls until it is given, the position is one which, though it could not be legally defended, would be equitably sound. Surely a shareholder has a right to know whether his money is going to be thrown away, or whether it is not. The expedition which has been sent out is "headed" by Lord Headley. This is a new class of business for noble lords to betake themselves to; but if noble ladies open dress-making shops and go into the millinery line, we do not see why their husbands should not be pioneers in unknown lands. At all events, it will remove from them the reproach that they toil not, neither do they spin, though the shareholders may be dubious as to whether they are the sort of people to whom a business of this kind should be entrusted. They cannot draw much consolation from the views of the chairman, who gathers his inspiration as to the prospects of the company from what he "sees in the papers," that Lord Headley, and the motley group that own him as captain, will find a very large amount of gold. We hope they will, but believe they will not. The chairman did not add much to the enlightenment of the shareholders, but more was expected from a Mr. Cheesewright, who was called upon to give "technical details." This gentleman's idea of "technical details" is extremely limited. On this occasion it was bounded by a sort of reply to a newspaper critic, who, in our judgment, truly described the company as with "no definite prospects"; and the best proof of that is to be found in the speech of the chairman. In fact, Lord Headley simply appears to have gone out on a vague voyage of discovery after that gold, of which the chairman reads in the papers there is plenty. So far as we have been able to grasp the position, the value of New Mashonaland shares appears to be scarcely worth the paper represented by the certificates.

THE STOCK MARKET REVIVAL.

PERHAPS the most striking feature in connection with the marked revival of speculative activity upon the Stock Exchange, is that it commenced and has developed apace just at the time when everybody is supposed to be out of town, either at the seaside, on the moors, or bathing in mud and drinking unpleasant waters in Germany or France. No doubt the revival is largely of a professional character, designed for the purpose of letting the general public in, in more senses than one, at a very much higher level of prices than that ruling when the American market was taken in hand, and though here and there the benevolent intentions of the "boomers" have been fulfilled, we are indisposed to believe that the advance in quotations owes much to outsiders. On the contrary, we think that the gamble has been so rampant that prudent investors will more than ever fight shy of the "House." The bountiful crop harvests in the United States have naturally led to a substantial advance in prices, though an all-round lift of from 10 to 30 per cent. is rather tall, even for a Yankee "boom" of a few weeks' duration. And it would be difficult to deduce any practical reason, apart from pure speculation, for the rise in such shares as Erie and Wabash, ordinary, Denver, Missouri, Ontario, or Union Pacific. They are at present non-dividend paying, and they are likely to remain so. It would be very easy, if space permitted, to point to other classes of "securities," using the term in a Stock Exchange sense, which have been unduly appreciated; but all that we desire to do is to utter a note of caution. To use a sporting phrase, it seems to us that the pace has been made rather too hot to last, and we would, therefore, advise our readers to take care that they are not left high and dry when the inevitable reaction comes about.

THE POSITION OF TRADE.

THE returns of trade for the past month, compiled by the Customs, are certainly unfavourable. Our home exports have only reached 20,670,000*l.*, being nearly 10 per cent. less than for the corresponding period, and making the average for the current year over $4\frac{1}{2}$ per cent. less. The imports, on the contrary, however, were $4\frac{1}{2}$ per cent. better, at 32,746,000*l.*, making an increase of 2 per cent. for the eight months, while the re-shipments were 3,657,000*l.*, a reduction of fully 30 per cent., giving an average decrease over the whole period of 5 per cent. The action of the McKiuley tariff is again made responsible in part for the falling off in exports, but allowing for whatever this may be worth, the loss shown is a material one, and reflects the contraction of trade, while, for all the arguments to the contrary, it is still a question whether increased imports with declining exports can be considered favourable. If, as some of our non-practical economists contend, the imports are of your own ordering, it would, as they say, be a favourable sign, for our manufacturers would not order more

than they would think they ought to require, but, unfortunately for this logic, the imports are in great part simply exports from foreign countries, consigned to parties here, who have to find a market for the produce when it arrives, if not before. Under these circumstances, to receive less for exports, and have to pay more for imports, must result in augmenting the balance against us, and, therefore, the position is an unfavourable one. All classes in the export summary show a falling off, except raw materials, chiefly coal and wool, and apparel, &c. The reduction is largest in yarns and textile goods, approaching 9 per cent., and in metals and metal manufactures, which reaches 25 per cent. Most classes of imports have augmented, the only diminution being apparent in animals (for food), chemicals, oils, and raw materials for textile manufactures, although those for sundry industries show an increase, together with foreign manufactured articles. The arrivals of wheat have been smaller, chiefly due to the falling off in the export from Russia, which, however, has been nearly made up for by the increased import from the United States and India, and the value is rather greater. As regards metals and their subsidiary industries, we find the import of copper and lead has increased, but that of tin, on the contrary, has fallen off. Of copper, the arrivals, which have been the largest, have chiefly increased from Venezuela and other less important quarters, while the supplies of tin have diminished from both the Straits and Australia. Looking to the export side, we find decreased shipments of copper, tin, and lead, but it is to be noted that the export of wrought copper shows an augmentation, principally to the East Indies, Turkey, and Brazil. The unwrought metal has been sent on a much smaller scale to France, Holland, Belgium, and the East Indies. Lead has fallen off, mainly to Russia and China, and tin to Russia and France. The shipments of machinery show some increase as regards steam engines, but a decline in other sorts. Iron and steel work has also fallen off, but coal exhibits an increase.

The following tables in our usual form give the particulars as to metals, &c., for the month:—

IMPORTS.					
Article.	Quantity Tons.	Value £	Increase or decrease per cent.		
			Quantity.	Value.	
Copper ore	7,548	59,434	+63.6	+73.1	
" reg. and precip. ...	5,590	161,169	-29.4	-28.1	
" un. and pt. wrought	6,358	339,549	+65.2	+49.9	
Lead	14,390	181,491	+13.9	+10.6	
Tin	1,737	158,958	-23.7	-25.9	
EXPORTS.					
Copper, unwrought ...	2,194	124,309	-37.8	-42.8	
" wrought	1,368	89,650	+78.3	+59.6

Iron and steel	272,209	1,834,692	-21.2	-29.4	

MAID OF ERIN—A PROSPEROUS COMPANY.

SINCE the formation of this company, we have received so many enquiries as to its position and antecedents, that we propose to give all necessary particulars before offering a few comments upon the successful meeting, which was held on Tuesday, and which was the sequel of the one that took place about three weeks ago. The company was brought out about four months ago, with a capital of 600,000*l.* in 1*l.* shares. Of these 25,000 were offered to the public, and the balance remained in the hands of the vendor as the total purchase price. On the shares issued here, 2*s.* 6*d.* was due on application, and 1*s.* 6*d.* on allotment. It will thus be seen that all the shares are fully paid and marketable. There is a highly respectable directorate in England, with an advisory board in America. The company is based on a previously existing concern styled the "Henriett and Maid Consolidated Mining Co.," and it owns the freehold of two mines, Maid of Erin and Henriett, and the leasehold of the Adams' claim. The mines were taken over as a going concern on the favourable report of Mr. Hooper, of the American firm of Messrs. Bewick, Moreing and Hooper. The freehold area is $15\frac{1}{2}$ acres, and the leasehold $7\frac{3}{4}$ acres. At the time the mines were taken over, the outlay on the machinery and plant represented to the former only a cost of \$366,650. The report of Mr. Hooper spoke of the existence of fuel and water in abundance. It stated that the Henriett shaft had been sunk 619 ft.; that the hauling facilities were 150 tons a day; that the ore reserves were estimated at 49,606 tons, and added: "The undertaking does not depend upon the ore which is in sight, but upon its prospective value in the development of other sulphide deposits, which will, no doubt, be found as a continuation of the many carbonate ore bodies worked above." The profits of the Henriett and Maid of Erin Mines in 1888 were \$408,700; in 1889, \$384,942; and in 1890, \$453,787. The Adams' lease, from Apr., 1889, to Dec. 31, 1890, showed a profit of \$6,144*l.*, and the united properties from June, 1887, to Dec., 1890, paid dividends to the amount of 284,536*l.*

Now, a property with such evidences of wealth as these cannot be passed idly by when the careful critic comes to consider it,

particularly as its records show that since the formation of the company, only four months ago, the total nett profit to the end of Aug. amounted to no less a sum than 57,009*l.*, and that already two dividends of 1*s.* each have been paid—in other words, “at the rate of 30 per cent. since the formation of the company.” The mines, according to the statement of the directors of the United States Mint, yielded last year \$1,938,239, being the largest amount credited to any mine in the whole of North America. The meeting of Tuesday last was nominally held to welcome one of the advisory board from America, Mr. Graham, and to hear a statement from him; but the most important address delivered was that of Mr. F. Groombridge Dawson, the representative and manager in this country of the London and Amsterdam General Investment Co., Limited, whose statements were as gratifying in matter as they were precise in detail. Amongst other important figures he mentioned:—“The following is ‘the synopsis of the work done since our incorporation in May last:—Total gross yield, 24,284 tons, of an estimated value of \$547,660, equal, on an exchange of 4.85 to the £ sterling, to 112,919*l.* 10*s.* 6*d.* The average per ton is 22.15, equal, at the same rate of exchange, to 4*l.* 13*s.* per ton. I may observe here that the average per ton is going up. Our total net profit from the incorporation of the company to the end of last month amounts to 57,009*l.*” He also added that the directors had declared a second dividend of 1*s.* per share out of the profits earned down to the end of Aug., and still carried forward a sum of 12,000*l.* The address of Mr. Graham referred to the “splendid developments of the property” and also to the “brilliant future of the company.” He said that Mr. Dawson had not in any sense overstated the facts, and that if Mr. Hooper, who made the original report, examined the mine now, what he would write about it would be in a much more reassuring tone. The expected developments of rich sulphide ores have turned out better than was expected, and, as Mr. Dawson said, “the average produce per ton is going up.” Altogether, Main of Erin Silver Mines appear to be of exceptional value, and the facts are forthcoming to demonstrate and emphasise such a belief.

AFFAIRS IN SOUTH AFRICA.

[From our Own Correspondent.]

Kimberley, Aug. 24, 1891.

THE PRINCE ALBERT GOLDFIELDS.

I CANNOT yet report anything of a very promising nature from these goldfields. All the accounts received are of a conflicting nature, but I may remark that privately I have ascertained that some of the diggers are doing exceedingly well, and the reason why their finds have not been made public is because they are anxious to get hold of the best claims before they make any fuss. I hear there are upwards of 1,000 diggers on the fields, and that prospecting is being carried on over a very large extent of country.

MANICALAND.

At last we have received some authentic information regarding these goldfields. A correspondent writes that the country is being vigorously prospected. A large number of new prospectors have come in lately, both from Mashonaland and from the coast, and the prospects have been so good that considerable excitement has been the result. Manicaland has always been considered an exceptionally rich gold-bearing land by the old prospectors, who have stuck to it for some years, and their impressions are receiving corroboration every day, in the neighbourhood of the Umtali Valley, in the heart of Umtassa's country, the only part that has really been prospected so far. A number of reefs lying parallel to each other have been found, all panning well, almost without a blank. They are generally imbedded in huge masses of argillite of a soft, easy workable nature. The colour of the reef is either a whitish red or mottled blue, soft and inexpensive to work. Prospecting is attended with a little difficulty, owing to the deep rich surface soil, and the absence, generally speaking, of a well-defined outcrop. The long grass has also, up to now, operated against prospectors, but it is now being burned. Some of the reefs show a considerable width on the surface, and all point to a large expansion at the lower depths. In this country it may safely be said that few, if any, of the reefs will pinch out; on the contrary, their nature is to widen out. The numerous old workings have been a guide to the majority of the discoveries, but a number of virgin reefs have been found, although we are really only at the commencement of our prospecting. The rough pannings we have seen run from 1 to 10 ozs. to the ton, and some would even run more. With the unusual facilities afforded by nature for working the ore, we believe 10 dwts. would pay well, so that it can be seen what profits well managed concerns would realise. Old hands, of extensive experience, who have come into the country, are enthusiastic about it, and it is their impression that the reefs become richer at lower levels. Over 1,000 claims have already been pegged off, and in the very near future we fully expect to see a flourishing town—a second Johannesburg, without its disasters, we hope—in the valley of Umtali. Alluvial gold is known to exist, and, no doubt, one day some lucky prospectors will drop on a rich bed. The deposits in all the rivers in the country pan well, and it can only be a question of a short time before rich alluvial goldfields are discovered. The Chartered Co. offer a reward of 300*l.* for the discovery, and do not participate in any portion of the finds.

OTHER ATTRACTIONS.

The same correspondent goes on to say that other minerals have been discovered, and that a great future is in store for Manicaland. Added to the great facilities with which nature has endowed the land, its close proximity to the coast, and its position of being on the line of route to Mashonaland, must be a great boon. Machinery, plant, and supplies of every description can be brought up promptly and cheaply into it, and the living should be comparatively inexpensive, only a shade above Durban expenses. Add to this the facilities afforded by a railway from the coast—which railway will, no doubt, be constructed at once—and it will be admitted that this land has been the most favoured of any goldfield yet discovered. Then it is a beautiful country to reside in. There can be no struggle for water, for it is here in the most permanent form. Timber there is in plenty, and soil rich and rare, capable of growing almost anything, and sustaining its own population to an illimitable number. The climate is pronounced by old inhabitants to be perfect, with only a few cases of fever, of a mild type, in the rainy season. In fact, the country is an exceptionally healthy one as far as the Chartered Co.'s land extends. With regard to the Pungwe route, this correspondent sends down some information which I have not seen before. He says Messrs. Johnson and Co. are pushing on with the construction of a decent road from the coast. The Portuguese, with their pre-adamite title to the country, never even so much as made a road from there to their much vaunted Manica and Mashona possessions. They well knew they dare not do so. The coach road from Beira to Fort Salisbury *via* Manica is expected to be finished in about a month's time. They are going to run comfortable coaches from Beira once a week, and with rapid travelling the journey to Fort Salisbury should be done in 10 days. A number of claims and farms have already passed hands here and in Mashonaland at big prices. This is satisfactory, and points to future larger prices when the capitalists arrive. There are really good properties here waiting the developing hand of capital—properties which are certainly destined to open the eyes of the world. The backbone of Johannesburg is rich, and will pay well by and bye, with due economy, but in a year or two it must take second place to this country. Unlike Johannesburg with one main reef—the only one that will ever pay—there are here numerous reefs, running nearly parallel with each other. One might say there is a perfect network of them, and all gold bearing, or nearly all, in, so far as already known, payable quantity.

MASHONALAND.

Another correspondent, writing from Fort Salisbury, under date July 1, confirms the above with regard to the road from the coast, and then goes on to say that the activity at the Manica Goldfields cannot be greater than that in the Mazoe, Umtali, and northern districts. Almost daily he is shown quartz specimens, showing rich visible gold, received there from various syndicates on those fields. Messrs. Johnson and Co. were expecting to have a five-stamp battery at work in a few days, and the same firm were getting up another battery, and also one for the Bechuanaland Exploration Syndicate. Amongst those who hold what are considered some of the very best things are the various British South Africa Police Syndicates. One troop has had notable good luck. Their “Little B” Syndicate, shares in which stand at 70*l.* each, have 50 claims, reckoned to be among the best on Concession Hill and Hartley Hill. The “Great B,” formed by the right of each trooper to 10 claims, has some 600 or 700 claims among the different fields, and possesses many highly valued blocks. The “Officers’” Syndicate has made fortunate finds, and received big offers on the “Eiffel” reef and at Hartley Hill. The above is the best and most reliable information which has reached here for some time past. In a few days Mr. Cecil Rhodes, our Premier, starts for Mashonaland, *via* the Pungwe route, with a party of friends, for the purpose of inspecting his enormous territories.

THE DEBENTURE ISSUE OF CHAMPION REEF CO.

THE directors being in want of further capital to complete the important developments now going on in the property of the Champion Reef Co. of India, have decided to raise it by way of first mortgage debentures to the amount of 50,000*l.*, bearing interest at the rate of 10 per cent. per annum, and repayable with a bonus of 25 per cent. The security offered is the entire property of the company. There is not the least doubt that the whole of this money will be forthcoming from the shareholders. The strength of the position is indeed indicated by this alone—that the directors feel they can raise the sum by a debenture issue rather than by the usual and costly method of re-construction. A consideration of the position of the company brings a double conviction to the mind, first, that the security offered for this amount is more than ample, and next, that at the first blush of success the company will have no difficulty in providing for the cancellation of the debentures. What is the position? The last news from the mine is the best that has been received. It refers to the four shafts that are now being sunk on the property, each of which, to use the language of the directors' circular, “it is anticipated will before long become the centre of a productive mine.” We reproduce the full text of this circular elsewhere, and commend it to the careful attention of our readers who may desire an investment in one of the most promising of the Indian mines. Of course, we are now referring to the ordinary shares of the company, for the debenture issue, it is to be presumed, will be confined to the actual shareholders, whose applications for an allotment must be received on or before Sept. 30.

THE NEW CATALOGUE OF RANSOMES, SIMS AND JEFFERIES, LIMITED.

RANSOMES, SIMS AND JEFFERIES, LIMITED, have issued a new edition of their exhaustive catalogue and illustrated description of steam engines and boilers, with their multifarious adaptations, as manufactured by them at their Ipswich works. These works, we may say, are one of the sights of the town. They cover 12 acres of land and employ upwards of 1,400 men and boys. The firm have gained a great reputation in regard to agricultural machinery which has been fully sustained by their mining appliances long in successful use, both at home and abroad. In their Ipswich works no effort has been left untried and no expense spared so as to ensure the greatest accuracy and workmanship in every detail, with the result that their productions may be recommended for perfection of design as well as efficient, durable, and economical working. They manufacture every description of compound engine on a method which enables the expansion of steam to be utilised to the fullest extent, whilst the utmost advantage is sought to be gained in respect to economy of fuel. Some of the latest improvements introduced into their works include a patent automatic governor expansion gear, which is specially recommended for engines for driving the electric light, and the "Head and Schemioth" patent apparatus, which has enabled steam power to be used in countries where any kind of crop is produced, but which, on account of the absence of wood or any other fuel, have been hitherto debarred from its advantages, and it is claimed that, "although many attempts have been made with other systems, nothing yet has been found so simple and efficient." Ransomes, Sims and Jefferies have had a large experience in the export trade, which enables them to supply machinery suited to the requirements of different countries, and special care is taken so that no difficulties should be met with when the goods are unpacked—a very important point for mining companies to consider when ordering machinery. We have known mines kept idle for months by want of requisite attention in this respect. We need scarcely add that Ransomes, Sims and Jefferies have been the recipients of first prizes with gold and silver medals at exhibitions all over the world. The awards, we are informed, have been over 2,000 in number. It is evident from the present catalogue that Ransomes, Sims and Jefferies is an up-to-date firm.

THE MONEY MARKET.

CITY, FRIDAY EVENING.

UNDER the combined influence of the export demand for gold and the settlement of an account which was the largest for many months, and has embraced a recovery in prices of from 5 to 10 per cent., the Money Market has fairly moved out of its lethargic condition, so much so that discount is now quoted $2\frac{1}{2}$, $\frac{3}{4}$ per cent. for three months' bills, and 2 per cent., or a fraction under, for those of shorter date. Money at call, or for advances for periods up to a week, has likewise been in better demand, both at the Stock Exchange and outside, up to $\frac{3}{4}$, $1\frac{1}{4}$ per cent. Loans for the new account were arranged on the basis of 2 to $2\frac{1}{4}$ per cent. The Bank return, with an export of 340,000Z. in gold, shows a decrease of only 250,000Z., while the note circulation also shows a reflux of nearly 250,000Z., so that the reserve practically remains at 17,284,000Z., against 13,672,000Z. at this time last year. The liabilities, however, under deposits have decreased less than half a million, but the result is a slightly better proportion at 47 $\frac{1}{2}$ per cent. The private securities have further run off over half a million, and the statement of Mr. Lidderdale at the Bank meeting, regarding the progress of the liquidation of the Baring estate, is very reassuring indeed, as he reiterates his belief that the guarantors will have no loss to face. A fresh issue of Treasury Bills is notified, which will on balance take half a million from off this market. A demand continues for Germany and America, and the exchanges are threatening.

The settlement on the Stock Exchange this week has been of a remarkable character. Seldom have the markets arranged a liquidation covering 19 days showing an almost uninterrupted rise throughout that period, and, judging from the breadth of this extraordinary movement, the great recovery rests upon as solid a foundation as can be conceived and events have justified. The profits made within the last month are enormous, and now the newest feature comes from America, where, as on this side, our cousins are investing the riches accumulating from their abundance in their own securities. Truly the ball is rolling, nor has its onward progress been sensibly retarded by Monday's curious reports regarding a British occupation of Mitylene, an island in the Greek Archipelago. A fall, of course, occurred, but of the most temporary nature, and the significance of the reports, assumed or otherwise, are left to the vivid imagination of the Continental press, or the inherent sensitiveness of the Berlin bourse. Foreign Bonds are better, although less scarce for delivery than formerly, and Argentine, Uruguay and Guatemalan issues have fallen. Consols remain weak, and Colonial Inscribed only steady. In English Railways, Brighton "A" have been 152 $\frac{1}{2}$ and 149, but, like many more, show some advance, good traffics, an improvement in the iron trade, and an easy account, all tending in one direction. Chatham stocks have been a great feature in anticipation of more intimate relations with the Midland Co. Grand Trunk securities have sensibly advanced, and Mexican lines rose chiefly through scarcity and a cramped market; otherwise Foreign Railways receded. American descriptions were carried over at increased contangoes, viz., 3 to 4 per cent., and disclosed a very heavy "bull" account open,

but all, nevertheless, further expanded, and the net gain for the week is considerable. Electric Lighting shares have become exceedingly strong on public appreciation, and Cable stocks and Miscellaneous generally present a firm appearance.

Bullion has at length left the Bank of England for America, 50,000Z. being withdrawn this afternoon, but the full effect was counteracted by another sum of 38,000Z. in sovereigns arriving from Portugal. Rates of accommodation have been very firm, and three months' bill are now dearer at $2\frac{1}{4}$, $\frac{1}{2}$ per cent., but loans on the other hand were easier at $\frac{1}{2}$, $\frac{3}{4}$. Bar silver was maintained at 44 $\frac{1}{2}$ d. by harder exchanges in India, and Rupee Paper showed a nominal recovery.

The Russian Loan of 17,000,000Z. or 400,000,000f. will be offered on Oct. 6, by the Credit Foncier of Paris.

The Stock and Share Markets have been irregular, but very active to-day, and prices are for the most part lower, although considering the extent of realisations, the tendency is good. The American department has again been the centre of attraction, this department being excited all day, and prices fluctuating at times rather wildly. Compared with yesterday, quotations show a pretty general average improvement of $\frac{1}{4}$ to $\frac{1}{2}$ per cent., although closing considerably below the best. Denver and Reading descriptions have been the feature, the various stocks of these companies rising from \$1 to \$3; the closing is firm. Grand Trunks are weak, Guaranteed being most affected with a fall of $\frac{3}{4}$. Among Home Railways there has been a decline, and the Southern lines were most offered owing to the inclement weather, and Brighton and South Eastern "A" fell to 148 $\frac{1}{2}$ and 81 $\frac{1}{2}$ respectively, but closing quotations are sensibly above these figures, although there is an appreciable fall on balance. Chatham Prefs. fell 1 per cent., while Caledonians were bid for, and North British were maintained; Mexican lines fell $\frac{1}{2}$ to 1, and Nitrates and other Foreign Railways are flatter; International Bourse Securities are slightly weaker, but Argentine, Chilean, and Uruguay were disposed to harden. Electric Lights receded, while Miscellaneous, Trusts, and Banks improved.

Annexed are the final quotations to-day:—Consols Account, 94 $\frac{1}{2}$, 95 $\frac{1}{2}$; Egyptian Preference, 91 $\frac{3}{4}$, 91 $\frac{3}{4}$; Egyptian Unified, 96 $\frac{1}{2}$, 97 $\frac{1}{2}$; French Four-and-a-Half per Cents, 104 $\frac{1}{2}$, 104 $\frac{1}{2}$; Hungarian, 88 $\frac{1}{2}$, 88 $\frac{1}{2}$; Italian, 89, 89 $\frac{1}{2}$; Mexican, 87 $\frac{1}{2}$, 88; Peru Five per Cents, 10 $\frac{1}{2}$, 11; Peru Six per Cent., 29 $\frac{1}{2}$, 29 $\frac{1}{2}$; Russian 1889, 97 $\frac{1}{2}$, 98; Portuguese, 37 $\frac{3}{4}$, 38; Spanish, 71 $\frac{1}{2}$, 71 $\frac{1}{2}$; Turkish 1871, 95 $\frac{1}{2}$, 95 $\frac{1}{2}$; Turkish Defence, 91 $\frac{1}{2}$, 91 $\frac{1}{2}$; Caledonian Railway, 116 $\frac{1}{2}$, 116 $\frac{1}{2}$; Great Eastern, 89 $\frac{1}{2}$, 89 $\frac{1}{2}$; Great Western, 160 $\frac{1}{2}$, 161 $\frac{1}{2}$; Brighton "A," 149 $\frac{1}{2}$, 149 $\frac{1}{2}$; North Western, 172, 172 $\frac{1}{2}$; Metropolitan, 84, 84 $\frac{1}{2}$; Metropolitan District, 29 $\frac{1}{2}$, 30 $\frac{1}{2}$; Midland, 159 $\frac{1}{2}$, 159 $\frac{1}{2}$; North British, 37 $\frac{1}{2}$, 37 $\frac{1}{2}$; North Eastern, 154 $\frac{1}{2}$, 155 $\frac{1}{2}$; South Eastern "A," 85 $\frac{1}{2}$, 85 $\frac{1}{2}$; Mexican Ordinary, 34 $\frac{1}{2}$, 34 $\frac{1}{2}$; Grand Trunk, 11 $\frac{1}{2}$, 11 $\frac{1}{2}$; Grand Trunk First Preference, 72, 72 $\frac{1}{2}$; Grand Trunk Second, 51 $\frac{1}{2}$, 51 $\frac{1}{2}$; Grand Trunk Third, 28 $\frac{1}{2}$, 28 $\frac{1}{2}$; Canadian Pacific, 92 $\frac{1}{2}$, 93 $\frac{1}{2}$; Denver Preference, 50 $\frac{1}{2}$, 51 $\frac{1}{2}$; Erie, 31 $\frac{1}{2}$, 32 $\frac{1}{2}$; Milwaukee 74 $\frac{1}{2}$, 74 $\frac{1}{2}$; Lake Shore, 124 $\frac{1}{2}$, 124 $\frac{1}{2}$; Louisville, 83, 83 $\frac{1}{2}$; Atlantic First, 41 $\frac{1}{2}$, 41 $\frac{1}{2}$; Ontario, 23 $\frac{1}{2}$, 23 $\frac{1}{2}$; Ohio, 26 $\frac{1}{2}$, 27; Norfolk and Western, 56 $\frac{1}{2}$, 57; Reading, 22 $\frac{1}{2}$, 22 $\frac{1}{2}$; Reading Bonds, 83, 84; Union Pacific, 43 $\frac{1}{2}$, 44; Wabash Preference, 33 $\frac{1}{2}$, 33 $\frac{1}{2}$; Ottoman Bank, 12 $\frac{1}{2}$, 12 $\frac{1}{2}$; Anglo-Telegraph, 49 $\frac{1}{2}$, 49 $\frac{1}{2}$; National Telephone, 4 $\frac{1}{2}$, 4 $\frac{1}{2}$; Hudson's Bay, 16 $\frac{1}{2}$, 16 $\frac{1}{2}$; Suez Canal, 113 $\frac{1}{2}$, 113 $\frac{1}{2}$; Guinness, 315, 317; Allsopp's Ordinary, 22, 24; Bryant and May 13 $\frac{1}{2}$, 14; Eastmans Ordinary, 5 $\frac{1}{2}$, 5 $\frac{1}{2}$; Elmore's Copper, 4 $\frac{1}{2}$, 4 $\frac{1}{2}$.

BLLENDE SALE.

Date.	Name.	Tons.	Rlsd. per ton.	Purchaser.
Sept. 17.—	Roman Gravels.....	10	7 4 0	Pascoe, Grenfell.
17.—	Ditto	10	7 4 0	Swansea Vale Spltr. Co.

At a meeting of the directors of the Brush Electrical Engineering Co., Limited, held on Sept. 4, it was resolved to recommend the payment of a dividend on the preference shares of the company, and also a dividend on the ordinary shares, both at the rate of 6 per cent. per annum, for the six months ended June 30, 1891.

TARAPACA WATERWORKS CO., LIMITED, announce a dividend at the rate of 5 per cent., or 10s. per share, less income tax, on the capital of the company, on account of the current year's working, payable Oct. 1. The share transfer books will be closed from the 25th inst. to the 30th inst., both days inclusive.

NEW TWIN-SCREW STEAMER FOR THE AUSTRALIAN MAIL SERVICE.—The managers of the Orient Line have made another new departure in the service between Great Britain and Australia. They have added to their fleet a twin-screw steamer of 6,500 tons register, and 9,500 h.p., named the Ophir. She is the first twin-screw steamer built to run between this country and the antipodes, and in regard to safety, she possesses qualities of a character unequalled by any vessel running in waters east of Suez. The twin-screw arrangement, which practically dispenses with sails for locomotive purposes, will enable the vessel to go at three-quarter speed even with one set of engines disabled. She is provided with a fore and aft water-tight bulkhead between her two sets of engines, and she has also two separate sets of boilers self-contained in water-tight compartments. The steam pipes are all carried in water-tight casings to prevent condensation of steam in case of any compartment being flooded, and any two compartments may be filled with water without sinking or stopping the vessel. Besides this, she is constructed with a cellular bottom throughout nearly the whole of the length of the ship, and the two skins are in no part closer to each other than 3 ft. 9 ins. Her boilers work at 160 lbs. pressure, and she can carry coal enough to enable her to drive at a speed of 18 knots for a distance of 14,000 miles, or to continue running at a speed of 10 knots for 130 consecutive days, all of which considerations mark the Ophir as one of the safest, if not the safest, steamers afloat. She was launched from the yard of Napier and Sons, on the Clyde, in Apl. last, and starts on her first voyage to Australia on Nov. 6. The Ophir has been specially designed to fulfil the requirements of the Admiralty for armed cruisers.

REPORTS OF MEETINGS.

MAID OF ERIN SILVER MINES, LIMITED.

A PROFIT OF £57,009 IN FOUR MONTHS, AND DIVIDENDS PAID FOR THAT TIME AT THE RATE OF 30 PER CENT.—VIEWS OF MR. DAWSON AND MR. GRAHAM—REMARKABLE EVIDENCES OF FUTURE PROSPERITY.

THE adjourned statutory meeting was held at the Offices, Suffolk House, Cannon Street, on Tuesday, for the purpose of meeting Mr. T. Graham, one of the members of the advisory board from America.

Mr. F. Groombridge Dawson

(a director of the company) presided.

Mr. CHARLES SHILSON (secretary) read the notice of meeting.

The CHAIRMAN, who was received with applause, said: Gentlemen, my opening words must be those of mingled regret and pleasure—regret, that our esteemed chairman is unable to be with us to-day, and pleasure, that Mr. Graham, a member of our advisory board in America, is in attendance on this occasion. You will recollect that at our statutory meeting, held three weeks ago, we cordially and unanimously resolved to adjourn the meeting to this day, to give you an opportunity of seeing and hearing Mr. Graham. (Hear, hear.) Now, I have read and heard of companies whose directors have not shown an excessive anxiety to meet their shareholders, but I rejoice greatly that our position is the very antithesis of this.

SHAREHOLDERS WILL KNOW ALL.

We believe in giving our shareholders all the information we possibly can, recognising that such is their right, and feeling, as we do, that the brighter and the more searching the light which is let in upon our enterprise the more truly will our shareholders be convinced of the extent and value of our property, the excellence and completeness of our plant, the enormous developments that are being carried on at our mine, and the successful and, indeed, brilliant future of this company. I claim to know as much of our property as anyone here, except my friend, Mr. Graham, and although he, in his modesty, does not allow himself to be called an expert in mining matters, yet, when I tell you that he has been intimately associated with mining in Colorado for the past 24 years, you will agree with me that he speaks as one who knows, and I am sure he will corroborate all I have to say with regard to the solidity and soundness of our undertaking, and the increasing prosperity which, so far as human knowledge can possibly go, we feel sure will be ours. May I ask your indulgence for a moment or two while I supplement very briefly the information given you at our statutory meeting the other day.

OUR MINES ARE THE MOST PRODUCTIVE IN NORTH AMERICA.

According to a statement of the director of the United States Mint, the Henrietta and Maid yielded last year \$1,938,239, being the largest amount credited to any mine in the whole of that country. There are about 300 hands employed on and in the mines, including officials, and when visiting the property in Mar. last it was my pleasure to meet Mr. Smith, our general manager, and I can only assure you we have in him a manager who, for expert mining knowledge and instinctive insight into men and things, and intelligent interest in his profession, stands unequalled. I was also struck with the splendid physique of the men employed, the majority of whom seem to be fine, young men, of from 25 to 35 years of age. As one instance of the able and economical way in which the company's business is managed, I may mention that we have our own engineering and machine shops, in which we make cars, cages, and other mining accessories. In addition to our own work, we do repairing jobs for others—the consequence being that we made last year a revenue of \$22,886 in our machine shops for outside people and supplies furnished. In addition to this, we have our own sawmill, fitted complete, in which all our mining timbers are framed. The result of all this is, that we have always on hand an extensive supply of mining materials and appliances of every description. As

OUR ADVISORY BOARD IN AMERICA,

when I remind you that we have at its head Mr. David H. Moffat, it will be superfluous to say more. It would be impossible for our interests to be in safer keeping, for Mr. Moffat is and will remain far and away the largest shareholder in our company, and in safeguarding and promoting our interests he is safeguarding and promoting his own. (Cheers.) It is a matter of intense gratification to my colleagues and to myself that in this business we are associated with one of the most honoured, wealthy, and successful business men in the whole of the United States. As to our board here, it is clear I cannot say all I feel, but this I will say,

WE ARE A WORKING BOARD,

and have given, and are determined to give, all that close attention to minute details of management which you, as business men, know is so necessary to the successful development of any undertaking; for I can assure you our aim is to make this a big and continuous success.

STARTLING FIGURES.

The following is the synopsis of the work done since our incorporation in May last:—Total gross yield, 24,284 tons, of an estimated value of \$547,660, equal, on an exchange of 4.85 to the £ sterling, to 112,919l. 10s. 6d. The average per ton is 22.15, equal, at the same rate of exchange, to 4l. 13s. per ton. I may observe here that *the average per ton is going up*. (Cheers.) Our total net profit from the incorporation of the company to the end of last month

AMOUNTS TO 57,009l.

(Loud cheers.) And, now, gentlemen, just one more piece of informa-

tion, which I am sure you will not fail to appreciate. You will remember that we very recently paid you an interim dividend of 1s. per share, carrying forward about 12,000l. Our net profit for Aug. was \$78,500, equal, at an exchange of 4.85, to 16,185l. Our returns for the first 12 days of this month have been \$48,000. The directors at their board meeting this morning have declared

A FURTHER INTERIM DIVIDEND OF 1s. PER SHARE,
